
APPENDIX.

APPENDIX

TO THE

CONGRESSIONAL RECORD.

Revenue-Cutter Service.

SPEECH OF HON. CHAMP CLARK, OF MISSOURI, IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 11, 1894.

The House having under consideration the bill (H. R. 6723) to promote the efficiency of the Revenue-Cutter Service—

Mr. CLARK said:

Mr. CHAIRMAN: So far this bill has served merely as a string on which several gentlemen have hung up oratorical gems. It is almost dead. I feel proud to believe that I am standing here to-day looking into its open grave.

I have nearly killed it, and I rejoice to think that by talking forty-five minutes more I will give it its coup de grace. Then I will know my Congressional life has not been in vain. I shall not talk about the bill. Everything has been said that can be said about it. I shall talk simply to finish it.

OBSCURE HEROES.

On Saturday, when I had occasion to make some pertinent remarks on this bill, I incidentally referred to a distinguished member on the other side of the Chamber as an obscure hero. My Republican friends laughed. The truth is, Mr. Chairman, that heroes in the Republican camp are generally obscure. The men who stayed at home get the honors.

I say it, by way of retort, that when I get through talking about SILAS ADAMS, the obscure hero on that side of the House, he will be obscure no longer.

THE BORDER STATE SOLDIER.

My theme to-day is the Border State Soldier, Union and Confederate. Macaulay said when he finished writing his essay on Barere that he had succeeded in placing him on a pinnacle of infamy from which no succeeding historian could take him down. I propose to place the border State soldier, no matter under which flag he fought, on a height of glory from which no future orator shall dislodge him.

I said on Saturday, and they laughed at me for it, that I was just about a year too young to squeeze into the war. They thought that funny. They did not know how a man feels who was born and has lived all of his life in that thin border land—Kentucky, West Virginia, Missouri, Kansas, and Tennessee.

Mr. Chairman, if the history of those five States could be written it would discount all of Sir Walter Scott's novels. There my people and my wife's people lived and died. There my children were born. There two of them lie buried. I love the people of that borderland—the best, the bravest, the noblest under heaven—and I hate the men who jeer at them.

I will tell you how a border man feels. He is not a bully. He is not quarrelsome, but he understands how to take his own part. [Laughter and applause.] It happened to me, Mr. Chairman, that I was born and reared in Kentucky; that I lived two years in West Virginia, and most people there believe that I was born and reared there. I am very grateful to them for the kind things they have said about me. I lived eleven weeks in Kansas, and I have spent the remainder of my life in Missouri. When the war began I was 11 years old. I was a large boy. I wanted to go into the Army, but they wouldn't have me on account of my youth.

I want to tell you, Mr. Chairman, one of the first things I remember distinctly about the war. I see the man sitting in front of me who recalls it. It makes the blood in my heart go faster to look upon

his countenance—DANIEL EDGAR SICKLES. All that I remember of it I read in a newspaper at the time of the battle of Gettysburg, and that was that General SICKLES was carried off of that battlefield with his leg shot off, smoking a cigar. I thought it was the coolest thing that I ever heard of, and I did not believe any man could do it; but when I have seen him standing up here in this House, sometimes badgered by a dozen men at one time, and he, as cool as an icicle, polite as Chesterfield and brave as a lion hurling them all off, I have believed the story that I read about the field of Gettysburg.

Since then I have read of Pickett's charge and how the Virginia youth went to death as to a festival. It gives one a higher opinion of his race to read of that splendid feat of arms. [Applause.]

Down there where I was living one company of men went into Frank Wolford's cavalry. Another went into John Morgan's cavalry. Wolford was the very best specimen of the human race that ever stood on this floor. He sat in this Congress twice. He was a Kentucky mountain lawyer; and when you have said that, you have passed the highest encomium that can be passed on a lawyer. [Laughter and applause.] He would not wear a colonel's uniform; he wore the uniform of a private. They said they could never get enough of that regiment together to have a dress parade except on the eve of a battle, and then they gathered from the four quarters of the compass. When the war closed there was not enough left of that gallant band of men to have a roll call. The truth is that the First Kentucky Federal Cavalry died on the field of battle. SILAS ADAMS, its last colonel, was the youngest man in the regiment. Some way he escaped to live, although badly shot and taken to a hospital.

In the very same neighborhood a company went into Morgan's cavalry. They were made up of the flower of the Kentucky chivalry. I am glad to know that the colonel of the First Kentucky Union Cavalry sits over on that side; that the colonel of Morgan's cavalry, Governor MCCREARY, sits over here; that Col. WILLIAM C. P. BRECKINRIDGE sits over here, who went in as a private and fought his way to a colonel's commission in the finest body of soldiers that ever rode to battle. I am proud to be a Kentuckian among such Kentuckians. I remember when I was a boy the refrain went through Kentucky:

John Morgan's heel is on thy shore,
Kentucky, Oh Kentucky!
His hand is on thy stable door,
Kentucky, Oh Kentucky!
You'll never see your good gray mare any more;
He'll ride her till her back is sore,
And drop her at some stranger's door,
Kentucky, Oh Kentucky!

[Laughter.]

That song has been running through my head and singing in heart ever since.

I want to tell you how Morgan traded horses. They say that you can tell where Morgan marched through Ohio and Indiana yet by the good breed of horses that are through there. [Laughter.] He took the Kentucky thoroughbreds and rode them, you know, until they got stove up, and then he dropped them. Here is the way he swapped horses. He would come across a man in Kentucky and he would say, "You have a good horse and I want it." If the man said, "I am a Union man," he would say, "Well, I will confiscate it." [Laughter.] If the man said "I am a rebel," he would say, "You ought to contribute it to the cause of good government." [Applause.] Anyhow he took the horse. [Applause.]

It is only just and proper to state that Morgan's method of swapping horses was generally practiced on both sides. [Laughter.]

Obscure heroes, Mr. Chairman! I want to say now in the face of the American people that if the men who served on the Federal side from the border States during the war had served on the Confederate side the result of the war would have been different.

Take the 77,000 soldiers from Kentucky. Theodore Roosevelt says they were the finest men in the Army. I believe him on that proposition, although I do not believe a word he says about civil-service reform. [Applause.] Take the fifteen or twenty thousand from West Virginia. Take the gallant men from Maryland. Take the 35,000 from East Tennessee. Take the 99,000 that Missouri sent, and put Frank Blair at the head of them in the rebel army, and the Southern Confederacy would have achieved its independence. Those border State people saved the Union. They could have established the confederacy. Think of Frank Blair leading that host of heroes in the confederate army! The charge of the Old Guard at Waterloo, the charge of the Light Brigade at Balaclava, the charge of Mad Charles at Pultowa—all pale into utter insignificance compared with what Blair could have done at the head of those Marylanders, West Virginians, Tennesseans, Kentuckians and Missourians. [Applause.] With them at his back he could have marched to the frozen ocean! [Applause.]

And yet every time a man says a word about a man being a Union man in Kentucky, or Missouri, or West Virginia, or Tennessee, or a rebel either, some fellow who was safely housed during the war gets up here and grins at him, and I am tired of it, and I am going to vindicate the border soldier.

It was very easy to be a Union man in the State of Maine; the truth is it was very unhealthy to be anything else. It was very easy to be a rebel down in the State of Mississippi; it was very dangerous to be anything else down there; but in Kentucky and Missouri, during the war, a man had to feel of his topknot when he got up in the morning to see if, like the flag of his country, it was still there. [Laughter.]

Mr. SIBLEY. What about a baldheaded man?

Mr. CLARK of Missouri. Mr. Chairman, I want to tell you about an arithmetic class I was in when the war began. [Laughter.] I was 11 years old. As a boy I was a pretty good arithmetician, a sort of lightning calculator. A strolling phrenologist from England came through there and established a school. [Great laughter.] His name was Charles R. Whittier. I love to think of him. He was the best teacher I ever saw. He built up a reputation as a man who could teach arithmetic. There were three grown men in that class. I was a little boy and they made a great pet of me. I am going to tell you about two of those men, maybe the third. When the war began there was a man in that class by the name of Orville B. Young. I want his name to go down in this record, and it will go down in history before I get through with him. He was 30 years of age. He studied for a month to see whether he ought to become a minister of the gospel of the Christian Church, vulgarly called the "Campbellite Church," or whether he ought to enlist in the Federal Army in the defense of his country.

He studied that matter. I know he did it conscientiously. God Almighty never made a better or a braver man. He is dead now and gone to heaven. Finally he decided that he ought to enlist in the Federal Army as a private soldier. He enlisted in John M. Harlan's Tenth Kentucky Infantry. This was after Rousseau and Morgan and Wolford had taken out the dare-devils. It was after Seward's ninety days' picnic, when lawyers, doctors, and merchants were leaving their business and farmers were leaving their farms, and when men were leaving their wives and children to enlist in the Federal Army. Young went to Lebanon and enlisted, and as he went to enlist his brother-in-law Squire Land, went along with him. Young was to marry Land's sister after the war, if he lived. [Laughter.] Land got drunk. [Laughter.] When Young held up his hand to be sworn in, Land held up his hand and got sworn in, too; but got sworn in accidentally. [Laughter.] The next morning, after he found he was in the Army, he said, "Now that I am in, I will do anything in the world except charge breastworks." Finally, down at Jonesboro, when they were ordered to charge the breastworks, Land went to the sutler's wagon. Young served his three years. He was the man who placed the Union flag on the rebel breastworks at Jonesboro. Congress passed a resolution giving that man a gold medal for heroic conduct on the field of battle. [Applause.]

General Sherman sent for him and wanted to make him a captain, and he said: "I did not come into the Army for an office. I am going to quit when I serve my three years out." And he did not take it. Talk about "obscure heroes!" Why a man like that deserves to rank with Havelock as a Christian soldier. [Applause.] Talk to me about "border men," "obscure heroes!" [Laughter and applause.]

I want to tell you about another fellow in that class—Big Isaiah Coulter. He was 6 feet 6 inches tall, and looked like an Indian. I think he must have had Indian blood in his veins, for his hair was as black as a raven's wing. I love to think about him. He petted me when I was a child. A man who is kind to a child is not a bad man. He enlisted in that organization known as Sue Munday's guerrillas, as they were called in Kentucky. He loved that predatory warfare. He had fifty in his command. When they got any of Sue Munday's gang they hanged them. They barred

them from the rules of warfare, and I never thought that was fair.

Finally, when Quantrell was killed at Shelbyville, Big Isaiah was with him, and was shot right square through the body with a minie ball. He knew that if they caught him they would hang him, so he made a fellow take a ramrod, tie a silk handkerchief at the end of it, and shove it clean through his body in the track of the ball. Then he put knots on each end, and got on one of Alexander's thoroughbred stallions and rode him 30 miles to where his aunt lived, and contracted pneumonia and died. Talk to me about obscure heroes! That country is full of them. [Applause.]

I want to tell you about another one. Out in my country there is a Republican that I hardly knew when I saw him, but I had heard of him. He wrote me a letter, saying, "I want you to get me a pension. I am getting blind. Some of my Republican friends have told me that you would not help me to get a pension because I was in the Federal Army." I wrote back to him and said, "Your Republican friends lied. [Laughter.] I have a great deal of admiration for you, though I never saw you but once or twice." That was another obscure hero. His name was Tom Folwell. He was a private in the army under Grant. He was the first man that took a transport past Vicksburg. [Applause.] Grant made him a captain on the field of battle. I would like to know what kind of an opinion any man would have of a member of Congress who would not undertake to get a pension for a man like that, who had the courage and the skill to take the first transport past Vicksburg, and who is nearly blind. He will get his pension if I can get the Republicans to help me give it to him. [Laughter.]

I said that Harlan's regiment was made up of a different class of people—Mr. Chairman, how much more time have I left?

The CHAIRMAN. The gentleman has twenty-two minutes remaining.

Mr. TRACEY. What is this bill?

Mr. CLARK of Missouri. This is about the obscure heroes of the war. [Laughter.] Mr. Chairman, I was speaking about Judge Harlan's regiment. It was made up, as I was saying, of men who had come to the conclusion that the war meant something, men who went in to fight. They went in deliberately to stay their three years. They served under George H. Thomas. And then I want to say incidentally that more injustice has been done to George H. Thomas by the war writers than to any other man who took part in that great conflict. [Applause.]

I love to go up here to Thomas Circle and look at him on his horse. I took my little boy up there and taught him to look at and speak of General Thomas on his horse. I did that for two reasons. In the first place, that is the only respectable bronze horse in the city of Washington. [Laughter.] In the second place, it has Thomas on it, and Thomas saved the Union at Chickamauga. He was "the Rock of Chickamauga." If Thomas had not been a Virginian, if he had not been a border man, he would have been the general-in-chief of all the armies. They wrote him down, but they shall not keep him down. Harlan's regiment was in the battle of Chickamauga, and to show how pugnacious the Kentucky spirit is, I will tell you an incident. The chaplain of that regiment was a Christian militant. Harlan had been wounded and Hayes was commanding. He ordered the Chaplain to go back among the wounded, but he wouldn't do it. He rushed up to the front where the fighting was going on and shouted, "Boys, give them hell—as Colonel Hayes says." [Laughter.]

Mr. Chairman, the border men have always been "in it." Sir Edward Creasy wrote a book entitled "The Fifteen Decisive Battles of the World." I wish I could whisper to him to add a postscript making the number sixteen. It was not Saratoga, it was not Yorktown, that decided the American war of the Revolution; it was King's Mountain. That was where the British lion met his death on the American continent, at the hands of a handful of backwoodsmen, the same kind of men as Wolford and Morgan. Somehow they found that Major Ferguson, a brave Scotch major, had been sent out in that direction by Cornwallis to punish them for something. Ferguson's men stopped to eat breakfast, or dinner, or supper, I have forgotten which, on a place called King's Mountain. Isaac Shelby, John Sevier, Alexander Campbell, Major Williams, and Major Cronace, and others, with 810 Virginia, Tennessee, and Kentucky militia, got around King's Mountain and performed the most remarkable feat ever performed on any mountain.

Eight hundred and ten backwoodsmen, huntsmen, squirrel shooters, men who could hit a squirrel at a hundred yards, were there, in that thickly wooded country, every fellow behind a tree, with the flower of the British army in their front. Gradually they drove the British to the top of the mountain, each one killing his man every time, and when they got through I don't know whether there was a man left of the enemy to tell the tale. I have forgotten. [Applause.] Obscure heroes! [Laughter.] Why, sir, very few of the men on the other side who laughed at me the

other day had ever heard of John Sevier or Isaac Shelby or men like them. Now, Mr. Chairman, what does America owe to such men? Are they obscure, and does any man blame me for being proud of the fact that I was born and reared among such a people as that, the people that are found in West Virginia and Kentucky and Missouri, Maryland, and Tennessee.

I said that I lived in Kansas.

A MEMBER. How did that happen?

Mr. CLARK of Missouri. I went out there with Mr. HUDSON, who sits over there on the other side of the House, to practice law. He and I were in a law school together. Instead of going where we intended, I went to Wichita (which has been built up where the two Arkansas rivers come together), the year after the grasshoppers had eaten the State up. That year the blossoms dropped from the trees; and everybody thought it meant a coming incursion of the grasshoppers. I left the State to keep clear of the grasshoppers. A fellow at the Kentucky University paid me \$25 to write a speech for him; and that is the way I got out of the State. [Laughter.]

Now, there is one funny circumstance about this matter. I have a good deal of sympathy, I will say by way of preliminary, with Mr. SIMPSON on the other side of the House. Last summer I was going home on the train, and when I got tired of having nobody to talk to I went into the smoker and entered into conversation with a man I found there. I asked him where he was from? He said: "I am from Hutchinson, Kans." Then I asked him about the salt wells there, and matters of that kind. Said he: "You seem to know a good deal about Kansas." I replied: "Yes; I went out there to practice law, and I left because the grasshoppers drove me out of the State; and I don't believe there has been a grasshopper in the State since." He looked very serious for a minute or two, and then said: "No, there have not been any grasshoppers there since; but we have got something out there that is a d—d sight worse than grasshoppers." "Good Heavens!" said I, "what is it?" "Why," said he, "it is JERRY SIMPSON." [Laughter.]

But, Mr. Chairman, I want to say—and I might just as well talk about JERRY SIMPSON as anything else—I want to say that when I came into this House I had the newspaper idea about JERRY SIMPSON. Finally he got up here and made a speech on the silver question. I listened to that speech; and I want to say now, because somebody ought to state it to the American people, as SIMPSON and I are going out together [laughter], that during the whole of that long, able, profound debate on the silver question there was not a man in this House on either side who delivered a speech that was pitched on a higher plane of political economy and human philosophy than that of Mr. SIMPSON. [Applause.]

They say that "an open confession is good for the soul." I want to make that statement now. From that day to this, instead of having the newspaper idea of JERRY SIMPSON that he is a rantankerous, ad captandum demagogue, I have regarded him as a philosopher, as a statesman, as one of the friends of human freedom. [Applause.]

A MEMBER. Why don't you save this for his eulogy when he dies?

Mr. CLARK of Missouri. No, sir; I am going to say it while he is living. There is an old maxim, "Say nothing about the dead except what is good." That maxim ought to be reversed. It does not make any difference what you say about a dead man; he is dead, and you can not make him any deader. [Applause.] That maxim ought to read, "Say nothing about the living except what is good." [Applause.]

Now, I do not know what party SIMPSON is going to train with in the future. The truth is, it is very hard to tell what the political future in this country is going to be. [Laughter and applause.] I do not care what party he trains with; I do not care what anybody says about him; I hail him as my brother, because he loves the human race; he has fought for it here; he has rendered it conspicuous service here. [Applause.]

Mr. Chairman, how much more time have I?

The CHAIRMAN (Mr. DOCKERY). Ten minutes.

Mr. CLARK of Missouri. All right.

Obscure heroes, Mr. Chairman! [Laughter and applause.] Now, I do not want my time wasted by applause; I shall be obliged to gentlemen if they will not applaud me any more.

Obscure heroes! I have snatched a few of them from obscurity in these forty-five minutes. I want to talk to you about another of that class.

The first major-general that I ever saw—one of the handsomest men that ever lived—was Lovell H. Rousseau. God bless his memory! That man took eight or ten dare-devils out of every county in Kentucky—men who were determined to get into the war just as soon as there was a gun fired. He could not even drill them in Kentucky, but took them across the river, either to New Albany or Jeffersonville. Which was it, General? [Addressing Mr. SICKLES.]

Mr. SICKLES. Jeffersonville.

Mr. CLARK of Missouri. He formed them into Rousseau's

Louisville Legion. After that General Rousseau was elected to Congress. While serving here he broke a cane over some fellow's head—a thing that ought to be done a good deal oftener than it is. [Laughter.]

A MEMBER. Was it a Republican that he struck?

Mr. CLARK of Missouri. Yes; it was a Republican head that he broke the cane over. [Laughter.]

Now, they were going to expel him from the House on account of that transaction. He resigned, went back home, and appealed to his people for reelection; and to show how Kentuckians feel in such matters, they would not allow any man of any party to run against him. [Laughter and applause.] When he had broken that Michigan Republican's head with a cane it made him so popular in his district that they would not let a single solitary man ever run against him for anything. [Laughter and applause.] They reelected him, and at a mass meeting held in the city of Louisville, Ky., they presented him with a gold-headed hickory cane. [Laughter and applause.] The President of the United States appointed him to be military governor of the State of Louisiana. To show you the feeling of the people of this country toward a Federal general and the military governor of a great State, when he behaved himself so much like a gentleman, the fact is that when he died of the yellow fever in that city he was followed to the grave by the universal sorrow and regret of all of the people of that great city of New Orleans. [Applause.] Obscure heroes! [Laughter.] If that man had lived up in Massachusetts, my God, how many books would have been written about him! [Renewed laughter.]

One time, and this is another illustration, a Michigan general undertook to lecture old Wolford about not keeping up his military harness and war gear. Finally he got the old general mad. They were camped about where my friend McMILLIN lives in Tennessee. Wolford said at last, "Damn you, I didn't come down here to steal negroes; I came to fight. My regiment is not very good for dress parade, but if you bring out the three best Michigan regiments you have got I will run them out of Tennessee before sundown." [Laughter.] Obscure heroes! [Renewed laughter.]

Out in Missouri, Mr. Chairman, there lived a man—two of them—that I love to talk of, and I never will tire of talking of them, "Old Pap" Price, on the rebel side, and Frank Blair. Gen. Sterling Price was called "Pap" by his soldiers because he exercised a tender fatherly care over them. No braver man ever commanded an army, no more honorable gentleman ever drew his sword, no truer American ever lived. When he sent part of his army under Frank Cockrell to Beauregard at Corinth, Jefferson Davis pronounced the Missourians the finest body of men he had ever seen! [Applause.] Frank Blair was fit to have ridden "with Spotswood round the land and Raleigh round the sea." I always think of him as an antique hero just stepped out of the borderland—that borderland of which Walter Scott wrote—as a man who had stepped out of the pages of one of his novels. He was born rich. He and his father were distinguished, and his mother also. Coming from that old Kentucky stock that I hope will never die out, he went into the war when a child—and that is the way they do down there—into the Mexican war. After the war he located in St. Louis, practiced law, made a fortune, and married rich.

Somehow or other he took it into his head that slavery was a bad institution. It was an extremely dangerous theory to hold in that particular locality at that time. But he held it, and was not afraid to proclaim it. And here is an instance in proof of the honesty of the views he entertained and of his leonine courage. He and Samuel T. Glover, the most belligerent man in the State, went to the town of Hannibal to make a speech—what was called a "free nigger" speech at that time. A mob assembled and made so much noise and confusion and disorder that Glover could not make his speech. But Frank Blair had come there to make a speech, and he commenced, and he had not been talking for more than a minute and a half, when somebody hit him plump in the middle of the forehead with an egg. Most men under such provocation would have got mad and quit. But he never stopped. He only wiped off the egg, threw the froth remains of it on the ground, and proceeded with his speech. [Applause.]

He never alluded to it. The courage of it was recognized, and everybody admired the act. You can not get away from facts, and it is a fact that that mob that went there to stone him stayed to applaud. That is the kind of a man he was. When the war began Frank Blair saved Missouri to the Union. That cannot be stated too often. He raised a regiment; went into the Army; fought his way to a high grade; was Lincoln's special friend in Congress, and is regarded by the bookmakers of the United States, these New England war historians, as an "obscure hero!"

I suppose to-morrow I will be flayed in a hundred papers. [Laughter.] I want to state before I finish, Mr. Chairman, an idea that I started on yesterday. The mistake that Jefferson made, the mistake that Madison made, the mistake that John Randolph made, the mistake made by Calhoun, Hayne, John C. Breckin-

ridge and all of that great, glittering line of heroes and statesmen of the South made was that they did not go into the bookmaking business. [Laughter.] If children read books they will get ideas into their heads from that reading. I found a boy in a hotel in Keokuk last fall, when I was there one night, reading somebody's history of the United States that absolutely made it plain that Madison and Jefferson hated the Government, and that Alexander Hamilton took the people by the throat and rammed the Constitution down it. He asked me some questions about history and what I thought of it. I said, "If you want to know the history of this country you take that book and burn it up." [Applause.]

If the Marylanders, Virginians, Kentuckians, and Missourians had only written more books, so many of their great statesmen and heroic soldiers would not be sleeping in forgotten graves. [Applause.] [Here the hammer fell.]

Let There be no Premium Placed upon the Forgery of Public Records for the Purpose of Deceiving the People.

SPEECH

OF

HON. JOHN C. HOUK,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 17, 1894.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8230) making appropriations for the support of the Army for the fiscal year ending June 30, 1895, and for other purposes—

Mr. HOUK said:

Mr. CHAIRMAN: I desire to make some remarks on the pending bill providing money for the support of the Army, and for other purposes, with the hope that Congress and the country may see the necessity of enacting into law a proposition which I am thinking of offering as an amendment to the bill under consideration.

Strange to say, sections 5418 and 5479 of the Revised Statutes provide for the punishment of persons falsely making, forging, altering, or counterfeiting military and naval commissions or discharges or other public records for the purpose of defrauding the United States, while there is no provision whatever anywhere in our Federal laws for the punishment of persons who commit these acts for the purpose of deceiving the public.

To cure this defect in the law, on August 15 of this year I introduced the following bill, which was referred to the Committee on the Judiciary, but no action as yet has been taken by that committee:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That every person who falsely makes, alters, forges, or counterfeits any commission as an officer in the United States Army or Navy, or any discharge from the United States Army or Navy, or other public record, for the purpose of defrauding the United States or deceiving the public, or utters or publishes as true any such false, forged, altered, or counterfeited commission as an officer in the United States Army or Navy, or discharge from the United States Army or Navy, or other public record, for such purpose, knowing the same to be false, forged, altered, or counterfeited, or transmits to or presents at the office of any officer of the United States, or in any way uses such false, forged, altered, or counterfeited commission as an officer in the United States Army or Navy, or discharge from the United States Army or Navy, or other public record, knowing the same to be false, forged, altered, or counterfeited for such purpose, shall, on conviction thereof, be imprisoned at hard labor for a period not more than ten years, or be fined not more than \$1,000, or be punished by both such fine and imprisonment, and that any such false, forged, altered, or counterfeited public record or records herein described shall be seized and destroyed.

No more appropriate way of making this bill the law could be adopted than by adding it as an amendment to the pending Army appropriation bill.

It is the duty of Congress, by all necessary legislation, to guard and protect the records of the Government against forgery and counterfeiting, whether committed for the purpose of defrauding the Government itself, or for the purpose of deceiving the public at large, who compose the Government.

To forge a public record for the purpose of defrauding the Government is no greater moral crime than to forge a public record for the purpose of deceiving the public at large. A man who would commit the one deed would commit the other. Then why not prescribe a penalty for the one crime as well as the other?

Certainly Congress ought not to punish the man who forges a public record in order to defraud the Government and then by an act of omission license another man to forge as many public records as he pleases for the purpose of deceiving the public just so long as he does not pass or attempt to pass them on the Government directly. The dignity and best interests of the General Government demand the extension of our penal laws so as to cover the crime referred to.

I will illustrate the utter inefficiency of the Federal laws. John Smith forged a commission as an officer on the staff of General Grant and an honorable discharge or muster out signed by General Sherman. Mr. Smith never attempted to pass these forged papers on the Government for purposes of fraud, but he did use them for twenty-five years openly and notoriously for the purpose of deceiving the people of a whole State or Congressional district.

John Smith was never in the Army as a soldier in any manner, form, or fashion, yet he persuaded the public to believe his papers genuine and make him governor or Congressman because of their genuineness. In such a case as this there is no law punishing the impostor for his forgeries.

This illustration is not exaggerated or overdrawn. In order to convince Congress that my suggestion should become the law at once, by being added as an amendment to the pending bill, I will give a full, complete, and plain history, pro and con, from the record of the most startling and remarkable case of the forgery of a public record known to the annals of crime.

The novelist who desires to base a story upon facts of record could find no better material from which to draw than that to be found in this case, covering thirty long years of studied deception, involving forgery, moral perjury, and kindred crimes committed to secure high public station.

While the chief actor of this drama played the villain's part with admirable audacity and a degree of skill and success, he can but excite pity and contempt.

Considering his station and the objects for which he committed his misdeeds, a well written story of the "chief of Hooker's staff," based on the record he has made, would develop him into the most ludicrous but most interesting character now known to the literary world.

He has presented to the War Department the most wonderful and the boldest scheme of deception and fraud it has ever had experience with, but the War Department can not prosecute him because he refuses to pass upon the Government the commission and discharge which he filed with the Grand Army of the Republic and subsequently withdrew after exposure. You have but to investigate to be astounded at the audacity of the man and the weakness of our laws relating to the forgery of public records. To give Congress and the country a fair general understanding of the Gibson fraud, I will first present the following bill which I introduced on August 11, 1894:

A bill providing for the punishment of persons falsely making, forging, altering, or counterfeiting military and naval commissions or discharges or other public records for the purpose of defrauding the United States or deceiving the public, etc.

Whereas the following bill for the relief of Henry R. Gibson was introduced in the House of Representatives by Mr. HOUK of Tennessee on June 12, 1894, and in the Senate by Mr. HANSHROUGH of North Dakota, on June 16, 1894, and referred to the Military Committee of the respective Houses of Congress:

"A bill to perfect the military record of Henry R. Gibson."

Whereas Henry R. Gibson has made oath before a court of inquiry of the Grand Army of the Republic that he holds in his possession a true copy of an original and genuine commission as an officer in the Army of the United States, which commission is as follows, to wit:

"HEADQUARTERS ARMY OF THE POTOMAC,
"Camp near Falmouth, Va., March 17, 1863.

"Special order.

"1. Henry R. Gibson is hereby appointed a special aid-de-camp, with the rank of first lieutenant, and will be respected and obeyed accordingly.

"2. He will report for duty forthwith to Capt. A. P. Bilyeu, C. S. Vols., at Aquia Creek, Va., in accordance with verbal instructions.

"By command of Major-General Hooker.

"(Signed)

A. A. WOODWARD,
"Captain and A. A. G."

"Lieutenant Gibson will take and subscribe to inclosed oath and forward the same to headquarters.

"(Indorsed.)"

"HEADQUARTERS ARMY OF THE POTOMAC,
"Falmouth, March 17, 1863.

"Order of general commanding appointing Henry R. Gibson first lieutenant and aid-de-camp.

"I reported to Capt. A. P. Bilyeu, C. S. Vols., March 17, 1863, as ordered, and returned the oath to headquarters.

"(Signed)

HENRY R. GIBSON,
"First Lieut. and Aid-de-Camp."

And whereas he also has made oath before a court of inquiry of the Grand Army of the Republic that he holds in his possession an original and genuine honorable discharge from the Army of the United States, which honorable discharge is as follows, to wit:

"MILITARY HEADQUARTERS, DISTRICT OF DELAWARE,
"Wilmington, August 4, 1865.

"Special Orders.

"In obedience to the order of the Hon. Secretary of War, the following officers on duty in this district are this day honorably discharged from the service of the United States by reason of the termination of the war:

"(1) First Lieut. Henry R. Gibson, C. S. Vols., with the brevet rank of captain. He will turn over all United States property in his possession to Col. Joseph G. Crane, C. S. Vols., Baltimore, Md.

"(Signed)

S. M. BOWMAN,
"Col. 84th Pa. Vols., Commanding."

"And whereas said Gibson claims to have gallantly served as an officer in the Union Army on the staff of Maj. Gen. Joseph Hooker, or otherwise, from March 17, 1863, to August 4 (or 5), 1865, and to have participated in various hard-fought battles, such as Gettysburg, Fredericksburg, Chancellorsville, and the Monocacy; and

"Whereas said Gibson made the following applications based upon the aforesaid commission and honorable discharge, to the Ed. Maynard Post, Grand Army of the Republic, Tennessee, and was admitted to full membership in that post, to wit:

"First application, December 18, 1884:

"To the officers and members of Ed. Maynard Post, No. —,
Department of Tennessee and Georgia, G. A. R.:

"I have the honor to make application for membership in said Post, No. —, Department of Tennessee and Georgia, Grand Army of the Republic, basing my application on the following facts:

"I am 44 years of age, and was born in Queen Anne County, State of Maryland, now residing at Knoxville, in the State of Tennessee; am by occupation a lawyer.

"I served during the late rebellion as follows:

"First appointed March 17, 1863, as aid-de-camp on the personal staff of Gen. Jos. Hooker for the period of — years, and was discharged therefrom as A. C. Sub., at Wilmington, Del., on the 5th day of August, 1865, by reason of the termination of the war, serving at the time as acting commissary of subsistence of volunteers.

"I have never borne arms against the United States and have never been convicted by court-martial of desertion, nor of any other infamous crime.

"I have not made previous application for membership to the Grand Army of the Republic. Filed with Ed. Maynard Post, No. —, Department of Tennessee and Georgia, on the 18th day of Dec., 1884.

"(Signed)

HENRY R. GIBSON,
"Residence, No. 49 Broad st."

"A true copy of the original now on file in Ed. Maynard Post, No. 14, Dept. of Tenn., G. A. R.

"(Signed)

E. W. ADKINS, *Adj't.*

"[Seal of the post.]

"Second application, February —, 1885:

"To Ed. Maynard Post, No. 14,
Department of Tennessee and Georgia, G. A. R.:

"I have the honor to make application for membership in Ed. Maynard Post, No. 14, Department of Tennessee and Georgia, Grand Army of the Republic, basing my application on the following facts:

"I am 45 years of age, and was born in Queen Anne County, State of Maryland, now residing at Knoxville, State of Tennessee, and by occupation lawyer.

"I served during the late rebellion as follows:

"First enlisted March 17, 1863, as first lieutenant on staff of Gen. Jos. Hooker, for the period of — years, and was discharged therefrom as capt. C. S. V., at Wilmington, Del., on the 4th day of August, 1865, by reason of termination of the war.

"I have never borne arms against the United States, and have never been convicted of desertion nor of any other infamous crime.

"I have made previous application for membership to the Grand Army of the Republic. Filed with Ed. Maynard Post, Department of Tennessee and Georgia, on the — day of February, 1885.

"(Signed)

HENRY R. GIBSON,
"Residence, No. 49 Broad st."

"True copy of the original now on file in Ed. Maynard Post, No. 14, Department of Tennessee, Grand Army of the Republic.

"(Signed)

E. W. ADKINS, *Adjutant.*

"[Seal of the post.]

"[Indorsed on the back: 'Mustered April 17th, 1885. No. on Des. Book: 42.]

"HEADQUARTERS GRAND ARMY OF THE REPUBLIC,
"Lynn, Mass., March 14, 1894.

"I certify that the annexed are true copies of the application for admission to Ed. Maynard Post, No. 14, Department of Tennessee, G. A. R., of Henry R. Gibson, on file with the evidence and records of the court of inquiry convened by Special Order No. 3, from these headquarters, dated Nov. 8, 1893, to inquire into said Gibson's eligibility for membership in the Grand Army of the Republic.

"(Signed)

JAS. F. MEECH,
"Adjutant-General.

"And whereas charges were filed in said Ed. Maynard Post that the aforesaid commission and honorable discharge are fraudulent, bogus, or forged, and said Gibson was expelled from the Grand Army of the Republic in the following official order, to wit:

"HEADQUARTERS DEPARTMENT OF TENNESSEE,
"GRAND ARMY OF THE REPUBLIC,
"Knoxville, Tenn., Jan. 23, 1894.

"General Orders No. 8, Series 1893-1894.

"1. The following special order from the commander in chief is published for the information of the comrades of this department:

"HEADQUARTERS GRAND ARMY OF THE REPUBLIC,
"Lynn, Mass., Jan. 20, 1894.

"Special Order No. 5.

"1. The proceedings of the court of inquiry, convened by Special Order No. 3 from these headquarters, to examine into the membership of Henry R. Gibson, of Ed. Maynard Post, No. 14, Department of Tennessee, has been reviewed by the judge-advocate-general, who finds as follows:

"First. That the appointment of the court of inquiry to ascertain the eligibility of Henry R. Gibson to membership in the Grand Army of the Republic was lawful and a proper exercise of power by the department commander, under the direction of the commander in chief.

"Second. That the court of inquiry, having ascertained and reported all facts bearing upon the matter under inquiry, after a full and fair hearing, in which the party whose eligibility was being inquired into had every opportunity to be heard, the commander in chief is authorized to make a finding of facts, and act upon such finding without obtaining a finding from the court.

"Third. That the only finding warranted by the evidence, as presented in the records of this case, is that said Henry R. Gibson served merely as a commissary clerk during the war of the rebellion, and not as an officer or soldier, and that the appointment and discharge, which the said Gibson pretends to hold, are spurious and fictitious and entitled to no credit whatever.

"Therefore, the findings of the judge-advocate-general are approved, and it is hereby ordered that Henry R. Gibson be dropped from the rolls of Ed. Maynard Post, No. 14, Department of Tennessee, Grand Army of the Republic, as he is ineligible to membership under our rules and regulations.

"Comrade Frank Seaman, commander Department of Tennessee, Grand Army of the Republic, is hereby charged with the execution of this order.

"By order of John G. B. Adams, commander in chief.

"Official:

JAS. F. MEECH,
"Adjutant-General.

"2. The commander of Ed. Maynard Post, No. 14, is hereby ordered, at the first meeting of said post after the receipt of this order, to direct that these

General Orders, No. 8 be entered in full on the post records; and also direct that the name of Henry R. Gibson be dropped from the roll of membership, as ordered by the commander in chief. The commander of Ed. Maynard Post, No. 14, will make official report to these headquarters, without delay, of the execution of this order.

"3. The department court of inquiry, convened by Special Orders, No. 11, from these headquarters, dated November 23, 1893, 5 o'clock p. m., and composed of Comrades Thos. H. Reeves, Post 35, president; W. T. Mitchell, junior vice department commander, Post 8; Luke Harvey, Post 14, and Wm. J. Ramage, Post 14, recorder, is hereby dissolved. The department commander returns thanks to the members of the court for the faithful performance of the duties assigned them.

"By command of Frank Seaman, department commander.

"CHAS. H. OGDEN,
"Assistant Adjutant-General.

"And whereas said Gibson claims that his expulsion was not warranted by the facts and was brought about by improper and corrupt means on the part of the officials of the Grand Army of the Republic, namely, the department commander, the commander in chief, and his judge-advocate-general, and that the proof showed that he was commissioned as an officer of the Federal Army on the staff of Maj. Gen. Joseph Hooker and received an honorable discharge from the military service of the United States; and

"Whereas said Gibson has proposed to appeal from the action of the officials expelling him from the Grand Army of the Republic to the national encampment of that order, which convenes in Pittsburg, Pa., on September 10, next; and

"Whereas the aforesaid commission and honorable discharge, for some peculiar reason, are not of record in the War Department, and said Gibson, as a result, is now being publicly charged with being a hypocrite, fraud, and forger, pending his proposed appeal to the national encampment; and

"Whereas said Gibson claims that the aforesaid Ed. Maynard Post passed a resolution that it had fully investigated his military record and found the same to be correct and his commission and honorable discharge to be genuine; and

"Whereas said Gibson in justice is entitled to have his said commission and honorable discharge, if genuine and not bogus, fraudulent, or forged, recorded and recognized by the War Department of the United States; and

"Whereas said commission and honorable discharge, if bogus, fraudulent, or forged, and not genuine, in justice to the United States Government, the public at large, and the Grand Army of the Republic, should be exposed as such: Therefore, in order to give said Gibson an opportunity to come before the Committee on Military Affairs of the House of Representatives of the United States Congress, and urge and secure the passage of a law which will compel the Secretary of War to receive and record his commission and honorable discharge, if genuine, and otherwise correct his military record, if he has any,

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of War be, and he is hereby, authorized and directed to spread or record the commission of Henry R. Gibson as an officer of the Union Army on the staff of Major General Joseph Hooker, and the honorable discharge of said Gibson from the military service of the United States, when the same are presented by said Gibson, upon the permanent records of the War Department, and certify to said Gibson, under the official seal of the Department, said action, when completed.

"SEC. 2. That the Secretary of War be, and he is hereby, further authorized and directed to recognize said Gibson as a first lieutenant and commissary of subsistence volunteers, with the brevet rank of captain, as he is recognized in his honorable discharge; *Provided, however,* That there are no facts or records in the possession of the War Department which show conclusively the commission and honorable discharge of said Gibson to be 'fraudulent,' or 'spurious and fictitious and entitled to no credit whatever,' or that said Gibson did not serve as a soldier in the Union Army between March 17, 1863, and August 4 (or 5), 1865; and

"Whereas the Committee on Military Affairs of the House of Representatives referred the bill introduced by Mr. HOUK to the Treasury Department in the following words, to wit:

"Respectfully referred to the honorable Jno. G. Carlisle, Secretary of the Treasury, with the request that he furnish to the Military Committee of the House of Representatives a full and complete statement, giving dates, of the positions held, services performed, and compensation received, as shown by the records of the Third Auditor's Office, by Henry R. Gibson, between March 17, 1863, and Aug. 5, 1865, and by whom he was employed, and whether he was detailed at any times between these dates from the staff of any military officer to do duty in the Commissary Department as a clerk; and

"Whereas the Treasury Department responded in the following letters to wit:

"TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
"Washington, D. C., June 14, 1894.

"Hon. JOSEPH H. OUTHWAITE,

"Chairman Committee on Military Affairs,
"House of Representatives.

"SIR: I have the honor to transmit herewith copy of letter of the Third Auditor in reply to yours of the 7th instant, inclosing House bill No. 7366, to perfect the military record of Henry R. Gibson.

"The bill is returned herewith.

"Respectfully, yours,

"S. WIKE,
"Acting Secretary.

"TREASURY DEPARTMENT, OFFICE OF THE THIRD AUDITOR,
"Washington, D. C., June 18, 1894.

"Hon. JOHN G. CARLISLE,

"Secretary of the Treasury:

"SIR: I have the honor to return the within communication addressed to you by Hon. J. H. OUTHWAITE, chairman Committee on Military Affairs, House of Representatives, together with its inclosure, 'H. R. 7366: A bill to perfect the military record of Henry R. Gibson,' and in reply to Chairman OUTHWAITE's request that his committee be furnished with a full and complete statement, giving dates of the positions held, services performed, and compensation received, as shown by the records of this office, by Henry R. Gibson, between March 17, 1863, and August 5, 1865, and by whom he was employed, and whether he was detailed at any time between these dates from the staff of any military officer to do duty in the Commissary Department as a clerk. I have to state that the name of Henry R. Gibson as an officer does not appear on the records, or in the files of this office; neither have I found his name in the Official Army Register (regulars), nor in the Official Register of the Volunteer Force of the United States Army.

"From an examination of the accounts of A. P. Bilyeu, captain and commissary of subsistence, volunteers, it is found that Henry R. Gibson was a civilian employee in the office of Capt. Bilyeu, as follows, viz: From March 28 to 31, 1863, as asst. clerk, at a compensation of \$50 per month; and as clerk

from April 1 to June 30, 1863, at a compensation \$65 per month; from July 1 to October 31, 1863, at a compensation of \$75 per month; and from January 1, 1864, to July 2, 1865, inclusive, at a compensation of \$90 per month.

"Capt. Bilyeu resigned July 2, 1865, and, so far as known to this office, Mr. Gibson rendered no service in the Commissary Department, or in any other of the staff departments of the Army subsequent to July 2, 1865.

"It will be observed that Mr. Gibson was employed and paid as a civilian employee. I am not cognizant of any law or Army regulation under which a commissioned officer could be detailed on duty as a clerk; so that if he was a commissioned officer, as alleged, he was not entitled to payment for services as a civilian employee; and if he was a noncommissioned officer or private, and detailed on extra duty as a clerk, he was not entitled to any compensation therefor, the allowance having been prohibited by the act of March 3, 1863.

"Respectfully, yours,

"SAM'L BLACKWELL, Auditor."

"And whereas the Committee on Military Affairs of the House of Representatives also referred said bill to the War Department in the following words, to wit:

"The inclosed bill is respectfully referred to the honorable Secretary of War with the request that he furnish to the Military Committee of the House of Representatives the following information:

"1st. A full and complete statement of all records, letters, and facts in the possession of the War Department bearing on the military career of Henry R. Gibson, the genuineness of his alleged commission and honorable discharge, and the justice of his claim to have been a soldier in the United States Army during the rebellion, as set forth in the preambles of the bill.

"2d. Whether Henry R. Gibson has ever made application to the War Department to have his alleged commission and honorable discharge placed on record, or to have his alleged military record amended or corrected in any way.

"3d. Whether the War Department is now or has ever been in possession of the original papers which Henry R. Gibson claims to be his commission, and honorable discharge.

"4th. Whether, in the judgment of the honorable Secretary, the claims of Henry R. Gibson are sufficiently supported and well founded to justify Congress in passing the accompanying bill."

"And whereas the War Department made the following reply, to wit:

"Relief of Henry R. Gibson.

"WAR DEPARTMENT.

"Washington City, June 15, 1894.

"The chairman of the Committee on Military Affairs,
House of Representatives.

"SIR: Referring to your letter of the 7th instant, requesting certain information relative to the bill (H. R. 7366, 53d Congress, 2d session) to perfect the military record of Henry R. Gibson, I beg to inform you that after careful search no record has been found that Henry R. Gibson was in the military service of the United States during the war of the rebellion, either as an officer or as an enlisted man.

"It appears, however, from Gibson's own statement, that he was a civilian employee of the Commissary Department of the Army, and in a report from the 3d Auditor of the Treasury, not on file, but referred to in the correspondence records of this Department, it is stated that he was paid as such civilian employee from March, 1863, to July, 1865.

"Mr. Gibson's statement, to which reference has been made, and in which he declares that he was 'never regularly in the U. S. service during the war,' was addressed to the Secretary of War from Knoxville, Tenn., July 12, 1866, and reads as follows:

"On the 30th of November, 1864, I applied for a commission as capt. and C. S. Vols., said application being indorsed by Capt. A. P. Bilyeu, C. S. Vols., chief com'm'y for the dist. of Del. and E. shore of Md. by Col. S. M. Bowman, commanding said dist., by Lieut. Col. Joseph G. Crane, chief C. S. 8th Army Corps, by Lieutenant-Colonel S. C. Benham, chief C. S. department Arkansas and 7th Army Corps, and by Brigadier-General Henry G. Thomas, U. S. Vols., and was forwarded to you by Governor Fenton, of New York.

"At the time of making the above application, for two years previously and for nine months subsequently, I was chief clerk to Capt. A. P. Bilyeu, C. S. Vols., and had been assigned to many difficult, arduous, and perilous duties, arising out of my captain's peculiar duties as officer in charge of the beef cattle of the Army of the Potomac, then as connected with the organization of colored troops in Maryland and Delaware, and lastly as chief C. S. of district of Delaware and east shore of Maryland. The indorsements established my efficiency under the above circumstances.

"Being a citizen of South Carolina, and one of her few loyal sons, earnestly praying and working, in my humble capacity, for the success of the Federal armies, I was naturally anxious to be recognized by my country as one of her defenders, and would have enlisted had I not been persuaded by officer friends (some of whom indorsed my application) to continue as commissary clerk, they promising to use their influence to obtain for me a commission of capt. and C. S. V. My application was postponed from time to time until November 30, 1864, when it was written and sent round to be indorsed by those in authority who deemed me deserving. But we awoke one bright April morn., and the war was over, the rebellion was dead, the old flag had triumphed; and this I suppose decided the chances against me.

"Now, sir, upon this brief statement of facts and upon my indorsed application (which is, I believe, in your office) I respectfully request that I may be granted a commission as capt. and C. S. Vols., dated Nov. 30, 1864 (or earlier), and a muster-out dated July 4, 1865; and I will sign the necessary papers to deprive myself of all compensation for said period, or will accept the commission on condition that I shall receive no pay, rations, or compensation of any kind, for self or servant (said condition, of course, not appearing on the commission).

"This is doubtless a unique and unheard of application, but I am living in a Southern city, and feel keenly and sensitively the humiliation arising from my never having been regularly in the U. S. service during the war. That I did serve my country earnestly and well my own conscience and the voices of my superiors alike assure me; but alas! where is the proof that I ever served her at all? Any commission even of a lower grade than capt. and C. S. Vols. will be hailed as a boon, for I long to be able to say 'I too stood up for the flag of my country when rebellion arose in the land,' and long to show the triumphant proof.

"Praying, though little hoping, a favorable response, I am, sir,

"Your obedient servant,

"(Signed)

HENRY R. GIBSON."

"No action was taken by the Department upon this application of Mr. Gibson for a commission in the Commissary Department, and no record has been found of the receipt of the former application to which he refers, though a letter from Governor Fenton, dated at Albany, N. Y., Dec. 14, 1864, joining in a recommendation of Gibson for appointment as an 'asst commissary of subsistence' was received at the Adjutant-General's Office in 1868, without inclosures. No action was taken upon this communication. No record has

been found that Henry R. Gibson has ever made application to this Department to have 'his alleged commission and honorable discharge' placed on record, or to have his alleged military record amended or corrected in any way; nor has the Department ever been in possession of any original papers claimed by Mr. Gibson to be his commission and honorable discharge, but certain papers purporting to be copies of original orders left at this Dept. by Hon. JOHN C. HOUK for verification were returned to Mr. HOUK by Department letter dated January 6, 1894, in which it was stated:

"These papers appear to be copies of what purport to be special orders relating to one Henry R. Gibson. One of these 'orders,' dated headquarters Army of the Potomac, March 17, 1863, and signed A. B. Woodward, captain and A. A. A. G., relates to the appointment of the said Gibson as a 'special aid-de-camp,' and the other, dated military headquarters, district of Delaware, Wilmington, August 4, 1865, and signed S. M. Bowman, colonel 84th Pennsylvania Volunteers, commanding, purports to discharge 'First Lieutenant Henry R. Gibson, C. S. Vols., with the brevet rank of captain,' from the service.

"Both of these papers are fraudulent.

"The special order book of the Army of the Potomac, which is complete for the period in question, does not show that any such order as that submitted by you, dated March 17, 1863, was issued by General Hooker. On the contrary, the special order which was issued by General Hooker on March 17, 1863, contains thirteen paragraphs, no one of which relates to Gibson in any way. This order and all other special orders of General Hooker for the month of March, 1863, are signed by S. Williams, assistant adjutant-general. It does not appear from the records of this Department that there was any such person as 'A. B. Woodward, captain and A. A. A. G.,' on duty at the headquarters of the Army of the Potomac at this time, nor does it appear that any officer of this name was in the military service of the United States, either in the regular or volunteer Army, at any time during the late war. Furthermore, General Hooker had no authority to make such an appointment as that in question, and if he had made it it would have been void ab initio and would have conferred upon the appointee no right whatever to be recognized as being in the military service of the United States.

"Since Gibson was not in the military service he could not be discharged therefrom, and consequently the order dated August 4, 1865, purporting to discharge him would be valueless as evidence of service, even if it were genuine.

"But it is plainly fraudulent.

"Col. S. M. Bowman, Eighty-fourth Pennsylvania Volunteers, was relieved from the command of the District of Delaware on March 20, 1865, and consequently could not have issued any orders in that district subsequent to that date. In addition, it does not appear that he had authority at any time to issue an order such as that in question.

"The official record, as well as Mr. Gibson's own statement, made to the Department in writing in 1866, show conclusively that he was a civilian employee of the Commissary Department from March, 1863, to July, 1865, and had no military status whatever.

"In view of the facts in this case, as set forth in the foregoing statement, no just ground is discovered for extending to Mr. Gibson, by legislative enactment, the relief provided by the pending bill.

"Very respectfully,

"DANIEL S. LAMONT,

"Sec'y of War."

"And whereas the following letter was addressed to the chairman of the Military Committee of the House asking a hearing for Mr. Gibson:

"WASHINGTON, D. C., June 14.

"DEAR SIR: I have introduced a bill for the relief of, or to perfect the military record of, Henry R. Gibson, No. 7366 (7428).

"This case is surrounded by a most extraordinary set of circumstances, and is admitted by the War Department officials to be the most remarkable case they ever had occasion to deal with.

"Your committee is petitioned to grant Mr. Gibson the privilege of appearing before it with his papers and making a statement in his own behalf.

"Please advise me whether Mr. Gibson will be given a hearing. I think, under the exceptional circumstances, it would be an injustice not to grant him the privilege asked.

I am, very respectfully,

(Signed)

JOHN C. HOUK.

Hon. J. H. OUTHWAITE,
Chairman of the Military Committee of the House of Representatives.

And whereas the following reply was made, granting a hearing:

"COMMITTEE ON MILITARY AFFAIRS,

"HOUSE OF REPRESENTATIVES,

"Washington, D. C., June 14, '94.

"Hon. JNO. C. HOUK,
House of Representatives.

"SIR: In reply to yours of June 14, asking whether Mr. H. R. Gibson, of your district, for whom you introduced a bill (H. R. 7366 (7428)) to perfect military record, may have a hearing before this committee, I will say no doubt that gentleman will be permitted by the committee to be heard before it any time that he will present himself to the subcommittee having in charge this bill and make request that he be heard before the whole committee.

"The rule of this committee is to permit persons for whom bills of a private character have been introduced to appear first before the subcommittee to which his bill is referred. If that subcommittee disposes of the bill favorably of course there is no necessity of a hearing before the full committee. Should that subcommittee be undecided as to the report to be made upon the bill, or should they consider it of more than usual importance that the matter be heard before the full committee, upon their recommendation that it be so heard permission is always granted, and generally at the convenience of the applicant or the member representing him.

"Very truly, yours,

"(Signed)

JOS. H. OUTHWAITE,

"Chm. Com. on Military Affairs.

And whereas the chairman of the subcommittee having the bill in charge has stated that he did not feel like taking the bill up and disposing of it unless Mr. Gibson should ask it; and

Whereas Mr. Gibson has refused to come forward and ask a hearing and action on the bill for his relief, although after notice he has had sixty days in which to do so; and

Whereas after his expulsion from the Grand Army of the Republic he issued an address Feb. 8th, 1894, to the ex-Federal soldiers of the 2d Congressional District of Tennessee, in which he said:

"The national commander of the Grand Army of the Republic having decided that I am not eligible to membership in the Grand Army, and that my appointment and discharge were spurious and fictitious, and entitled to no faith or credit whatever, * * * from this decision of Commander Adams I shall appeal to the national encampment that meets next September; and

Whereas under the regulations of the G. A. R. he had six months from January 20, 1894, the date of his expulsion, within which to appeal; and

Whereas the six months expired on July 30, 1894, and the adjutant-general of the Grand Army of the Republic of the United States has certified in the following letter that no appeal was filed:

"HEADQUARTERS GRAND ARMY OF THE REPUBLIC,
"25 Exchange Street, Lynn, Mass., July 23, 1894.

"FRANK SEAMAN,
"Past Department Commander G. A. R., Knoxville, Tenn.

"DEAR SIR AND COMRADE: Replying to your favor of the 20th inst., I beg to say that no appeal in the case of Henry R. Gibson has been received at these headquarters up to date.

"I have the honor to remain, fraternally yours,
"(Signed)

JAS. F. MEECH,
"Adjutant-General."

And whereas George W. Bilyeu identifies Henry R. Gibson in a recent photograph of a group of Grand Army men as the same person who was with him employed as a civilian clerk in the commissary under his father, Aaron P. Bilyeu, chief of the commissary, and says that Henry R. Gibson was not a soldier in the Union Army between March, 1863, and July, 1865, in the following affidavit, marked Exhibit I:

"WASHINGTON, Sept. 25, 1893.

"In the photograph hereto attached, the second man from the left-hand end of the photograph, sitting on the bench in the front row, with a turn-down collar and black cravat or tie, with large ears, with a mustache and goatee, with a broad nose, with a smile on his face, with legs uncrossed and both feet on the ground or floor, without any walking cane or badge, rather small of stature, and with hands clasped across his legs, and around which figure, in the photograph hereto attached, is a mark or line drawn, which is connected by a mark or line with a mark or line running around my name attached to this statement, is the same identical Henry R. Gibson, who was a civilian employee or commissary clerk, and not a Federal soldier or officer, from March, 1863, to July, 1865, under my father, Captain A. P. Bilyeu, C. S., U. S. Vols.
"(Signed) GEORGE W. BILYEU."

And whereas said Gibson's military papers have been declared by the G. A. R. spurious and fictitious and entitled to no credit whatever; and

Whereas the records of the Treasury and War Departments show conclusively that he was never anything but a commissary clerk; and

Whereas the War Department has denounced his military papers as "fraudulent" and stated there is no just ground for extending the relief asked in the bill; and

Whereas said Gibson's own letter on file in the War Department and his failure to appeal from the decision of the commander in chief of the G. A. R., expelling him from that order, to the national encampment are conclusive evidence that he is a bold fraud and that his papers are forgeries; and

Whereas said Gibson has for thirty years, both publicly and secretly, impeached and discredited in the minds of thousands of good and loyal citizens of east Tennessee the permanent records of the executive branch of the Government by the use of a fraudulent or forged commission and a fraudulent or forged honorable discharge; and

Whereas said Gibson continues to use these fraudulent or forged papers, to the prejudice of the ex-Federal soldiers of east Tennessee and to the discredit of the Government, for his own material benefit, alleging that his

papers are genuine and legal, and that the War Department officials are corrupt and have falsified the public records; and

Whereas said Gibson refuses to submit his papers for the inspection of the War Department, or the Senate, or the House of Congress; and

Whereas such acts as are related in the preambles of this bill do not come within the provisions of existing law, unless the fraudulent or forged papers are passed upon the Government: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That every person who falsely makes, alters, forges, or counterfeits any commission as an officer in the United States Army or Navy, or any discharge from the United States Army or Navy, or other public record for the purpose of defrauding the United States or deceiving the public, or utters or publishes as true any such false, forged, altered, or counterfeited commission as an officer in the United States Army or Navy, or discharge from United States Army or Navy, or other public record, for such purpose, knowing the same to be false, forged, altered, or counterfeited, or transmits to or presents at the office of any officer of the United States or in any way uses such false, forged, altered, or counterfeited commission as an officer in the United States Army or Navy, or discharge from the United States Army or Navy, or other public record, knowing the same to be false, forged, altered, or counterfeited for such purpose, shall, on conviction thereof, be imprisoned at hard labor for a period not more than ten years, or be fined not more than \$1,000, or be punished by both such fine and imprisonment, and that any such false, forged, altered, or counterfeited public record or records herein described shall be seized and destroyed.

MR. GIBSON'S FIRST NOTORIOUS PUBLIC LETTER.

Mr. Chairman, it being charged on all sides that Mr. Gibson was a military fraud and impostor, having secured admission to the Grand Army of the Republic by stating falsehoods in two written applications, many of his friends demanded that he make a public explanation in vindication of himself. His effort in this direction was delayed until the fast disintegration of his following convinced him he must do something and do it quickly and boldly.

Being guilty of forging his military papers, and having deliberately stated falsehoods in both of his applications, he made the effort of his life in the letter he published. For gall, smooth and cunning misstatements of facts, injured innocence, egotism, affected dignity, and slight of hand evasion of the points of the case, his letter has never been equaled even by himself.

To those acquainted with the record of his case, his letter brought a firmer conviction, if possible, of his guilt, but thousands who had not time or inclination to investigate the record accepted Mr. Gibson's statement as a vindication of himself and rallied to his support, believing that he had been falsely accused.

No guilty person ever more adroitly or successfully yet impudently managed his defense than did he for the time being.

For the reason that Mr. Gibson does not mention the points in the case in his letter, which I shall read, I will ask you to keep it in mind that the charges which he should notice are that when he stated in each of his two separate applications that he was a lieutenant on Hooker's staff and was mustered out as a captain he stated a falsehood, and that when he swore to this statement in the Grand Army of the Republic he swore to a falsehood, and that the commission and discharge which he presented to the Ed. Maynard Post are forgeries.

His "unique" letter reads as follows:

To the Republicans of the Second Congressional District:

While I desired it known that I would be a candidate for the next Republican nomination for Congress, I did not desire the canvass to begin a whole year in advance of the ordinary time. I do not believe the welfare of the party will be promoted by a long-continued strife for the nomination, and have, therefore, refrained from making any utterances, or publishing any statements calculated to stir up strife at this early day.

My opponents, however, do not seem to care for the welfare of the party, but to care only for themselves, and so they have begun the fight all along the line. Their principal bombardment is upon me. I have submitted to their attacks for about a month without making any reply. Not being hurt, knowing that it is not the thunder that kills, but the lightning, I was content to remain silent. Besides, I am getting accustomed to being abused and misrepresented. That is one of the penalties inflicted upon men in public life.

Nevertheless, some accusations have been made lately that I desire to refer to. One is that I served in the rebel army, and the other is that I was never in the Union Army.

OLD DEMOCRATIC SLANDERS.

These are a couple of old, stale, Democratic falsehoods started about seven-teen years ago, and again and again answered. My Union record from 1858 to the end of the war was published in the Republican twice, once over thirteen years ago and again over twelve years ago, in refutation of these same Democratic slanders. Some of my young Republican adversaries were, perhaps, too young then to remember my answer to these falsehoods; and, perhaps, they do not know that they are using Democratic ammunition in their efforts to blacken my record. It seems to me that a good, true Republican would be ashamed to use Democratic weapons to strike down a fellow Republican; and, if they are not ashamed of it, I believe all good, true Republicans will be ashamed of them.

Besides the men who make these charges know well enough that there is absolutely no truth in either charge; they know that both charges are absolutely false and are exactly the reverse of the truth; but they own newspapers and are anxious to defeat my nomination for Congress, and they hope to be able, by means of these false Democratic charges, to deceive and mislead a few people.

In answer to the charge that I was in the rebel army, I will say that I entered Hobart College, at Geneva, in the State of New York, in September, 1858, and remained there, except during vacations, until June, 1862, when I graduated. I was at Geneva when the rebellion broke out, and was an ardent, outspoken Union man from the very start, and made many speeches in favor of the Union cause while yet a schoolboy. I never drew a disloyal breath, or uttered a disloyal word, or did a disloyal deed in my life. After graduating

at college, in June, 1862, I returned to Maryland, where I was born and where my father was living, and remained in Maryland and in Washington City until March, 1863, at no time having been nearer the rebel army than Washington City.

As to the charge that I was never in the Union Army, I will say that I served in the commissary department of the Union Army from about March 17, 1863, to August 4, 1865, being with the Army of the Potomac a large part of the time, and all the time doing my duty as became a loyal man and a faithful subordinate; and received the commendation of my superior officers. In January, 1866, I came to Knoxville and have been here or in Campbell County ever since. Now, let Mr. JOHN C. HOUK tell the people what sort of a "war record" he has.

NOT ASHAMED OF HIS RECORD.

I have never boasted of my army record, for I have always deemed it an humble one; but I am proud that I was on the Union side in the great war for the Union's life, and that I filled one man's place in the Union Army, and those I served under say I filled it well. My "record" was fully disclosed to the Grand Army post here, and after due consideration was deemed satisfactory.

The men who are repeating these Democratic attacks upon my army record were babies, or were not born when the war was going on; and it is safe to say that if anybody beside me was an opposing candidate for Congress, it would matter not how bravely and honorably he served in the Union Army, he would soon find himself charged with being a deserter or a bummer or a coward or a "coffee cooler" or a hospital lounge, or with some other disreputable conduct. To be falsely accused or vilified seems to be the unavoidable fate of any man who runs for Congress in this district. Judge Houk, when first a candidate, was charged with having been dishonorably dismissed from the army, with having been engaged in passing counterfeit money, and with having been removed from his office as judge by the legislature for drunkenness, but the people elected him to Congress in spite of those charges.

I defended Judge Houk against these charges. I defended him with my voice, my pen, and my pocketbook; and I never then expected that the day would come when Judge Houk's sons would show their gratitude to me for defending their father by trying to make people believe that I was in the rebel army and never was connected with the Union Army. When Gibson was fighting Judge Houk's battles he was a great man and a good man, and was deemed worthy of all honor, but now that the judge is dead and Gibson's friends think his time has at last come to represent them in Congress, behold Gibson is charged with being a very bad man. The people see through these small political tricks. The people love fair play, and I am willing that they may decide between me and the men who are abusing me by repeating falsehoods invented seventeen years ago by Democratic politicians.

RUNNING ON HIS PEACE RECORD.

The claim that I am running for Congress on my "war record" is one made by my opponents to throw newspaper balls at. I respectfully inform my opponents that I am running for Congress on my peace record. These are days of peace, and not days of war. If they were days of war I would cheerfully give way to my warlike opponents, and would rejoice to see them marching to the front and facing a full battery loaded to the muzzle with grape-shot and canister. But the people do not want soldiers right now. The war is over, over twenty-eight years ago. We now want men to devise means to enable the farmer to get a better price for his produce, and to enable the laboring man to get more work and better pay.

My peace record covers twenty-six years of active work in behalf of the Republican party. In that period I have made fourteen canvasses, speaking from twenty to sixty times in each canvass, many of the canvasses covering the whole Congressional district, and several of them extending to other sections of the State. Many of my speeches have been published and scattered all over the State. I have attended most of the Congressional and State conventions since the war, and have drawn several of our State platforms. In this same period I have spent several years as editor of Republican newspapers, and when not editor my pen has been at work in the cause of my party. I served in the constitutional convention of 1870, and in both branches of the State legislature, and the work I did in those bodies remains on the statute books to this day, and will be brought to the attention of the people in due season. This is the record I am running for Congress on; and I am willing to compare my peace record with that of Mr. JOHN C. HOUK also.

THE NEEDS OF THE PRESENT TIME.

If the Republican party think twenty-six years of hard, faithful, ceaseless work for its welfare a sufficient apprenticeship for a seat in Congress, I will be proud of the honor. If they think Mr. Houk has a better war record or a better peace record, or can do them more and better service in Congress, let him be chosen.

These are hard times in which we are now living. It may be that neither Congress nor the legislature can help us. Nevertheless, the people feel that they need their most faithful and most experienced men to serve them; and candidates for Congress should be engaged in discussing the needs of the people, the cause of the hard times, and the proper measure to bring better times, instead of throwing mud at each other, and comparing "war records," and digging in Democratic graveyards.

In due time I expect to give my opponents a chance to meet me face to face before the people to discuss with me all such measures as each of us may suggest to bring better times. I hope to engage in a canvass that the people will consider honorable and fair; and I will not resort to any tricks, nor mud throwing, nor abuse. I have too much respect for the office I hold and the office I seek, and too much respect for myself, to engage in misrepresentation or abuse. The United States is now the greatest nation in the world, and the man who aspires to be one of her Congressmen, to make laws for her, should be a man too broad-minded, too large-hearted, too open-handed to engage in little schemes and small tricks.

In conclusion, I wish to return my thanks to the thousands of true and tried Republicans who are actively and bravely advocating my election in all the counties. The masses of the people are for me, and if the primary was held to-day my majority would be from eight to ten thousand.

HENRY R. GIBSON.

JULY 20, 1898.

MR. HOUK'S ANALYSIS OF MR. GIBSON'S FIRST NOTORIOUS PUBLIC LETTER.

Mr. Chairman, as soon as Mr. Gibson's "unique" explanation of his military record appeared in print I analyzed it in the following public letter, which substantially is the history of the Gibson fraud, commencing nearly thirty years ago, and will no doubt prove of more than ordinary interest to criminal lawyers and other students of criminology:

KNOXVILLE, TENN., August 3, 1898.

To the Republicans of the Second Congressional District:

On last Sunday morning, July 30, there appeared in the Knoxville Daily Journal an article of two columns over the signature of Mr. Henry R. Gibson. That article contains several false statements which were written purposely to mislead and deceive you, and was intended as an attack upon me,

and a slur, cowardly and with malice, upon my father in his grave. Realizing such to be the case I feel it is a duty I owe the public, the memory of my father, my family and friends, and myself that I make a reply.

In the first place I will pay my respects to the lofty (?) introductory remarks of Mr. Gibson's card.

He says while he desired it known that he would be a candidate for the next Republican nomination for Congress, he did not desire the canvass to begin a whole year in advance of the ordinary time.

In this connection I desire to state that Mr. Gibson has

NO RIGHT TO COMPLAIN

at his opponents for opening an early bombardment upon him, since by a little reflection it will be remembered that on the 6th day of May last he, as well as myself, announced his candidacy for the nomination over his own signature in various newspapers of the district. When I signed my announcement of that date I did so well recognizing the right of every citizen of the district to turn his gun upon me; and an experienced warrior like my opponent, who is twenty or more years my senior, surely did not fail to recognize the same right when he signed his announcement.

It may not be out of place to remark here that Mr. Gibson is dealing with men in this contest who know him, and know him well, and who understand that time is an important element in exposing his dignified hypocrisies, so long and so successfully practiced upon the brave and confiding soldiers and loyal Republicans of the Second Congressional district—the Gibraltar of American Republicanism.

He asserts that he does not believe the welfare of the party will be promoted by a long continued strife for the nomination; and that he has, therefore, refrained from making any utterances or publishing any statements calculated to stir up strife at this early date.

At the end of a quarter of a century of studied deceit, when he finds himself without an avenue of escape from exposure, in the name of the party he pleads against "a long-continued strife for the nomination," and while he pleads he seems to forget that he is guilty of having uttered and caused to be uttered and published in recent months past statements derogatory to myself, my family name and friends, statements in manner and language so meanly made as to be calculated among ordinary human beings to stir up strife. He forgets that on the 30th day of May last he made a Federal decoration speech at New Market and impudently circulated thousands of copies of it as a campaign document. He says his opponents do not seem to care for the welfare of the party, but to care only for themselves, and that he has submitted to their attacks for about a month without making any reply. It is well known that he was never careful of the welfare of either party or friend except when he had some selfish end to subserve, evidence of which facts will be introduced at another place in this card. That he has

SUBMITTED TO THE ATTACKS

of his opponents for about a month without making a reply is settled beyond dispute, and it will not be hard to recall the fact that he has silently submitted to attacks upon his so-called record as a Union soldier and upon his membership in the sacred order of the Grand Army of the Republic since certain discoveries were made in the archives of the War and Treasury Departments of the United in the years 1889 and 1890.

That he is still submitting silently to the same attacks his letter of last Sunday and all intelligent observers will bear witness. He avers with an air of transcendent philosophy that such attacks did not hurt him, and knowing that it is not the thunder that kills but the lightning, he was content to remain silent. I am led to remark that it does not seem necessary for his opponents to apply the lightning in his case—the thunder seems to have done its work well, and is cheaper and much easier handled than the indescribable electrical fluid. Whether thunder or lightning or thunder and lightning be required I think his opponents will be able to supply the demands of the situation.

In concluding the remarkable preamble of his remarkable letter, and just preceding the part thereof where he turns into the woods and

FIGHTS INDIAN FASHION

from tree to tree instead of remaining in the public road or open field and squarely meeting his opponents on the real issue, he says he is getting accustomed to being abused and misrepresented. To him it is unnecessary to say it, but to the public I will state that it is unnecessary for his opponents to abuse and misrepresent him. His opponents are in possession of many interesting facts connected with his so-called record as a soldier and with his record as a statesman and party servant. It would not be improper, however, for me to ask him if the name of Houk has not borne its share of abuse from both Democrats and Mr. Henry R. Gibson. Again I would like to ask him if he ever knew of a Houk running for office in this section of the country without him being abused and vilified outrageously, both publicly and privately, politically and personally, absolutely regardless of the feelings of the candidate himself or his wife and children or his friends, and regardless of every law of decency and fair play. Every man and woman in this Congressional district knows that I have been abused as much as any man now living in it, and it is a useless waste of time and energy to dwell longer upon this subject.

In the second place

I COME TO BUSINESS;

that is, I now propose to discuss the real issue which Mr. Gibson no doubt feels he has adroitly evaded. What is the question to which the people of this Congressional district desire him to confine whatever explanations he may have in stock? What is the point upon which the open-hearted and valiant ex-Federal soldiers and untimbered Republicans of these mountains desire to see him "loom" and hear him "roar"? The text he announces and from which he preaches, and I beg of every honest and intelligent person to pause and consider it, is as follows: "Nevertheless, some accusations have been made lately that I desire to refer to. One is that I served in the rebel army and the other is that I was never in the Union army." If he means by this statement to charge that I have been accusing him of having served in the rebel army, in reply I have to say that such is not the fact and that Mr. Henry R. Gibson knows it.

Since 1891 I have had in my possession conclusive and overwhelming evidence that Mr. Henry R. Gibson was not in the rebel army, unless he got in before he left Hobart College in the spring of 1862 and got out of it before he became a civilian employee in the Federal commissary in the spring of 1863. If he can prove his titles clear between those two dates I am prepared to furnish the evidence and will become witness for him if he demands, and show that he did not serve in the rebel army either prior to the spring of 1862 or after the spring of 1863. It would be foolish for me to accuse him of having served in the rebel army when all the records in my possession indicate that such was not the fact. As to when and under what circumstances he wrote his celebrated poem, "Sons of the Sunny South, Arise," and as to whether that poem contained seeds of secession, is a matter for future discussion.

Never having charged him with having served in the rebel army there are left of the charges manufactured against himself and by himself to fit the theory of his defense the following words, "and the other (charge) is that I was never in the Union Army." Having formulated his own charges against himself he proceeds more with feigned dignity than anything else to demolish them. Let me command: Company Q of the horse marines, attention!

carry arms! right dress! front! Warrior Gibson will step forward! The remainder of his comrades, if there be any, break ranks! Having the battle-scarred veteran before me I desire to exhibit to him the three cardinal principles of the G. A. R., and to read to him a few sacred extracts from the sacred rules and regulations and rules of order of the national encampment of the

GRAND ARMY OF THE REPUBLIC

in full force when he applied for membership in that order, and in full force at the time he was mustered into it, and which are in full force to-day, being the same in paragraph, sentence, word, and punctuation mark.

The three cardinal principles of the Grand Army of the Republic are Fraternity, Charity, Loyalty (title and design copyrighted). In the picture the principle of—

Fraternity is represented by the wounded soldier on the field of battle, resting on the arm of a comrade who ministers to his wants as the lifeblood flows from the fatal wound.

Charity is represented by the destitute widow and orphan children of him "who died that the Nation might live," receiving aid at the hand of the surviving comrade.

Loyalty is represented by the "Boy in Blue," bearing aloft the tattered battle flag, while shot and shell fall thick and fast about him. (G. A. R. Handbook.)

The preamble of the rules and regulations of the sacred order referred to reads: "We, the soldiers and sailors and honorably discharged soldiers and sailors of the Army, Navy, and Marine Corps of the United States, who have consented to this union, having aided in maintaining the honor, integrity, and supremacy of the National Government during the late rebellion, do unite to establish a permanent association for the objects hereinafter set forth; and through our national encampment do ordain and establish the following rules and regulations for the government of this association."

It will be observed that this preamble embraces the words

"SOLDIERS AND SAILORS,"

and that the words "civilian employees" or "commissary clerks" are not referred to. The battle-scarred veteran who enters the Grand Army of the Republic, as did Mr. Henry R. Gibson, if he complies with the rules and regulations thereof, signs the same with the understanding that he has read, understands, and will abide by the same.

We will assume for the present that he who stands before me was either a soldier or a sailor and not a commissary clerk or civilian employee, for the reason that article 4 of chapter 1, or the eligibility clause of the Grand Army of the Republic, of which order Henry R. Gibson enjoys full membership, says: "Soldiers and sailors of the United States Army, Navy, or marine corps, who served between April 12, 1861 (the day Fort Sumter was fired upon), and April 9, 1865 (the day upon which Lee surrendered), in the war for the suppression of the rebellion, and those having been honorably discharged therefrom after such service, and of such State regiments as were called into active service and subject to the orders of the United States general officers, between the dates mentioned, shall be eligible to membership in the Grand Army of the Republic. No person shall be eligible to membership who has at any time borne arms against the United States." This article

MR. HENRY R. GIBSON UNDERSTOOD

when he entered the Grand Army of the Republic, whether he complied with the rules and regulations thereof by signing the same or not. It would be inferred, therefore, that Mr. Henry R. Gibson was either a soldier or sailor, and not a commissary clerk or civilian employee during the war for the suppression of the rebellion, being now a member of the Grand Army of the Republic; or, at least every comrade of his in the Grand Army of the Republic, at the time he entered the same, had a right to believe that he was either a soldier or sailor, and not a commissary clerk or civilian employee. And ever since he became a comrade of that patriotic organization thousands of people have believed that he was either a soldier or sailor, and thousands will continue to believe that he was either a soldier or sailor so long as he remains a member of the Ed. Maynard Post. Now we will pass on to section 1 of article 2 of chapter 2 of the rules and regulations of the Grand Army of the Republic which reads as follows: "Every application for admission to membership shall be in writing, and shall give in detail, upon the blanks furnished by the national headquarters, the applicant's age, birthplace, residence, occupation, date and rank when entering the service, and his rank at the time of his discharge (or if still in the service, his present rank), the date and cause of his discharge, the company and regiment or ship to which he belongs or belonged, the length of time he served; if wounded when, in what engagement, in what manner and degree, and the fact of any previous application, and to what post it was made."

Every reader will perceive that the application clause of the rules governing admission to a post requires the applicant to give his rank when entering the service and his rank at the time of his discharge, the company and regiment or ship to which he belonged, and the length of time he served. This does not apply to commissary clerks and civilian employees; for it will be remembered that the supreme law of the order is that none but soldiers or sailors shall be admitted as members. Section 2 of article 2 of chapter 2 of the rules and regulations says: "The application shall be presented at a stated meeting, and be recommended by a member of the post, who shall vouch for the applicant's eligibility; it shall then be referred to a committee of three, of which number the member recommending shall not be one, for investigation and report." Section 8 of the same article of the same chapter says: "A member elect shall pay, before enlistment and muster, an admission fee of not less than \$1. Upon muster in he shall subscribe to a copy of these regulations and by-laws of the post." In the year 1864 or 1865, while Maj. A. S. Prosser was commander of the

ED. MAYNARD POST,

Mr. Henry R. Gibson made application to said post for admission. The commander of the post, Maj. A. S. Prosser, refused to appoint a committee, as required by the rules and regulations of the order, to pass upon the applicant's eligibility until he presented an honorable discharge. No honorable discharge being forthcoming, the matter dragged along for some time until Major Prosser's administration as commander expired and Maj. L. A. Gratz's administration as commander came in. At some time during the period that Major Gratz served as commander of the post Mr. Henry R. Gibson renewed his effort to acquire membership in the order. Finally his application was passed upon, but how, in what way, and by whom I am unable to say. Whether his application was presented, in accordance with the rules and regulations of the order, at a stated meeting, and whether he was recommended by a member of the post who vouched for his eligibility; and whether his application was referred to a committee of three for investigation and report I can not state. It is sufficient at present to say that he became a member and subscribed, as I am informed by a responsible member of the Grand Army of the Republic, to a copy of the regulations of the order and of the by-laws of the post.

SIGNING HIS NAME AS CAPTAIN

and C. S. U. S. Vols., afterwards becoming in 1865 senior vice-commander of the department of Tennessee. If he did not subscribe to a copy of the regu-

lations and by-laws he failed to that extent to comply with the supreme law of the order. However, the records of the post will show the truth of this matter if they are intact.

Subsection 2 of section 3 of article 8 of chapter 2 of the rules and regulations of the order is as follows: "The adjutant general shall keep a descriptive book, ruled to embrace every fact contained in the application, as well as date of acceptance and muster, and a column for general remarks." In this connection I will state that my information, received a short time since, is that this application disappeared from the archives or files of the order and is still absent therefrom, unless it has been found and returned; but fortunately the description book is required to be so ruled as to embrace every fact contained in the application as well as the date of acceptance and muster. This description book I have seen with my own eyes. By the way, this book is a costly and well made one, being heavily bound and filled with thick, heavy leaves, with leather indexes, intended to endure for many years to come and hand down to future generations the military pedigree of the soldiers and sailors who belonged to the Grand Army of the Republic. Upon this description book, which on account of its permanent and enduring appearance I will call the eternal book, is made the following entry: "No. 42, H. R. Gibson, age 45, born Md., enlisted Mch. 17, 1863."

LIEUTENANT ON GENERAL HOOKER'S STAFF.

honorably discharged August 4, 1865, captain and commissary of subsistence, served 2 years and 4 months, cause of discharge close of war, mustered into post in second quarter of 1865."

Now, what is the question in the mind of every intelligent man in the second district? It is whether Mr. Henry R. Gibson was at any time during the war for the suppression of the rebellion between the day that Sumter was first upon and the day that Lee surrendered, a soldier or sailor. The same question in another form is, was he when he entered the Grand Army of the Republic and is he to-day eligible to membership in that order? Mr. Henry R. Gibson says that he migrated to Tennessee in January, 1863. On July 12, 1865, after the close of the war, and six months after he had settled in Tennessee, he wrote a letter to the Secretary of War, which shows that up to that time he had never been enlisted; that he had

NEVER BEEN A SOLDIER;

that he had never received an honorable discharge; that he had never been anything but a clerk, or assistant clerk, or principal clerk in the Federal commissary; and that he had never been either an enlisted private or an officer of any kind in the military service of the United States. Every statement which I have asserted his letter shows to be true is corroborated by the official records in my possession from the War and other Departments of the Government. In this famous and "unique" letter of July 12, 1865, Mr. Henry R. Gibson seeks to beg or defraud the War Department out of a commission as captain and commissary of subsistence or a commission of any lower grade based not upon services rendered as a soldier in the Federal Army between the day that Sumter was fired upon and the day that Lee surrendered as required by the rules and regulations of the Grand Army of the Republic, but upon services rendered as a commissary clerk or civilian employee. In this peculiar letter of July 12, 1865, the writer states that on November 30, 1864, he applied for a commission as captain and C. S. Vols., said application being indorsed by Capt. A. P. Bilyeu, C. S. Vols., and various other more or less distinguished Federal officers, but the War Department has not been able to find any record whatsoever of the reception of the application alleged to have been made.

On this subject the Adjutant-General of the United States Army on July 12, 1893, said "that another thorough search of the records of this office has been made and that no record has been found of any application or recommendation for the appointment of Henry R. Gibson as captain and commissary of subsistence other than those of which copies are already in the possession of Mr. HOUK (the letter of Mr. Gibson of July 12, 1865, and the letter of the Hon. R. E. Fenton recommending him for appointment as assistant commissary). Possibly some trace of the application claimed to have been made November 30, 1864, may be found in the records of discontinued commands on file in the Record and Pension Office." The Record and Pension Office on July 13, 1893, replied that "none of the papers within referred to in the case of Henry R. Gibson has been found on file in this office." On July 14, 1893, the Acting Secretary of War said: "An examination of the application book in the office of the Secretary of War from 1863 to date fails to disclose a record of the papers." On July 18, 1893, another letter from the office of the Adjutant-General of the United States says: "But even if such papers had been found, the fact would remain that

HENRY R. GIBSON WAS A CLERK

and not a commissioned officer during the war." The reader should bear it in mind that the office seeker during the days of the war was just like the office seeker of this day. As a rule he could always get plenty of indorsements but few offices. By Mr. Henry R. Gibson's own letter, written July 12, 1865, we know that he never received the office he sought. If he ever received a commission as a captain and commissary of subsistence after the date of his letter it would be a very easy matter to prove it by presenting the commission after which I am prepared to test its legality. There is no doubt that Mr. Henry R. Gibson made a very competent commissary clerk or civilian employee, but his merits as a Federal soldier during the late rebellion are yet to be discovered.

If he does not present to the public a commission as an officer of some kind in the Federal Army during the war of the rebellion, I will, at the proper time, present proof that he has since his arrival in Tennessee, in 1865, exhibited such a commission and boastfully claimed it as evidence of his military services to his country in the war of 1861 and 1865. Some inquiring friends may remark: "Well, HOUK, what charges can be substantiated in connection with the military record of Henry R. Gibson?"

I would reply that it can be truthfully charged and proven by thousands of citizens that from about the time that Mr. Henry R. Gibson located in this State down to the present time he, in one way or another, has made the general impression that

HE WAS A SOLDIER

in the Federal Army; that by thousands of citizens it could be proved that the general impression was deepened when he became, in 1865, a member of the Grand Army of the Republic and made himself active in its councils; that Mr. Henry R. Gibson ceased to be so active in the councils of the Grand Army of the Republic about the year 1869, when my father discovered documentary evidence that he was never in the Army as a soldier; that Mr. Henry R. Gibson managed to work himself into the Grand Army of the Republic upon his insufficient credentials just before his candidacy for chancellor; that he was never enlisted as a soldier; that he never received a legal discharge from the service as a soldier for the simple reason that he could not be discharged from a service that he had never entered; that he was

NEVER AN OFFICER OR A PRIVATE

at any time during the war of the rebellion; that he was never a lieutenant on any general's staff during the late war; that he was never a captain and commissary of subsistence in the Federal Army at any time during the war of the rebellion; that after a question had been raised in the Grand Army of the Republic as to the genuineness of his credentials, and that after his appli-

cation had hung fire for a considerable time he never stated in open meeting of the Ed. Maynard Post the extraordinary circumstances under which he was entering that order; that he never divulged in open meeting of that order the true contents of his now famous "unique and unheard-of" letter to the Secretary of War, July 12, 1863; that he was never eligible and is not at this time eligible for membership in the Grand Army of the Republic; that he knew it when he was mustered into the post, and that he knows it now, for he was a man of intelligence when he was mustered in, and he is a man of intelligence to-day, his very position as a judge on the bench being one which requires him to understand and interpret the constitution and laws of his State; and, being so gifted and able as to do this, he can not plead that he was not able to interpret and understand the constitution and by-laws of the Grand Army of the Republic, which he has said over his own signature that he has read, understood, and would abide by. The above would be my reply to his friends, and if I had time, and you had the patience to read it, I could cite a good many other things that could be proved. I will

MAKE THIS PROPOSITION:

That if Mr. Henry R. Gibson will demand of the Ed. Maynard Post an investigation I will furnish the proof on form; request from that order that he is not eligible to membership in it; and if that order does not desire to use the evidence which I have in my possession I will furnish a full memorandum showing where each and every part of the evidence can be found in the War and other Departments of the United States Government. If I have maliciously and falsely accused Mr. Henry R. Gibson in any material respect with regard to his alleged record as a soldier, or his record as a commissary clerk or a civilian employee or as to his eligibility for membership in the Grand Army of the Republic, I am possessed of criminal instincts and should hide my face in shame from the sight of all honest men.

I shall now proceed to pay a little attention to Mr. Henry R. Gibson's explanation which does not explain him out of his awkward position, into which I have had no hand in placing him. He picked his own ground. I am but throwing light upon his true position. He says that the charge that he was never in the Union Army (as a soldier I suppose he means, he being now a member of the Grand Army of the Republic) is a "stale" Democratic falsehood started seventeen years ago. The charge may have started as soon as he landed in the State, but conclusive evidence that he was not a soldier in the Federal Army during the late war was not discovered until 1889 or 1890, when my father, the late Hon. L. C. Houk, unearthed certain records in the War Department, and the charge that he was not a soldier was not seriously made and backed by proof until my father had revealed the contents of these records to his friends at a time when Mr. Henry R. Gibson was trying to tear him down. I should not have mentioned my father in this letter had not Mr. Henry R. Gibson first assailed his name. From a statement, left by my father fortunately, which will be published in full later on, I make the following quotation:

"Having long borne with his deceitful and traitorous course, involving every phase of deceit and bad faith, I concluded that forbearance had about ceased to be a virtue. Although I had never given much credence to the stories circulated about him by the Democrats in regard to having been a rebel, and having been perfectly willing to overlook his youthful ardor and indiscretion which brought forth his so-called poetry, 'Sons of the Sunny South, Arise,' etc., I concluded I would make a little investigation and see how far his claims to national patriotism and heroism as a soldier of the Union were well founded." The investigation referred to was instituted by my father, and from him the charge proceeded, backed by the proof, that Mr. Henry R. Gibson was not a Federal soldier at any time during the rebellion. I inherited the evidence that he developed. I have it to-day and have added to it somewhat of additional evidence; but he had in his hands before his death sufficient proof to satisfy any member of the Ed. Maynard Post as to the ineligibility of Mr. Henry R. Gibson to membership in that order, which would have been presented to the post had not my father been cut off by death. The plea that the Democrats are persecuting him will not work in this instance.

"He says that his Union record from 1853 to the end of the war was printed in the 'Republican' twice, once over thirteen years ago, and once over twelve years ago. Not only young men, but old men and middle-aged men as well, forget many things in twelve or thirteen years, and I would suggest that he print for the information of the public the explanations he made in the Republican. He is about the only man I know of who possesses a file of that paper. I have tried repeatedly to get hold of one, but have failed. Of him I would like to inquire if either or both of his old explanations dealt with 'soldiers or sailors, or lieutenants on General Hooker's staff, or captains of commissaries of subsistence.' It takes a soldier or sailor to get into the Grand Army of the Republic, and

THE ETERNAL BOOK

of that order shows that he was a lieutenant on General Hooker's staff and a captain and commissary of subsistence between Sumter and Lee's surrender. Of course he made frequent use of all these names and titles and printed honorable discharges, etc., if he had any. He further says that the men who made these charges know well enough that there is absolutely no truth in them; that they know that they are absolutely false and are exactly the reverse of the truth. While quoting these statements of this distinguished jurist, generally supposed to be able and with a discriminating mind of the first order, brave in heart and bold even unto foolhardiness, open and frank in his every act, and whose tongue has flashed lightning through every valley and along the top of every mountain in East Tennessee in every political campaign since the war, I am absolutely cast down with pity. Far better would it have been for him had he forever sealed his lips in silence on the subject of his war record and never accused any person of falsehood for asserting that he was "never in the Union Army."

The warrior who is on trial is admonished that he is not being prosecuted for the purpose of blackening his record and that all the writer has ever done in connection with his military history has been simply to throw the light of truth upon it. If any party to this controversy ought to be ashamed of his conduct it is he who has sinned.

UNDER FALSE COLORS

for twenty-five years. I deny that I own or control any interest whatever in any newspaper of any kind, but on the other hand I charge that Mr. Gibson holds \$2,000 worth of stock, more or less, in the Knoxville Journal, and not more than ninety days ago he boasted that he proposed to have him a newspaper for the purpose of showing the public what he had done for the Houks. To him I now say that I know he has the money with which to start an organ and that there is plenty of printing material for sale and many printers in this country who would like to have work, and that if he desires to start him a personal organ it is his privilege. He seems at this late date to frankly admit before the public that he was in the Commissary Department of the Union Army as a subordinate from March 17, 1863, to August 4, 1865.

It will no doubt seem to the reader that it would have been much more manly for him years ago, by a public declaration or statement, to have removed a deeply embedded false impression from the minds of the people by confessing that he had never been a soldier or an officer in the Union Army during the war of the rebellion. And it would have been a great circumstance in his favor if he had not wormed himself in 1885 into the Grand Army of the Republic contrary to its rules and regulations, well understood by him.

Like the true warrior he is, with the sword in one hand and the bayoneted musket in the other, he paws the earth and says, "Let Mr. JOHN C. HOUK show what sort of a war record he has." If he has reference to my "war record" I desire to inform him that I am honest enough to admit that I was not "in the Union Army," either as a private soldier or as an officer, though I am able to prove that I was along with the "Union Army" a portion of the time during the war, eating commissary crackers and squalling as a 3-year-old for Federal success.

If he had reference to his own "war record" I desire also to inform him that while it was supposed until recent years that he had one it has lately developed, and I have the proof of it, that he never had any at all. What I am in possession of is the proof that he was a civilian employee in the commissary department of the Federal Army, subject to be discharged at any time by the chief of the commissary under whom he served. It is true that he filled "one man's place" as a clerk or civilian employee in the commissary department under Capt. A. P. Bilyeu, but it is not true that he filled "one man's place in the Union Army." It is no discredit whatever, on the contrary it is creditable to him, that he made an efficient, though "humble" commissary clerk, but it would have been far more creditable to him if he had been more "humble" in his pretensions between the time the war closed and the time that it was discovered that he had not been in the Army by revealing frankly to the public, when he saw the military titles accumulating before his name, the real service that he rendered his country in her hour of trial and for which he was paid \$50, \$65, \$75, and \$90 per month, while the boys "in the Union Army" were marching in the mud with their guns and fighting the battles of the country for \$13 per month.

I emphatically deny his statement that "it would not matter how bravely and honorably he served in the Union Army, he would soon find himself charged with being a deserter, or a hummer, or a coward, or a coffee cooler, or a hospital lounge, or guilty of some other disreputable conduct." In 1891 I made a race for the Republican nomination for Congress in the primary election, exciting and hotly contested, against Capt. W. W. Woodruff, an ex-Federal soldier. The military record of Capt. W. W. Woodruff, unlike Mr. Gibson's, was a straight one, and I have information that it so appears upon the record of the War Department. In that exciting contest some friends on either side perhaps made some charges that were not true. But at no time before or during or since that race did I, or so far as my best recollection goes, any of my friends charge Captain Woodruff with being a "deserter or a coffee cooler or a hospital lounge," etc., during the war. It is true that it seems to be the unavoidable fate of any man who runs for Congress in this district, especially if his name is Houk, to be falsely accused and vilified. It may be the fact that "Judge Houk, when first a candidate, was charged with having been dishonorably dismissed from the Army, with having been engaged in passing counterfeit money, and with having been removed from his office as judge by the legislature for drunkenness."

To this cowardly and ghoulish and unjustifiable method of attacking my father after he has gone to his grave I desire to make a brief direct reference. When Mr. Henry R. Gibson seeks to use such a method of defense he but introduces evidence of the truthfulness of the charge that he has been a military impostor. The dead man whose memory he seeks to besmirch has now been in his grave about two years. If he had lived and was a candidate for Congress in the next campaign Mr. Henry R. Gibson well knows that he would not be a candidate against him, and he further well knows if he was a candidate against him he would suffer the loss of his right arm before he would use such language as I have quoted above, knowing the deadly effect with which my father would use the weapons he had on hand. Every decent citizen can forgive any attack made upon the writer, who is living, but they will never condone an attack upon the grave, though it be made under the cloak of former friendship. This great man who

ASSAULTS THE DEAD

says that he "defended Judge Houk with his voice, pen, and pocketbook." I beg to remind him that against these charges Judge Houk did not have to have the defense of Mr. Henry R. Gibson—the "voice, pen, and pocketbook" of the latter not being necessary to the vindication of the former. The military record on file in the War Department, and copies of which I now have in my possession, vindicate the dead Houk against the charge of having been dishonorably dismissed from the Army, while there never was any evidence of any character whatsoever to substantiate the second charge against him of "passing counterfeit money," and while there was no evidence of any character whatsoever, either record or otherwise, that he was "removed from his office as judge by the legislature for drunkenness." Instead of Mr. Henry R. Gibson always being a defender of the late Judge Houk, I will inform the public that I can prove that he deliberately and falsely charged for immediate purposes in the constitutional convention in 1870 that the people living in Judge Houk's judicial district petitioned the legislature to impeach him, and then thanked God that he had been gotten rid of by the seventeenth circuit being abolished.

I can further show that he was a party to a conspiracy to ruin my father while he was a judge, but the latter, in his charity and goodness of heart, and perhaps blinded by his false friend's protestations of friendship, forgave, only again to be slandered while living and after death. When the charges against Judge Houk (to which I have referred above) were made he defended himself, without evasion or counter false charges, against any and all comers, and they were disposed of and settled forever in his favor twelve or thirteen years ago. He never fell back upon his dignity in order to avoid a discussion of them. A reference to them now, if my father was alive, ought to appear "stale" to Mr. Henry R. Gibson, and a reference to them now, since my father is in his grave, will appear to many thousands of old friends in Tennessee and elsewhere as low, mean, cunning, and indecent, which no gentleman of true dignity and manhood would make. None but an arrant coward would strike such a blow. As to Mr. Henry R. Gibson's "pocketbook," I do not believe that it ever lost more than it received on account of its owner's relationship to Judge Houk, whom the latter, in a forgiving and a forbearing spirit, had appointed as census supervisor, as postoffice inspector, and as United States pension agent, and whose following were in a very large degree responsible for Mr. Henry R. Gibson's elevation to the bench after it was seen that the able Judge Staley could not make the race. Let every intelligent man ask himself this question: Would Mr. Henry R. Gibson, if he had

BEEN A TRUE FRIEND

to Judge Houk and defender of his memory, have revived the grave charges which have been for many years exploded and out of the public mind and settled for all time to come? Standing before the public convicted as a military impostor, he begs for the sympathy of the people, and I am in favor of extending it to him if he will make an open and frank-hearted confession of his guilt. He says that he never expected that the day would come when Judge Houk's sons would show their gratitude to him for defending their father's name by trying to make people believe that he was never "connected with the Union Army." Little did Judge Houk's sons think that after what he had done for Mr. Henry R. Gibson he would show his gratitude by trying to

BESMIRCH THE NAME

of their father both before and after he had gone to his grave. He says when Gibson was fighting Judge Houk's battles he was a great and good man and

was deemed worthy of all honor. My father, in the generosity of his nature, proverbial everywhere he was known, and forgiving as a child, and full of charity always, did up to a certain time indorse him by letter and otherwise for appointment to office as a true friend, worthy of all honor, and an ex-Federal soldier. But what he thought of Mr. Henry R. Gibson as a gentleman and an ex-Federal soldier before a certain time, and as to what he thought of him as a gentleman and an ex-Federal soldier after a certain time will be hereafter printed if Mr. Henry R. Gibson insists on keeping the name of the dead before the people in this controversy. Before leaving this branch of the discussion, voluntarily and without any provocation introduced by my opponent, I desire to show the people by quoting from a letter written by him to my father the motive that he had in espousing the latter's aspirations for Congress. In his letter Mr. Gibson says: "I will be in Knoxville Monday before convention, prepared to work like a Turk for you. And I mean to do something. We are all selfish creatures. He is a

FOOL OR KNAVE

who denies it. I do not. I expect to gain something by your election to Congress. What it is you shall know if elected; not before. While working for you I am working for myself. We are selfish creatures I repeat." I have never assailed anything but the public record of my opponent, but when he falsely claims that he was an unselfish friend of Judge Houk's and in his support of him had no other motive than to elevate and defend his name, hoping thereby to make votes in the coming campaign, I feel justified in using any honorable means to expose the hypocrisy.

It may be a part of my opponent's general policy, though I trust it is not, in his mad desire to get to Congress and print long-winded speeches in the CONGRESSIONAL RECORD at the Government's expense, to do publicly what he has been doing privately, that is, attack the whole Houk family living and dead. If he goes as far in this direction as he has impressed persons privately he intended to go, namely, to the extent of dragging family matters into the discussion during the campaign to show what he "had done" for the Houk family, I assure him nothing will be evaded in the way of duty.

By some of Mr. Henry R. Gibson's supporters it has been suggested that the Grand Army of the Republic can not afford to be used as an instrument to promote the political aspirations of JOHN C. HOUK, and for that reason it is thought best that the order remain inactive or ignore the specific charges that are made against Lieutenant or Capt. Henry R. Gibson, a full-fledged member of the Ed. Maynard Post. I beg of these men who take such a view of this matter to lend me their ears for but a moment, and allow me to ask them if it ever appeared to their minds that the Grand Army of the Republic for several years has been unconsciously allowing itself to be used as an instrument to promote the political aspirations of Mr. Henry R. Gibson, who was never at any time any more eligible for membership in that order than I am, and I speak according to the constitution or supreme law of the Grand Army of the Republic; did it ever occur to these partisan supporters of Mr. Henry R. Gibson that so long as he is kept in the Grand Army of the Republic that for just so long will he be using that order for his political aggrandizement, because his membership therein gives his friends the right to argue that he was a soldier, an argument that I have not yet quite been able to get him to condemn, though he may drop to it in the course of time.

Looking at this matter from the standpoint opposite to that from which it is viewed by my opponents, it seems to me certain that there are thousands of other persons in the Second district who are eligible for membership in the Grand Army of the Republic, if Mr. Henry R. Gibson is, and if the latter is permitted to remain therein these thousands of citizens should also be allowed to apply and enter, upon the ground that it will help them in aspiring to office, or otherwise. The Ed. Maynard Post is

COMPOSED OF HONEST MEN

as a whole, who understand the Grand Army rules and regulations and appreciate fully their obligations, not alone to the order but to the soldiers of the country generally, including every person who is justly drawing or seeking to draw a pension. It is said by some of my enemies that in attacking the right of membership of Mr. Henry R. Gibson in the post that I am attacking the post itself. This, of course, every member of the post knows to be absolutely false.

In attacking the right of a member belonging to that post, who is clearly ineligible, I have no fears but that every honest man who understands the facts of the case will approve my course. I have no right whatever, nor have my friends the right to use the fact that I am a member of the "Fons of Veterans" in my behalf, and I do not propose if I can prevent it that any opponent shall use the fact that he is a member of the Grand Army of the Republic to build himself up and break me down. His membership in the Grand Army of the Republic is null and void. "These are days of peace and not days of war," but if these were days of war I would feel it my duty to give way to my opponent with his "humble" record as a commissary warrior and rejoice to see him expose his person in defense of the cracker boxes. "But the people do not want soldiers right now," the war having been ended over twenty-eight years ago.

These days are not like they were in the good year of 1865, just before the election for chancellor, when my opponent thought it behooved him to twist his way into the remnant of "the Army of the Union," now existing in the form of the Grand Army of the Republic. "We now want men to devise means to enable the farmer to get a better price for his produce, and to enable the laboring men to get more work and better pay," as my competitor has said, but he has forgotten to say that we now want men also to devise means of bettering the condition of the old soldiers, most of whom are now members of the Grand Army of the Republic, and who made it possible for the farmer and workingman to have a government which gives them better prices for the products of their farms and their labor than any Government on the face of the earth. My competitor should not lose his interest

IN THE OLD SOLDIER,

and I do not propose to allow him to do so if I can help it. My peace record does not cover twenty-six years of active work in behalf of the Republican party, but it does cover thirteen years—exactly half of twenty-six—of constant, unremitting, and unselfish labor in its behalf, the value of which I am anxious for the Republicans of the Second district to pass upon in a primary election. And during all this time I have never been a candidate before the people one second, or one minute, or one hour or any other length of time, for any office except when I was nominated for Congress in 1891 in a primary election by 9,000 or 10,000 majority, and in the following Congressional election, when I was unanimously renominated. My competitor arrived in Tennessee just six months after the war closed and at the very time that certain other gentlemen were migrating to the various Congressional districts of the South to become candidates for office, and within six months after his location in this Congressional district he tried to get the War Department of the United States to certify in the form of a commission that he had been a soldier, no doubt for the purpose of using it in hoisting himself into office. He certainly did not want a commission to prove that he was a commissary clerk. Just a short time—some two or three years—after he had become a citizen of this section of the South he became a standing candidate for office, and has run for office, either appointive or elective, just nine times, including his present race.

Notwithstanding he never secured the services of the War Department in establishing his record as a soldier he has succeeded remarkably well in securing and holding office. At the end of his term as chancellor he will have been

IN OFFICE FIFTEEN OR SEVENTEEN YEARS,

considerably over half the time he has been a voter in Tennessee, drawing from \$30,000 to \$40,000 for the "fourteen campaigns and several hundred speeches" he has made for Mr. Henry R. Gibson. My opponent, in speaking of his services, which I have no desire to disparage, says, among other things, that he was a member of both branches of the State legislature, and that the work he did in those bodies remains in the statute books until this day. In the interest of justice I desire to cite the fact that one of the laws that he helped to place in the statute books of Tennessee while he was a member of the legislature was the infamous and inhuman

PENITENTIARY LEASE BILL,

for which he voted; and he did not vote for it blindly, thinking that it did not carry with it the power to work convicts in the coal mines. He arose in his seat in the legislature and offered an amendment to the convict lease bill that no convicts should be worked in the coal mines. This amendment however was not pushed with the warrior's usual dash and energy, for when Mr. Cummings, a Democratic member of the legislature moved to table it, it was done without a call for the yeas and nays, which could have been ordered upon demand of 5 members. The amendment went posthaste to its grave, the member offering it then thinking, no doubt, that he had satisfied a certain class of his constituents. But what did he afterwards do? The penitentiary lease bill came up immediately for final passage, and Mr. Henry R. Gibson voted for it, unless the journal of the proceedings of that legislature fails to state the truth. It became a law and the convicts went into the mines and are still there. This much he did for the laboring man, I frankly admit that I have no war record, beyond that spoken of heretofore, and that I have a brief and "humble" peace record which perhaps may be somewhat "subordinate" to or less luminous than that of my modest competitor. However I am willing to compare my record in both war and peace to that of Mr. Henry R. Gibson. It is certain I will never, like my competitor,

MAKE A DEMOCRATIC SPEECH

while running as a Republican candidate, and when my Republican friends demand that I do not repeat it, answer them by saying that the Republicans are all for me anyway, and that it is my policy to make Democratic speeches in order to get the support of the Democrats. My competitor complains that Democrats are abusing him. I predict that he will appeal to Democrats yet to help him explain his "soldier record."

It is also certain if my competitor is nominated that I will not treat him as he did me after I was nominated the first time when I went to him and asked him to help me against a Democrat in the special election of 1891, and to which earnest request he replied that the "dignity" of the bench would prevent him from doing so. In this very next general election, when he was about to open his campaign for Congress, two years in advance of the election of 1894, he made sixty speeches, each from one and a half to four hours in length, in the out counties, knowing they were going Republican, and he could claim that "Gibson did it." And he made none in Knox County, thinking the new election laws would make it go Democratic and he could claim "the Houks did that." But in this he was sorely disappointed, because I carried the county by a larger majority than Harrison. In none of his speeches in that campaign did he give me honest and earnest support.

In further consideration of my competitor's lofty and consistent peace record, I quote an amendment offered by him in the constitutional convention of 1870, probably before he got his "eagle eye and gigantic brain" fixed on the chancellorship as a stepping-stone to Congress.

"No judicial officer shall be a candidate before the people for any other than a judicial office, directly or indirectly. And the election of any such officer by the people during his incumbency, or for one year thereafter, shall be absolutely void."

He is still chancellor, and in order to become eligible for membership in Congress in 1894, if he is consistent, he would have to resign his present office, but of course he can not afford to turn his office over to a Democratic appointee of the governor, and being a great, good, and consistent man, there is but one thing for him to do, that is, explain his "war record" and postpone his candidacy for Congress until he is eligible.

I admit that my competitor is right when he says that these are hard times and that the people need their most faithful men to serve them. His theory seems to be that they are the result of the fact that he is not in Congress, while my theory is that they are the outgrowth of a Democratic Administration. He further says that candidates for Congress should be engaged in discussing the needs of the people, etc., instead of throwing mud, comparing war records, and digging in the Democratic graveyards. I am one of those individuals who think that for the present there has been too much demagogical discussion and agitation, particularly upon the

TARIFF AND MONEY QUESTIONS,

for the good of the country by the Democrats and the anarchists, who never ally themselves with either party except with a hope of securing office. I am also one of those individuals who is opposed to mud slinging, false war records, and digging in graveyards.

The history of my competitor is that of a religious mud slinger, and he was the first candidate in this race for the nomination to throw mud over his own signature. I am willing to admit that he tried earnestly to do it in a pious and dignified sort of a way in order to pave the way to evade the discussion of the fact that he was not a soldier "in the Union Army." He built up his false war record before I ever conceived the idea of claiming for myself that I was with the "Union Army." Every reader will bear me witness that he was the first and only candidate for the Republican nomination for Congress to go into the graveyard and dig up old and exploded charges that had been forgotten against my father, with sinister motives. He knows well that it was my father who first developed and revealed the evidence that he was not a soldier, and this, no doubt, accounts for his attack upon the grave.

If he has had so much respect for the office which he now holds as he attempts to make the people believe, and if he has been and still is such a pious and dignified gentleman, broader, bigger hearted, and more open handed than any of his fellow-citizens, I can not conceive how he has become guilty of both public and private slander, deceitful schemes, and petty tricks known only to the arts of the selfish, vain, and ambitious politician. Before concluding I ask you to pardon me for inflicting so much upon you in the way of a card, but I offer as an apology for it the contents of Mr. Henry R. Gibson's card of last Sunday morning, and the fact, though it has not been publicly and generally known, that he has ever since my election to Congress, wherever he has gone in his ramblings through the second district, holding regular terms and special terms of his court, on each and every occasion when he could, speak derogatory of me done so, but at times he has pretended to speak favorably of me only in order that his

STAB IN THE DARK

may be more effective. I am becoming, like my competitor, very much accustomed to abuse and I am entering this race with the expectation of being

struck as I have already been, and of striking back whenever the provocation is sufficient and it is necessary. Like Mr. Henry R. Gibson, I will deny no truthful charges, and unlike him I will prove out of all "untruthful" ones. I have not been a saint. I have been a sinner in some respects, but I am not as mean a man by any means as my enemies make me out, I hope. I am a natural-born Republican, and always expect to be loyal to the faith. I am not as great a man as my competitor, he says, but I think when you become well acquainted with him and all his arts that you will conclude that my character is not so bad but that you can then rank me safely among the class of moderately good people, if you think he can be so classed. I have

TRIED TO DO MY DUTY

as a member of Congress, and at the proper time I think I will be able to show that I have been faithful and accomplished a few things, though small they may be, for the people I represent. I have no ambition whatever to spread out over the United States, or the Western Hemisphere, or the world, like my competitor, but I have been content to concentrate my mind and energies in behalf of the interests of the people of the eleven counties of the Second district. As I have told you once before, I do not claim to be a statesman, and that although I have had a great deal of experience about Washington, I have met not a great many of those kind of gentlemen. My competitor is a statesman, he says, and it may be he has cures for all the ills existing in our Government, but I think after you become better acquainted with him you will find out that all his great remedies and programmes are better before taking than after taking; that is, they have been more effective when applied by their inventor in securing offices for himself than beneficial to the public at large after he has lauded. I am simply a

PLAIN, MODEST MAN,

at least some people say these things of me, but I claim to understand, after large experience, the duties of a Congressman, and it will give me great pleasure to continue earnestly and loyally to perform them as I see them. The gifted and able Thomas A. R. Nelson, when petitioned by many of the ablest men of the State in 1899 to allow the use of his name as a candidate for member of the supreme bench in this State, said: "If it is the pleasure of the people to elevate me to one of the highest judicial offices within their gift, I will, while sincerely distrustful of my own powers, faithfully endeavor to discharge the duties of that exalted station." Now this sentence was uttered by a truly great man. If it had been my competitor in the shoes of the lamented Nelson more than likely he would have replied that "if it is the pleasure of the people to elect me to one of the highest judicial offices within their gift, but not as high as my character and abilities merit, I will take the office and adorn it to their honor, though it brings none to me." The office of Congressman is a great and honorable one, and I sometimes feel that I am hardly the man for the place, and I think I am authorized to state that my competitor agrees with me.

All I ask of the fair and liberty-loving Republicans of this district is to give me an equal chance with all other Republicans who aspire to the position of Congressman—that equal chance lying only in a primary election. My competitor, "who was in the Union Army" upon the same principle that a

COW IS A HORSE

is a very cunning man—few men being able to fathom him until they have studied closely his tactics—and I desire to warn the Republicans of the district against that cunning on one point. On the 6th day of May last he pretended to say he was for a "primary election." Several times since he has used the word "primary" very adroitly, on the face of his expressions to the casual reader who does not understand him it appearing that he is in good faith for a "primary." I charge that he is not unconditionally for one, and that his friends will prevent one if they can. I am

UNCONDITIONALLY FOR A "PRIMARY"

and will with my friends favor one to the last. On the 6th day of May last I publicly asked if he would be in favor of every Republican of the district voting in the "primary" who is 21 years of age and has been in the State twelve months and the county six months. No answer has been made yet. He says if the "primary" was held to-day that he would be nominated by eight or ten thousand majority. I have this proposition to make him: That since he is satisfied he has eight or ten thousand majority among the Republicans, and pretends to be anxious for a "primary," I will ask him if he will say over his own signature he is unconditionally for one, as I have done; that I publicly guarantee that all my friends on the Congressional committee will vote unconditionally for a "primary election," and I ask him to make the same guarantee as to his friends on that committee. Of course, being for the people and a "primary election" he will accept my proposition at once.

Again, apologizing for the length of this card, which had to be written either now or later, I will say that a man who will deceive the people as to his "military record" will deceive them as to his "peace record," and subscribe myself, your obedient servant,

JNO. C. HOUK.

MR. HOUK TO THE COMMANDER IN CHIEF—CORRESPONDENCE AND EVENTS LEADING UP TO THE COURT OF INQUIRY AND THE EXPULSION OF MR. GIBSON FROM THE GRAND ARMY OF THE REPUBLIC.

Mr. Chairman, by the slick snap manipulations of Mr. Gibson's friends in the post who had in the first instance slipped him into the same, I, although a member of the Sons of Veterans, was forced to appeal to the commander in chief before I could get a hearing and opportunity to vindicate myself in the eyes of the public, who naturally presumed at first that the officers of the post would not countenance whitewashing proceedings and that I was in the wrong.

The following letters, which I shall read, explain themselves:

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 20, 1898.

MY DEAR GENERAL: The inclosed is a true copy of a letter, which was sent to the commander in chief of the Grand Army of the Republic, prior to the election of Mr. Adams, through * * *. A few days thereafter I received a letter from the adjutant general of the Grand Army of the Republic, stating that the letter had been referred to the department commander of Tennessee, Frank Seaman, at Knoxville, "for his information and investigation."

In the meantime, however, the Ed. Maynard Post held a meeting, and Mr. Gibson appeared before it, and made a speech, cheeky and full of false statements, after which the post passed a resolution, a copy of which I have not now at hand, to the effect that Mr. Gibson's military record had been investigated, which every member of the post knows to be untrue, and found correct.

At this meeting Mr. Gibson did not demand an investigation, and the post, in the face of such a demand on the part of other members of the post, refused to order an investigation. In this meeting Mr. Gibson stood up in the shoes of a comrade and stated that he had a commission as a lieutenant on Hooker's staff, but which he failed to produce. He also stated that he had an honorable

discharge or muster-out as a lieutenant and brevet captain, signed sometime in August, 1865, by Col. S. M. Bowman, and he pulled out of one pocket and read what he alleged to be the discharge or muster-out, and immediately transferred it to another pocket, and which the post was not permitted to scrutinize. This paper, I am informed, is in Henry R. Gibson's own handwriting. (Since learned that Gibson inserted the date and that the body of the paper is printed with a pen.) From the evidence in my possession, most of which you have seen, whatever paper or papers Mr. Gibson may have showing that he was a soldier must either be, necessarily, irregular or bogus, or clean-cut forgeries.

After this action of the post the department commander, to whom the question had been referred "for his information and investigation," held that before he could pass upon the matter it should come up to him from below and not down to him from above. In the first meeting of the post written charges against Mr. Gibson were not filed, but, acting upon the suggestion of the department commander, written charges were filed in the meeting last night (September 19, 1898), but I have not as yet heard what action the post took in the matter. I have no doubt, however, that the post by the manipulation of certain officers and members, who seem to dominate its proceedings, evaded the question, and that the right of appeal to the department commander, being clear, was taken.

The Ed. Maynard Post has a membership of 212. At the first meeting in which this matter came up only about fifty members were present, and at the last meeting, yesterday evening, I have no doubt that not more than that number were present.

All that I desire in this matter is a fair investigation and the development of the truth. Mr. Gibson's application for admission to membership in the post, some time ago, disappeared from the files of the order (both of Gibson's applications have since turned up), either by design or accident, but the rules of the Grand Army requiring the description book to be so ruled as to embrace every fact of the application, the claims he made in his application clearly appear in the description book, which were that he was "enlisted in the military service of the United States March 17, 1863, as a lieutenant on Hooker's staff, and that he served two years and four months, and was honorably discharged August 4, 1865, as a captain and commissary of subsistence by reason of the close of the war."

I am a Unionist by birth, training, and every-day associations. Every relative on the face of the earth, of whom I have any knowledge were and are intense Unionists. The people of my district were almost universally loyal during the war and are so to-day. First, I think the Grand Army owes it to itself and to the old soldiers of the entire country to go to the bottom of this matter and expose to light all the facts. In the next place, I do not feel that the Grand Army ought to protect and defend and harbor an impostor who is using his membership in the order to make votes among one of the most confiding and loyal people of the nation and break down a member of the Sons of Veterans whose right of membership in that order can not be questioned for an instant. All officials of the War Department and the Third Auditor of the Treasury know, and their records clearly and unmistakably show, that Mr. Gibson is playing one of the cheekiest and boldest games of hypocrisy and fraud that has ever been attempted.

Any honest man, free of prejudice, who will investigate the facts can not help but think as I do in this matter. It is true that I am, in one sense, an interested party, but I have given this matter careful and impartial consideration, and pursued my investigation with the utmost fairness and the sole aim of developing the truth. When I say that from the beginning to the ending of the investigation there has never developed a single circumstance or fact in favor of Henry R. Gibson, I mean it. No man's loyalty to the best interests of the old Union soldiers, their widows and orphans, is superior to mine. To the Union soldiers my father owed his chief successes, and to them I am indebted for much of whatever success I have had.

If the Grand Army does not investigate this matter I believe it is a duty I owe the old soldier supporters of my father and myself to publish the official facts relating to Mr. Gibson's alleged military record from New York to San Francisco, and I will do it if it takes the last dollar I can raise. This long explanation is written with the view of requesting you to refer it to the new commander in chief, Mr. Adams, with the suggestion that you have seen the proof of my charge, and that you consider it sufficient, at least, if such be the fact, to warrant a most thorough investigation.

I am, sir, most respectfully,

JNO. C. HOUK.

Gen. _____,
Washington, D. C.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., August 11, 1898.

MY DEAR SIR: In the interest of the Grand Army of the Republic, and of the true Union soldiers, and of justice, I ask you to read this letter and carefully consider its contents. By so doing I am certain you may prevent what is already a local scandal from becoming a national one, to the detriment of the Grand Army of the Republic, and thus deprive the Bourbon Democrats in Congress of one excuse at least of assailing pensions by assailing the Grand Army of the Republic. My statement shall be open and frank from beginning to end. I am at present the member of Congress from the Second district of Tennessee, of which Knoxville is the largest and most central city.

I am a candidate for reelection—that is, I am a candidate for renomination at the hands of the Republican party. My competitor for the Republican nomination is the present chancellor of the Knoxville chancery division, Mr. Henry R. Gibson. A Republican nomination in my district means two years of service in Congress, that district not having sent a Democrat to Congress for more than forty years, and the territory of which, as it is now made up, has not cast a Democratic majority since Andrew Jackson carried it in 1824. It, therefore, is natural that a candidate for the Republican nomination should take an earnest interest, if he really desires to go to Congress from that district, in the primary election or convention, whichever it may be.

As is natural, Mr. Gibson and myself have taken great pains to investigate the history of each other. Mr. Gibson is a member of the Ed. Maynard Post of the Grand Army of the Republic at Knoxville, and I am a member of the Sons of Veterans at that place. I came into possession of overwhelming evidence that Mr. Gibson was never a soldier or sailor, and is not therefore eligible for membership in the Grand Army of the Republic, and I have so charged through the public prints of Knoxville. I reached Washington on last Monday, and yesterday I received a letter from a confidential friend at Knoxville, in which he stated that certain parties living in that city were making an effort to persuade the Ed. Maynard Post to whitewash my competitor, and thus allow him to reap all the benefits of being a member of the Grand Army of the Republic in that loyal section. Immediately after receiving that letter I sent the following telegrams:

WASHINGTON, D. C., August 11, 1898.

To Commander GAGE,

Ed. Maynard Post, G. A. R., Knoxville, Tenn.:

I am informed Henry R. Gibson will demand some kind of an investigation by the post in connection with his Army record, and that you will appoint

the proper committee for the purpose. The charge I make is that he was never a Federal soldier and has never been eligible for membership in the G. A. R., and I am prepared to prove it to the post, department, or national encampment. Of course I assume the investigation will be on the real question, open, deliberate, impartial, and without evasion, and that neither partisans of Gibson nor myself will be placed upon the investigation committee. Shall I present my proof to the post; if so, when?

JNO. C. HOUK.

AUGUST 14.

Capt. WM. RULE and Commander FRANK SEAMAN,
Members Ed. Maynard Post,
Knoxville, Tenn.:

The membership of Henry R. Gibson in the G. A. R. is already a local scandal, and I hope intemperate action on the part of the post or its officers or members that will make the scandal a national one can be avoided. If the post takes up anything in connection with Gibson's military record, it should be the question of eligibility, upon which all other questions rest. If the post takes up "side issues," and at the same time refuses to take up the real question, in self-defense an appeal will be taken to the commander in chief, if necessary. The post has no right to protect and defend Henry R. Gibson as a comrade when he is ineligible for membership, thus allowing him to use an order in which his membership is null and void to tear me, a member of the Sons of Veterans, down. I hope you will advise common sense and impartial action. This is a very simple question for the post to deal with and all I ask is fair play.

JNO. C. HOUK.

AUGUST 14.

To C. B. GOSSETT, J. A. DOUGHTY, VOLNEY GOSSETT, W. R. MURPHY, and
L. D. JOHNSON (care R. W. Austin), Knoxville, Tenn.:

The charge against Henry R. Gibson is that he was never a soldier, and therefore has never been eligible for membership in the Grand Army. I understand Gibson next Tuesday night will demand an investigation into some "side issue," with a view of being vindicated in such language by his friends and my opponents in the post as to enable him to claim before the public that the post has passed upon his eligibility to membership. Please attend the meeting and demand that the real question be investigated. I have the proof that Gibson was never a soldier, and will furnish it upon call. Put your demand in the form of a resolution of inquiry, and if the investigation is not impartial appeal to Seaman, the department commander. Don't let the real question be evaded.

JNO. C. HOUK.

For fourteen years my father, the Hon. L. C. Houk, now deceased, was the member of Congress from that district. During all his canvasses ninety-nine out of every one hundred, almost, of the ex-Federal soldiers gave him loyal and unyielding support, but somehow or other the officers of the Ed. Maynard Post, or nearly all of them, were nearly always against him.

My first nomination was received by a popular vote of the party, my majority being 9,500; and I was unanimously renominated the second time. In each race one of my main supports was the rank and file of the ex-Federal soldiers, while the officers and others who dominated the Ed. Maynard Post were opposed to me in each of the preceding races, and are opposed to me in this, the commander and a few others connected with the post going so far, I am informed, as to denounce me on the street. It may be that they were conscientious in their denunciation, growing out of the fact that Mr. Gibson has filled their eyes with sand.

If the Ed. Maynard Post continues to allow Mr. Henry R. Gibson to reap the benefits, in his aspirations for office, of his membership in that order, it is only a question of time until it has lost its usefulness for good in the Second Congressional district of Tennessee. In my fight I am but exercising the natural law of self-preservation. The War Department sustains my charge. I am overwhelmingly armed with proof, which is in the vaults of the Mechanics' National Bank at Knoxville, Tenn. A greater imposition was never practiced upon any people than that practiced by Henry R. Gibson upon the people of east Tennessee. I should have stated just awhile ago that I am backed by the War Department as to the charge that Henry R. Gibson was never a soldier, and that I am also backed by the Treasury Department to the effect that he was never anything except a commissary clerk during the time he claimed to have been a soldier. Now, I ask you to take this matter under consideration, and, after you have carefully read this letter and the card which appears in the accompanying newspaper, to take such steps as may to you seem proper.

Henry R. Gibson was elected to his present position as chancellor as much on account of his having been an ex-Federal soldier, as supposed, as on account of anything else. But I do not propose, if I can help it, that he shall be elected to Congress with the understanding that he was a soldier in the Federal army, and has a right to be a member of the Grand Army of the Republic.

Since writing the above, I have sent the following telegram:

"AUGUST 14, 1893.

"To R. W. AUSTIN or JOHN W. CONNER, Knoxville, Tenn.:

"Just left War Department. Colonel Ainsworth, charge of Records, says any commission Gibson presents is worthless: that he was never mustered in or out as a soldier. If any persons desire to whitewash him it is their privilege to try it.

"JNO. C. HOUK."

If you can not yourself thoroughly investigate this matter, please refer it to your adjutant-general, or other proper party, and direct that he go to the bottom of it.

I am, very respectfully,

JNO. C. HOUK, M. C.

Gen. A. G. WEISSERT.

Commander in Chief G. A. R., Headquarters, Milwaukee, Wis.

THE SECOND WHITEWASH BY THE OFFICERS OF THE ED. MAYNARD POST.

Mr. Chairman, the first whitewash by the officers of the post was perpetrated when they deliberately slipped Mr. Gibson into the same without hinting in open meeting of the post the most extraordinary set of circumstances surrounding his case.

It is morally certain if the few officers of the post had done their solemn duty it would have indignantly rejected Mr. Gibson's application.

The second whitewash, to their eternal shame, was perpetrated

by the same set of unprincipled officers who smuggled him in. I will read the following accounts of outrage No. 2:

[Knoxville Republican.]

WAS IT A WHITEWASH OR VINDICATION?—THE ED. MAYNARD POST HAS UP COLONEL GIBSON'S CASE ON TUESDAY NIGHT—NO INVESTIGATION ORDERED, BUT A RESOLUTION ADOPTED.

The Ed. Maynard Post met in regular meeting Tuesday night with a fair attendance, about 50 out of 212 members being present, as it had been rumored for several days that Colonel Gibson's case would be brought up for consideration.

It had been asserted that Colonel Gibson himself would demand the appointment of a court of inquiry or committee of investigation to investigate and report upon his standing as a G. A. R. man.

No such request was made by Colonel Gibson and there was none appointed. Colonel Gibson did call attention to these charges, and read before the post certain papers. And the post without further inquiry or proof adopted the following resolution:

"Resolved by Ed. Maynard Post, No. 14, Department of Tennessee, G. A. R., That the army record of Comrade Henry R. Gibson has been fully investigated and found correct; and that Comrade Gibson made no misrepresentations whatever, but obtained his membership in this post honorably, and after due investigation of his army record by a committee of this post to whom his application was referred."

It was ordered that a copy of the resolution adopted be sent to the various Grand Army posts in the State of Tennessee.

The injunction of secrecy was removed so that members of the post could talk about the matter in the outside. The Democratic press of this city reports, in order to help Colonel Gibson out, that the vote stood 33 to 1. The Republican is informed by several members that while only one vote was cast against the resolution, that many of the fifty members present did not vote at all.

Much talk was heard on the streets Wednesday and yesterday.

The Gibson men claim it is a knockout, and the Houk men say it was an attempt at whitewash. The Gibson men say that the colonel showed documents proving that he was a soldier, a lieutenant on Hooker's staff, and had an honorable discharge as captain and commissary of subsistence. The Houk men say that these papers were bogus, and that he put them back in his pocket and did not demand an investigation. They say that Gibson admitted that he was never mustered into the service, and that his claim that he was mustered out is ridiculous, as a horse could not be turned out of a lot that he was never in. They say that Gibson denied that he wrote the Secretary of War in July, 1865, admitting that he was never enlisted, never was a soldier, and had no discharge, and that when a comrade stated that he had seen a certified copy of this letter, and asked time to show it, that the post refused to wait, and that the vote was taken with no evidence before it from those who had charged that Mr. Gibson was never in the Army.

No evidence was submitted that Mr. Gibson was not a soldier, because no time was given. Some members of the post felt that the whole thing was cut and dried. Such men as comrades Rule, Ramage, Kearney, Gossett, and other prominent members of the post, advised that it would not look well to take such hasty action; that it was not doing the post justice, and would do Colonel Gibson no good. They urged that time should be taken and a thorough investigation be made, but this was not done. Some members of the post are indignant, and assert that they will prefer charges against him at the next meeting in such a way as to force the post to look into the matter.

We are unable to say to our readers just where the truth lies. We can not get a chance to see Colonel Gibson's pretended documents. He has them in his own possession. He will not let them be examined.

On Wednesday we wrote him the following letter, and had it delivered to him in person, to wit:

KNOXVILLE, TENN., Aug. 15, 1893.

DEAR SIR: There are so many conflicting rumors upon the streets to-day as to what action the Ed. Maynard Post took on your case last night, and as to just what papers you read to said post, upon which it based its action, my paper is unable to publish for its readers any intelligent account of the same. Therefore, in order that we may publish the truth for the benefit of the public, I desire to know if you will allow a representative of this paper to examine all of said documents, and take copies of the same for publication.

Inasmuch as the post removed the injunction of secrecy, there can be no wrong in doing this, and inasmuch as our readers want, and expect the truth, I hope you will grant this request.

Awaiting an early reply, I am,

Yours truly,

R. W. AUSTIN, Ed. Rep.

HON. HENRY R. GIBSON, City.

To this communication he sent back the answer, "I have no reply to make." The fault is not ours. We would print the truth if we could get it. Our readers must judge for themselves where the truth lies. We will aid them all we can. We think Mr. Gibson owes it to the community to produce his proof before the public, as he must be tried by the people, and ought to know that fifty friends can not get together in Knoxville, upstairs, and bind the 25,000 Republicans of this Congressional district. No sleight-of-hand performance will win before the Republicans of this country. We predict that the people will never see for themselves these records—if they are not genuine. The people must know the facts, as they must decide the case.

Congressman Houk only wants a fair, open investigation, and sent the commander of the post the following dispatch:

[Copy of telegram sent.]

HOUSE OF REPRESENTATIVES, UNITED STATES.

Washington, D. C., August 11, 1893.

TO COMMANDER GAGE,

Ed. Maynard Post, Grand Army of the Republic, Knoxville, Tenn.:

I am informed that Henry R. Gibson will demand some kind of investigation by the post in connection with his army record, and you will appoint the proper committee for the purpose.

The charge I make is that he was never a Federal soldier, and has never been eligible for membership in the Grand Army of the Republic, and I am prepared to prove it to the post, department, or national encampment. Of course, I assume the investigation will be, on the real question, open, deliberate, impartial, and without evasion, and that neither partisans of Gibson nor myself will be placed upon the investigation committee. Shall I present my proof to the post, and if so, when?

JOHN C. HOUK.

[Knoxville Republican.]

SCRATCH OUT THE LIE!

Gentlemen of the Ed. Maynard Post, No. 14, G. A. R., you were persuaded by Henry R. Gibson recently, eight years after his admission to your post, to pass the following resolution, which now disgraces the records of your sacred order:

"Resolved, That the army record of Comrade Henry R. Gibson has been

fully investigated and found correct; and that Comrade Gibson made no misrepresentation whatever, but obtained his membership in this post honorably, and after due investigation of his army record by a committee of this post to whom his application was referred."

The Republican is chiefly read and supported by the gallant ex-Federal soldiers and Unionists of East Tennessee. It lives for and by them. It acknowledges a superior devotion to their cause on the part of no paper, man, or set of men, and it claims the right to speak plainly in this matter. When Henry R. Gibson imposed this resolution upon you he put on your official records a black and damnable falsehood, placing you in the light before the public of being largely responsible for his deceit and fraud, if not forgery.

As soon as he perpetrated this infamy upon your honorable order and a confiding public, he continued his dishonorable course by sending printed copies of the resolution throughout this section with a note at the bottom in his own handwriting that "it was passed by a vote of 53 to 1," proof of which action on his part we have in our possession.

We believe—yes, we know—your post is made up almost universally of good and intelligent citizens, but you have let your confidence and trust in the integrity of a so-called "comrade" bring disgrace upon you and your true comrades everywhere. You owe it to the ashes of the gallant Ed. Maynard, who was a real soldier, and whose name honors you, to wipe the stain from your official records—to tear from the book the leaf which contains the awful resolution.

The Grand Army of the Republic has no right to turn Chris Bathman, a poor and humble man, out of the order because he has no record as a soldier, and retain a confessed fraud like Henry R. Gibson, who is a judge. Such discrimination can lead but to the dissolution of your holy organization. In this hour of Bourbon onslaught upon those who saved the nation, it behooves the Grand Army of the Republic to keep itself pure and free from impostors, big and little.

We beg your post for nothing, for we are armed with the truth. But we appeal to you in the name of the 31,000 sturdy warriors East Tennessee sent to fight for the flag in 1861-1865, to remove the stigma that attaches to them in the eyes of the nation by reason of the records of your post proclaiming a fraud to be an ex-Federal soldier.

The brain and heart of every warrior of these loyal mountain men can possess no conviction in the light of the facts but that you have done them an injustice if you do not blot out, destroy, burn the resolution in which you have been deceived into declaring an impostor to be an ex-Federal soldier.

The grave of every dead mountaineer patriot heaves in its effort to speak against dragging the name "soldier" in the mire by such a false resolution.

The aged and feeble widow, with one foot in the grave, and the orphan of every old soldier of these mountains ask you not to dishonor their husband and father by allowing this resolution to remain a part of the records of your post. Thousands of deserving soldiers, widows, and orphans who are justly seeking pensions cry aloud in their want, sickness, and waning hopes to you not to weaken their cause by adhering to this resolution.

There is no section of the land which glories more in the word "soldier" than east Tennessee, and you are warned that her loyal sons will, unless you do your duty and strike the resolution from your records, begin and carry forward an agitation which will sooner or later shake the very earth beneath your feet.

A few months ago the cloud was no larger than a little finger; now it may not be larger than a hand, but soon it may cover the heavens and be accompanied by a veritable cyclone, reaching from ocean to ocean. A fundamental principle is involved, and it is the corner stone of the G. A. R. In order to save himself Henry R. Gibson is willing to sacrifice your post by persuading it to violate that fundamental principle. Will you let him do it?

The resolution says, "The army record of Comrade Henry R. Gibson has been fully investigated and found correct." When and by whom was "the army record" investigated and what was it found to be? Gibson has admitted that he was "in the Union Army" as a "commissary clerk." Did the post find "the army record" to be a record of service as a "commissary clerk"? If it did, why was Henry R. Gibson entered on the records of the post as having enlisted as a "Lieutenant on Hooker's staff and as having been honorably discharged as a captain and commissary of subsistence," as claimed in his application? Did the alleged investigation by the post reveal that Gibson told the truth in his applications? If so, where is the proof? When was the investigation made, and what man will say over his signature he was on the committee and found Gibson stated the truth in his applications?

The resolution further says, "that Comrade Gibson made no misrepresentations whatever, but obtained his membership in this post honorably." No honest man in the Ed. Maynard Post would sign such a statement if he knew its contents and is acquainted with the cold and premeditated falsehoods embraced in Gibson's applications.

If Gibson, in his own handwriting, stated in applying that he was a lieutenant, etc., and captain, etc., when he was never either, with the eligibility clause right before his eyes, can any honest man claim he never got in by misrepresentation? Could he have "obtained his membership honorably" if he did not state the truth in his application?

Gibson, by hoodwinking the post into passing this infamous resolution, seems to put the post in the light of having admitted him, although at the time he knew he was a liar and a fraud and was never anything but a commissary clerk.

But we contend the post never understood the import of Gibson's resolution when he by his willing agent presented it for passage.

The post accepted his statements in the applications as truthful—without any investigation—and acted upon them in good faith by admitting him to full membership. If this is not true the post is as corrupt as Gibson and they have jointly perpetrated a wicked fraud on the public at large. As we have said before, Gibson's applications were accepted as containing truthful statements and acted upon in good faith without considering anything else other than Gibson's own intangible verbal assertions.

To repeat for emphasis, did the post "investigate" his "army record" and find it to be "correct" in that he was a "commissary clerk" and then admit him as a "Lieutenant on Hooker's staff, and as a captain and commissary of subsistence"? We have too much faith in the integrity of the individual members of the post to insinuate such a thing. Or was the investigation made into his "army record" and was it "found to be correct" in that he was actually a "Lieutenant on Hooker's staff and a captain and C. S. Vols."?

This is impossible, for there has never existed the slightest evidence that he had such an "army record." On the contrary a proper investigation would have revealed the astonishing truth that he never had a record of any kind as a soldier, and that he had never in fact been a soldier.

If an investigation was made and his "army record" as a soldier was found to be "correct" alleged evidence of the fact must have been presented by Gibson and accepted as genuine by the post. Supposing this to be true, what was that evidence? Where is it now? If it can not be produced now, what is the reason? We contend that no investigation has ever been made by the post as a post, and that the post, on account of Gibson's high position as a judge and generally supposed keen sense of honor, placed unlimited confidence in the truthfulness of his written applications and his additional verbal statements, without even writing a letter to the War Department, and let him in.

If the post when Gibson was admitted wrote to the War Department, the original letter in reply or a certified copy of the same could be very easily produced. Certainly in the absence of regular papers in the hands of Gibson the post never "investigated" his "army record" without writing the War Department, and if it did this we know the War Department stated Gibson had no "army record" as any kind of a soldier.

Gentlemen, you are compelled to admit that Gibson was admitted because he made an application, as the ironclad laws of your order require, and in it stated he "was enlisted March 17, 1863, as a lieutenant on Hooker's staff, and was honorably discharged as a captain, and C. S. Vols., on August 4, 1865."

Every man acquainted with the facts knows this to be an impudent falsehood, and this being true, what honest man can say that "Comrade Gibson made no misrepresentations whatever, but obtained his membership in this post honorably?" Scratch out the lie, cunning, audacious, and infamous!

Gentlemen, we know, and we know you know, Henry R. Gibson has never presented a commission to you as a lieutenant on Hooker's staff, or an honorable discharge as a soldier of any kind. We know, and we know you know, he has never presented to you a muster in of any kind.

We know, and we know you know, the alleged muster out he presented is on its face and in almost every surrounding circumstance irregular, insufficient, and fraudulent, and bears strong evidence of being a cunning, deliberate, and bold forgery.

We know Henry R. Gibson, like the guilty man he is, refuses to send his bogus muster-out up to the commander in chief or the War Department, as any true soldier would do under similar circumstances, so they may inspect it, or to allow it to be photographed and a facsimile of it to be printed in the newspapers so the people may pass upon it; that he had admitted his ineligibility and that he has never at any time been eligible; that if no other evidence of any character whatever existed of his ineligibility his letter to the Secretary of War, July 12, 1866, is sufficient to convince any Grand Army man that he should never have been admitted to and should be put out of the post at once. You have already too long protected an impostor at the expense of the G. A. R. Your pity and sympathy for a vain, bigoted and unscrupulous "comrade," for whose predicament he alone is responsible, have already carried you too far. You can not, if you would, cover up his crimes. They will find him. You should retrace your steps and do it quick.

"Falsehood is cowardice—truth is courage."

FURTHER CORRESPONDENCE WITH THE COMMANDER IN CHIEF.

Mr. Chairman, I will read the remainder of the correspondence leading up to the appointment of the court of inquiry, and I invite the closest attention of the committee and the House. This case presents the strongest possible argument for the enactment of my proposition into law, and I believe when the startling facts in my possession are generally known a universal sentiment will demand that it be made the law:

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 20, 1893.

MY DEAR SIR: Since General — wrote you to-day, inclosing two letters from me relating to Henry R. Gibson's membership in the Grand Army of the Republic, at Knoxville, Tenn., I received the following telegram:

"KNOXVILLE, TENN., September 20, 1893.

Hon. JOHN C. HOUK, Washington, D. C.:

"The post laid the written charges against Henry R. Gibson on the table. An appeal was taken to the department commander."

All my evidence, which is as conclusive as it is voluminous, is at Knoxville, Tenn., and as soon as it has been laid before the department commander it will be forwarded to you. All I ask is fair play, and the development of the truth. I do not think the Grand Army at Knoxville should be prostituted to the purposes of tricky politicians and military impostors like Henry R. Gibson. In the face of the present onslaught against the pension system, I think it will appear to you to be better for the East Tennessee pensioners at least for this matter to be sifted and straightened out at the very earliest date practicable. I do not know when the department commander at Knoxville will consider and act upon the appeal. I will express to you to-morrow a photograph of a letter written by Henry R. Gibson July 12, 1866, after the war had closed and after he had migrated to Tennessee, and which is on file in the Adjutant-General's Office, at the War Department.

I am, sir, very respectfully,

JNO. C. HOUK, M. C.

To the Commander in Chief of the Grand Army of the Republic.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 20, 1893.

To the commander in chief,

Grand Army of the Republic, Lynn, Mass.:

I herewith hand you an affidavit of Volney F. Gossett, a prominent member of the Ed. Maynard Post, of Knoxville, Tenn., in good standing, in which he says "that the above is a true and correct copy of the charges preferred by him against Henry R. Gibson at the meeting of the said post (Ed. Maynard Post, No. 14.) on Tuesday, September 19, 1893, and that the post refused to take action on the charges, and that a motion to table the charges was made and carried; that he endeavored to appeal from the action of said post and that he was denied the right of appeal."

I have learned that the department commander has not as yet taken jurisdiction of, allowed, or recognized the appeal prayed and denied in the post. Of course I do not know why the department commander so unreasonably delays action in the face of the references of the matter a month or two ago by the commander in chief, General Weissert, "for his (the department commander's) information and investigation."

I am not a member of the Grand Army of the Republic, but I am a member of the Sons of Veterans at Knoxville, Tenn., and in a position to see and know enough to enable me to establish that the action of the post is unprecedented, ridiculous, and inexcusable, if not worse.

It certainly does seem to me that a sacred order of the standing and proportions of the Grand Army of the Republic has a power lodged in some official or officials to take hold of and correct the wrongful acts of a post, detrimental in their every effect to the interests of the order, when the department commander fails within a reasonable time to do so.

I also hand you herewith a true copy of a letter which I have just sent to the commander of each of the one hundred posts in the department of Tennessee.

So far I have published only a very small proportion of the evidence which I have, but the point has about been reached where the conditions of the situation require that I should give the public all my proof in self-defense. However, before doing that my sincere interests in the welfare of the Grand Army of the Republic make me feel that I should hesitate, or delay my exposure until the Grand Army of the Republic extricates itself from the unenviable position into which the action of the Ed. Maynard Post has placed it. But the

law of self-preservation is a natural one, and no person can be blamed for exercising it. I am willing to endure a great deal, but endurance in this matter has about ceased to be a virtue. There is a sore on the body of the Grand Army of the Republic at Knoxville, Tenn., and it should be lanced at once. Is it possible there is no physician who will come to the relief of the patient? I am, sir, very respectfully,

JOHN C. HOUK.

[Charges against Gibson.]

Personally appeared before me, a clerk of the United States circuit court for the eastern district of Tennessee, Volney F. Gossett, of Knoxville, Knox County, Tenn., well known by me to be reputable and entitled to full credit on oath, who makes oath in due form of law that he is a member of the Ed. Maynard Post, No. 14, Grand Army of the Republic; that the above is a true and correct copy of the charges preferred by him against Henry R. Gibson at the meeting of said post on Tuesday, September 19, 1893.

He further states that the post refused to take action on the charges; that a motion to table the charges was made and carried; that he endeavored to appeal from the action of the said post, and that he was denied the right of appeal.

V. F. GOSSETT.

Subscribed and sworn to before me this 28th day of September, 1893.

[SEAL.]

H. H. TAYLOR, Clerk,

By J. T. CARTER,

Dept. Clerk of the U. S. Circuit Court,
Northern Division Eastern District of Tennessee.

[Knoxville Republican.]

THE CHARGES—GIBSON'S FRIENDS VOTED TO LAY THE CHARGES ON THE TABLE—THEN DENIED AN APPEAL TO THE DEPARTMENT COMMANDER—THE CHANCELLOR SAT AS DUMB AS AN OYSTER AND DID NOT DEMAND AN INVESTIGATION.

The Ed. Maynard Post, at its meeting on September 19, 1893, again had up the war record of Colonel Gibson. The following charges were preferred by a member of the post, to wit:

To the commander of Ed. Maynard Post, No. 14,
of the Grand Army of the Republic, Knoxville, Tenn.:

SIR: I charge that Comrade Henry R. Gibson, who is a member of the above-named post, and who is in the full enjoyment of all the honors and advantages of such membership, is not eligible for membership in the said order for the following reasons:

The said Henry R. Gibson was never a soldier or a sailor of the United States Army, Navy, or Marine Corps, who served between April 12, 1861, and April 9, 1865, in the war for the suppression of the rebellion, and never having been honorably discharged from such service, and was never a member of any State regiment that was called into active service and subject to the orders of the United States general officers between the dates mentioned. I charge further that Comrade Henry R. Gibson has been disobedient to the rules and regulations of the order to which he belongs and guilty of conduct prejudicial to said order, because he falsely stated in his application for membership in said post that he had been a soldier; that he enlisted March 17, 1863, as a lieutenant on General Hooker's staff and received an honorable discharge and muster out August 4, 1865, as captain and commissary of subsistence.

I charge further that Comrade Henry R. Gibson has injured the cause of the Union soldiers and placed Ed. Maynard Post of the Grand Army of the Republic in an unenviable position, because he has falsely proclaimed that his post would stand by and vindicate him and fight his battles after it had become known to many citizens and old soldiers that he, the said Henry R. Gibson, was never a soldier and is not eligible to membership in the Grand Army of the Republic. And because he has industriously given circulation to all references to himself as a veteran of the late war, when in fact he was never a soldier at all; and that he cunningly induced the Ed. Maynard Post at its last meeting in August, 1893, to adopt a resolution declaring that his war record was straight by reading to the post certain papers pertaining to his standing as a soldier which I charge was unauthorized, irregular, fraudulent or forged; and further that he denied to said post, upon the honor of a comrade, that he wrote the Secretary of War a letter in July, 1866, in which he admitted that he was never an enlisted soldier, but asked for a commission as captain or any less grade, when in fact he had written such a letter and well knew it when he made such denial.

I am a member of this post, and as such I make the above charges in the interest of truth and for the good of the order. I have in my possession the proof to sustain every charge and demand that an investigation be made in accordance with the rules and regulations governing such cases.

As soon as these charges were presented and read, a strong friend of Colonel Gibson sprang to his feet and moved to lay the charges on the table, and every friend that Gibson had present voted for the motion, and it carried. Then an appeal was prayed, but they claimed that no appeal could be taken. It was a desperate effort on the part of Colonel Gibson and his friends to smother an investigation. One member of the post turned to Colonel Gibson and appealed to him, and said: "Colonel Gibson, if you are an honest man, if you were a soldier, if you are rightfully a member of this post, why don't you get up here and demand an investigation?" But "Comrade" Gibson could not speak. His wonderful power as an orator failed him. He sat as dumb as an oyster. Here was the time to speak. The good of the order demanded it. His own reputation was at stake. Even John Houk, "that silent man," would have talked then. But the "veteran orator" dared not open his mouth. The post can not smother the matter longer. It will now go to the department commander, who will take action on it.

KNOXVILLE, TENN., September 17, 1893.

SIR: I desire to call your attention to the inclosed copy of charges presented by myself to the Ed. Maynard Post, No. 14 of this place, at its last meeting, and to request that you take the responsibility of investigating the eligibility of Henry R. Gibson to membership in said post. I make this appeal to you for the reason that the said post will not make an investigation.

I await your pleasure in the matter, and will forward proof I have in hand whenever you desire the same.

Yours in F., C., and L.,

(Signed)

Commander in Chief,
Grand Army of the Republic,

Lynn, Mass.

V. F. GOSSETT.

P. S.—I was informed by Hon. William Rule, United States pension agent at this place, editor of the Knoxville Daily Journal, and a member of the Grand Army of the Republic, that while in conversation with Henry R. Gibson about his eligibility as a member of the Grand Army of the Republic, the said Gibson admitted (?) that he entertained doubts (?) himself as to his eligibility in the said organization, and that he (Rule) told Gibson that he had no right in it, and should withdraw from the Ed. Maynard Post.

(Signed)

V. F. GOSSETT.

KNOXVILLE, TENN., October 5, 1893.

SIR: I, as a member of the Ed. Maynard Post, No. 14, of the Grand Army of the Republic, at a regular meeting of said post on the 19th day of September, 1893, preferred written charges against Comrade Henry R. Gibson, which not only alleged that he had been guilty of conduct prejudicial to the order of the Grand Army of the Republic, but that he is not eligible to membership in said post.

The charges were by a vote of said post laid on the table. I prayed an appeal, which was refused. I then asked that a certified copy of the charges and the action of the post thereon be furnished you as the department commander, but this the post also refused to do.

Now, sir, in view of this extraordinary and unheard of action on the part of the post, I ask you to examine the charges referred to, and look into the action of said post to the end that you may order or cause to be ordered such an investigation as will establish the truth in the premises and purify the membership of said order.

In order that you may see that said charges are not frivolous, I inclose herewith a true copy of the same.

I am, sir, with very great respect, yours, in F., C., and L.,

(Signed.)

Hon. FRANK SEAMAN,

Department Commander, Knoxville, Tenn.

V. F. GOSSETT.

HOUSE OF REPRESENTATIVES, UNITED STATES.

Washington, D. C., October 5, 1893.

MY DEAR SIR: The within telegram is referred to you with the statement that it relates to the case of Henry R. Gibson, pending before the Ed. Maynard Post at Knoxville, Tenn.

The high-handed course of this post in allowing itself to be manipulated to shield Henry R. Gibson, who is notoriously a member of the post by deliberate fraud, if not by forgery, will not be indorsed by the old soldiers and Grand Army men in Tennessee, and in the eyes of the public generally the action of the post will be pointed to as the only black spot in the history of the Grand Army of the Republic in east Tennessee.

I have advised my friends from the beginning to make no effort whatever to pack or control the post in this matter. They have been told in every instance to simply file the charges against Mr. Gibson and let the post act of its own free will. It has now acted three times in direct violation of the rules of the order, and brought disgrace upon the name of soldier in proportion to the extent of its influence, which I assure you will be quite limited in the future in my section if its present course is persisted in.

I shall now proceed to lithograph various documents, and publish all of my evidence in pamphlet form, and send a copy of the pamphlet to every Grand Army post in the United States and to every voter in my Congressional district. What I shall do shall be done in self-defense, and in the interest of the genuine ex-Federal soldier. I give way to no man in admiration and respect for the sacred order of the Grand Army of the Republic, and whatever I may do will be done more to protect that order than to injure it.

I am, sir, most respectfully,

JNO. C. HOUK, M. C.

Capt. J. G. B. ADAMS,

Commander in Chief, G. A. R.,

(Care Gen. A. G. Weissert,)

Milwaukee, Wis.

[Telegram.]

KNOXVILLE, TENN., October 4, 1893.

Hon. JOHN C. HOUK, M. C.,

Washington, D. C.

Replying to yours second. Motion made to take charges from table; this motion tabled; commander ruled appeal could not be taken or copy of record given Gossett or furnished department commander, and post indorsed this ruling.

INVESTIGATION BY COURT OF INQUIRY ORDERED AT LAST.

Mr. Chairman, here is the order directing the appointment of the court of inquiry:

[Special Order No. 8.]

HEADQUARTERS DEPARTMENT OF TENNESSEE,
GRAND ARMY OF THE REPUBLIC,
Knoxville, November 30, 1893.

I. Information having been filed with the department commander by a comrade of Ed. Maynard Post, No. 14, alleging that Comrade Henry R. Gibson, mustered into Ed. Maynard Post, No. 14, of this department, in April, 1865—basing his claim to membership on having served as lieutenant and aide-de-camp on the staff of Major-General Hooker and as captain and commissary of subsistence, United States Volunteers, had never served in the military service of the United States as claimed by him in his application for membership; and questioning the right of said Gibson ever to have been a member of the Grand Army of the Republic. The comrade filing this information also alleged that the information had been presented to Ed. Maynard Post at a regular meeting thereof, and that the post had refused to investigate the same. The department commander, in the absence of any express provision of R. and R. to that effect, doubted his authority to order a court of inquiry to investigate the eligibility of Comrade Gibson to membership. He thereupon referred the matter to the commander in chief, who has issued the following order:

[Special Order No. 3.]

HEADQUARTERS GRAND ARMY OF THE REPUBLIC,
Lynn, Mass., November 8, 1893.

I. Comrade Frank Seaman, commander Department of Tennessee, Grand Army of the Republic, is hereby directed to order a department court of inquiry to convene at once at Knoxville, Tenn., to examine into the membership of Henry R. Gibson, of Ed. Maynard Post, No. 14, Department of Tennessee; and to especially inquire into the said Gibson's eligibility to membership in the Grand Army of the Republic. The papers and findings in this case to be forwarded to these headquarters as soon as possible.

By command of John G. B. Adams, commander in chief.

(Official.)

JAS. F. MEECH,

Adjutant-General.

II. In obedience to Special Order No. 3, Headquarters Grand Army of the Republic, a court of inquiry is hereby ordered to convene at the hall of Ed. Maynard Post No. 14, Harris Building, Knoxville, Wednesday, November 29, 1893, at 10 o'clock a. m., for the discharge of the duty specified in said order No. 3. The court will continue in session from day to day until the examination is concluded to the satisfaction of the court. The rules given in the Blue Book for the government of courts-martial will apply as far as practicable.

III. The following is the detail for the court:
 Senior Vice-Department Commander H. W. Veasey, past commander Post 94, president of the court.
 Department Chaplain Rev. W. B. Rippetoe, Post 18.
 Past Department Commander Wm. J. Ramage, past commander Post 14.
 Past Department Chaplain M. M. Harris, past commander Post 14.
 Past Assistant Adjutant-General Halbert B. Case, past commander Post 2.
 Past Assistant Quartermaster-General Thos. H. Heeves, past commander Post 35.
 Comrade A. M. Gamble, A. D. C. Dept. staff, past commander Post 39.
 The court will designate one of its members to act as recorder.
 Comrade J. A. Reep, A. D. C., Post 14, is detailed as orderly during the sessions of the court.

IV. A complete record of the proceedings of the court, including the original, or properly attested copies of, papers submitted as evidence, will be forwarded to these headquarters without delay, for transmittal to the commander in chief.

By command of FRANK SEAMAN, Department Commander.

CHAS. H. OGDEN,
 Assistant Adjutant-General.

CONVICTED OUT OF HIS OWN MOUTH.

Mr. Chairman, I now submit a portion of the testimony submitted under oath by Mr. Gibson before the court of inquiry. This report is as full as I have been able to secure up to date. It is nothing but a string of premeditated falsehoods. Its cold-blooded wickedness will be clear to all who listen. Under oath he convicts himself. When we contemplate that the witness at the time he testified was a judge upon the bench, it is hard for us to understand how he was so reckless, conscienceless, or foolish as to commit moral if not legal perjury by swearing that his military papers were genuine, and in another breath admitting that some of his papers were fraudulent!

Henry B. Gibson, next witness, called on his behalf, having been first duly sworn, testified as follows:

I live in the city of Knoxville and am judge of the chancery court of the second chancery division. Am 55 years old.

In March, 1863, I was in the city of Washington subbing in the commissary department, of which Col. Amos Beckwith was the head. The gentleman in that office took considerable interest in me because of the fact that I had previously lived in South Carolina, and was an intensely loyal man.

Capt. A. P. Bilyeu, some months before that time, had been quartermaster of a Pennsylvania regiment in the defense of Washington City. He was wholly incompetent to discharge the duties of his position, but he was a man of great political power in Philadelphia, Pa., his home. He had been a contractor for many years in the building of houses, having built one or more solid blocks of houses in Philadelphia, and had at various times thousands of men in his employ. At that time the sentiment at Washington City seemed to be that our military affairs were very unpromising. The Army of the Potomac, the previous December, had been badly beaten at Fredericksburg, and the movement a month or so thereafter ended in the Army getting stuck in the mud and being withdrawn to their winter quarters.

Affairs in the Southwest were then very discouraging, and the authorities at Washington felt the necessity of having all possible help from public opinion. The question of removing Captain Bilyeu was discussed, and it was decided that he was a man of too much political influence to take that step. His Congressman, Judge Kelley, vigorously protested. It was thereupon agreed that instead of removing him they would promote him, making him a captain in the commissary department, which was accordingly done.

Inasmuch as he was a man accustomed to outside work he was put in charge of the fresh beef department of the Army of the Potomac. That department issued to the army about 600 head of beef cattle a month. I was asked by Col. Amos Beckwith how I would like a position under Captain Bilyeu? I replied that I would like to have one if it was agreeable. On reaching Aquia Creek Captain Woodward informed me that I had been selected to perform the duties ordinarily incumbent upon Captain Bilyeu, but that the old captain was absolutely incompetent, drunk part of the time; when not drunk was half crazy.

I was somewhat appalled at that presentation of affairs—the fact of his incompetence and his idiosyncrasies not being known to me previous to that time, although I knew of his ignorance. I thereupon went to a place near Marlboro Point, near Aquia Creek, where the Government corral was, and found Captain Bilyeu there, and a great corral in front, made of immense logs, cutting off a neck of land. I made myself agreeable and continued to act from that time on. When the pay roll was first made out he had a son there, George W. Bilyeu, who was acting as chief clerk, although the understanding was that I was to act as chief clerk. I did not object to Mr. Bilyeu acting, because there were only a few days remaining. He acted as chief clerk the balance of that month. The next month, if I remember rightly, in order to ease things off as much as possible, I acted simply as clerk, perhaps for some time as clerk, but came in ahead of Mr. George Bilyeu in control and management. I remained in that position until after the battle of Chancellorsville. I was connected with the Army at that battle, being at Sedgewick. Before the battle all the beef cattle on hand were apportioned among the various Army corps, so that we had none left; that is, none except two. There is no need to mention that. After the battle of Chancellorsville we were ordered up to Alexandria, Va., and continued, you might say, skirmishing more or less between Alexandria, Va., and Gettysburg until after that battle was fought.

I will say in this connection that some of those reports that were read upon yesterday were made in such convenient places as I could get a rest. I had an ambulance with two horses, two field desks, two field tables, a hospital tent, with patent flexible flooring, and attended to all the office work. Captain Bilyeu, on horseback, attended to the outside work. We were constantly receiving and sending out beef cattle for the army, and occasionally had large herds that had been pasturing in various parts of the State of Maryland on which we could draw. During this time various orders were issued to me, directing me to do so and so; that is, to issue cattle, to report at such and such places. On one occasion I bore a dispatch from Lieut. Col. George Bell, at Alexandria, Va., to Lieutenant-Colonel Sturdevant, at Edwards Ferry, while the main body of the army was marching to Gettysburg. Edwards Ferry is about a two days' march to the site of the battle of Gettysburg; and in other ways I was recognized as something more than a clerk. These orders were issued by a higher authority than Captain Bilyeu, and were issued to me direct. After the battle of Gettysburg we were ordered back to Washington City—I will not say we were ordered back—but we went back because we could go wherever the exigencies of the service seemed to require at that time. There was no place in Virginia at that time where we could herd cattle. The army had followed up Lee and was encamped between Lee's army and Washington City, but the country in between was covered

with guerrillas, Mosby especially, and we had to have military escorts to carry the cattle through from the Maryland side of the Potomac to the rear of the army. Affairs remained in that condition until about December, 1863.

December, 1863, we were ordered to report to Gen. William Birney at Benedict, in southern Maryland. We remained at Benedict, Md., organizing, in plain English, negro troops, and took down with us three complete regiments of officers and not a single private, from brigadier-general down to the lowest commissioned officer. We organized three full regiments of colored troops down there, and in March, 1864, we were ordered to Baltimore, Md., to a place called "Camp Birney," near Druid Hill Park. I wish to state while at Benedict, Md., I was recognized as being more than a clerk; as having some sort of official position, and was not exactly disciplined, but I was summoned before General Birney on one occasion for having used a Government ambulance as a citizen. I produced my authority and showed him what I had, which was the first time I ever produced it. It was the original of that paper, exhibit 7. Thereupon I was discharged without censure upon the ground that I had a right under the circumstances to use the wagon. It was necessary for me to go to Washington City; it was a short overland trip and I used a Government ambulance. It was in that very cold spell of January weather, and the animals died as the result of the trip. Owing to the extreme rigor of January, 1864, they froze to death that night, not being properly cared for, and I came near freezing to death. When we got to Baltimore in March, 1864, we remained there as general commissary, at Camp Birney, until, my recollection is, some time about—I don't really remember what time it was, but so it was we were transferred to Wilmington, Del., under Col. S. M. Bowman, commanding the Eighty-ninth Pennsylvania Volunteers.

While at Baltimore, having let General Birney know what my position was, and then having disclosed it to Captain Bilyeu, there was no necessity any longer to mollify Captain Bilyeu; because the prospects of our military success were all that could be desired. I let them know what my status was, and thereupon thinking that my position then would perhaps be uncomfortable with Captain Bilyeu when he found out the status, I immediately made application for promotion, but I found that the old captain had got attached to me, and I am sure that I did everything that I could to win the old man's confidence. I did it, first, because it was to my interest; second, because it was my duty; third, because I had promised my superiors I would do so; and I will say further that I was treated with great kindness in return, and it is a great pain to my heart to have to say the things that I have been obliged to say with reference to Captain Bilyeu, for he treated me better than his son, and never gave me an unkind word that he did not afterwards cry over in his half-drunken moods; never gave me an unkind word that he did not cry about like a child, for he was big-hearted; for, while an old man, he was very babyish in a great many respects; a man without an education, absolutely unlettered, he felt that I was his only reliance, had unlimited confidence in me; told me almost every time he got drunk, which was at least every two or three weeks, that I could ruin him any time that I saw fit, and that he was risking everything on me, and when I got into this trouble down at Benedict with General Birney, who was very strict, Captain Bilyeu was very much pleased at my coming out, and that paved the way to open up the situation. So, after getting up to Wilmington, Del., on November 31, 1864, I wrote a letter to the Adjutant-General of the United States Army, of which this is a copy. (Filed, marked exhibit No. 8, and read.)

After affairs remained in that condition until the surrender of Lee was announced in April, 1865, and on the very same day, or a few days after, the papers contained a general order—I will not be positive whether it was a general order, but something in the nature of a general order or proclamation by Secretary Stanton to the effect that no more troops would be mustered in the service; that all recruiting stations should close up, and that no more soldiers should be forwarded to the front, and those in the parole camps and forwarding points should be mustered out and returned to their homes. This startled me when I thought of my pending application for promotion, and seemed to blast my prospects of either getting the commission or promotion. Colonel Bowman at that time was in Washington City; spent most of his time there. I wrote to him, and gave him a history of the case. I think he already knew it, however. I think I had given it to him before; also wrote to Judge Sherwood to bring his influence to bear upon Secretary Stanton, and to get Governor Fenton to do what he could.

Not long after that I learned from my uncle that Mr. Stanton had been very obdurate and offensive, but that he had borne with him. The Secretary did not want to be bothered by commissaries who had the peculiar status that I had, but Judge Sherwood was a lawyer, accustomed to take hold of things, and he and Colonel Bowman and Colonel Beckwith—what influence Governor Fenton brought to bear I can not now recall; I have tried to search in my memory, but have failed to remember anything that Governor Fenton did.

I continued to perform the duties of commissary without any superior at all until the 4th of August, 1865, when I turned over what was left to Lieut. Col. Joseph G. Crane, at Baltimore, Md., and filled in the date of that paper August 4th, and that ended my connection with the service.

I then went to Albany, N. Y., to the law school, and on the 5th of January, 1866, came here to the city of Knoxville. I had intended for years making this my home. The reason for that is not necessary to give. I came here and remained. When I got here I found that I needed some evidence that I had been connected with the Federal Army. While carrying that paper (Exhibit No. 15) in my valise with a bottle of lightning hot drops, I believe they call it, the movement in my valise caused the bottle to leak, and that paper, with a lot of others, was in it and some of the liquid got on the paper. I cleaned it off as well I could, but for several weeks, in fact for about five or six weeks, I have been carrying it in my pocket and dust collected there on it, and in trying the other day to make it look a little more respectable I tore it. Look at the signature and you will find there are no signs that there has been any tampering or anything of that sort. Providence seems to have favored me in that respect and kept the lightning hot drops from Colonel Bowman's signature.

In this connection I will state that I have corresponded with the officials in Pennsylvania to learn about Colonel Bowman. Of course I knew he was dead.

After coming here to Knoxville I found nobody that I knew, with the exception of two, and I had been accustomed for years to live among the army officers and knew all about them. I got here, found myself a complete stranger, and nobody knew anything about me, and when I began to state my connections with the service one of the first questions asked was, "What company or regiment did you belong to?" and I felt the necessity of having some fortification. So I wrote to the Adjutant-General of the Army, in one of the letters that was read last night, requesting him to return to me my application for promotion in the commissary department, and all the papers that accompanied it. To that letter I received this answer (filed and marked as Exhibit No. 17):

When I received that I was very much chagrined and shocked that my friends had not done their duty by me in forwarding and filing my papers, supposing that letter to be true. I therefore employed a claim agent at Washington City by the name of John H. McCutchen to investigate the matter for me. While I knew a great deal then about the Commissary Depart-

ment I didn't know much about the law of the War Department. I did not know much about prosecuting claims against the Government, but I knew that a great many officers seemed to have their business transacted at Washington through claim agents, and it occurred to me that perhaps through a claim agent—I did not know what "hocus-pocus" they exerted upon the Department to get things done—I didn't know but what through a claim agent I could obtain a commission by virtue of that memorandum of appointment that I had. Thereupon I wrote to this man McCutchen, giving him a full history of the case. He made some investigation, as I learned from him, and then wrote me a letter to the effect that he could find nothing of the letters in the War Department upon which to predicate my claim, and requested me to write a letter showing the state of facts as they appeared of record; not to put anything in the letter that did not appear on record. And thereupon I wrote that letter of July 12, 1865, Exhibit I, that was exhibited here last night, a photograph copy, and sent it to Mr. McCutchen, and I take it he delivered it to the Adjutant-General and undertook to accomplish something, but accomplished nothing, except to get a fee out of it.

I got in a hurly-burly of work here and these matters dropped out of my mind, and I never thought of it any more until Major Gratz spoke to me one day about joining the Grand Army post here, and I told him I would like to join. At that time I didn't know what the qualifications for membership were. I just took it for granted that any man who was connected with the Army was eligible, never dreamed of anything else, and I regarded myself as connected with the Army. I never questioned that myself, and I did not suppose anybody else questioned it. Major Gratz gave me an application to fill out, and I filled it out. I call special attention of the court to the fact that at that time the qualifications of membership were not printed on the application blanks. You see the adjutant in furnishing this copy scratched it out. [Showing the copy of the second application.] On the application now used, at the head of the application is an extract from Article IV, chapter 1, giving qualifications for membership; that was not on the first application that was given me, so I had nothing in the world to go by, and as I looked down I saw it was to be addressed to somebody. I addressed it to "Ed. Maynard Post."

I wanted to make application for membership in said post, Department Tennessee and Georgia, Grand Army of the Republic, and based my application on the following facts: [Reads from first application, Exhibit D.] I had no papers before me when I filled this up. You will find I wrote over the word "enlisted," the word "appointed," etc., March, 1863, and what I meant by personal staff of General Hooker is that I was appointed by his command. I want to say in this connection that I have no idea that any man who has had connection with a big army supposes that General Hooker ever knew about the order. Things are not done in that way. That paper [Exhibit No. 7] was simply gotten up after a conference with certain of the staff officers as a means to accomplish an end. I understood that. I don't suppose the court thinks I consider that document was anything more or less than a device to enable me to do something for the public welfare if the urgency required and the occasion demanded, but it was some sort of authority, and I am very free to say, as I learned later on, I never relied on it to amount to a great deal. It was a mere device and not composed of that sort of authority that I felt like relying on, and the real truth is in my correspondence with the Secretary of War I felt a delicacy in relying on that document because I understood its character.

I told Major Gratz that I was borne on the commissary pay roll, and stated to him further, as I state now to the court, in order to tell the whole truth about this transaction—it is very humiliating to do so—that I had a good berth; was getting \$90 a month and rations. I felt I could get a commission any time by disclosing facts and making application, but I had a good berth, and I had hold with one hand and could let go with the other, and all I wanted to do was to come out of the war fortified with a commission and I was content. I endeavored to shape things in such a way that I would come out that way; but as I have stated to you, I had waited too long. I had a fine berth; there was no question about that.

EXHIBIT No. 7.
[Special Order.]

HEADQUARTERS ARMY OF THE POTOMAC,
Camp Near Falmouth, Va., March 17, 1863.

1. Henry R. Gibson is hereby appointed a special aid-de-camp, with the rank of first lieutenant, and will be respected and obeyed accordingly.
2. He will report for duty forthwith to Capt. A. P. Bilyeu, C. S. Vols., at Aquia Creek, Va., in accordance with verbal instructions.

By command of Major-General Hooker.

A. B. WOODWARD,
Captains and A. A. G.

Lieutenant Gibson will take and subscribe to inclosed oath and forward the same to headquarters.

[Indorsement.]

HEADQUARTERS ARMY OF THE POTOMAC,
Falmouth, March 17, 1863.

Order of general commanding appointing Henry R. Gibson first lieutenant and aide-de-camp.
I reported to Capt. A. P. Bilyeu, C. S. Vols., March 17, 1863, as ordered, and returned the oath to headquarters.

HENRY R. GIBSON,
First Lieutenant and Aid-de-Camp.

EXHIBIT No. 15.
[Special Orders.]

MILITARY HEADQUARTERS, DISTRICT OF DELAWARE,
Wilmington, August 4, 1865.

In obedience to the order of the honorable Secretary of War, the following officers on duty in this district are this day honorably discharged from the service of the United States by reason of the termination of the war.

1. First Lieut. Henry R. Gibson, C. S. Vols., with the brevet rank of captain. He will turn over all United States property in his possession to Col. Joseph G. Crane, C. S. Vols., Baltimore, Md.

(Signed)

S. M. BOWMAN,
Col. Eighty-fourth Pennsylvania Volunteers, Commanding.

NOTE.—Gibson's two applications remained in the hands of his friends who slipped him into the post, and the eligibility clause printed at the top of one of them was no doubt scratched out as an afterthought to fit the theory of Gibson's defense. There could be no consistent motive for scratching this clause.

KNOXVILLE, TENN., June 9, 1894.

I hereby certify that the printed matter hereto attached is a copy of the testimony of Henry R. Gibson, given before a court of inquiry of the Grand

Army of the Republic, held at Knoxville, November 29 and 30, 1893. Said court was convened for the purpose of inquiring into the eligibility of said Gibson to membership in the Grand Army of the Republic. At that date, and until March 21, 1864, I was commander of the Department of Tennessee, Grand Army of the Republic, and the testimony of said Gibson hereto attached was printed from a copy made by the official stenographer of the court, then in my possession. The original of this testimony is with the record of said court of inquiry, at the headquarters of the Grand Army of the Republic, Lynn, Mass.

FRANK SEAMAN.

Mr. Chairman, I now submit the brief for the prosecution in the court of inquiry:

IN RE HENRY R. GIBSON.

May it please the court:

The Army regulations being a part of the law of the land, Gibson is presumed to know the requirements to make a soldier—enlistment and discharge. Such being the case he can not hide behind ignorance, and say, "he did not know what it took to make one eligible to membership in the Grand Army of the Republic." Neither can he plead the fact in palliation of his conduct, that the Ed. Maynard Post, No. 14, Grand Army of the Republic, knew the relation he sustained to the Army from March 23, 1863 to July 2, 1865.

The Ed. Maynard Post had before it Gibson's application for membership, in which he stated that on the 17th of March, 1863, he was made a lieutenant on General Hooker's staff, and that he was mustered out August 4, 1865, as brevet captain and C. S. Vols. This was all the post had to guide it, and was what the Grand Army of the Republic regulations required as the first step to gain admission to the post; and this step was taken by Gibson himself, for he tells you he filled out and signed his own applications. The first application was dated December 18, 1864, and the second February, 1865. The last of these applications had printed in plain letters at its top what was required to make a person eligible for membership in the Grand Army of the Republic, namely, service as a soldier, or enlistment as a soldier between April 12, 1861, and April 9, 1865, and an honorable discharge.

In December, 1864, and February, 1865, Mr. Gibson knew when he made these applications and stated that he had been from March 17, 1863, a lieutenant on General Hooker's staff, and was mustered out August 4, 1865, as a brevet captain and C. S. Vols., that he had never held either of these honorable positions in the United States Army, and that his claim to have done so was a fraud, and that he was perpetrating on Ed. Maynard Post, No. 14, Grand Army of the Republic, a wicked falsehood.

But I do not care to discuss as to how he got into Ed. Maynard Post, for the reason that that post is not on trial before this court. The Ed. Maynard Post, of course, knew what constituted eligibility for membership when Gibson was admitted, and we must assume that the post accepted as true the statements contained in Gibson's applications. We have no right to assume that the post admitted Gibson to membership believing at the same time that his applications contained false statements, and that he had no military record. There is no doubt that the post accepted Gibson's applications as truthful, and acted upon them in good faith. Even if this court had jurisdiction over the question as to how Gibson gained admission to the post, it has been admitted that his letter of July 12, 1866, to Secretary Stanton was never presented to the post, and which, in fact, was not discovered in the files of the War Department until 1889. It has never been claimed that the contents of this letter were revealed to the post at the time Gibson was admitted.

The question presented for your consideration is, was Henry R. Gibson, between April 12, 1861, and April 9, 1865, a soldier or sailor—the latter he does not claim to have been—and is he entitled to membership in the G. A. R. under the rules and regulations of the G. A. R.?

To ascertain this fact the evidence submitted to you and on file must be looked to, for that is a question of fact, and from the facts we must see whether he comes within the letter of the law. It is undisputed that Gibson has no commission or muster in his possession; and the records of the War Department do not show that he ever had a commission of any grade.

By his letter written to Secretary of War Stanton July 12, 1866, and which letter he admits he wrote, he says, speaking of making an application for a commission, "at the time of making the above application, for two years previously, and for nine months subsequently I was chief clerk to Capt. A. P. Bilyeu." In the same letter he says that this application was made on the 30th day of November, 1864. Two years previous to that date would be the 30th day of November, 1862, or about three months before March 17, 1863, the date on which Gibson alleges he was appointed on Hooker's staff. Nine months subsequent to November 30, 1864, would be August 30, 1865, or 26 days after August 4, 1865, the date of his alleged muster out. This would make him, according to his own language to the Secretary of War, written one year after the war had closed, and after he had migrated to Tennessee, chief clerk to Capt. A. P. Bilyeu, from November 30, 1865, to August 30, 1866, or two years and nine months, between which dates Gibson now claims he entered the Army as a lieutenant and was honorably discharged therefrom as a captain.

But let us see what he says in this letter about his enlistment. I quote from it, as follows: "And I would have enlisted had I not been persuaded by officer friends (some of whom indorsed my application) to continue as a commissary clerk, they promising to use their influence to obtain for me a commission of captain and C. S. Vols.—I respectfully request that I may be granted a commission as captain and C. S. Vols., dated November 30, 1864 (or earlier), and a muster out dated July 4, 1865. This is doubtless a unique and unheard of application, but I am living in a Southern city and feel keenly and sensitively the humiliation arising from my never having been regularly in the United States service during the war. That I did serve my country earnestly and well my own conscience and the voice of my superiors alike assure me, but alas! where is the proof that I ever served her at all? Any commission, even of a lower grade than captain and C. S. Vols., will be hailed as a boon. Praying, though little hoping, a favorable response, I am, sir, etc."

When Gibson wrote this letter on July 12, 1866, his recollection of his connection with the Army must have been better than it could be to-day, and he doubtless then had fewer motives for failing to tell the truth than he has now, and all the evidence in the record goes to show that he then stated the facts to Secretary Stanton as to his not having been a soldier—that is, that he had never been anything but a civilian employee or a commissary clerk.

This fact Gibson knew when he made and filled out his application to the Ed. Maynard Post, No. 14, to become a member of the G. A. R., and he also knew the further fact that when he said in the applications that he was a lieutenant on General Hooker's staff and was mustered out as brevet captain and C. S. Vols. that he was telling an untruth. If he entered the military service as a lieutenant on General Hooker's staff March 17, 1863, why did he not in his letter to Secretary Stanton of July 12, 1866, which he admits he wrote, mention the fact, instead that he served from November 30, 1865, to August 30, 1866, as a commissary clerk?

Again, if he was honorably discharged August 4, 1865, as brevet captain and commissary subsistence of volunteers, why did he not tell Secretary Stanton this fact, instead of saying that he would have enlisted had he not been persuaded by officer friends to continue as commissary clerk, because they promised to obtain for him a commission as captain and commissary subsistence of

volunteers? Gibson's alleged muster out, bearing the alleged signature of S. M. Bowman, shows that Bowman in getting Gibson out of the service made a captain and commissary of subsistence of him. Under what law did Colonel Bowman get the authority to make Henry R. Gibson a captain and commissary of subsistence, even though it should be admitted that alleged muster out is genuine? Colonel Bowman had no such authority. Gibson is frank enough to tell us in his deposition that General Hooker never knew of his appointment as a lieutenant on his staff, but that it was got up by some member of Hooker's staff for some mysterious special purpose. If General Hooker never knew of Gibson's being lieutenant of his staff it is fair to assume that there is a probability that Gibson secured his muster out as a captain and commissary subsistence of volunteers without the knowledge of Col. S. M. Bowman. These facts convict the defendant of the most outrageous fraud on the Grand Army of the Republic. Why did the defendant ask, July 12, 1866, to be mustered out July 4, 1865, if he already had a muster out dated August 4, 1865? The inquiry is easily answered if we will look at the date A. P. Bilyeu went out of the service, July 2, 1865, on which same date Gibson went out as a commissary clerk, as the receipts for his pay show, and the correctness of which he admits.

The reason that the lieutenantcy and the brevet captaincy were not mentioned in his letter of July 12, 1866, can be accounted for on two grounds: First, by the fact that he could not humbug Secretary Stanton, as the Secretary had at his command the records of the truth in the case, and at short notice could discover whether Gibson had been a lieutenant on Hooker's staff or whether he was a brevet captain and commissary subsistence of volunteers. If he had been either in the District of Columbia, Maryland, Delaware, Pennsylvania, or New York, or within the Federal lines of defense about Washington, there would in all human probability have been a record in the War Department either of Gibson's appointment as a lieutenant in 1863 or of his muster out as a captain two years later, in August, 1865. It is hardly possible that Gibson would have failed to have put these valuable documents on record in the War Department, since during the entire time he was connected with the Army he had daily unobstructed means of communication with the War Department.

Second, the "lieutenant and brevet captain" claim was never thought of until the defendant found that Secretary Stanton paid no attention to his letter, not even acknowledging its receipt. Then it was the "lieutenant and brevet captain" dodge was brought forth.

If the defendant was a lieutenant of General Hooker's staff and a brevet captain and C. S. Vols., why did he write this letter of July 12, 1866, to Secretary Stanton and beg and pray for a commission of any kind? Then, again, if he was entitled to or held these offices, why did he not exact the pay that accompanies each office? His pay as chief clerk in 1865 was \$90 per month, as the receipts show, and the vouchers of the Third Auditor's office also show that Gibson was always very prompt in drawing his salary.

Why did Gibson then apply for another muster out dated July 4, 1865, if the muster-out order of S. M. Bowman was genuine and regular, dated August 4, 1865, a month later, and propose to give the Government a receipt against all pay and claims of any kind?

Why did he call his letter of 1866 "a unique and unheard-of application," and admit that he had "never been regularly in the United States service during the war," and why did he exclaim in that letter, "but, alas, where is the proof that I ever served her at all?"

Again I ask, if he was a brevet captain and C. S. V., and mustered out as such, why did he not mention that fact, and why did he want another commission and muster out of the same kind? Two commissions and two muster outs or discharges would make him no greater in the eyes of his Southern people with whom he had concluded to live.

The defendant admits on the witness stand that he was nothing but a civilian employee during the war, and that he never had a regular commission or muster in, or muster out, or honorable discharge, and that he was never a soldier in the military service of the United States; also, that he told the truth in his letter to the Secretary of War July 12, 1866, and that the vouchers from the Third Auditor's office filed as evidence show the pay he received for service as a civilian employee from March 23, 1863, to July 3, 1865, there being twenty-seven vouchers in all. It is remarkably strange that all the letters and papers offered in evidence by Gibson are in his own handwriting, as admitted by him, except the alleged order of S. M. Bowman, of August 4, 1865, which he refused or objected to sending in its original form to the commander in chief, with the other papers of the case, when the prosecution applied to the court for an order on him to send up the original paper. The objection was made upon the technical ground that the prosecution did not apply to the court at the proper time. It is true that Gibson says that all these other papers are copies, but is it not strange that these copies are all in his own handwriting, and that the originals can not be produced, because a "near relative has them." Is this not a "unique" state of affairs and "unheard-of" way of making out a case?

This whole transaction from the time Gibson entered the Army, March 23, 1863, as clerk, down to the present time, can easily be accounted for by those who are acquainted with the defendant's vanities and ambitions. He parades himself before the public for years as a member of the staff of "Fighting Joe Hooker" in his desire to be the leader of the Union people of East Tennessee and to accomplish that end he is willing to sacrifice on the altar of his ambition his honor and integrity. He has resorted to every means, whether right or wrong, to gratify his insatiable appetite for posing before the people as a great military hero, regardless of the welfare of the sacred institution into which he has crept contrary to its laws, which must be followed strictly if the veterans of the Union Army expect to preserve their order.

I desire to call special attention to the fact that Gibson did not present a single official paper or memorandum of a record in the War Department showing that he had a military record. He presented but one original paper, and he admitted that it was dated three months after the officer who signed it, or is alleged to have signed it, had severed his connection with every branch of the military service. This alleged muster out bears the date of August 4, 1865, written in Gibson's own handwriting, which he attempts to explain by the absurd statement that Col. S. M. Bowman gave the muster out to him with the date blank before he (Bowman) left the military service, and that he (Gibson) inserted the date in August after Colonel Bowman had left the service.

Gibson bases his whole claim on this remarkable and unauthorized muster out, the only paper which he presented as an original one, and upon his own unsupported statements from the witness stand.

Special attention is called to the curious fact that so many papers which Gibson claims to have been original and genuine have disappeared; also to the facts that so many curious circumstances surround this case and that Gibson has made so many curious explanations and interposed so many curious technical objections to an investigation and the development of the truth; that he has no record in the Commissary-General's Office except as a civilian employee; that he has no record in the Adjutant-General's Office other than the original letters which he wrote Secretary Stanton in January, 1866, and July, 1866; that he has no record in the Record and Pension Division of the War Department, or any other branch of the War Department other than those mentioned above; that the records of the Third Auditor's Office show that he was simply a civilian employee, subject to be discharged at any time

by Captain Bilyeu, the chief of the commissary in which Gibson was employed and that he was always carried on the rolls as an employee and never served in any other capacity; that he could not have been commissioned as a captain and commissary of subsistence without first filing a bond with the Second Comptroller of the Treasury, which he never did; that Gibson in his brief makes no reference whatever to his letter of July 12, 1866.

(Signed) A. S. PROSSER, Attorney.
For V. F. GOSSETT, Prosecutor.

[Major Prosser is an ex-commander of the Ed. Maynard Post. He refused to allow Gibson to join the post while he (Prosser) was the commander.]

THE JUDGE-ADVOCATE-GENERAL'S DECISION.

Mr. Chairman, the order of the commander in chief expelling Mr. Gibson was presented in the beginning of my remarks. I now present the able and impartial decision of the judge-advocate-general, of St. Louis, on which the order of the commander in chief was based. This decision embraces a concise but clear statement of the whole case. It will be observed that Mr. Gibson obstructed an investigation at every step.

DECISION NO. 1.

The commander in chief may direct the commander of a department to appoint a court of inquiry to ascertain the eligibility of a comrade of that department, if post to which such comrade belongs declines or fails to investigate charges of ineligibility and the matter is properly brought to the attention of the commander in chief, notwithstanding the fact that the person whose military record is questioned does not demand the appointment of such a court.

He may, also, upon all the facts elicited by such a court of inquiry, after a full and fair hearing, at which the party whose eligibility was being inquired into was present and had every opportunity to be heard, make a finding of facts and act upon the same, in the absence of a finding by the court itself. One who served merely as a commissary clerk is not eligible to membership in the Grand Army of the Republic.

The commander in chief is authorized and in duty bound under section 1, Article VI, chapter 4, of our rules and regulations, which provide that he shall "enforce the rules and regulations of the Grand Army of the Republic, * * * and for this purpose may issue such orders as may be necessary, * * *" to direct that a person be dropped from the membership roll of a post when the clearly established facts unmistakably indicate that such person is not entitled to membership therein, and has obtained same by fraud and deception.

Case.

In the matter of the appeal of Henry R. Gibson, a member of Ed. Maynard Post, No. 14, Department of Tennessee.

OPINION—JANUARY 16, 1894.

From the record of this case it appears that on November 8, 1863, by Special Order No. 3, Commander in Chief John G. B. Adams directed Comrade Frank Seaman, commander of the Department of Tennessee, Grand Army of the Republic, to order a court of inquiry to convene at once in Knoxville, Tenn., to examine into the membership of Henry R. Gibson of Ed. Maynard Post, No. 14, Department of Tennessee, and to especially inquire into the said Gibson's eligibility to membership in the Grand Army of the Republic, and directed the papers and findings in the case to be forwarded to headquarters as soon as possible.

Pursuant to this order, the commander of the Department of Tennessee, by Special Order No. 8, on November 20, 1863, after setting forth the ground upon which the order of the commander in chief was issued, namely, upon information filed with the Department Commander by a comrade of the said post, that Henry R. Gibson, who had been mustered into the post as a comrade in April, 1865, on a claim of having served as lieutenant and aide-de-camp on the staff of Major-General Hooker, and as a captain and commissary of subsistence, had never served in the military service of the United States, as claimed by him, and denying or questioning his eligibility to membership in the Grand Army of the Republic; also upon the further information that said post had refused to investigate the said charge when presented to the post, duly appointed a court of inquiry consisting of seven comrades, and directed the proceedings and evidence to be forwarded to his headquarters.

By Special Order No. 9 of the Department of Tennessee, on November 24, two of the members of the court, having notified the department commander of their inability to attend as members, were released from serving on said court, and two other comrades appointed in their stead.

On November 29 the comrade who was designated as the president of the court, having signified his inability to be present, was relieved from serving on the court by the department commander in Special Order No. 10, and another member of the court designated to serve as president thereof.

The court convened as thus constituted at the appointed time and place and, pursuant to the authority given in the first order, selected one of its members recorder. Comrade Henry R. Gibson, whose record was under consideration, upon due notice from the department commander, appeared, as also the commander of Post No. 14; also the comrade who had lodged the information with department commander upon which the court of inquiry was convened. Comrade Gibson objected to one of the members of the court sitting thereon, because he had formed an adverse opinion; which objection was sustained by the court. The comrade who had lodged the information with the department commander as aforesaid objected to another member of the court, on the ground that he had expressed an opinion; to the consideration of which objection exception was taken by Comrade Gibson, and which exception the court sustained.

The comrade of Post No. 14 whose information led to the court of inquiry asked to be permitted to be represented by a past post commander of Post No. 14, which was allowed him, and objection to such action by Comrade Gibson was overruled.

Thereupon Comrade Gibson presented objection to the further procedure of the court, on the ground that he had not demanded the appointment of the court, and in another objection protested against the order convening the court, and noted an appeal from the issuing of such order to the next national encampment. The court overruled both objections.

Comrade Gibson then objected to the court as constituted, because it consisted of more than three members, which number, he contended, was fixed by the laws governing courts of inquiry in the United States Army. The court, after considering the last objection, decided to submit the question to the department commander, and requested that the court be reorganized in conformity with the articles of war governing courts of inquiry.

By Special Order No. 11 of the Department of Tennessee, issued upon unanimous request of the court of inquiry, the same was reorganized, two members being relieved from service, three members being retained, and a recorder duly appointed. There being no further objection to the organization of the court, the members and the recorder were sworn, in accordance with Army Regulations, and proceeded to the hearing of another objection to the appearance of a past commander of Post No. 14 as counsel for the in-

for want. The court sustained the objection, but announced the rule that the comrade had the right to tender any evidence to the recorder which he might want to offer.

Thereupon, without further objection, documentary evidence was offered by the informant tending to show that he had preferred charges against Comrade Gibson of Post No. 14, charging him with noneligibility to become a member of the Grand Army of the Republic, and with making fraudulent misrepresentations at the time he became a member. That the said post had tabled the said charges, having theretofore examined into the record of said Comrade Gibson, and resolved that his military record had been correctly given, and that no misrepresentations had been made by him, and that the post had refused to entertain his appeal from such action. Also evidence from the Adjutant-General's Office of the War Department tending to show that said Gibson had never served as a commissioned officer in any capacity at any time in the military service of the United States. Also that said Gibson had stated his service during the late rebellion as follows: "First enlisted March 17, 1863, as first lieutenant on staff of Gen. Joe Hooker, and discharged therefrom as captain C. S. V. on August 4, 1865, by reason of termination of the war." Also evidence of his election and muster in as member of Post No. 14, on April 17, 1885, on the application above referred to.

The informant then offered as evidence certified copies of vouchers in the Commissary Department of the United States covering a period of time beginning with March 23, 1863, and ending with July 2, 1865, and showing receipts of pay by said Henry R. Gibson, of the United States Government, for services as clerk in the commissary department during said entire time. Also letter of said Henry R. Gibson, dated at Knoxville, Tenn., January 13, 1866, directed to the Adjutant-General of the United States Army, at Washington, D. C., and requesting that his application for a commission as captain and C. S. Vols., forwarded by Governor R. E. Fenton some time during the first quarter of 1865, be returned to him with all the inclosures. Also copy of letter of said Henry R. Gibson, dated at Knoxville, Tenn., July 12, 1866, directed to Hon. E. M. Stanton, Secretary of War, War Department, Washington, D. C., in which said Gibson refers to the fact that he, on the 30th of November, 1864, applied for a commission as captain and C. S. Vols., and therein states that at the time of making said application, for two years previously and for nine months subsequently, he was chief clerk of a captain of the commissary department, and in that capacity had rendered efficient service; he also states therein that he would have enlisted had he not been persuaded by friends to continue as commissary clerk.

In that letter he requests, upon his statement of services as commissary clerk, that he be granted a "commission as captain and C. S. Vols., dated November 30, 1864, or earlier, and muster out dated July 4, 1865," and offers to sign the necessary papers to deprive himself of all compensation for said period, or that he would accept the commission on condition that he should receive no pay, rations, or compensation of any kind for himself or servant, said conditions, however, not to appear on the commission. He then proceeds by saying that a letter thus written "is doubtless a unique and unheard-of application," and suggests that living in a Southern city he keenly and sensitively feels the humiliation arising from his never having been regularly in the United States service during the war. He closes with the final statement that any commission, even of a lower grade than captain and C. S. Vols., would be hailed as a boon, for he longed to be able to say, "I stood up for the flag of my country when the rebellion arose in the land," and also that he longed to show the triumphant proof. There was also introduced in evidence a certified copy of a letter of Gov. R. E. Fenton, dated Albany, N. Y., December 14, 1864, in which he joined in the recommendations for the appointment of Henry R. Gibson, of the Subsistence Department, as assistant commissary, with the rank of captain, which letter was duly certified to be a true copy by the Assistant Adjutant-General of the War Department, who also certified that no other paper was on file with reference to said Gibson's application for appointment as captain and C. S. Vols. than said letter of Governor Fenton and the letter of said Gibson of July 12, 1866, already referred to.

The informant having rested his case, Henry R. Gibson then introduced the commander of Post No. 14 at the time the said Gibson was elected and mustered as a member of said post, who admitted that at the time of said Gibson's election he knew substantially all the facts brought out regarding the record of said Gibson before the court of inquiry; that the question of his eligibility was considered by the post; that he was aware of the contents of the letter of July 12, 1866, written by the said Gibson to the Secretary of War, and that in his anxiety to increase the membership of the post he deemed him eligible, and the post had deemed him eligible, and elected him a member.

Henry R. Gibson then offered himself as a witness in his own behalf, and after having been sworn, testified that he had received from Capt. A. B. Woodward, assistant adjutant-general of General Hooker, March 17, 1863, a special order of that date, in which he was appointed a special aid-de-camp with the rank of first lieutenant, and directed him to report for duty to Capt. A. P. Bilyeu, C. S. V., and that the said order, at the time he received it, was known to him to be a device to blind the eyes of Captain Bilyeu, and of no force whatever. He offered in evidence a copy of such fraudulent order, the same being without number.

He then presented in evidence a copy of a paper dated November 30, 1864, directed to Adjutant-General United States Army, and signed by said Henry R. Gibson as first lieutenant and aid-de-camp, purporting to be an application for promotion to a captaincy in the subsistence department of the volunteer service, and in which he refers to the alleged fact that he had been performing duty in the commissary department as first lieutenant and aid-de-camp since March 17, 1863. At the end of the letter three inclosures are referred to, to-wit: 1. Order of General Hooker appointing him lieutenant and aid-de-camp; 2. Letter of Brig. Gen. H. G. Thomas and indorsement of Colonel Crane; 3. Letter of Lieut. Col. S. C. Benham, C. S. Vols. Following the copy of the alleged application appears also, under date November 30, 1864, a copy of a recommendation purporting to be signed by A. P. Bilyeu, captain and C. S. Vols. And under the copy of the alleged recommendation of Capt. A. P. Bilyeu appears, as of date December 21, 1864, a copy of a recommendation purporting to be signed by S. M. Bowman, colonel Eighty-fourth Pennsylvania Volunteers, commanding district of Delaware, in which the colonel is made to say that he has been requested to favor this application, referring to the application of said Henry R. Gibson, and speaks of him as "Lieutenant Gibson," and says "that he is peculiarly qualified for the promotion he asks."

Said Gibson offered in evidence what purported to be a letter signed by Henry G. Thomas, brigadier-general volunteers, dated December 23, 1864, directed to Colonel Crane, then commissary of subsistence, middle department, and in which he is made to say that he knows First Lieut. Henry R. Gibson, and hopes he may receive the promotion he applies for. Attached to the copy last referred to is a copy of what purports to be an indorsement by Joseph G. Crane, lieutenant-colonel and C. S. Vols., dated Baltimore, January 1, 1865, and in which the recommendation of General Thomas is respectfully forwarded to the commissary-general of subsistence, United States Army. There is a reference in the alleged indorsement of Colonel Crane to the recommendations of General Thomas, Colonel Bowman, and Captain Bilyeu, and a statement that he believes Lieutenant Gibson's promotion is well deserved, and that Lieutenant Gibson has been in the commissary department since

September, 1862, (?) first as clerk, and since March, 1863, as first lieutenant by virtue of a staff appointment as aid-de-camp. Said Gibson also offered in evidence what purports to be a copy of a recommendation by S. C. Benham, lieutenant-colonel and commissary of subsistence, dated Little Rock, Ark., January 10, 1865, directed to Brig.-Gen. A. B. Eaton, commissary-general of subsistence, Washington, D. C., in which he takes great pleasure in recommending his friend Henry R. Gibson, first lieutenant and C. S. Vols., who has applied for a promotion to captain.

He also offered in evidence what purports to be a copy of a letter by said S. C. Benham, lieutenant-colonel and C. S., dated Little Rock, Ark., January 10, 1864, in which he states that he incloses a letter addressed to the commissary-general in his behalf. Said Gibson also offered in evidence what purports to be a copy of a letter of Lorenzo Sherwood, dated New York, November 20, 1864, directed to Henry R. Gibson, Wilmington, Del., in which said Sherwood acknowledges receipt of a letter of said Gibson of the 23d of November, 1864, and in which he says he intends to see Governor-elect Fenton in a few days, and that he knows of no one whose word would go further with Mr. Stanton than his, Fenton's. That he would endeavor to press said Fenton's recommendation, along with his own, into the service of said Gibson, hoping that said Gibson might obtain the desired appointment. No mention is made in said copy of a letter, of inclosures in the letter of said Gibson to which said Sherwood replies, nor of any application of said Gibson for promotion.

Said Gibson also offered in evidence a letter of R. E. Fenton to L. Sherwood, esq., New York, dated December 14, 1864, Albany, N. Y., in which Governor Fenton acknowledges the receipt of a letter of said Sherwood of the 6th of December, with inclosure; and says that he takes great pleasure in recommending "his nephew to the Secretary of War for appointment as assistant commissary, with the rank of captain." He also offered in evidence a letter of Lorenzo Sherwood, directed to Henry R. Gibson, C. S. Vols., dated New York, December 15, 1864, in which he says that he is in receipt of the letter last mentioned, and that Governor Fenton, he is certain, will give him, Gibson, a strong recommendation. He says therein that he sent to him, said Fenton, two letters of said Gibson, directed to Sherwood, that he might know where to address him. He also says that said Fenton might also write directly to the Secretary, because he, said Sherwood, had asked him to request Gibson's appointment as a personal favor.

He also offered in evidence the original letter of Colonel Bowman, dated Washington, April 23, directed to said Gibson, and in which said Bowman says that he had called on Secretary Stanton, and that he would call again in a few days, and that Colonel Beckwith had promised to go with him; and in which he says further that he thinks they will surely give him a promotion.

The next piece of evidence offered by said Gibson is a copy of what purports to be a special order issued by S. M. Bowman, colonel Eighty-fourth Pennsylvania Volunteers, commanding district of Delaware, dated Wilmington, August 4, 1865, the said special order having no number, in which First Lieut. Henry R. Gibson, C. S. Vols., with the brevet rank of captain, is honorably discharged from the service of the United States by reason of the termination of the war, "in obedience to the order of the honorable Secretary of War," and in which said Gibson is directed to turn over all United States property in his possession to Col. Joseph G. Crane, C. S. V., Baltimore, Md., there being no number or date mentioned in reference to the order of the Secretary of War. An affidavit was then offered by one Jesse Bowman Young, tending to prove the signature of said S. M. Bowman on the paper purporting to be a discharge.

Further evidence was offered by said Gibson, as follows: A letter from J. C. Kelton, Assistant Adjutant-General, War Department, dated Washington, January 19, 1866, in which said Kelton says, in reply to a letter of the said Gibson, of January 13, 1866, that the records of the Department did not show that any papers had ever been received such as were referred to by said Gibson as having been forwarded to the War Department. Also a letter from John P. Hawkins, Commissary-General of Subsistence, dated Washington, D. C., July 12, 1863, in which he says that said Gibson's letter to the Adjutant-General of July 8, 1863, in which an official statement was requested of said Gibson's service as clerk of A. P. Bilyeu, from March 17, 1863, to August 4, 1865, had been referred to his [Hawkins'] office. He stated further, in reply, that the only record evidence of service of the character mentioned by Gibson, now available, was to be found in the money accounts of the officer who employed him, and that the accounts are on file in the Third Auditor's Office, Treasury Department, Washington, D. C. Also a letter from Samuel Blackwell, Third Auditor, dated Washington, D. C. July 25, 1863, directed to said Henry R. Gibson, and in which letter the writer acknowledges receipt of a letter of July 22, 1863; and states in reply that it appears from an examination of the accounts of A. P. Bilyeu, C. and C. S. V., that said Gibson was employed as a clerk in his office from March 23, 1863, to July 2, 1865; that he was rated part of the time as assistant clerk, part as clerk, and the remainder of the period as chief clerk; and then states the stations at which Gibson was employed, and concludes with the statement that he was discharged from such employment on July 2, 1865.

In rebuttal the informant then offered in evidence the military record of S. M. Bowman, which discloses that said Bowman was honorably discharged from the service as colonel of Eighty-fourth Pennsylvania Volunteers to take effect May 15, 1865, on account of his services being no longer required, and that he was relieved from the command of the Department of Delaware March 23, 1865.

This was all the evidence, and thereupon both the informant and said Henry R. Gibson were permitted to sum up the testimony, all of which was transmitted to the department commander, with a full record of the case, but with no finding, because none such was directed to be made in the order appointing the court; and then the record of the court and exhibits were transmitted to the commander in chief.

I have purposely gone into the record of this case, referring to the appointment of the court more fully than was necessary in passing upon the merits of the case, inasmuch as nothing appears in the rules and regulations regarding the appointment of a court of inquiry by the commander in chief or a department commander, and that the power to appoint such a court is either dependent upon the authority exercised and precedent established by the national encampment, notably at Portland in 1896, and which power, therefore, by the written rules is also lodged in the national council of administration during the time that the national encampment is not in session, or must be assumed to have been conferred by implication in the requirement of the performance of certain duties by these officers.

The rule defining the duty of the commander in chief (chapter 4, Article VI, section 1) provides that he shall "enforce the rules and regulations of the Grand Army of the Republic, * * * and for this purpose he may issue such orders as may be necessary. * * *"

In the case in hand the commander in chief is made acquainted with the fact that the right to membership in our organization of a prominent member is publicly denied and his comrades bring the matter before the commander of the department, by whom the matter is laid before the commander in chief. The rules and regulations clearly define that only those who have actually served as soldiers and sailors during the war of the rebellion shall be members of our organization. The commander in chief is reliably informed that comrades have alleged that the post to which the said member

belongs has ignored its duty of thorough examination after the same was made acquainted with the fact that the correctness of the result of the original examination was being questioned. There was but one way for the commander in chief to obtain the necessary knowledge of the facts upon which properly to exercise his duty of enforcing the rules and regulations. To follow the precedent established by the national encampment seems to me to have been the only proper course to be pursued, and hence he issued the order directing the commander of the department to which the post belongs to convene a court of inquiry for the purpose of ascertaining and establishing the facts necessary to enable him to perform the duty devolved upon him by the rules and regulations.

While it is my opinion, therefore, that the commander in chief had the authority to direct the appointment of the court, it was also his privilege, if he saw fit, to determine the number of members of which the court should be composed, regardless of the requirements of the United States Army regulations. This court was finally composed of three comrades and a recorder, who was also a comrade, and to which organization thereof no objection was made by the comrade whose alleged membership in the Grand Army of the Republic was to be inquired into.

The objection made by Henry R. Gibson that such a court could not be appointed without being requested or demanded by himself, either directly or indirectly, is also without merit. The national encampment has directed such courts of inquiry where no demand appears of record, and hence the commander-in-chief was similarly authorized to require and direct the appointment of the court. In many instances the appointment of a court is required by the good of the organization only, and in such cases the examination may be directed to be made of a matter which the party interested is most anxious to prevent examination into. While the court in this case has not seen fit to comply with one of the principal objects of the appointment of the same, namely, to return a finding on the facts, as indicated by the order of the commander-in-chief, directing the department commander to convene the same, still since all the evidence has been preserved in the record and transmitted to the reviewing power, and such evidence furnishes the facts which clearly indicate his duty in the premises, it is my opinion that the commander in chief is justified in making a finding upon such evidence if the same be fully warranted by it.

The evidence in this case seems to be of a character which leaves no room for reasonable doubt as to the conclusion which should be drawn from the same. Henry R. Gibson, over his own signature, admits, after the war, that he was never enlisted as a soldier or appointed as an officer in the Army. He admits that he was merely employed as a clerk in the commissary department. This evidence, if there were none other, would fully and clearly establish under the rulings of our order heretofore that he was not eligible to membership therein. (See decision 5, L. W. opinion 53, W. W. D. opinion 99, W. C. all on page 50 of the Blue Book.) But in this case it is also perfectly clear that the person who obtained membership in our order undertook to obtain in an improper way from the Secretary of War fraudulent evidence of having been in the service of the United States Army as an officer during the war of the rebellion.

It also appears from his own admission that the paper exhibited in evidence as a copy of a part of a special order of Gen. Joe Hooker was obtained by Henry R. Gibson as a device, if obtained at all, and was never considered by him as an appointment to a position of first lieutenant in the United States Army, and was only used by him to deceive General Birney when he was caught in having used an ambulance of the United States Government after the death from exposure or ill use of the animals attached thereto. It being admitted that the alleged appointment as first lieutenant was fraudulent, and known to be such by the person holding or pretending to hold the same, it is equally clear that the pretended copy of an application to the Adjutant-General of the United States Army for promotion by the person holding such fraudulent appointment is equally untrue and unreliable. It must also again follow that the alleged recommendations for promotion, of which copies or what purport to be copies, are presented, inasmuch as they recommend one for promotion who never held the position of first lieutenant, are equally unreliable, either because obtained merely as devices for purposes of deception, or because they never were in existence and sprang as copies of copies from the brain and pen of one who never served the Government as a soldier during the war of the rebellion, but who longed to show "the triumphant proof" of such service after the war was over.

That the claim made by said Gibson that the original papers of his application for promotion and of said several recommendations of himself for promotion were transmitted to the Adjutant-General's Office and there lost is unfounded in fact, appears also conclusively from his own statement (pages 42, 43, and 53 of record) that his application and recommendations for promotion were sent to his kinsman, Lorenzo Sherwood, a copy of whose letter acknowledging receipt of said Gibson's letter is dated November 23, 1894, before the dates appearing on said alleged application for promotion and on said alleged recommendations, and which letter makes no reference to any application or recommendations for promotion. The letter of Governor Fenton, as well as the letters of L. Sherwood, contain no indication whatever that an application for promotion was to be made or pressed; but merely an application for an appointment as assistant commissary with the rank of captain. These letters appearing in evidence, therefore, tend clearly to show that the same spirit which actuated Henry R. Gibson in seeking fraudulent evidence for purposes of deception when he applied to Secretary Stanton for a commission indicating service in the United States Army when no service had been performed, must also have actuated him when procuring a fraudulent appointment as first lieutenant and aide-de-camp on General Hooker's staff, when securing the fraudulent recommendations or making copies of recommendations which were fraudulently obtained, when procuring a fraudulent discharge as first lieutenant and aide-de-camp with the brevet rank of captain, from Col. S. M. Bowman, commanding Department of Delaware, who was relieved from said command March 24, 1865, said discharge being dated August 4, 1865, over two months and a half after Colonel Bowman had himself been discharged from the United States service.

It is a fortunate fact for our organization that all the evidence of the service of our members in the Army or Navy is preserved in the different Departments of our Government at Washington. It is also fortunate for us that the evidence of payment for services rendered by noncombatants attached to the Army during the war of the rebellion is also within easy reach.

These reliable records as placed in evidence in this case prove: First, that Henry R. Gibson never served as a soldier or as an officer during the war of the rebellion; and second, that he drew pay as a clerk of the Commissary Department from March 28, 1863, to July 2, 1865, the time during which he claims to have held a commission as an officer on the staff of General Hooker.

The fact that Ed. Maynard Post, No. 14, Department of Tennessee, permitted itself to be duped by the bogus special orders and letters of recommendation presented by Henry R. Gibson does not militate against the finding of facts which should be made upon this evidence.

It is my opinion, therefore—

1. That the appointment of the court of inquiry to ascertain the eligibility of Henry R. Gibson to membership in the Grand Army of the Republic was lawful and a proper exercise of power by the department commander under the direction of the commander in chief.

2. That the court of inquiry having ascertained and reported all facts bear-

ing upon the matter under inquiry, after a full and fair hearing, in which the party whose eligibility was being inquired into had every opportunity to be heard, the commander in chief is authorized to make a finding of facts and act upon such finding without obtaining a finding from the court.

3. That the only finding warranted by the evidence as preserved in the record in this case is that said Henry R. Gibson served merely as commissary clerk during the war of the rebellion, and not as an officer or soldier, and that the appointment and discharge which the said Gibson pretends to hold are spurious and fictitious and entitled to no credit or weight whatever.

4. That the commander in chief, providing he concurs in the foregoing finding of facts on the evidence, is justified and in duty bound, in the exercise of the power intrusted to him, to order that Henry R. Gibson be dropped from the membership roll of Ed. Maynard Post, No. 14, Department of Tennessee, because ineligible to membership under the rules and regulations.

LEO RASSEUR,
Judge-Advocate-General.

THE THIRD WHITEWASH.

Mr. Chairman, the officers of the Ed. Maynard Post, who wormed Mr. Gibson into that post, crowned their infamous action by applying a third coat of whitewash at the time they dropped their idol from the rolls in obedience to an order from the commander-in-chief. Through these officers and tools, Mr. Gibson actually dictated the resolution dropping him, and had it spread upon the permanent records of the post!

He, a confessed and convicted fraud and imposter, made these tools place on the records of the post a lie on its face, in the shape of a resolution insulting, in the highest degree, to the commander in chief and the judge-advocate-general and all who were genuine soldiers and are real comrades.

What comradeship!

[Knoxville Republican.]

THE LATEST TRICK OF GIBSON'S TOOLS.

The Ed. Maynard Post has a membership of about 200, and many of them are high-minded, honorable gentlemen. They are professional and business men of standing, influence, and respectability. They are such men as Messrs. Chamberlain, Kile, Ogden, Prosser, West, Kearney, Holloway, Aiken, Woodruff, White, and others. Such men have long since washed their hands of that military fraud and bogus aide-de-camp, Henry R. Gibson. They are too far above prejudice, too careful of their good names, too proud of their characters for truth to vote for resolutions whitewashing Gibson after the War Department had certified that the very papers upon which Gibson originally obtained membership in the Ed. Maynard Post were fraudulent—forgeries. However, at last Tuesday night's meeting of the Ed. Maynard Post, out of a membership of 200, only sixteen or eighteen were present, and without warning or notice of their intention a majority of the sixteen present passed the following resolutions:

HALL OF ED. MAYNARD POST, No. 14, G. A. R.,
Knoxville, Tenn., February 20, 1894.

"Whereas, by a recent order of the commander in chief, the name of Henry R. Gibson has been dropped from the roll of Ed. Maynard Post of the Grand Army of the Republic; and

"Whereas, as soldiers we learned obedience to the commands of our superiors as our first and chief duty: Therefore be it

"Resolved, That we yield our prompt deference to the judgment and loyal obedience to the mandate of the highest officer of our order.

"Resolved, That in parting with our late comrade, Henry R. Gibson, we take the occasion to express our unbounded confidence in him as a man and late comrade, and we hereby reiterate a former declaration of August 15, 1893, that the army record of Henry R. Gibson was fully examined and that Henry R. Gibson made no misrepresentation whatever, but obtained his membership in this post honorably and after a due examination of his army record by a committee of this post to whom his application was referred."

Upon motion of Comrade Harris this preamble and resolution was adopted and ordered spread upon the minutes.

By order of the post.

Now, in order that the people who reside outside of Knoxville may understand the situation, we will state that the men who engineered these snap resolutions and voted for their passage numbered less than ten, principally old-time Hook hatters, and some of them never cast a vote for either Judge or JOHN HOOK, and would gladly pass a resolution that Jeff Davis was right and Lincoln wrong, if Gibson could convince them it would strengthen him and defeat HOOK.

We submit this question to the ten men, even those in Gibson's pay and employment that voted for the above whitewash resolutions, and we ask them to look the honest old soldier in the eye when they answer it, and also keep the fear of God before them. "How did Henry R. Gibson obtain his membership in the Ed. Maynard Post honorably?" when the papers he presented were fraudulent according to the testimony of the officials of the War Department and his so-called appointment on Hooker's staff in Gibson's handwriting bore the name of a person who was never in the Army? Did Gibson tell the Ed. Maynard Post his papers were fraudulent, and that the man who signed his commission as a lieutenant was never in the Army? If he did not give the post this information, then he did deceive the post and did not honorably obtain membership.

The truth is the Hook hatters in the post and certain men in the pay of Gibson have turned it into a Gibson club, and as the G. A. R. laws require that every post must bear the name of a dead man, there is no reason why the name of Henry R. Gibson should not be substituted for that of the gallant Ed. Maynard.

The ten men in the Ed. Maynard Post may pass resolutions every day in the year, but they will never succeed in hiding Gibson's crime or in fooling the people into believing he was a soldier and did not deceive the post when he claimed he was a lieutenant and captain.

Here is something that ought to end this matter for all the time, take it out of the Grand Army of the Republic and satisfy even the ten Gibson men that put through the above resolutions, and if they are dealing with the old soldiers in good faith, they will accept it. It is this: John Hook, in his speeches daily, says if Hon. Peres Dickinson, Judge O. P. Temple, and Capt. Wm. Rule will examine Gibson's papers, all the proof, and after an examination of the same they state Gibson's papers are not fraudulent and he acted honorably in obtaining membership in the Ed. Maynard Post, he (Hook) will withdraw from the race. Now, gentlemen, stop your snap meetings, give us a rest on whitewashing resolutions, and get down to open, manly business by having your "late comrade" (heaven save the mark) accept John Hook's challenge, and put an end to your shameful proceedings in constantly using a sacred and patriotic organization as a political club to boom a man that used forged and fraudulent papers to obtain membership in your post, out of which he was diabolically kicked.

AN ANALYSIS.

Mr. Chairman, the following analysis of the military claims of Henry R. Gibson and his testimony as to the same before the court

of inquiry of the Grand Army of the Republic, printed several weeks ago in the Republican Leader, of Knoxville, Tenn., is rich and instructing reading:

FOR TRUE SOLDIERLY.—"OUT OF HIS OWN MOUTH IS HE CONDEMNED."

Henry R. Gibson made application to join Ed Maynard Post, Knoxville, on the 18th of December, 1884.

For some reason, which is not necessary to relate, even if correctly known, this application was not acted upon by the post. It is said that objection was made because no papers accompanied it giving his army record. Be that as it may, however, in February, 1885, Gibson filed another application. It will be seen that this application was acted on, though action was evidently delayed, as he was not mustered into the post until April 17, two months after he made application. The members of the post say the delay was because he had "misled" his papers. The truth is, that while there was objection to admitting him, he finally "went through" on his own statement, reliance being placed on his honesty and integrity—it being deemed that so pronounced a Christian gentleman would not tell a lie about so small a thing as his army service.

So, Henry R. Gibson became a member of the Grand Army. He wore the badge of this honored society, was addressed by the title of comrade, and some, at least, believed him fully entitled to the right to wear the badge of the organization. He was placed in official position; became the senior vice-commander of the Department of Tennessee and Georgia—the highest position but one in the Department. And yet, there were those who took no stock in his army record. It was an "open secret" that Henry R. Gibson was believed to be sailing under false colors; that his pretended military record was bogus, or, as has been developed, "spurious and fictitious." In the winter of 1886 the commander of the department died. Henry R. Gibson was next in rank, and the opportunity was offered him to become commander of the department. Did he grasp it? No! Think of Gibson throwing over his shoulder such an honor, that was like the ripe apple, ready to drop to him simply for the asking. He declined it, although he need only serve two months to have retired with the full honors. Why did he decline and "fling away ambition?" He was afraid that bogus record would rise up and confront him!

Though the opinion was entertained by many that Gibson was a fraud as a soldier, no one attempted to thoroughly investigate his record, and he kept in the front at every opportunity, allowing no occasion to pass to pose before a public audience (whether invited or not) and talk about his army experiences, and salute genuine soldiers as "comrades," until he himself came to believe he was really a soldier.

Information came to the late Judge Houk that Gibson was never in the military service, as he claimed to be. Previous to his death, he had found enough to convince any fair-minded man that Gibson was an imposter. After his death, Hon. JOHN C. HOUK continued the investigation, and gave the result to the public. By this means, the matter was forced to the attention of the Grand Army of the Republic. Ed Maynard Post, of which Gibson was a member, instead of properly investigating his eligibility to membership, as the rules and regulations of the order require, at one of its meetings listened to a harangue made by Gibson, and accepted as genuine papers which he read to establish claim to military service and membership, and which papers no member examined at said meeting, and then passed by a majority vote (one-fourth present not voting) a resolution stating that:

"The army record of Comrade Henry R. Gibson has been examined and found correct; and that he made no misrepresentation whatever, but obtained his membership in this post honorably."

Who examined his record? Not a single member of the post at that meeting. He "made no misrepresentation whatever," but obtained his membership in this post honorably." Read the statements Henry R. Gibson made in his applications printed above. Read what he on honor (!) represented himself to be, and read what follows in this article, and then ask yourself if Gibson "made no misrepresentation whatever."

At a subsequent meeting of the post, charges were preferred against Gibson to the effect that he was never in the military service of the United States, and questioning his right to membership in the Grand Army. Those present, deeming their political allegiance to Gibson paramount to their allegiance to the Grand Army, tabled these charges, establishing the unique precedent that a question involving the character of a member of a society, and his right to a membership therein, was not of sufficient importance to investigate.

Thereupon the member of the post preferring these charges laid the matter before the commander of the department. That officer, as was his sworn duty, proceeded to investigate the charges. He made inquiry of the War Department to know if Gibson had served, as he claimed, either as lieutenant and aid on Hooker's staff or as a captain and commissary of subsistence, United States Volunteers. To this inquiry the Adjutant-General of the United States Army wrote:

"The records of this office, which have been thoroughly examined, afford no evidence that Mr. Gibson served as a commissioned officer in any capacity at any time in the military service of the United States."

(Signed)

"R. WILLIAMS,
Adjutant-General."

This communication was sufficient evidence that Gibson was never a soldier, as he claimed, and the department commander would have been justified in ordering his name dropped from the roll of the post, as having been illegally mustered. But, in order to prevent the possibility of the charge being made of local feeling or prejudice in dealing with the question, the department commander referred the case to his superior, the highest official of the Grand Army, the commander in chief. The commander in chief advised a department court of inquiry to thoroughly investigate the matter, and ordered such court to be convened "to examine into the membership of Henry R. Gibson, of Ed Maynard Post, No. 14, Department of Tennessee, and to especially inquire into the said Gibson's eligibility to membership in the Grand Army of the Republic."

This order was obeyed, and the court held its session in Knoxville. Of the three members of the court, only one was a resident of this Congressional district. Gibson was a witness before the court, and his evidence was, at his request, taken by a stenographer. In that evidence he submitted to the court, among other papers, his "appointment" on the staff of General Hooker, it being filed as Exhibit No. 7, and so known in the court record. The following is a copy:

EXHIBIT No. 7.
[Special Order.]

HEADQUARTERS ARMY OF THE POTOMAC,
Camp Near Falmouth, March 17, 1863.

- (1) Henry R. Gibson is hereby appointed a special aid-de-camp, with the rank of first lieutenant, and will be respected and obeyed accordingly.
- (2) He will report for duty forthwith to Capt. A. P. Bilyeu, commissary of subsistence, volunteers, at Aquia Creek, Virginia, in accordance with verbal instructions.

By command of Major-General Hooker:
(Signed)

A. B. WOODWARD,
Captain and Acting Assistant Adjutant-General.

Lieutenant Gibson will take and subscribe to inclosed oath and forward the same to headquarters.

[Indorsement on back.]

HEADQUARTERS ARMY OF THE POTOMAC,
Falmouth, Va., March 17, 1863.

Order of general commanding appointing Henry R. Gibson first lieutenant and aid-de-camp.

I reported to Capt. A. P. Bilyeu, commissary of subsistence, volunteers, March 17, 1863, as ordered, and took and returned the oath to headquarters.

(Signed)

HENRY R. GIBSON,
First Lieutenant and Aid-de-Camp.

There are some peculiarities about this paper. General Hooker (just think of Jo Hooker doing this!) assumed the prerogative of the President and appointed a man an officer in the Army, and not only that, but created an office hitherto unknown, "special" aid-de-camp! This was one of the papers Gibson used to throw dust into the eyes of some of the members of Ed Maynard Post. This was his "commission." In his testimony before the court of inquiry, Gibson let the cat out of the bag, and characterized this appointment as a spurious paper—virtually acknowledging it to be a forgery. He said on his oath—

"I had no papers before me when I filled this up. [Referring to his first application for membership.] You will find I wrote over the word 'enlisted' the word 'appointed,' etc., March, 1863, and what I meant by personal staff of General Hooker is that I was appointed by his command. I want to say in this connection that I have no idea that any man who has had connection with a big army supposes that General Hooker ever knew about the order. Things are not done in that way. That paper was simply gotten up after a conference with certain of the staff officers as a means to accomplish an end. I understand that. I don't suppose the court thinks I consider that document was anything more or less than a device to enable me to do something for the public welfare, if the urgency required and the occasion demanded, but it was some sort of authority, and I am very free to say, as I learned later on, I never relied on it to amount to a great deal. It was a mere device and not composed of that sort of authority that I felt like relying on, and the real truth is, in my correspondence with the Secretary of War, I felt a delicacy in relying on that document, because I understood its character."

So much for how Gibson got "into the Army." "A device"—"spurious"—"fictitious." First get your hog into the pen before you get him out. We see how Gibson got himself into the military service. It was as easy as anything "Jim the penman," ever did. Now, we will see how he got out. Filed with the court papers, as part of his testimony, was his so-called "discharge," marked and known as Exhibit No. 15, in these words:

[Special orders.]

MILITARY HEADQUARTERS, DISTRICT OF DELAWARE,
Wilmington, August 4, 1865.

In obedience to the order of the honorable Secretary of War, the following officers on duty in this district are this day honorably discharged from the service of the United States by reason of the termination of war.

- (1) First Lieut. Henry R. Gibson, commissary of subsistence, volunteers, with the brevet rank of captain. He will turn over all United States property in his possession to Col. Joseph G. Crane, United States Volunteers, Baltimore.

(Signed)

S. M. BOWMAN,
Colonel Eighty-fourth Pa. Vols., Comdg.

Another peculiar military paper, one that gives a lieutenant the rank of commissary of subsistence, volunteers, while United States Army regulations do not recognize the rank below that of captain. It will also be noted that the commanding officer of the department signed his own order (and forgot to number it). His adjutant had probably gone out to see a man!

"Captain" Gibson, in his testimony, referred to this paper in these touching words:

"While carrying that paper (Exhibit No. 15) in my valise with a bottle of lightning hot drops, I believe they call it, the movement in my valise caused the bottle to leak, and that paper, with a lot of others, was in it, and some of the liquid got on the paper. I cleaned it off as well as I could, but for several weeks, in fact for about five or six weeks, I have been carrying it in my pocket, and dust collected there on it, and in trying the other day to make it look a little more respectable I tore it. Look at the signature and you will find there are no signs that there has been any tampering or anything of that sort. Providence seems to have favored me in that respect and kept the lightning hot drops from Colonel Bowman's signature."

We will venture the assertion that Col. S. M. Bowman never tampered with the signature. Observe the date of the "discharge"—August 4, 1865—and see further on what the War Department has to say about the date.

The evidence obtained by the court of inquiry was forwarded to the commander in chief of the Grand Army, as he directed, upon the adjournment of the court. On the 20th of January, 1894, the commander in chief issued Special Order, No. 5.

On the evening of February 6, 1894, the order, No. 5, was read in Ed Maynard Post, and the name of Henry R. Gibson ordered dropped from the roll of membership, where it should never have been placed, and where it never would have been placed had the officers of the post done their duty when his application was presented.

AN OFFICIAL OPINION FROM THE WAR DEPARTMENT.

In order to satisfy some members of the Grand Army, who were so thoroughly amazed at the audacity of Gibson as to believe him, when he said to the public that injustice had been done him, and that the official action of the commander in chief was done at the instigation of Senator Harris ("Boogy man"), copies of Gibson's "papers" were submitted to the War Department and an official opinion asked on them. Following is the statement of the record officer of the War Department:

RECORD AND PENSION OFFICE, WAR DEPARTMENT,
Washington City, January 6, 1894.

SIR: I have the honor to advise you that a careful investigation of the records of this Department has been made in connection with certain papers recently left by you at this office. These papers appear to be copies of what purport to be special orders relating to one Henry R. Gibson. One of these "orders," dated Headquarters of the Army of the Potomac, March 17, 1863, and signed A. B. Woodward, captain and acting assistant adjutant-general, relates to the appointment of the said Gibson as a "special aid-de-camp," and the other, dated Military Headquarters for the District of Delaware, Wilmington, August 4, 1865, and signed S. M. Bowman, colonel of the Eighty-fourth Pennsylvania Volunteers, commanding, purports to discharge "First Lieut. Henry R. Gibson, commissary of subsistence, volunteers, with the brevet rank of captain," from the service.

BOTH OF THESE PAPERS ARE FRAUDULENT.

The special-order book of the Army of the Potomac, which is complete for the period in question, does not show that any such order as that was submitted by you, dated March 17, 1863, was issued by General Hooker. On the contrary, the special order which was issued by General Hooker on March 17, 1863, contains this

teen paragraphs, no one of which relates to Gibson in any way. This order and all other special orders of General Hooker for the month of March, 1863, are signed by S. Williams, assistant adjutant-general. It does not appear from the records of this Department that any such person as "A. B. Woodward, captain and acting assistant adjutant-general," was on duty at the headquarters of the Army of the Potomac at this time, nor does it appear that any officer of this name was in the military service of the United States, either in the regular or volunteer army, at any time during the late war. Furthermore, General Hooker had no authority to make such an appointment as that in question, and if he had made it it would have been void *ab initio* and would have conferred upon the appointee no right whatever to be recognized as being in the military service of the United States. Since Gibson was not in the military service he could not be discharged therefrom, and consequently the order dated August 4, 1865, purporting to discharge him, would be valueless as evidence of service, even if it were genuine.

BUT IT IS PLAINLY FRAUDULENT.

Col. S. M. Bowman, Eighty-fourth Pennsylvania Volunteers, was relieved from the command of the District of Delaware on March 20, 1865, and consequently could not have issued any orders in that district subsequent to that date. In addition it does not appear that he had authority at any time to issue an order such as that in question.

The official record, as well as Mr. Gibson's own statement, made to the Department in writing in 1890, show conclusively that he was a civilian employee of the commissary department from March, 1863, to July, 1865, and had no military status whatever.

Very respectfully,

F. C. AINSWORTH,

Colonel, U. S. Army, Chief Record and Pension Office.

Is further evidence needed to show to the soldiers of this district that this man Gibson has been humbugging them ever since he came among them? What think you of this impostor—this "spurious," "fictitious," "fraudulent," make-believe one of you? How many times has he looked into your faces and called you "my comrades," and thereby insulted your valor, your heroism, your loyalty. This pretender, who, when you were baring your breasts in the shock of battle, was enjoying a soft snap behind cracker boxes at wages just seven times as much as yours—you getting \$13 a month and he \$90! And yet he wants you to vote to send him to Congress to look after your interests—to see about your pensions! Is there a soldier with a record in this entire district who will so stultify himself and smirch the memory of his dead comrades as to defend the pretensions of this proven fraud to be allowed to sit in Congress with Dan Sickles, Grosvenor, Cogswell, Cummings, Black, and dozens of other ex-Union soldiers, as one of them! Think for a moment of the odium that would be cast on you did this pretender occupy a seat—which heaven forbid—in Congress, and when he gets up to speak be twitted by the rebel brigadiers as a "spurious," "fictitious" soldier; "that little fellow the War Department pronounced a fraud." The best way to prevent this is to cast your ballot for him to stay at home, and allow him to do his posing at the old stand on Custom-House Square.

One more word. Gibson and his paid "attorney," and blowers and strikers, are at the old game of dust-throwing, thereby hoping to close the eyes of members of the Grand Army who have not yet fathomed the depths of Gibson's audacious assertions, telling them and the public that he will appeal to the national encampment, which meets in September, and that the encampment will reverse the decision of the commander in chief, and that he will be reinstated in the organization. There are two things as certain as death and taxes—one is, Gibson will never appeal to the national encampment—he dare not; the other is, Henry R. Gibson will never be reinstated on the rolls of the Grand Army. He stands a better chance of being the next nominee for President of the United States. The Grand Army is an organization of soldiers, not of commissary clerks, cooks, and teamsters.

Gibson says "the court of inquiry, sworn judges, sworn witnesses, sworn prosecuting attorney, unanimously decided that I (he) was eligible to membership in the Grand Army." When Gibson made the above statement in his Walnut Grove speech he knew he was not telling the truth, but was deliberately misrepresenting and falsifying. He knew the court of inquiry rendered no decision in his case—knew that all the court did was to certify the proceedings, and directed them forwarded. He knew the court was acting simply as an investigating committee, collecting the evidence upon which the commander in chief could render a decision.

THE TRUTH OF THE MATTER.

In order that the readers of the Leader may see that Gibson deliberately lied, and that they may know just what the court did do, below is printed a part of the proceedings, as certified to the commander in chief:

The court of inquiry, after hearing testimony, adjourned from November 30 to December 7, in order to give the stenographers time to write out the testimony, and the recorder to complete the record.

HEADQUARTERS GRAND ARMY OF THE REPUBLIC,
Knoxville, Tenn., Thursday, December 7, 1893.

Court met pursuant to adjournment. Present: Thomas H. Reeves, president, W. T. Mitchell and L. Harvey, members, and William J. Ramage, recorder. Also, Henry R. Gibson and Attorney W. A. Gage and V. F. Gossett and Attorney A. S. Prosser.

The records of the previous meetings were read, corrected, and approved by the court.

Adjourned until 2 o'clock p. m.

Court met at 2 o'clock p. m. Present: Thomas H. Reeves, president, W. T. Mitchell and L. Harvey, members, and William J. Ramage, recorder. Also, Henry R. Gibson and Attorney W. A. Gage and V. F. Gossett and Attorney A. S. Prosser.

There being no further evidence the parties to the case were allowed to read and file their arguments.

Arguments by V. F. Gossett read by his attorney, A. S. Prosser, and herewith filed as Exhibit No. 21.

Argument for Henry R. Gibson read by himself and herewith filed as Exhibit No. 22.

Comrade W. A. Gage, attorney for Comrade Gibson, objected to the personal attacks on his client contained in the argument of Comrade Prosser and asked that the objection be so noted.

Comrade A. S. Prosser, attorney for Comrade Gossett asked that the original of Exhibit No. 15 be placed with the exhibits and go up with the records to the reviewing authority.

The court, after maturely deliberating, is of opinion that this request not having been made when the copy of the original was accepted and filed as evidence, comes too late after the case has been closed and argument heard.

The court having been cleared and maturely considered the matters submitted and referred to in the record finds—

First. That the exhibits filed as copies of the originals were examined by the court in the presence of all the parties and are true copies.

Second. We find no precedent or rules to govern us in the rules and regulations of the Grand Army of the Republic, and have therefore confined [ourselves] as near as possible to the rules and regulations governing the United States Army.

Third. Article of war No. 119 says: "A court of inquiry shall not give an opinion on the merits of the case inquired of unless specially ordered to do so."

The court therefore certifies the proceedings without an opinion on the merits of the case, and directs the recorder to forward the same to the department commander for transmittal to the national headquarters for the action of the commander in chief.

Thereupon the court adjourned sine die.

(Signed)

WM. J. RAMAGE, Recorder.

T. H. REEVES, President.

HEADQUARTERS OF THE GRAND ARMY OF THE REPUBLIC,
Lynn, Mass., May 10, 1894.

I certify that the foregoing is a true transcript of pages 56, 57 and 58 of the records of the court of inquiry held at Knoxville, Tenn., between November 20, 1893, and December 7, 1893, to inquire into the eligibility to membership in the Grand Army of the Republic of Henry R. Gibson.

JAS. F. MEECH,
Adjutant-General.

MR. GIBSON'S SECOND NOTORIOUS PUBLIC LETTER.

Mr. Chairman, expelled from the Grand Army of the Republic, Mr. Gibson promised faithfully, just before the primary election, to appeal his case to the national encampment, but he failed to do so, and now laughs at the credulity of the people and smiles over his successful tricks of deception.

He cries out falsely that his war record was found correct by the post by a vote of 53 to 1. Even if this were true, would it vindicate him if the evidence shows him guilty?

By his process of reasoning he will now doubtless claim that his commission and discharge or military record are more perfect or correct because he got 1,972 majority out of 30,458 votes for Congress, although the proof still shows him to be a fraud. It makes no difference what the proof against him is, he claims to be not guilty if he can figure out one or more majority, honestly or dishonestly, on the face of the returns.

To the ex-Federal Soldiers and People of the Second Congressional District:

The national commander of the Grand Army of the Republic having decided that I am not eligible to membership in the Grand Army, and that my appointment and discharge were spurious and fictitious and entitled to no faith or credit whatever, I wish to lay the main facts of the case before you and ask at your hands that justice which has been denied me by the national commander. And to show you that I am entitled to a fair and patient hearing by you, I call your attention to the fact that this whole question was fully and fairly submitted to a grand jury of 54 east Tennessee men, my neighbors and companions, and members of my post, and that 53 out of these 54 men decided that my "army record" is all right, and that I had made no misrepresentation whatever, but had obtained membership honorably. And I wish further to state that so far as I know all of these 53 men are to-day of the same opinion as they were last August when they rendered their grand verdict in my favor.

The one man out of the 54 who voted against me was Vol. F. Gossett, and he took an appeal to the department commander, Seaman, and through him to National Commander Adams, who has, in effect, set aside the verdict of the 53 east Tennessee soldiers, and rendered the harsh judgment against me already stated.

From this decision of Commander Adams I shall appeal to the national encampment that meets next September; but in the meantime I wish to appeal from that decision to you, my old friends, comrades, and acquaintances, among whom I have lived so long, and who have honored me so much; and I call upon you all to say whether the 53 east Tennessee soldiers decided rightly or whether Commander Adams decided rightly.

The facts of my connection with the Army are, in brief, these:

In March, 1863, I received an appointment as special aid-de-camp, with the rank of first lieutenant, on General Hooker's staff, Army of the Potomac, and was directed to report to Capt. A. P. Bilyeu, of the commissary department, for duty, in accordance with verbal instructions. Captain Bilyeu was a very influential man with the people of Philadelphia, Pa., but too illiterate to attend to the various duties imposed by his position in the Army. But he was honest, and when sober capable of doing good service outside of office work. Because of his popularity with the people, it became important to retain him in the service, and I agreed to serve under him in the capacity of clerk, and to attend to all the office work. He was then in charge of the fresh-beef department of the Army, and had a force of over 50 herders under him, all mounted and equipped as cavalymen, except weapons.

I accordingly entered at once upon the discharge of my duties, and was borne on Captain Bilyeu's pay roll as his clerk, and was paid by the United States Government until July, 1865, when Captain Bilyeu resigned.

In November, 1864, I applied to the War Department for a promotion to the rank of captain and commissary of subsistence in the volunteer service. Along with this application I sent my original appointment as first lieutenant, and written recommendations by Capt. A. P. Bilyeu, Col. S. M. Bowman, Lieut. Col. Joseph G. Crane, Lieut. Col. S. C. Benham, and Brig. Gen. Henry G. Thomas. My application and recommendations were forwarded to the War Department by Gov. Reuben E. Fenton, of New York.

I heard nothing from my application until after Lee's surrender, when I had life put into the matter by some friends. The Secretary of War refused to promote or commission me because the war was then practically over, but in recognition of my services, so I was informed, ordered my commander, Col. S. M. Bowman, who interviewed him in my behalf, to muster me out with the rank of brevet captain in the commissary department.

Accordingly, some time in the early part of May, 1865, Colonel Bowman, who was expecting to be himself mustered out every day, and who then spent about all of his time in Washington, while I was then at Wilmington, Del., sent me my discharge or muster out undated, but with directions for me to date it on the day we were all mustered out.

It so happened that Colonel Bowman was mustered out on May 16, 1865, a fact, however, of which I was ignorant, he being in Washington and I being at Wilmington. Captain Bilyeu resigned in July following; but as I did not get through with all my work until August 4, I dated my discharge on that day, as I thought I had the right to do. The following is a copy of the discharge:

(Special Order.)

MILITARY HEADQUARTERS, DISTRICT OF DELAWARE,
Wilmington, August 4, 1894.

In obedience to the order of the honorable Secretary of War, the following officers on duty in this district are this day honorably discharged from the service of the United States, by reason of the termination of the war.

I. First Lieut. Henry R. Gibson, C. S. Vols., with the brevet rank of captain.

He will turn over all United States property in his possession to Col. Joseph G. Crane, C. S. Vols., Baltimore, Md.

S. M. BOWMAN,
Col. Eighty-fourth Pa. Vols., Comdg.

In January, 1866, I moved to Knoxville, and realizing that my army record was defective I employed John H. McCutcheon, esq., a claim agent in Washington City, to procure for me a commission as captain and commissary of subsistence, I feeling that I was entitled to such a commission by reason of my original appointment and my muster out as captain by brevet. Mr. McCutcheon notified me that the records of the War Department did not show the order for my appointment or the order to muster me out, and advised me to write a letter to the Secretary of War for a commission as captain and commissary of subsistence, volunteers, but to state nothing in my letter that did not appear of record; and that he and my Washington friends who knew some of the outside facts would make out the balance of the case.

I accordingly wrote the letter that Mr. JOHN HOUK has had published, dated July 12, 1866. In that letter, I showed only what appeared on the War Department records, and stated that I "felt keenly and sensitively the humiliation arising from my never having been regularly in the United States service during the war." By this I meant that I had never been commissioned, the appointment I had having become obsolete and ineffective by reason of my having been assigned to duty away from the Army of the Potomac.

This letter and other papers I sent to Mr. McCutcheon, but he had no success, except to get a fee from me. About this time I removed from Knoxville to Campbell County, and business matters drove the subject of getting a commission out of my mind.

I introduced (in the Grand Army of the Republic court of inquiry) copies of my letter of appointment (the original having been transmitted with my application to the War Department for a commission), copies of my application to the Secretary of War for a promotion, and of my endorsements by Capt. A. P. Bilyeu, Col. S. M. Bowman, Lieut. Col. Joseph G. Crane, Lieut. Col. S. C. Benham, and Brig. Gen. Henry G. Thomas. I also made a part of my own evidence a letter introduced in evidence by the prosecution, of which the following is a copy.

GOVERNOR FENTON'S RECOMMENDATION.

ALBANY, N. Y., December 14, 1864.

SIR: I have the honor to join in the recommendations for the appointment of Henry R. Gibson, of the subsistence department, at Wilmington, Del., for assistant commissary, with the rank of captain.

Very respectfully,

R. E. FENTON.

To Hon. EDWIN M. STANTON,
Secretary of War, Washington, D. C.

It will be seen that this letter from Governor Fenton, introduced by the prosecution, shows two very important facts: First, that other recommendations for my appointment as captain had been made to the Secretary of War; and second, that I was then in the subsistence department of the Army at Wilmington, Del.

HENRY R. GIBSON.

[Governor Fenton's letter reached the War Department in 1868.]

GIBSON'S FALSE STORY OF 53 TO 1.

Mr. Chairman, I here present a statement from one of the most reliable citizens of Knoxville, who was in the meeting of the post when Mr. Gibson was whitewashed, which shows that Mr. Gibson's claim that he was "vindicated" by a vote of the post—"53 to 1"—is absolutely false, and that in this meeting only Mr. Gibson's side of the case was heard. The audacity of "Comrade" Gibson is something wonderful to behold.

KNOXVILLE, TENN., February 10, 1894.

DEAR SIR: In answer to your letter of the 9th I will say:

First. I am a member of the Ed. Maynard Grand Army of the Republic Post.

Second. I was present at the meeting of the post when Henry R. Gibson called attention to the charges against him and submitted his so-called military papers. No proof was submitted by John Houk or any of his friends.

Third. Henry R. Gibson was urged by several of the leading members of the post to request or demand a committee or a court of inquiry so that there could be a thorough and impartial investigation and an opportunity given to both sides to submit proof. Mr. Gibson did not act upon any of these suggestions so that when the post did vote to sustain him it only had before it the proof on Gibson's side.

Fourth. I am reliably informed that there were 54 present at this meeting, including myself, and of this number 5 were visitors from other posts and had no vote, and of the other 49, the commander did not vote, neither did Mr. Gibson, which left 47, and of this number at least 12 or 15 did not vote. I notice that the Republican Banner states that the vote was 53 to 1. This could not be possible. There was no roll called, and not a standing vote, but a viva voce vote. In stating the vote at 53 to 1, the Republican Banner includes everyone present as voting for Gibson, except one, whereas there were, as I have stated before, 15 or 20, including myself, that did not vote, and many of those not voting were seated near me and within my hearing. Besides I have talked with them since the meeting and ascertained that they did not vote. I will say further that at a subsequent meeting a member of the post in good standing held the proof in his hand and demanded an investigation, and offered to prove if given an opportunity, that Mr. Gibson was never a soldier, but his request was voted down by Mr. Gibson's friends.

Very respectfully,

R. H. HOOD.

Hon. JOHN C. HOUK, Knoxville, Tenn.

[R. H. Hood is known by everybody of Knoxville as one of the most reliable citizens of that community.]

Mr. Chairman, the true story of the 57 members of the Ed. Maynard Post is now presented:

VETERANS TO VETERANS.

To our Comrades in the Second District:

The undersigned, veterans of the Union Army and members of Ed. Maynard Post, No. 14, Grand Army of the Republic, of Knoxville, desire to make a statement to our comrades who wore the blue. Last summer the eligibility of one of our post members, Henry R. Gibson, was questioned, and the post, on his own ex parte statement, without investigation according to our laws, decided that his army record was all right. Subsequently a court of inquiry was held to investigate his eligibility, and the testimony adduced before it proved that his record was "spurious and fictitious," that he had never been in the Union Army, and the commander in chief ordered him dropped. From this action Mr. Gibson told his friends that he would appeal to the national encampment, the supreme court of the Grand

Army, and that the decision would be reversed and that he would be restored to membership. The encampment has been held and he failed to appeal to it. We can arrive at no other conclusion from his failure to appeal than that he virtually acknowledges that the decision of the commander in chief was just—that he was not a soldier and had no right to membership in the Grand Army.

Without regard to political affiliations, we consider it a duty we owe to our comrades living, and to the memory of our comrades dead, to protest against the elevation to honorable public position of a man who falsely claimed to have been a soldier, and persisted in so claiming, to advance his own personal ambition. All honorable men should look with scorn and contempt upon such a man.

We therefore call upon every ex-Union soldier who prides himself on his defense of the flag to aid in placing the seal of condemnation upon this man who has been robbing us of a soldier's honor by pretending to be one of us. The way to do this is to refuse to recognize his claim to be placed in honorable public office—to ignore him. Let your vote be counted against him.

John C. Chiles, Lieutenant-colonel Third Tennessee Infantry; John M. Minton, Company G, Seventh Tennessee Mounted Infantry; Henry F. Shelton, Company H, Eleventh Tennessee Cavalry; John Leahy, Company C, Third Tennessee Infantry; Louis K. Sexton, Lieutenant Company L, Eighth Tennessee Cavalry; W. B. STATE OF TENNESSEE, Knox County:

Have compared the names printed above with the signatures to the original of the above instrument, and find the printed names to be as the written signatures. Witness my hand and official seal, October 23, 1894.

[SEAL.]

N. N. OSBORNE, Notary Public.

BEGINNING OF THE INVESTIGATION—SYSTEMATICALLY CONDUCTED.

Mr. Chairman, this investigation of this now celebrated case was commenced by the late Hon. L. C. Houk, M. C., in 1889, and at his death I took up the case and continued the systematic investigation which he had inaugurated, resulting in the astounding revelations which I have related and others to be related.

I will now give the official correspondence from the beginning to the end, and I hope the committee and the House will hear it. It makes a perfect chain of evidence against this alleged Lieutenant on Hooker's staff.

WASHINGTON, D. C., July 2, 1889.

SIR: I most respectfully ask that you advise me if your office has any record of the service of Henry R. Gibson, who claims to have been "captain and commissary of subsistence, volunteers," in the Federal service from the State of Maryland or the District of Columbia?

This information is not desired for the purpose of prosecuting any claim against the Government in any way, shape, or form whatever. I simply want the information.

I am, very truly,

L. C. HOUK, M. C.

Hon. ADJUTANT-GENERAL, UNITED STATES ARMY.

[Indorsement.]

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE.

July 3, 1889.

Respectfully returned with the information that the name Henry R. Gibson is not borne on register as a commissioned officer of volunteers during the late war.

M. O. SHERIDAN,
Assistant Adjutant-General.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., July 6, 1889.

COMMISSARY-GENERAL:

Please, after a careful examination, inform me if the records of the Commissary-General's Office show Henry R. Gibson as having served in the Federal Army as "captain and commissary of subsistence volunteers," or in any other capacity. He claims, I think, to have enlisted from New York, Maryland, or the District of Columbia.

If he was regularly enlisted and discharged would you not have a record of it? This information is not desired for the purpose of prosecuting any claim against the Government in anyway, shape, or form whatever.

I am, very truly,

L. C. HOUK, M. C.

The Adjutant-General's Office (as per his letter) has no record of this man's service.

[First indorsement.]

WAR DEPARTMENT, OFFICE COMMISSARY OF SUBSISTENCE,
Washington, July 9, 1889.

Respectfully returned to the Hon. L. C. Houk, 811 K street NW., Washington D. C., who is informed that the records of this office do not indicate that Henry R. Gibson performed duty in this Department as an officer of volunteers, nor do they show whether he was employed as a civilian or detailed as an enlisted man.

R. MACFEELY,
Commissary-General of Subsistence.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., October 28, 1889.

SIR: Please give me the military history, if any, of Henry R. Gibson, company and regiment not known. Claims to have served from 1861 to 1865 as "captain and commissary of subsistence, United States volunteers." Before he could have served in this capacity would he not have had to give bond? If so, would you not have the bond or a record of it? If you would not have the bond or a record of it who would?

This information is not asked for the purpose of prosecuting or aiding in the prosecution of any claim in anyway, shape, or fashion, direct or indirect, against the United States.

Respectfully,
Hon. SECRETARY OF WAR.

L. C. HOUK, M. C.

Subject: Military service of Henry R. Gibson.

[3906 C.]

WAR DEPARTMENT,
Washington City, November 5, 1889.

SIR: In reply to your request of the 28th ultimo, for a statement of the military service of Henry R. Gibson, as captain and commissary of subsistence of volunteers, I have the honor to state that the records of the Adjutant-General's Office fail to show that Henry R. Gibson was a commissary of subsistence during the late war, but it appears that in July, 1866, he applied to the Secretary of War for a commission in the grade indicated to date from November 30, 1864, and for a "muster out" to date July 4, 1865, stating that he had served from about November, 1862, to about August, 1863, as chief clerk to Capt. A. P. Bilyen, commissary of subsistence. No action was taken upon his application.

Very respectfully,

REDFIELD PROCTOR,
Secretary of War.

Hon. L. C. HOUK, M. C.,
House of Representatives.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., November 9, 1889.

SIR: The 28th of October last I addressed you a letter relative to the military history, if any, of Henry R. Gibson, who claimed to have served as "captain and commissary of subsistence of volunteers."

Your courteous reply was duly received, an exact copy of which I inclose. I respectfully request that you furnish me a "true copy" of Henry R. Gibson's application for a commission in the grade of "captain and commissary of subsistence of volunteers," or any other grade, and for a "muster out."

Also, I respectfully ask for a copy or copies of any other paper or papers filed in this connection, and that you inform me, if you can, whether action was taken on said Gibson's application, etc.

Also, give me a statement of the military service of said Capt. A. P. Bilyen. These facts are not sought for the purpose of prosecuting any claim against the United States in anyway, form, or fashion whatever.

Wishing a reply as soon as it is practicable, I am,
Very respectfully,

(Signed)

Hon. REDFIELD PROCTOR,
Secretary of War.

L. C. HOUK, M. C.

Subject: Application of Henry R. Gibson for commission.

[3418 C.]

WAR DEPARTMENT,
Washington City, November 20, 1889.

SIR: Referring to previous correspondence in regard to an application from Henry R. Gibson for a commission as captain and commissary of subsistence of volunteers, and in response to your request of the 9th instant, I have the honor to inclose the following:

1. A true copy of an application from Mr. Gibson, dated July 12, 1866, for such a commission, to date November 30, 1864, and for a muster out to date July 4, 1865;
2. A copy of a letter of December 14, 1864, from Hon. R. E. Fenton of New York, recommending the appointment of Mr. Gibson; and
3. A statement of the military service of Capt. A. P. Bilyen, late commissary of subsistence of volunteers.

The inclosed report of the 12th instant from the Adjutant-General shows that the application of Mr. Gibson for a commission, which he states was made November 30, 1864, was not received. It will also be seen from the said report that Mr. Gibson was employed as a civilian clerk by Captain Bilyen, but the official record of such service is not on file here. It may, however, be found in the office of the Third Auditor of the Treasury.

Very respectfully,

J. M. SCHOFIELD,
Major-General, Acting Secretary of War.

Hon. L. C. HOUK, M. C.,
House of Representatives.

(Inclosures 2, 3, and 4 of 3418 C and copy of indorsement of the Adjutant-General.)

KNOXVILLE, TENN., July 12, 1866.

SIR: On the 30th of November, 1864, I applied for a commission as captain and

commissary of subsistence, volunteers, said application being endorsed by Capt. A. P. Bilyen, commissary of subsistence, volunteers, chief commissary for the district of Delaware and Eastern Shore of Maryland; by Col. S. M. Bowman, commanding said district; by Lieut. Col. Joseph G. Crane, chief commissary of subsistence, Eighth Army Corps; by Lieut. Col. S. C. Benham, chief commissary of subsistence, Department of Arkansas and Seventh Army Corps, and by Brig. Gen. Henry G. Thomas, United States Volunteers, and was forwarded to you by Governor Fenton, of New York.

At the time of making the above application, for two years previously and for nine months subsequently, I was chief clerk to Capt. A. P. Bilyen, commissary of subsistence, volunteers, and had been assigned to many difficult, arduous, and perilous duties, acting out of my captain's peculiar duties as officer in charge of the beef cattle for the army of the Potomac, then as connected with the organization of colored troops in Maryland and Delaware, and lastly as chief commissary of subsistence District of Delaware and Eastern Shore of Maryland. The indorsements establish my efficiency under the above circumstances. Being a citizen of South Carolina, and one of her few loyal sons, earnestly praying and working, in my humble capacity, for the success of the Federal armies, I was naturally anxious to be recognized by my country as one of her defenders, and would have enlisted had I not been persuaded by officer friends (some of whom indorsed my application) to continue as commissary clerk, they promising to use their influence to obtain for me a commission of captain and commissary of subsistence, volunteers. My application was postponed from time to time until November 30, 1864, when it was written and sent around to be indorsed by those in authority who deemed me deserving. But we awoke one bright April morn, and—the war was over, the rebellion was dead, the old flag had triumphed; and this I suppose decided the chances against me.

Now, sir, upon this brief statement of facts, and upon my indorsed application (which is, I believe, in your office), I respectfully request that I may be granted a commission as captain and commissary of subsistence, volunteers, dated November 30, 1864 (or earlier), and a muster out dated July 4, 1865; and I will sign the necessary papers to deprive myself of all compensation for said period, or will accept the commission on condition that I shall receive no pay, rations, or compensation of any kind, for self or servant (said condition, of course, not appearing on the commission).

This is doubtless a unique and unheard-of application, but I am living in a Southern city, and feel keenly and sensitively the humiliation arising from my never having been regularly in the United States service during the war. That I did serve my country earnestly and well, my own conscience and the voices of my superiors alike assure me; but, alas! where is the proof that I ever served her at all? Any commission, even of a lower grade than captain and commissary of subsistence, volunteers, will be hailed as a boon, for I long to be able to say, "I, too, stood up for the flag of my country when rebellion arose in the land," and long to show the triumphant proof.

Praying, though little hoping, a favorable response, I am, sir,
Your obedient servant,
HENRY R. GIBSON.
Hon. E. M. STANTON,
Secretary of War, War Department, Washington, D. C.

A true copy.

ARTHUR MACARTHUR, JR.,
Assistant Adjutant-General.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
November 12, 1889.

[This letter contains the following indorsement:]

KNOXVILLE, TENN., July 12, 1866.

[G: 310. C.R. 1866.]

Henry R. Gibson refers to application for appointment as captain and commissary of subsistence, volunteers filed in November, 1864, and requests that he may be granted a commission as such to date November 30, 1864, and muster out to date July 4, 1865, without pay or allowances.

Copy furnished November 12, 1889.

See 6456, acts 1889.

Received Adjutant-General's Office, July 17, 1866.

ALBANY, N. Y., December 14, 1864.

SIR: I have the honor to join in the recommendations for the appointment of Henry R. Gibson, of the subsistence department at Wilmington, Del., [for] assistant commissary with the rank of captain.

Very respectfully,

R. E. FENTON.

To Hon. EDWIN M. STANTON,
Secretary of War, Washington, D. C.

A true copy.

ARTHUR MACARTHUR, JR.,
Assistant Adjutant-General.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
November 12, 1889.

Stamped: 3418C. War Department (4), 1889. 2289, Miscellaneous. Commissary-General. (4) Subsistence, 1889.

[First indorsement.]

ADJUTANT-GENERAL'S OFFICE, November 12, 1889.

Respectfully returned to the Secretary of War, inclosing a statement of the military record of Capt. A. P. Bilyen, late commissary subsistence of volunteers, and a copy of recommendation from Hon. R. E. Fenton, on behalf of Mr. Gibson, dated December 14, 1864, and of a letter from Mr. Gibson, of July 12, 1866, in reference to his application for appointment as captain and commissary subsistence of volunteers. These last two are the only papers found on file or of record in this office respecting Mr. Gibson's application for appointment as captain. There is no record of the receipt of the application and recommendations Mr. Gibson refers to in his letter of July 12, 1866, as having been made in 1864.

J. C. KELTON,
Adjutant-General.

As to Mr. Gibson's service under the Government, an unofficial memorandum on file indicates that he was employed as a clerk by Captain Bilyen, from March 28, 1863, to July 2, 1865, at \$65, \$75, and \$80 per month. The official record of his service would probably be found in the Third Auditor's Office. [Two years three months four days. First indication that Gibson was a commissary clerk.]

Stamped: 3418C. 2289, Miscellaneous. Commissary-General. (6) Subsistence, 1889. 6456, Acts 1889.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, November 12, 1889.

Statement of the military service of Aaron P. Bilyen, late of the United States Volunteers, compiled from the records of this office.

He was appointed captain and commissary of subsistence of volunteers September 24, 1862.

He was on duty in the defenses of Washington from September, 1862, to March, 1863; in charge of beef cattle for the Army of the Potomac at Aquia Creek, Va., to May, 1863; at Alexandria, Va., engaged in forwarding beef cattle to the Army of the Potomac, to August, 1863; on commissary duty at Alexandria, Va., to December, 1863; at Benedict, Md., to March, 1864; at Baltimore, Md., to September, 1864; and at Wilmington, Del., as commissary of subsistence of the district of Delaware, to July 2, 1865, upon which date his resignation was accepted, he having failed to pass examination before a board convened for the examination of officers of the subsistence department, under the provisions of the act of Congress, approved June 25, 1864, which directed the discharge of officers of the supply and disbursing departments who failed to pass such examination.

J. C. KELTON,
Adjutant-General.

Stamped: 2418C War (2) Department, 1869; 2860, Miscellaneous Commissary-General. (2) Subsistence, 1869.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., December 8, 1899.

SIR: The War Department refers me to your office for a statement of the clerical or other service of Henry R. Gibson, under one Aaron P. Bilyen, who was appointed "captain and commissary subsistence of volunteers" September 24, 1862, and served to about July 2, 1865.

After a careful search, I would be glad for a full statement of said Gibson's service under the Government as the same may appear in the records of your office. Said Gibson claimed himself to have been a "captain and commissary subsistence of volunteers," but the records of the War Department, including his own letter, show that he never was even an enlisted private.

An unofficial memorandum of the War Department indicates that he was employed as clerk by Captain Bilyen from March 28, 1863, to July 2, 1865, at \$65, \$75, and \$90 per month, and a letter from that Department suggests "that his official record would be found in the Third Auditor's Office."

In addition to the above information, please inform me if there is any record in your office showing that the employees, particularly Gibson, under Bilyen, were ever called upon to perform duty as soldiers. (See newspaper clipping.)

This information is not called for the purpose of prosecuting any claim against the United States in any way, shape, form, or fashion—rather the contrary. Please answer fully, after a close examination, and return this letter with inclosure.

Respectfully,

L. C. HOUK, M. C.

Stamped: Third Auditor's office, December 9, 1899. Mail Room.
Honorable THIRD AUDITOR.

TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE,
Washington, D. C., December 11, 1899.

SIR: In answer to your letter of the 8th instant, herewith returned, I have to inform you that the money accounts of Capt. A. P. Bilyen, acting commissary of subsistence, on file in this office, show him to have paid Henry R. Gibson for service in the subsistence department as assistant clerk, from March 28 to 31, 1863, at \$50 per month; as clerk from April 1 to June 30, 1863, at \$65 per month; from July 1 to December 31, 1863, at \$75 per month; and from January 1, 1864, to July 2, 1865, at \$90 per month (2 years, 3 months, 4 days).

There is no record of his having served in any capacity except as designated. His name is borne upon the rolls of citizens employed, and upon separate vouchers, always appearing as an employee of the subsistence department.

Very respectfully,

W. H. HART, Auditor.

Hon. L. C. HOUK,
House of Representatives.

[The foregoing letters were all submitted to Colonel Ainsworth and request made for thorough examination, etc., and the following letter is his reply, to which special attention is invited.

To this point the investigation was in the name of L. C. Houk. At his death the investigation was taken up by Jno. C. Houk.]

Subject: Military record of Henry R. Gibson.

WAR DEPARTMENT, Washington City, January 9, 1899.

SIR: The papers in the case of Henry R. Gibson, left by you at this office on the 8th instant, with a request for a search of the records for evidence of Mr. Gibson's military service, are herewith returned.

From these papers it appears that Mr. Gibson was a civilian employee of the commissary department of the Army from March, 1863, to July, 1865. This is shown by the statement of the Third Auditor of the Treasury, dated December 11, 1899; and it appears from Mr. Gibson's own statement that he has no military status, for in his letter to the War Department, dated July 12, 1866, he says: "I am living in a Southern city and feel keenly and sensitively the humiliation arising from my never having been regularly in the United States service." This condition he sought to have remedied, after the war had closed, by the issue of a commission as an officer of the subsistence department conferring rank for services rendered as a civilian employee, but in this effort he was unsuccessful. As regards the quasi-military status given to certain employees of the quartermaster's department under the civil-service law, reference to which is made in a printed slip accompanying the papers, it is only necessary to remark that, so far as has been discovered, the status of Mr. Gibson in the service was not analogous to that of the employees therein referred to, who were regular organized and employed for military service against the enemy. It therefore appears from the papers in the case, including Mr. Gibson's own statement, that he was not in the service of the United States either as an officer or an enlisted man. In compliance, however, with your request, a careful search has been made of the records of officers and enlisted men of New York, Maryland, District of Columbia, South Carolina, and Tennessee organizations in service during the war of the rebellion, and the name Henry R. Gibson has not been found. The records of Pennsylvania troops have not yet been carded and alphabetically arranged, and hence their systematic examination is impracticable, but the register of officers from that State has been examined and the name of Mr. Gibson is not found therein.

Very respectfully,

F. C. AINSWORTH,
Major and Surgeon, U. S. Army.

Hon. J. C. HOUK,
House of Representatives.

LETTERS TO AND FROM THE SECRETARY OF WAR AND COLONEL AINSWORTH—HONORABLE DISCHARGE DISCUSSED—A HENRY R. GIBSON DISCOVERED WHO IS NOT THE RIGHT MAN—FINAL THOROUGH SEARCH FOR A RECORD OF GIBSON'S ORIGINAL APPLICATION FOR A COMMISSION, ETC.

KNOXVILLE, TENN., June 7, 1898.

MY DEAR SIR: On January 9, 1899, I received the following letter from you marked "R. S. B.—Military Record of Henry R. Gibson." "The papers in the case of Henry R. Gibson left by you at this office on the 8th instant, with a request for a search of the records for evidence of Mr. Gibson's military service, are herewith returned. From these papers it appears that Mr. Gibson was a civilian employee of the commissary department of the Army from March, 1863, to July, 1865. This is shown by the statement of the Third Auditor of the Treasury, dated December 11, 1899, and it appears from Mr. Gibson's own statement that he has no military status, for, in his letter to the War Department, dated July 12, 1866, he says: 'I am living in a Southern city and feel keenly and sensitively the humiliation arising from my never having been regularly in the United States service.' This condition he sought to have remedied after the war had closed by the issue of a commission as an officer of the subsistence department, conferring rank for services rendered as a civilian employee, but in this effort he was unsuccessful. As regards the quasi-military status given to certain employees of the Quartermaster's Department under the civil-service law, reference to which is made in a printed slip accompanying the papers, it is only necessary to remark that so far as has been discovered, the status of Mr. Gibson in the service was not analogous to that of the employees therein referred to, who were regularly organized and employed for military service against the enemy. It, therefore, appears from the papers in the case, including Mr. Gibson's own statement, that he was not in the service of the United States either as an officer or an enlisted man. In compliance, however, with your request, a careful search has been made of the records of officers and enlisted men of New York, Maryland, District of Columbia, South Carolina, and Tennessee organizations in service during the war of the rebellion and the name of Henry R. Gibson has not been found. The records of Pennsylvania troops have not yet been carded and alphabetically arranged and hence their systematic examination is impracticable, but the register of officers from that State has been examined and the name of Mr. Gibson is not found therein." Since receiving this answer I understand Henry R. Gibson claims to have an honorable discharge, either in his own handwriting or in the handwriting of some other person, signed by Col. S. M. Bowman, commanding the District of Columbia, Delaware, and the Eastern Shore of Maryland. I wish you would be kind enough, after full consideration and thorough investigation, to advise me:

First. As to what constitutes an honorable discharge from the Army, Navy, or Marine Corps of the United States of soldiers or sailors who served between April 12, 1861, and April 9, 1865, in the war for the suppression of the rebellion?

Second. What constitutes an honorable discharge from such State regiments as were called into active service and subject to the orders of the United States general officers, between the dates above mentioned?

Third. Did either or all of the following officers named in Gibson's letter to Stanton have the right to issue honorable discharges from the service indicated in questions 1 and 2 above asked: Capt. A. P. Bilyen, commissary of subsistence, volunteers, chief commissary for the district of Delaware and Eastern Shore of Maryland; Col. S. M. Bowman, commanding the district of Delaware and Eastern Shore of Maryland; Lieut. Col. Jos. G. Crane, chief commissary Eighth Army Corps; Lieut. Col. S. C. Benham, chief commissary department Arkansas and the Seventh Army Corps; and Brig. Gen. Henry G. Thomas, United States Volunteers?

Fourth. Were the commissary clerks or any of them who served under either or all of the officers named in question 3, ever organized into State regiments or into any smaller division or organization and called into active service and made subject to the orders of the United States general officers between the dates mentioned in question 1?

Fifth. Had the governors of the States the right at any time to issue honorable discharges from the service indicated in questions 1 and 2?

I will state that Col. S. M. Bowman, above referred to, is mentioned in the following volumes of the Rebellion Record:

Volume 10, part 1, pages 24, 26, 644, 645, and 646.

Volume 23, part 1.

Volume 25, part 2, page 579.

Volume 33, page 681.

Volume 36, part 3, page 316.

Volume 37, part 2, pages 177 and 298.

You have heretofore made a full, careful search of the records of the officers and enlisted men of New York, Maryland, District of Columbia, South Carolina, and Tennessee organizations in service during the war of the rebellion and failed to find the name of Henry R. Gibson. I most respectfully request that you search the records of the officers and enlisted men of Pennsylvania and other States and advise me whether the name of Henry R. Gibson appears in any of them. By giving this letter careful consideration you will greatly oblige me.

Yours, truly,

JNO. C. HOUK, M. C.

Col. F. C. AINSWORTH,
Record and Pension Division, War Department, Washington, D. C.

B. J. W. 811, 747.
Subject: Case of Henry R. Gibson, Record and Pension Office, War Department.

WASHINGTON CITY, June 19, 1898.

SIR: In reply to your letter of the 1st instant, in case of Henry R. Gibson, formerly a civilian employee of the commissary department, I am directed by the Secretary of War to inform you as follows:

1. As to what constituted an honorable discharge from the Army, Navy, or Marine Corps, or from State regiments in the service of the United States during the war of the rebellion it is understood by this Department that such a discharge consists in a separation from the service while in a status of honor, by competent authority and in honorable terms.

The law in regard to discharges from the military service during the late war was found in the then 11th Article of War, which reads as follows:

"After a noncommissioned officer or soldier shall have been duly enlisted and sworn, he shall not be dismissed the service without a discharge in writing; and no discharge granted to him shall be sufficient which is not signed by a field officer of the regiment to which he belongs or commanding officer where no field officer of the regiment is present; and no discharge shall be given to a noncommissioned officer or soldier before his term of service has expired, but by order of the President, the Secretary of War, the commanding officer of a department, or the sentence of a general court-martial, nor shall a commissioned officer be discharged the service but by order of the President of the United States or by sentence of a general court-martial."

Paragraph 163, Army Regulations of 1861, repeated in the regulations of 1863, reads:

"No enlisted man shall be discharged before the expiration of his term of enlistment without authority of the War Department, except by sentence of a general court-martial, or by the commander of the department or of an army in

the field, on certificate of disability, or on application of the soldier after twenty years' service."

The right to discharge soldiers on account of physical disability was in some instances during the war exercised by local commanders, such as the military commander of a city, by authority of the Secretary of War; and medical inspectors of the army were authorized by law and the orders of the War Department to discharge disabled men, but the right of discharge on account of physical disability was generally exercised by department or army commanders.

The mere certificates of discharge, were, however, generally given by subordinate officers. Authority to discharge soldiers by reason of expiration of term of service was delegated to mustering officers specially appointed for the purpose.

2. The officers of the Commissary Department mentioned in your letter do not appear to have been authorized to grant discharges from the army for any cause, nor did the command exercised by Brig. Gen. Henry G. Thomas, United States Volunteers, authorize him to issue discharges. Col. S. M. Bowman, Eighty-fourth Pennsylvania Volunteers, was in command of the district of Delaware from August 20, 1861, to March 20, 1865. It is believed that he had no authority to grant discharges from the United States military service, unless upon certificate of disability. The command of Colonel Bowman did not include the Eastern Shore of Maryland.

3. The governors of States had no authority during the war of the rebellion to discharge officers or enlisted men from the service of the United States.

4. No record has been found that the commissary clerks of the Middle Department, district of Delaware, district of Delaware and Eastern Shore of Maryland, or of the Department of Arkansas, were organized or assigned to organizations for military service during the war.

5. The records of all the State and Territorial troops in the service of the United States during the war of the rebellion, except those of Indiana and Illinois, have been examined, and the name Henry R. Gibson has been found only in one instance. This Henry R. Gibson was enlisted August 5, 1863, at Woodstock, Vt., in Company C, Third Vermont Volunteers, to serve three years, and was mustered out of service with his company July 11, 1865, at Halls Hill, Va. He was born at Chester, Vt. The indexing of the records of troops from the States of Indiana and Illinois and of the United States Veteran Reserve Corps and United States Veteran Volunteers has not yet been completed, and a thorough examination of these records is now impracticable, but the name Henry R. Gibson is not found on the registers of officers of these troops.

Very respectfully,
F. C. AINSWORTH,
Colonel, U. S. Army, Chief Record and Pension Office.

Hon. JOHN C. HOUK, M. C.,
Knoxville, Tenn.

KNOXVILLE, TENN., June 17, 1893.

DEAR SIR: I respectfully ask the following questions and urge that you kindly answer them at the very earliest date practicable:

First. What constitutes an honorable discharge, and who is authorized to sign it, from the military service of the United States of a soldier who served between April 12, 1861, and April 9, 1865, in the war for the suppression of the rebellion?

Second. What constitutes an honorable discharge from the United States military service of a soldier who served in the above war between April 9, 1865, and the date on which the war was declared at an end?

Third. If an honorable discharge had been issued to a soldier dated November 30, 1864, or July 4, 1865, or August 4, 1865, or on any other date prior to the time the war was declared to be at an end, would not there be a record of it in the War Department, especially if the soldier was discharged from the service in either of the States of New York, Pennsylvania, Delaware, New Jersey, Maryland, Virginia, or the District of Columbia?

Fourth. An unofficial memorandum on file in the office of the Adjutant-General "indicates that Henry R. Gibson was employed as a clerk by Captain Bilyeu, acting commissary of subsistence from March 28, 1863, to July 2, 1865, at \$65, \$75, and \$90 per month." The records of the Third Auditor's office show that Capt. A. P. Bilyeu, acting commissary of subsistence, "paid Henry R. Gibson for service in the subsistence department as assistant clerk from March 28 to 31, 1863, at \$50 per month; as clerk from April 1 to June 30, 1863, at \$65 per month; from July 1 to December 31, 1863, at \$75 per month; and from January 1, 1864, to July 2, 1865, at \$90 per month, and that there is no record of his having served in any capacity except as designated; also that his name is borne upon the rolls of citizens employed and upon separate vouchers, always appearing as an employee of the subsistence department."

A letter on file in your Department, dated July 12, 1866, and signed by Henry R. Gibson, says that for "two years previous to November 30, 1864, and for nine months subsequently" he was chief clerk to Capt. A. P. Bilyeu, commissary of subsistence Volunteers.

A letter from your Department, dated November 13, 1889, and addressed to my father, Hon. L. C. Houk, then Member of Congress, says that Aaron P. Bilyeu was appointed captain and commissary of the subsistence, department of volunteers, September 24, 1862, and that he was on duty in the defenses of Washington from September, 1862, to March, 1863; that he was in charge of beef cattle for the Army of the Potomac at Aquia Creek, Va., to May, 1863; that he was at Alexandria, Va., engaged in forwarding beef cattle to the Army of the Potomac to August, 1863; that he was on commissary duty at Alexandria, Va., to December, 1863; at Bonediet, Md., to March, 1864; at Baltimore, Md., to September, 1864; and at Wilmington, Del., as commissary of subsistence of the district of Delaware to July 2, 1865, from which date his resignation was accepted, he having failed to pass examination, etc.

In the History of Tennessee, published at Nashville, Tenn., July, 1887, by the "Good-speed Publishing Company," appears the following authorized biographical sketch: "Henry R. Gibson entered the military service of the United States March 17, 1863, on the general staff of the Army of the Potomac. He participated in the second battle of Fredericksburg, in the battles of Chancellorsville and Monocacy, and in the preliminary skirmishes of Gettysburg. He was honorably discharged from the service August 4, 1865." Will you be kind enough to advise me as to the exact date or dates on which the above battles were fought, and whether the commissary clerks under Captain Bilyeu "participated" in them as soldiers; and, if so, in what way? If the location of the commissary clerks and Henry R. Gibson, who served under Captain Bilyeu, was such as to render it impossible for them or either of them to be present at and participate in either of the above battles, please so state. What was the "General staff of the Army of the Potomac," and was Henry R. Gibson a member of it on March 17, 1863, or on any other date?

By investigating and developing the truth of this matter and answering my letter fully in detail, you will not harm the interests of the true soldier or of the Government, and by so doing you can not inflict injustice upon Henry R. Gibson. Please give me an early answer.

Could Henry R. Gibson have received an honorable discharge from the military service of the United States August 4, 1865, "he never having been regularly in the United States service," according to his own language?

Yours, truly,

Hon. DANIEL LAMONT,
Secretary of War, Washington, D. C.

JNO. C. HOUK, M. C.

WAR DEPARTMENT,
Washington City, June 28, 1893.

SIR: In reply to your letter of the 17th instant, I beg to inform you as follows: 1. As to what constitutes an honorable discharge from the military service of the United States of a soldier who served during the war of the rebellion, it is understood by this Department that such a discharge consists in a separation from the service while in a status of honor, by competent authority, and in honorable terms.

The law in regard to discharges from the military service during the late war is found in the then eleventh article of war, which reads as follows:

"After a noncommissioned officer or soldier shall have been duly enlisted and sworn, he shall not be dismissed the service without a discharge in writing; and no discharge granted to him shall be sufficient which is not signed by a field officer of the regiment to which he belongs, or commanding officer, where no field officer of the regiment is present; and no discharge shall be given to a noncommissioned officer or soldier before his term of service has expired, but by order of the President, the Secretary of War, the commanding officer of a department, or the sentence of a general court-martial; nor shall a commissioned officer be discharged the service but by order of the President of the United States, or by sentence of a general court-martial."

Paragraph 163, Army Regulations of 1861, repeated in the regulations of 1893, reads:

"No enlisted man shall be discharged before the expiration of his term of enlistment without authority of the War Department, except by sentence of a general court-martial, or by the commander of the Department; or of an army on the field; on certificate of disability, or on application of the soldier after twenty years' service."

The right to discharge soldiers on account of physical disability was in some instances during the war exercised by local commanders by authority of the Secretary of War; and medical inspectors of the Army were authorized by law and the orders of the War Department to discharge disabled men, but the right of discharge on account of physical disability was generally exercised by department or army commanders. The mere certificates of discharge were, however, usually given by subordinate officers.

2. When a soldier was discharged the service during the war of the rebellion a record of the fact was made and the fact of discharge should appear on the soldier's service record of this Department.

3. The military operations including the battle of Fredericksburg, Va., date from December 11 to 15, 1862; the battle of Chancellorsville from May 1 to 5, 1863; and the battle of Gettysburg from July 1 to 3, 1863. The battle of the Monocacy was fought July 9, 1864.

No record or other evidence has been found on file in this Department that Henry R. Gibson, or any other clerk or clerks serving under Capt. A. P. Bilyeu, assistant commissary of subsistence, participated in any capacity in either of these engagements.

The expression "General staff of the Army of the Potomac" is not understood by this Department, but upon an examination of the official returns of that army the name Henry R. Gibson has not been found. These returns do not include the names of enlisted men, but it will be observed from former correspondence that Mr. Gibson stated in a letter to this Department, dated July 12, 1866, that he had "never" been regularly in the United States service during the war, "either as an officer or an enlisted man, claiming service only as a civilian clerk in the Subsistence Department of the Army."

Very respectfully,

L. A. GRANT,
Assistant Secretary of War.

Hon. JNO. C. HOUK, M. C.,
Knoxville, Tenn.

KNOXVILLE, TENN., June 29, 1893.

DEAR SIR: There is a Henry R. Gibson who was enlisted August 5, 1863, in the Federal Army at Woodstock, Vt., in Company C, Third Vermont Volunteers, to serve three years, and was mustered out of the service with his company July 11, 1865, at Halls Hill, Va. He was born at Chester, Vt. The above facts are shown by the records of the War Department. I desire to secure a full statement of this man's history and military record as it is found on file in your Department. This man's full military history is desired not for the purpose of prosecuting any claim in any way, shape, form, or fashion, directly or indirectly, against the Government of the United States. I desire the full record of this man so as to be able to show that another Henry R. Gibson is not the Henry R. Gibson above referred to.

Yours truly,

JOHN C. HOUK, M. C.

The Hon. SECRETARY OF WAR,
Washington, D. C.
(One Inclosure.)

Subject: Military service. [368833.]
WAR DEPARTMENT, RECORD AND PENSION OFFICE,
Washington City, July 3, 1893.

SIR: In compliance with your request of the 29th instant, received to-day, I am directed by the Secretary of War to transmit herewith a full statement of the military service of Henry R. Gibson, late of Company C, Third Vermont Volunteers.

Very respectfully,

F. C. AINSWORTH,
Colonel U. S. Army, Chief Record and Pension Office.

Hon. JOHN C. HOUK, M. C.,
Knoxville, Tenn.

R. and P., 368833. Military record of Henry R. Gibson, late of Company C, Third Vermont Volunteers.

The records show that Henry R. Gibson, private, Company C, Third Vermont Infantry, was enlisted and mustered in August 5, 1863, at Woodstock, Vt., to serve three years, as a substitute for Charles O. Sargeant, of Chester, Vt.; was promoted to be corporal October 17, 1864, and to be sergeant June 29, 1865. He was mustered out with the company July 11, 1865, at Halls Hill, Va.

During the entire period of his service he is reported present on the muster rolls of the company.

His personal description is as follows: Born, Vermont; age, 36 years; occupation, farmer; eyes, blue; hair, black; complexion, dark; height, 5 feet 8 1/2 inches. Official statement respectfully furnished for the information of the Hon. JOHN C. HOUK, M. C.

By authority of the Secretary of War:

F. C. AINSWORTH,
Colonel, U. S. Army, Chief of Office.

RECORD AND PENSION OFFICE,
War Department, July 5, 1893.

WAR DEPARTMENT, ADJUTANT GENERAL'S OFFICE,
Washington, July 13, 1893.

MY DEAR SIR: I am in receipt of your note of the 14th instant. By this time you have doubtless received back your letter to the Secretary of

War, asking for a further examination of records in the case of Henry R. Gibson, with reports from this office and the Record and Pension Office, returned to you the 14th instant from Secretary's office.

It seems certain that no papers other than those of which you have copies have ever been placed on file asking for his appointment and captain and commissary of subsistence, but even if such papers had been found, the fact would remain that he was a clerk and not a commissioned officer during the war.

Very truly, yours,

Hon. JOHN C. HOUK,
Knoxville, Tenn.

H. A. KOHR,
Expert 22 years in Adjutant-General's Office.

KNOXVILLE, TENN., July 7, 1893.

DEAR SIR: The Adjutant-General on November 12, 1889, in response to an inquiry made by Hon. J. C. Houk, then member of Congress, made the following return to the Secretary of War:

"Respectfully returned to the Secretary of War inclosing a statement of the military record of Capt. A. P. Bilyeu, commissary of subsistence, volunteers, and a copy of the recommendation from Hon. R. E. Fenton, in behalf of Mr. Gibson, dated December 14, 1864, and of a letter from Mr. Gibson of July 12, 1866, in reference to his application for appointment as captain and commissary of subsistence, volunteers. These last two are the only papers found on file or of record in this office respecting Mr. Gibson's application for appointment as captain. There is no record of the receipt of the application and recommendations Mr. Gibson refers to in his letter of July 12, 1866, as having been made in 1864. As to Mr. Gibson's service under the Government an unofficial memorandum on file indicates that he was employed by Captain Bilyeu from March 23, 1863, to July 2, 1865, at \$65, \$75, and \$90 per month. The official record of his service would probably be found in the Third Auditor's Office."

My father received the statement of the military record of Captain Bilyeu and a copy of the recommendations from Mr. Fenton and a copy of Mr. Gibson's letter above referred to.

It has been nearly four years since these documents were discovered and copies of them supplied to my father, and I desire to urge that you direct the adjutant-general to again thoroughly investigate the records of his office and furnish me with a certified copy of any other recommendation, statement, document, or letter which may be found on file in connection with the military record of Henry R. Gibson.

Mr. Gibson, in the beginning of his letter to Secretary Stanton, used this language: "On the 30th of November, 1864, I applied for a commission as captain and commissary of subsistence volunteers, said application being indorsed by Captain Bilyeu, commissary of subsistence volunteers, chief commissary for the district of Delaware and Eastern Shore of Maryland, by Col. S. M. Bowman, commanding said district, by Lieut. Col. Jos. G. Crane, chief commissary of subsistence volunteers, Eighth Army Corps, by Lieut. Col. S. C. Benham, chief commissary, Department of Arkansas, and Seventh Army Corps, and by Brig. Gen. Henry G. Thomas, United States volunteers, and was forwarded to you by Governor Fenton, of New York."

Henry R. Gibson, in June last, told, with emphasis, one of the leading and reliable men of this city, so the latter tells me, that he, Gibson, had some kind of a commission from Secretary Stanton. In June last Henry R. Gibson also told another very prominent citizen of east Tennessee, equally as reliable as the former gentleman to whom I have referred, that he had some kind of an honorable discharge from Col. S. M. Bowman.

Now I dislike very much to bother your Department further about this matter, but I find it necessary to write this letter, and if you will kindly have it promptly answered I will drop the case so far as calling upon your Department for information, etc.

Yours, truly,

Hon. DANIEL LAMONT,
Secretary of War, Washington, D. C.

JNO. C. HOUK, M. C.

[First indorsement.]

ADJUTANT-GENERAL'S OFFICE,
Washington, July 13, 1893.

Respectfully returned to the Secretary of War with the information that another thorough search of the records of this office has been made, and that no record has been found of any application or recommendation for the appointment of Henry R. Gibson as captain and commissary of subsistence, other than those of which copies are already in the possession of Hon. Mr. Houk.

Possibly some trace of the application claimed to have been made November 30, 1864, may be found on the records of discontinued commands on file in the Record and Pension Office.

R. WILLIAMS,
Adjutant-General.

[Second indorsement.]

RECORD AND PENSION OFFICE, July 13, 1893.

Respectfully returned to the Secretary of War with the information that none of the papers within referred to in the case of Henry R. Gibson has been found on file in this office.

F. C. AINSWORTH,
Colonel, U. S. Army, Chief of Office.

[Third indorsement.]

WAR DEPARTMENT, July 14, 1893.

Respectfully returned to Hon. John C. Houk, M. C., Knoxville, Tenn., inviting attention to the preceding reports of the Adjutant-General and the Chief of the Record and Pension Office, showing no record found of the papers within referred to.

An examination of the application book in the office of the Secretary of War from 1863 to date fails to disclose a record of the papers.

L. A. GRANT,
Acting Secretary of War.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., August 21, 1893.

DEAR SIR: There are on file in the office of the Adjutant-General two letters, written and signed by Henry R. Gibson—one dated January, 1866, and the other dated July 12, 1866, both after the war had closed.

Henry R. Gibson claims to have been a Federal soldier during the rebellion and to hold what he claims to be an honorable discharge and a commission as an officer, etc., but which seem to be either irregular and without authority or forged.

The two letters above referred to show beyond all doubt that he was never a soldier in any capacity at any time during the rebellion.

I have stated to my constituents publicly that these letters exist on file in the War Department. I am informed and believe Henry R. Gibson denies that he wrote either of them, and persists in claiming to have an honorable discharge and commissions as an officer, but refuses to reveal to the public the contents of his documents, which he has made the local Grand Army post believe to be regular in every respect. I have a certified copy of the letter of July 12, 1866, but I desire you to order that I be allowed to photograph each of these letters and thus be enabled to verify these records of your Department, the genuineness of which has been questioned by the person creating them, and prevent what has the appearance of being an effort to perpetrate a fraud from being successful at some future time.

I also ask that the photograph when made be certified by the Department. Politics in no degree whatever enter into this matter, both Henry R. Gibson and myself being Republicans of the strictest type. Of course I will bear the expense of the photographing.

I am, sir, your obedient servant,

JNO. C. HOUK, M. C.

Hon. DANIEL S. LAMONT,
Secretary of War, Washington, D. C.

Letter presented in person and permission was verbally given and photograph made.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 23, 1893.

DEAR SIR: Henry R. Gibson enlisted in the military service of the United States, as he claims, on March 17, 1863, as a lieutenant on General Hooker's staff (or as a lieutenant on the general staff of the Army of the Potomac), and served two years and four months, and was honorably discharged or mustered out, by reason of the close of the war, as a soldier or lieutenant and brevet captain, August 4, 1865, his honorable discharge or muster out having been signed by Col. S. M. Bowman, late of the Eighty-fourth Pennsylvania Volunteers, and at one time in command of the Department of Delaware.

It seems when Mr. Gibson was placed on the staff of Gen. Joe Hooker, or on the general staff of the Army of the Potomac, as he claims, the authorities, instead of giving him a regular commission, gave him only an original memorandum appointment, which it appears he has lost or is unable to produce.

It also appears that Mr. Gibson has lost or is unable to produce his honorable discharge or muster out.

In view of the above facts I, therefore, most respectfully request and urge—

First. That you cause to be issued to the said Gibson a duplicate copy, certified of the commission, or original memorandum appointment, which he claims he received when he became a lieutenant on Hooker's staff, on March 18, 1863.

Second. That you cause to be issued to the said Gibson a duplicate copy, certified, of the honorable discharge or muster out as a lieutenant and brevet captain, which he claims to have received on August 4, 1865.

Third. That if there is no record in your Department of the commission or appointment and of the honorable discharge or muster out, you inform me whether under the law said Gibson will be allowed to establish his claims before your Department, and if so, advise me what would be competent evidence.

Fourth. That if there is no record you advise me whether your Department will pass upon the genuineness or legality of the commission or appointment and of the honorable discharge or muster out should they be hereafter found and presented.

Please give me an early and full reply.

Very respectfully,

JNO. C. HOUK, M. C.

Hon. DANIEL S. LAMONT,
Secretary of War.

Subject: Case of Henry R. Gibson. [374205.]
RECORD AND PENSION OFFICE, WAR DEPARTMENT,
Washington City, September 30, 1893.

SIR: In reply to your letter of the 28th instant, received yesterday, requesting certain information relative to the case of Henry R. Gibson, who claims to have been a lieutenant on the staff of General Hooker (or on the general staff of the Army of the Potomac) during the late war, I am directed by the Secretary of War to inform you that no record has been found of the commission or original memorandum appointment which Mr. Gibson claims that he received when he became a lieutenant on General Hooker's staff on March 17, 1863, nor of the honorable discharge or muster out as a lieutenant and brevet captain which he claims to have received on August 4, 1865, and that, in the absence of any record of appointment, service and discharge, there is no provision of law under which he can establish his claim before this Department.

I am also directed to say that any question relating to the status of his appointment and discharge will be duly considered when those papers shall have been submitted to this Department.

Very respectfully,

F. C. AINSWORTH,
Colonel, U. S. Army, Chief Record and Pension Office.

Hon. JOHN C. HOUK,
House of Representatives.

[The above means the War Department will pass upon Gibson's papers if he will present them.]

[This was written before it was learned that he presented an alleged copy of an alleged commission instead of presenting the original.]

KNOXVILLE, TENN., December 6, 1893.

DEAR SIR: A few days ago the commander in chief, J. G. B. Adams, of the Grand Army of the Republic, directed Frank Seaman, the department commander of the Tennessee Grand Army of the Republic, to appoint a court of inquiry to look into the military record of Henry R. Gibson who, in his application to the Ed Maynard Post of this city, stated that he was a lieutenant on Hooker's staff and was honorably discharged as a captain and commissary of subsistence, and into his eligibility for membership in the Grand Army of the Republic. Mr. Gibson produced before the court of inquiry an alleged memorandum commission as a lieutenant on Hooker's staff, which alleged commission was in Mr. Gibson's own handwriting. He also produced what he claimed to be a muster out signed by Col. S. M. Bowman, and dated in August, 1865. When his attention was called to the fact that Colonel Bowman left the military service three months before August, he stated on the witness stand that Colonel Bowman gave him the muster out with the date left blank and authorized him to fill in the date, which he, Gibson, did. There are evidences on the face of this alleged muster out of errors.

Referring again to the alleged commission I will state that Mr. Gibson said on the witness stand before the court, that General Hooker never saw the commission, etc. An effort was made to persuade Mr. Gibson to send these original papers to the commander in chief, in order that he might submit them to the War Depart-

ment, but Mr. Gibson would consent only that copies of these original papers should be sent to the Commander in Chief. If either the original or copies of the same are referred to your office I hope you will give them a close and most thorough scrutiny. I would respectfully suggest that in case only copies are submitted to the War Department that the Department request Mr. Gibson, through the commander in chief of the Grand Army of the Republic to submit his original papers. In the light of all the evidence which I have in my possession, and most of which is in the possession of the War Department, these papers must necessarily be either illegal, fraudulent, or forged. All I ask is a thorough investigation and the development of the truth. If there is any way to do it, Mr. Gibson should be forced to turn his original papers into the War Department.

Very respectfully,

JNO. C. HOUK, M. C.

Hon. DANIEL S. LAMONT,
Secretary of War, Washington, D. C.

[Same letter sent to Adjutant-General Ainsworth.]

GIBSON ONLY A COMMISSARY CLERK.

KNOXVILLE, TENN., June 23, 1893.

DEAR SIR: Please be kind enough to answer the following questions at as early a date as practicable:

First. Was Henry R. Gibson a captain and commissary of subsistence at any time during the late war of the rebellion?

Second. Were not all captains and commissaries of subsistence required to give bond?

Third. If Henry R. Gibson was a captain and commissary of subsistence, did he ever file a bond; and if so, who were his bondsmen?

Fourth. Were not all commissary officers during the late war of the rebellion required to give bond; and if so, did Henry R. Gibson ever file a bond as an officer of the subsistence department; and if he did, who were his bondsmen?

Fifth. Were the chief clerks and assistant clerks under Capt. A. P. Bilyeu, acting commissary of subsistence, during the late war of the rebellion, in Delaware and Maryland, required to give bond. If so, did Henry R. Gibson file a bond as either chief clerk or assistant clerk; and if so, who were on his bond?

This is an important letter, and I hope you will give it immediate consideration and attention; and if it ought to be referred to another official for answer, please refer it to the proper place and request early action.

Yours, truly,

JNO. C. HOUK, M. C.

Stamped: "Third Auditor's office, June 27, 1893. Mail room."
To the THIRD AUDITOR OF THE UNITED STATES TREASURY,
Washington, D. C.

TREASURY DEPARTMENT, OFFICE OF THE THIRD AUDITOR,
Washington, D. C., June 23, 1893.

SIR: In reply to your inquiry of the 23d instant returned herewith, I have the honor to state that Henry R. Gibson was not at any time a captain and commissary of subsistence during the late war of the rebellion.

Captains and commissaries of subsistence were required to give official bond.

Henry R. Gibson has no official bond in the files of the Treasury Department as a captain and commissary of subsistence during the war of the rebellion.

Henry R. Gibson has no bond on file in the Treasury Department as an employee of the subsistence department. Neither the law nor Army Regulations required civilian employees of the Army to give bond. If Captain Bilyeu or any other officer required their employees to give bond it was a requirement of their own, and no report was made of the fact to the accounting officers.

I find that Henry R. Gibson was an "assistant clerk" in the office of Capt. A. P. Bilyeu, commissary of subsistence, from March 23 to 31, 1863, at \$50 per month; was a "clerk" from April 1 to June 30, 1863, at \$65 per month; and from July 1 to October 31, 1863, at \$75 per month, and from January 1, 1864, to July 2, 1865, he was the principal or chief clerk of Captain Bilyeu, at \$90 per month.

Respectfully yours,

G. W. SANDERLIN,
Acting Auditor.

Hon. JOHN C. HOUK, M. C.,
Knoxville, Tenn.

KNOXVILLE, TENN., July 7, 1893.

DEAR SIR: Henry R. Gibson served as a commissary clerk under Capt. A. P. Bilyeu, commissary of subsistence, volunteers, from March 23, 1863, to August 4, 1865. Is there any evidence in your office that Captain Bilyeu required Henry R. Gibson and other commissary clerks to give him a bond for the faithful performance of their duties, etc.? If Henry R. Gibson was required to give a bond, please state who were his bondsmen.

Yours, truly,

JNO. C. HOUK, M. C.

To the Honorable THIRD AUDITOR,
Washington, D. C.

TREASURY DEPARTMENT, OFFICE OF THE THIRD AUDITOR,
Washington, D. C., July 15, 1893.

SIR: Replying to your letter of July 7, 1893, herewith returned, you are informed that an examination of the accounts of Capt. A. P. Bilyeu, assistant commissary of subsistence, for the years 1863 to 1866, on file in this office, fail to disclose any evidence whatever relative to any bond having been required by this officer from Henry R. Gibson, or any other clerk for the faithful performance of their duties.

Respectfully, yours,

SAMUEL BLACKWELL, Auditor.

J. B. D.

Hon. JOHN C. HOUK, M. C.,
Knoxville, Tenn.

KNOXVILLE, TENN., July 12, 1893.

DEAR SIR: On December 11, 1889, you stated in a letter to my father that the money accounts of Capt. A. P. Bilyeu on file in your office show him to have paid Henry R. Gibson for service in the subsistence department as assistant clerk from March 23 to 31, 1863, at \$50 per month; as clerk from April 1 to June 30, 1863, at \$65 per month; from July 1 to December 31, 1863, at \$75 per month, and from January 1, 1864, to July 2, 1865, at \$90 per month. In the same letter you also state there is no record of his having served in any capacity except as designated, and that his name is borne upon the rolls of citizens employed and upon separate vouchers, always appearing as an employee of the subsistence department.

On November 12, 1880, the Adjutant-General in giving the military service of Aaron P. Bilyeu stated that he was appointed captain and commissary of subsistence of volunteers, September 24, 1862; that he was on duty in the defenses of Washington from September, 1862 to March, 1863; in charge of beef cattle for the Army of the Potomac at Aquia Creek, Va., to May, 1863; at Alexandria, Va.,

engaged in forwarding beef cattle to the Army of the Potomac to August, 1863; on commissary duty at Alexandria, Va., to December, 1863; at Benedict, Md., to March, 1864; at Baltimore, Md., to September, 1864; at Wilmington, Del., as commissary of subsistence of the District of Delaware to July 2, 1865, from which date his resignation was accepted, he having failed to pass an examination before a board convened for the examination of officers of the subsistence department, under the act of Congress approved June 25, 1864, which directed the discharge of officers of the supply and disbursing departments who failed to pass such examination. On January 23, 1863, the Acting Secretary of War said that the military operations, including the battle of Fredericksburg, Va., dated from December 11 to 15, 1862; the battle of Chancellorsville from May 1 to 5, 1863, and the battle of Gettysburg from July 1 to 3, 1863, and that the battle of the Monocacy was fought July 9, 1864.

There seems to be no doubt whatever that Henry R. Gibson was a commissary clerk under Captain A. P. Bilyeu from March 23, 1863, to August 4, 1865, or 2 years 3 months and 4 days. Gibson, in a letter he wrote to the War Department July 12, 1866, stated that he was a commissary clerk under Captain Bilyeu 2 years and 9 months. I desire to ask the following questions and to request that you answer them at the earliest date practicable after a thorough investigation:

First. Can your office show by the old books kept by Captain Bilyeu that Henry R. Gibson made or did not make entries in his own handwriting upon the same on either or all of the days upon which the above battles were fought?

Second. If you are not in possession of the old books used by Captain Bilyeu, have you any record, report, or documentary evidence that Henry R. Gibson was or was not present at his post of duty as a commissary clerk under Capt. A. P. Bilyeu on either or all of the days on which the above battles were fought?

Third. Is there any evidence of any character which shows that an actual battle took place at either of the points at which Capt. A. P. Bilyeu was stationed, according to his military record furnished by the Adjutant-General, during the time he was stationed at those points?

Please give me the benefit of any and all additional information you can furnish concerning the record of Henry R. Gibson as a commissary clerk, or as a commissary officer, or as any other kind of an officer of the Federal Army, and inform me whether there is any evidence on file in your office that the Secretary of War or any other official issued to Henry R. Gibson a commission as a commissary officer after July 12, 1866.

I have secured all the information it seems possible for me to obtain from each and every branch of the War Department. This is an important matter, and I hope you will be kind enough to direct that it be thoroughly investigated and promptly answered.

Yours, truly,

JNO. C. HOUK, M. C.

The THIRD AUDITOR OF THE TREASURY,
Washington, D. C.

Stamped: "Third Auditor's Office, July 15, 1893. Mail Room."

W. S. S. (L. B. S.)

TREASURY DEPARTMENT, OFFICE OF THE THIRD AUDITOR,
Washington, D. C., July 20, 1893.

SIR: Replying to your letter of July 12, 1893, herewith returned, I have to inform you that there are no books of record kept by Capt. A. P. Bilyeu, acting commissary of subsistence on file in this office. That officer rendered money accounts and provision returns for the period from March 1, 1863, to July, 1865, and they are the only records on file in this office pertaining to his transactions in the subsistence department. A thorough examination of these papers fails to disclose any evidence whatever as to his having been engaged in any of the battles mentioned. The returns are the only authority by which this office can determine where this officer was stationed, and are dated as follows:

Aquia Creek, Va., from March to June, 1863.

Washington, D. C., in July, 1863.

Brookville, Md., in August, 1863.

Alexandria, Va., from September to December, 1863.

Camp Stanton, Benedict, Md., January and February, 1864.

Camp Birney, Baltimore, Md., March to August, 1864.

Wilmington, Del., from September, 1864, to July, 1865.

Henry R. Gibson was employed as a clerk by Captain Bilyeu during this period, but there is no evidence, documentary or otherwise, on file with the Captain's papers to indicate whether or not the said Gibson was present continuously. All monthly reports, etc., appear to be regular, and a majority of the papers being in his handwriting, it would seem to indicate that he was present and on duty with Captain Bilyeu at the different stations on the days which said battles were fought.

The records of this office do not show that Henry R. Gibson has rendered any accounts as an officer in the subsistence, quartermaster, or engineer's department.

Respectfully, yours,

SAMUEL BLACKWELL, Auditor.

Hon. JOHN C. HOUK, M. C.,
Knoxville, Tenn.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., August 21, 1893.

DEAR SIR: Herewith I hand you the affidavit which you state is necessary under the law in order to secure photographic copies of certain vouchers and pay rolls of your Bureau upon which Henry R. Gibson was paid for services rendered as a civilian employee under Captain A. P. Bilyeu, acting commissary of subsistence, from March, 1863, to July, 1865.

In addition to the certified photographs I ask that you furnish me written copies of all vouchers for payments to Henry R. Gibson by Captain Bilyeu, and a statement in detail of the monthly payments made to Henry R. Gibson as a civilian employee in the commissary from the beginning of his service to the end, and advise me in whose handwriting each of the monthly vouchers and pay rolls upon which he was paid were written.

Also please inform me whether Henry R. Gibson was subject to dismissal as a commissary clerk at any time by and at the will of Capt. A. P. Bilyeu, under whom he was clerking, and whether Henry R. Gibson as a member of the staff of any officer of the United States Army was ever detailed for duty as a clerk under Capt. A. P. Bilyeu from March, 1863, to July or August, 1865. Also please advise me if the money paid Henry R. Gibson monthly was exclusively for services as a clerk.

By giving me a prompt and specific reply you will greatly oblige me.

I am, very truly, yours,

JNO. C. HOUK, M. C.

Hon. THIRD AUDITOR, UNITED STATES TREASURY,
Washington, D. C.

DISTRICT OF COLUMBIA, City of Washington:

On this 21st day of August, 1893, personally appeared before me JOHN C. HOUK, who makes oath as follows:

That he is a member of Congress from the second district of Tennessee, and lives at Knoxville, in that State; that he desires a photograph of the first and

last voucher and of the first and last pay roll on file in the office of the Third Auditor of the Treasury upon which Henry R. Gibson was paid for services rendered as a commissary clerk under Capt. A. P. Bilyeu, acting commissary of subsistence, between March, 1863, and July, 1865; that he desires said photograph to use in establishing the fact that Henry R. Gibson wrote a letter to the Secretary of War, under date of July 12, 1866, which is now on file in the War Department and which Henry R. Gibson, I am informed by reliable and responsible persons, denies that he wrote; that I am reliably informed Henry R. Gibson does not deny his handwrite now on file in the Third Auditor's office; that by establishing the genuineness of the War Department letter it is probable that the perpetration of a fraud against the Department can be prevented; that affiant knows of no other way he can secure a photograph of Henry R. Gibson's handwrite, which he acknowledges as his own, during the late rebellion, or the year following the war, except by the aid of the honorable Third Auditor; that said photograph is not desired for any other purpose except as stated and to show that Henry R. Gibson was a commissary clerk or civilian employee under Capt. A. P. Bilyeu between March, 1863, to July, 1865.

JOHN C. HOUK.

(Signed and sworn to before a notary.)

J. C. B.

TREASURY DEPARTMENT, OFFICE OF THE THIRD AUDITOR,
Washington, D. C., August 25, 1893.

SIR: It affords me pleasure to hand you herewith an abstract of payments made by A. P. Bilyeu, late captain and commissary of subsistence, volunteers, to Henry R. Gibson for services rendered as clerk in his office, during the period from March 28, 1863, to July 2, 1865, inclusive; also copies of the vouchers on which the respective payments were made.

Four of the copies of vouchers are photographs.

Respectfully, yours,

SAMUEL BLACKWELL, Auditor.

Hon. J. C. HOUK,
House of Representatives, City.

J. C. B.

TREASURY DEPARTMENT, OFFICE OF THE THIRD AUDITOR,
Washington, D. C., August 26, 1893.

SIR: Referring to your letter of the 21st instant, I find that in my letter yesterday I did not reply to all your inquiries; I therefore add the following to that reply, viz:

Commissary clerks during the war of the rebellion were subject to dismissal at any time by and at the will of the officer in whose employ they were. The papers on file in this office do not show that Henry R. Gibson, clerk in the office of A. P. Bilyeu, captain and commissary of subsistence, volunteers, was a member of the staff of any officer during said war; and I will add I have no knowledge of any staff officer having been detailed as a clerk in a captain's office.

All payments made by Captain Bilyeu to Mr. Gibson were for services rendered as a clerk in his office.

Respectfully, yours,

SAMUEL BLACKWELL, Auditor.

Mr. J. C. HOUK,
House of Representatives, City.HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 1, 1893.

DEAR SIR: You have in your office the twenty-seven original vouchers upon which Henry R. Gibson was paid for services as a civilian employee in the commissary, under Capt. A. P. Bilyeu, commissary of subsistence, United States Volunteers, between March, 1863, and July, 1865, both inclusive.

Please inform me in whose handwrite each and every one of these vouchers is filled out. An immediate answer will be appreciated.

I would also respectfully ask whether there is any kind of evidence on file in your office that Capt. A. P. Bilyeu was a drunken, jealous, quarrelsome, or unworthy official.

I am, sir, your obedient servant,

JNO. C. HOUK, M. C.

Honorable THIRD AUDITOR, UNITED STATES TREASURY,
Washington, D. C.

J. C. B.

TREASURY DEPARTMENT, OFFICE OF THE THIRD AUDITOR,
Washington, D. C., September 1, 1893.

SIR: In reply to your request of even date for information in whose handwriting the twenty-seven vouchers in the accounts of A. P. Bilyeu, captain and commissary of subsistence, volunteers, for payments to Henry R. Gibson, for services as a clerk in his office from March 28, 1863, to July 2, 1865, are filled out, I have to state that the vouchers referred to are made out in the handwriting of Henry R. Gibson, excepting vouchers 4, first quarter, 1863; 4, July, 1863; and 1, April, 1864, respectively; which are in the handwriting of G. W. Bilyeu, a clerk in the same office.

In reply to your inquiry whether there is any evidence on file in this office showing that Capt. A. P. Bilyeu was a "drunken, jealous, quarrelsome or unworthy official," I have to state, this office has no evidence in its files tending to show anything derogatory to the character of Captain Bilyeu, as an officer of the Army or as a citizen.

Respectfully, yours,

SAMUEL BLACKWELL, Auditor.

Hon. JNO. C. HOUK,
House of Representatives, City.HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 26, 1893.

DEAR SIR: Henry R. Gibson claims to have been a soldier or officer in the Federal Army from March, 1863, to August, 1865. The records of the War Department show that he was never either a soldier or officer at any time during the rebellion. The records of the Third Auditor's Office show that he was a commissary clerk from March, 1863, to July, 1865. Mr. Gibson persists in claiming, however, that he was in the Army, in some capacity between the dates mentioned, but the only specific statement or claim as to the character of his service is that he entered the military service of the United States in March, 1863 (the 17th), as a lieutenant on General Hooker's staff, and that he was honorably discharged or mustered out as a lieutenant and brevet captain August 4, 1865. The only States he could possibly have enlisted from are Maryland, Delaware, and Pennsylvania. I have searched every branch of the War Department, and every branch of the Treasury Department, except yours, which might have a record of this man's alleged service, but I have never been able to find anything to indicate that he was either a soldier

or officer. I write this letter to ask whether the records of your office show that he was ever paid any bounty or pay of any kind for services as a soldier?

I am, very respectfully,

JNO. C. HOUK, M. C.

Honorable SECOND AUDITOR OF THE TREASURY,
Treasury Department, Washington, D. C.TREASURY DEPARTMENT, SECOND AUDITOR'S OFFICE,
Washington, D. C., September 27, 1893.

Respectfully returned to the Hon. JOHN C. HOUK, House of Representatives, With reply that the records of this office do not show the receipt of any claim in behalf of Henry R. Gibson. If, as stated, the records of the War Department show that he was never, either a soldier or officer, this office would have no jurisdiction in the matter. If he served as commissary clerk, it should be referred to the Hon. Third Auditor of the Treasury.

T. STROBO FARROW, Auditor.

Mr. Chairman, I now give various inquiries and answers concerning Col. S. M. Bowman, whose name Gibson has to his forged discharge.

Colonel Bowman became paralyzed and died in St. Louis at the age of 71 years, about the very time Gibson slipped into the G. A. R.

This leaves only two men alive mentioned in Gibson's famous letter of July 12, 1866, as having recommended him for captain and commissary of subsistence, volunteers (Captain Bilyeu in an asylum, and General Thomas), who states that he does not remember Henry R. Gibson.

(Government telegraph lines, connecting the House with all the Executive Departments and the Government Printing Office. For Government business only.)

(Dated) August 16, 1893.

To Hon. SECRETARY OF WAR:

I have just received the following telegram from Knoxville, Tenn.: "Grand Army whitewashed Gibson, who presented an appointment by (S. M.) Bowman as lieutenant on Hooker's staff. Gibson denied writing letter to the Secretary of War in 1866 asking for muster in and muster out."

Please wire me at once if Henry R. Gibson was a lieutenant on Hooker's staff, whether Colonel Bowman had a right to issue a commission to him as such, and whether his letter is still on file in the Adjutant-General's Office, in which he asked for a muster in and out after the war closed, and whether he has yet been mustered in or out of the United States Army.

Please answer quickly by wire.

JNO. C. HOUK, M. C.

House of Representatives, Washington, D. C.

(Government telegraph lines, connecting the House with all the Executive Departments and the Government Printing Office. For Government business only.)

(Dated) WAR DEPARTMENT, August 17, 1893.

Hon. JOHN C. HOUK, House of Representatives:

Colonel Bowman had no authority to commission Henry R. Gibson or any one else in the military force of the United States; there is no official evidence that Henry R. Gibson was a commissioned officer in the military service of the United States on Hooker's staff or elsewhere, and his letter of July 12, 1866, asking for a commission dating back to sixty-four and to be mustered out to date sixty-five, is still on file.

DANIEL S. LAMONT,
Secretary of War.

WASHINGTON, D. C., August 19, 1893.

DEAR SIR: Please answer the following questions at once by letter: First. Was Col. S. M. Bowman ever at any time authorized to issue an honorable discharge from the military service of the United States to Henry R. Gibson or any other person as a lieutenant and brevet captain, or as captain and commissary of subsistence, or as any other kind of an officer?

Second. If so, did he ever issue such a discharge to Henry R. Gibson?

Third. Was Col. S. M. Bowman ever authorized to issue a commission of any kind to Henry R. Gibson?

Fourth. If so, did he ever issue a commission of any kind to Henry R. Gibson? Fifth. Was Henry R. Gibson ever commissioned as a lieutenant or any other kind of an officer upon General Hooker's staff and assigned to duty as such under Capt. A. P. Bilyeu, acting commissary of subsistence?

Sixth. Was Henry R. Gibson ever designated or commissioned as a member of the staff of any United States officer?

Seventh. Did Secretary Stanton ever issue an order honorably discharging Henry R. Gibson from, or mustering him in or out of, the military service, either as a private or officer?

By giving me an early answer to each of the above questions it will save me some inconvenience, as well as the Department. Please respond by mail, at the earliest moment practicable and oblige

Your obedient servant,

THOMAS SETTLE, M. C.

(Signed)

Hon. DANIEL S. LAMONT,
Secretary of War, Washington, D. C.

[Mr. Settle wrote this letter by request of JOHN C. HOUK.]

2833 D--A. C. P. 1893.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, August 27, 1893.

SIR: I have the honor to acknowledge the receipt of your letter of the 19th instant, and, by direction of the Secretary of War, to reply as follows to the seven questions submitted:

1 and 2. There is nothing of record to show that Col. S. M. Bowman was ever authorized to discharge Henry R. Gibson from the United States service as a commissioned officer of any grade, or that he ever issued such a discharge.

3 and 4. Colonel Bowman was never authorized to issue a commission of any kind to Mr. Gibson, and the records do not show that he ever issued any commission.

5 and 6. The records do not show that Henry R. Gibson was ever commissioned as an officer on General Hooker's staff—that he served as a commissioned officer under Capt. A. P. Bilyeu, or that he was ever designated or commissioned as a member of the staff of any officer.

7. There is nothing to show that the Secretary of War ever issued any order honorably discharging Henry R. Gibson from the military service.

Very respectfully,

Hon. THOMAS SETTLE,
House of Representatives, Washington, D. C.

R. WILLIAMS, Adjutant-General.

Blank No. 2.

(Government telegraph lines, connecting the House with all the Executive Departments and the Government Printing Office.—For Government business only.)

(Dated) AUGUST 23, 1893.

To Hon. DANIEL S. LAMONT, Secretary of War:

Please mail me a letter showing when Col. S. M. Bowman, Eighty-fourth Pennsylvania Volunteers, vacated his command of the District of Delaware, and showing what other department, if any, he ever commanded, giving dates, etc.

(Signed)

THOMAS SETTLE, M. C.,
House of Representatives, Washington, D. C.

[Mr. Settle wrote this letter by request of John C. Houk.]

R. J. W.

Subject: Case of S. M. Bowman.

WAR DEPARTMENT, RECORD AND PENSION OFFICE,
Washington City, August 24, 1893.

SIR: In reply to your telegram of yesterday, in which you request to be informed when Col. S. M. Bowman, late of the Eighty-fourth Pennsylvania Volunteers, vacated his command of the District of Delaware, and what other department he commanded, if any, I am directed by the Secretary of War to inform you that the records show that Colonel Bowman was relieved from duty as commanding officer of the District of Delaware by General Order, No. 55, Headquarters Middle Department, Eighth Army Corps, March 24, 1865.

No record has been found showing that he commanded any other department.

Very respectfully,

F. C. AINSWORTH,

Colonel, U. S. Army, Chief Record and Pension Office.

Hon. THOMAS SETTLE,
House of Representatives.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 2, 1893.

DEAR SIR: Please give me at as early date as practicable a statement of the military history of Col. S. M. Bowman, late colonel of the Eighty-fourth Pennsylvania Volunteers.

Very respectfully,

JNO. C. HOUK, M. C.

Hon. D. S. LAMONT,
Secretary of War, Washington, D. C.

Subject: Military record of Samuel M. Bowman.

WAR DEPARTMENT, RECORD AND PENSION OFFICE,
Washington City, September 6, 1893.

SIR: In reply to your letter of the 2d ultimo, received yesterday, requesting to be furnished with the military record of Col. S. M. Bowman, late of the Eighty-fourth Pennsylvania Volunteers, I am directed by the Secretary of War to inform you that the records of this office show that Samuel M. Bowman was mustered into service as major Fourth Illinois Cavalry, November 22, 1861. He is reported present on the rolls of the field and staff from muster in to February 28, 1862, and the next roll on file, dated June 30, 1862, reports him "Promoted to colonel of the Eighty-fourth Regiment of Pennsylvania Infantry, June 21, 1862." He was mustered out of service as major to date June 29, 1862, at Washington, D. C.

Samuel M. Bowman was mustered in as colonel Eighty-fourth Pennsylvania Volunteers June 21, 1862, at Washington, D. C., to serve three years, and is reported on the field and staff rolls of that regiment as follows: June 30, 1862, "Absent on special duty;" August 31, presence or absence not stated; October 31, "Present," and so reported to February 28, 1863; special muster roll dated April 10, 1863, "Present," with remark, "Commanding Second Brigade Third Corps, Army of the Potomac;" April 30, "Absent," with same remark; June 30, "Absent on military commission, Washington, D. C.," and so reported to December 31, 1863; February 29, 1864, "Absent as chief mustering and recruiting officer, colored troops, Md.," Special Orders No. 70, War Department, February 12, 1864, and so reported to October 31, 1864. He was mustered out of service as colonel, December 31, 1864, on individual muster-out roll, with remark as follows: "Mustered out in pursuance of Special Order 324, Headquarters Second Army Corps, December 31, 1864, authorizing the formation of the Eighty-fourth Pennsylvania Volunteers into a battalion of four companies." This muster out of service was suspended until further orders, by telegram from the office of the Adjutant-General of the Army, dated February 2, 1865. He continued in service in command of the district of Delaware and as chief mustering and recruiting officer for colored troops in the State of Maryland. He was relieved from duty as commanding officer of the district of Delaware by General Order No. 55, March 24, 1865, Middle Department, Eighth Army Corps, and was mustered out and honorably discharged from the service as colonel Eighty-fourth Pennsylvania Volunteers (consolidated with Fifty-seventh Pennsylvania Volunteers) to take effect May 15, 1865, on account of his services being no longer required.

S. M. Bowman, late major Fourth Illinois Cavalry, and colonel Eighty-fourth Pennsylvania Volunteers, was appointed brevet brigadier-general of volunteers, to rank from March 13, 1865, for "gallant and meritorious services during the war."

Very respectfully,

F. C. AINSWORTH,

Colonel U. S. Army, Chief Record and Pension Office.

Hon. JOHN C. HOUK,
House of Representatives.

CERTIFICATE OF DEATH.

KANSAS CITY, MO., June 6, 1885.

I hereby certify that Gen. Samuel M. Bowman died on June 3, 1885, ward No. 4 Place of death, Sixteenth and Baltimore avenue.
Residence, Sixteenth and Baltimore avenue.
Civil condition, married.
Sex, male.
Color, white.
Age, 71 years.
Birthplace, United States.
Cause of death, paralysis.

I treated the case from June 1, 1885, to June 3, 1885. D. E. DICKERSON, M. D.,
office, northeast corner Fifth and Delaware,
E. Stine, undertaker, 804 Walnut street.
Place of interment, Elmwood Cemetery.

No. 513.

CERTIFICATE OF DEATH.

Filed June 6, 1885.

I, Arthur Chapman, clerk of the board of health of Kansas City, Mo., certify the within to be a correct copy of the certificate of death of Gen. Samuel M. Bowman, as the same appears of record in my office. In testimony whereof I have hereunto set my hand and affixed the seal of the board of health of Kansas City aforesaid, this 12th day of October, A. D. 1893.

[SEAL]

ARTHUR CHAPMAN,
Clerk of Board of Health.

AFFIDAVIT OF GEORGE W. BILYEU, WHO SERVED AS A CLERK UNDER HIS FATHER IN THE COMMISSARY WITH MR. GIBSON.

Mr. Chairman, I shall now read the affidavit of Mr. Gibson's fellow clerk, George W. Bilyeu, which in itself establishes, beyond doubt, that Mr. Gibson is a cold-blooded fraud. Mr. Bilyeu's trustworthiness is vouched for by the late Hon. Charles O'Neill, of Philadelphia, Senator M. S. Quay, and others.

Q. 1. What is your name, age, and occupation, and how long have you been so employed?

A. George W. Bilyeu; age, 52 years; occupation, a bookbinder; in Government service for past five years.

Q. 2. State whether you were in the military service of the United States during the war of the rebellion; and, if so, for how long and in what company and regiment?

A. I was in Company H, One hundred and twelfth Pennsylvania Volunteers (Second Heavy Artillery); enlisted 13th day of August, 1862; discharged 13th day of January, 1863, at Fort Lincoln, District of Columbia.

Q. 3. How and for what purpose did you said service terminate?

A. By Special Order, No. 19, War Department, to take position as a clerk in Commissary Department, under Capt. A. P. Bilyeu, commissary of subsistence, United States Volunteers.

Q. 4. Do you know Capt. A. P. Bilyeu, late commissary of subsistence?

A. I do. He is my father.

Q. 5. Where and in what manner were you occupied between March, 1863, and July, 1863?

A. Assistant or clerk in the commissary department under my father. I was a civilian employee.

Q. 6. State whether during said period you knew one Henry R. Gibson.

A. I did. Constantly and intimately.

Q. 7. When and under what circumstances did you first meet said Gibson?

A. In the month of March, 1863. He came into Captain Bilyeu's office where I was employed and I was introduced to him.

Q. 8. When you first saw said Gibson state what was his apparent financial condition and describe his physical peculiarities and appearance?

A. He looked financially embarrassed. He wore no uniform and did not appear to be a military man. He was a short, slight man, with thick black hair, and as I recollect he wore a mustache and goatee, and had large gray eyes, as I remember.

Q. 9. Did Gibson come to your father seeking work, or was he detailed to assist your father by the War Department or any branch thereof? By whom was he recommended and in what capacity was he employed by your father?

A. He came seeking work and never mentioned anything about the detail at any time. He was recommended by Col. Beckwith, a great friend of my father's. He was employed in the capacity of a civilian employee, and acted as a clerk.

Q. 10. If he had been detailed or ordered to assist your father by the War Department, state whether you would have known it.

A. I would undoubtedly have known it.

Q. 12. Did Gibson at any time during your services together ever claim to be or have been a Union soldier or officer?

A. He never claimed to have been such and am surprised to hear that he ever claimed to have been.

Q. 13. Did you ever see him receive his pay as a commissary clerk? If so, what was the amount thereof, and who paid him?

A. Yes, I have. I can't state as to the amounts from recollection. The vouchers themselves will show that. He was paid by Capt. A. P. Bilyeu or by his direction.

Q. 14. Please examine the photo letters and vouchers handed you and indicate in whose handwriting are the letters, etc., marked Exhibits B, C, D, E, and F.

A. The March, 1863, voucher of Exhibit B is in my handwriting. The August, 1864, voucher of Exhibit B, and July, 1865, voucher of Exhibit B, are in Henry R. Gibson's handwriting. The September, 1864, voucher of Exhibit C is also in Henry R. Gibson's handwriting. The letter of January 13, 1866, Exhibit D, and the letter of July 12, 1866, Exhibit E, are in H. R. Gibson's handwriting. The letter of August 8, 1868, Exhibit F, appears to be his also.

Q. 15. Is this letter of July 12, 1866 (Exhibit E) in the handwriting of the Henry R. Gibson who served with you between March, 1863, and July, 1865?

A. It is.

Q. 16. What history did said Gibson give of himself when you first met him, and did he then ever claim to have served as an officer or soldier in the Union army?

A. He said he was a Southern man. He never said anything whatever about having been an officer or soldier in the Union army. He claimed to be a refugee.

Q. 17. What opinion did you form as to his moral habits during said period?

A. His personal habits were good. He was a vain, peculiar, and distant man.

Q. 18. State whether your father was competent and faithful in administering his duties.

A. He was, undoubtedly. He was a man of great native ability; generous and warm-hearted. Of great application and will power, and thoroughly understood and performed his duties, and had the utmost confidence in his subordinates.

Q. 19. Suppose that the Henry R. Gibson you knew in the service had used the following language: "I never drew a disloyal breath, or uttered a disloyal word, or did a disloyal deed in my life," please state whether, from your association and conversation with said Gibson, during the period you and he were commissary clerks, you believed at that time, and believe now, that he was the enthusiastic patriot then that the above-quoted words would indicate.

A. I never, while with him, considered him to be a thoroughly loyal man. I kept my "weather eye" upon his patriotism.

Q. 20. If not, relate any pertinent incidents to the contrary.

A. He was always evasive when the subject of the rebellion was broached. He always evaded any conversation with regard to the South. He would say, "Oh! Well, we won't discuss that question." His aim seemed to be chiefly to draw his salary.

Q. 21. Did you believe that while serving with said Gibson as a commissary clerk, and do you believe now, that his real sympathies were in favor of the Union and against the Confederacy before and during the civil war?

A. No, I don't think his sympathies were with the Union. He was never offen-

sive in his remarks, and being a good clerk so as to merit the personal good will of Captain Bilyeu, he was retained as a clerk.

Q. 22. Are you a member of the Grand Army of the Republic in good standing? If so, of what post and department?

A. Yes, of Kit Carson Post No. 2, Department of the Potomac, Grand Army of the Republic.

Q. 23. Have you ever seen or received any communication from one Henry R. Gibson, of Knoxville, Tenn., or elsewhere, since you left the commissary service? If so, state fully when and under what circumstances, and the substance of any letter or letters, if any, that you have received from him.

A. Yes; I received a letter inquiring whether I was alive and my father was alive. This was about two months since (about July, 1893). He wrote to know whether a visit from him to my father would be agreeable and whether he (my father) would recall him. I answered him that my father was very old and feeble and would hardly recognize him. Gibson replied to my letter and said he would be in Washington some time and call on me.

Q. 24. Did the said Gibson, who wrote you from Knoxville, Tenn., in any of his said letters assert or admit his identity with the Henry R. Gibson who served with you as a commissary clerk as stated?

A. He said nothing in these letters about our associations as commissary clerks during the war, but the handwriting was the same, except that the lines were heavier in these letters. He wrote me from Knoxville some years ago in regard to some papers bearing on an investment we made together while we were commissary clerks.

Q. 25. Did or did not Henry R. Gibson, while he occupied a position as commissary clerk under your father, show by word or act that he appreciated the kindness of your father in giving him employment when he was in need?

A. Yes; he seemed to appreciate my father's friendship for him and to have high regard for him. Captain Bilyeu always treated him as a son.

Q. 26. Did your father have the authority to dispense with the services of Gibson, or any of his clerks, at his own discretion?

A. He did; most certainly.

Q. 27. Is your father living? If so, how old is he? What is his condition of health?

A. My father is living at the age of 83 years, and very feeble in body and in mind. Q. 28. Before and after your father became captain and commissary of subalternance, United States Volunteers, in what occupation was he engaged, and on what scale?

A. He was a contractor and builder on a very extensive scale in Philadelphia, Pa. Q. 29. What was your father's standing in Philadelphia as a business man, and socially, before and after the war, and what prominent individuals were his personal associates and friends?

A. My father stood very high with all financial institutions and his reputation was unimpeachable in our home in Philadelphia, Pa. Some of his intimate friends are W. W. Frasier, one of the largest sugar refiners; Henry Haines, conveyancer; Thomas Robbins, ex-President Philadelphia Bank (he is dead); Hon. Charles O'Neill, Member of Congress; Jacob Grim—all of Philadelphia, Pa. I could name hundreds of others of the same standing.

Q. 30. The pay roll of September, 1864, and the pay roll of July, 1865, show that Sylvester Y. Kerna, clerk; Gilbert Lowrie, herder; James Fletcher, laborer; William Bayard, laborer, and Henry Robinson, laborer, were employed in the commissary department under your father, with yourself and Henry R. Gibson. If these gentlemen are living, where do they now reside?

A. Kerna I know to be dead. He was an old schoolmate of mine. The only others of our party that I know to be living are Henry R. Gibson, of Knoxville, Tenn., and myself.

Q. 31. Please state the highest, lowest, and average number of persons employed in your father's commissary from March, 1863, to July, 1865?

A. The highest number was when he had charge of the beef cattle, then about 12 or 15; the lowest about 3, and the average about 5. The vouchers in the Treasury Department will show exactly.

Q. 32. Did yourself or Gibson, or any other clerks or employees, while serving with you in the commissary under your father from March, 1863, to July, 1865, participate as soldiers or officers of the Federal Army in either of the battles of Fredericksburg, Chancellorsville, the Monocacy, or the preliminary skirmishes of the Battle of Gettysburg?

A. None of these or in any others. The nearest we came to it was when we were stationed near Rockville, Md., when we were run from there almost to Baltimore by the news that General Mosby was on our trail. We then had about 5,500 beehives in charge, but we reached a place of safety without a scratch. On this stampede, which was a bloodless Bull Run, as it were, our losses and casualties consisted of cattle that were crowded off bridges and who run themselves to death on our retreat. The chief danger was from being trampled upon by the frightened cattle, aroused and driven frantically by terror-stricken herders. In the strategic maneuver indicated I was seeing that my father's orders were obeyed while Gibson was riding in an ambulance, safe from trampling hoofs and whistling balls (we never heard).

Q. 33. Did the employees in the commissary under your father, from March, 1863, to July, 1865, participate as soldiers or officers of the Federal Army in any battle or engagement with the Confederates?

A. None whatever. (See above.)

Q. 34. What are your politics?

A. Republican, but not an offensive partisan; at one time secretary of Republican club.

Q. 35. Have you any sons, and if so, where and by whom are they employed?

A. I have a son who is inspector in the custom-house at Philadelphia. He got his position through the Civil Service Commission's examinations.

Q. 36. Upon whose recommendation did you receive your present position?

A. Hon. Charles O'Neill, M. C., and Senator M. S. Quay and R. A. Dinwiddie, department commander, Grand Army of the Republic (Potomac).

Q. 37. Where have you resided? How and by whom have you been employed during each year since you left the commissary service in 1865?

A. In business for myself in Philadelphia, Pa., for eighteen years; was in Government Printing Office four years, then was in Philadelphia three years, and since then in Government service here.

Q. 38. Did Gibson ever show you during the war any poetry or articles written by himself before and during the war relating to controversies resulting in the civil war, and if so, what was the substance or purport of such poetry or articles.

A. Only some verses he had in pass book, written by himself, and to the best of my recollection they were not favorable to the Union.

Q. 39. What was Gibson's religious faith or belief as indicated by his conversations with you during your service together as commissary clerks?

A. An Episcopalian, I believe.

Q. 40. What are your relations with Henry R. Gibson, and have you any malice, prejudice, or grievance against him?

A. Our relations were cordial and friendly. I have no malice, prejudice, or grievance against him whatever.

Q. 41. Have you any knowledge as to whether Gibson, while a commissary clerk, ever applied on November 30, 1864, or at any other time, for a commission as an officer in the Commissary Department?

A. Never to my knowledge did I hear Gibson say anything in that connection. If he ever got it I never heard of it, and if my father had heard of it, as he undoubtedly would had Gibson applied, he would have told me, but he never did.

Q. 42. Had he done so, were his relations with your father such as that he would have sought your father's indorsement and influence in procuring the same? Would your father have aided him in that direction?

A. He (Gibson) would, I have no doubt. My father would have willingly aided him if satisfied with his loyalty. He certainly was a most competent clerk, and my father fully regarded him as a son and called him "son."

Q. 43. Did you and Gibson leave the commissary service about the same time, and did you both, or either of you, receive an honorable discharge as soldiers employed in the Commissary Department?

A. We were discharged about the same time. We got no papers except perhaps a recommendation. I did not receive any, and if Mr. Gibson got a letter of recommendation even I don't know it. We could not be discharged as soldiers for we were simply clerks, civilian employees.

Q. 44. What was the form and substance of any paper you received upon the termination of your service in the commissary department, and by whom was the same signed?

A. None were received, so far as I know.

Q. 45. Was Gibson mustered out of the commissary as a lieutenant and brevet captain, or at any other kind of an officer in July or August, 1865, or at any other time between March, 1863, and August, 1865? When and where did you last see Henry R. Gibson?

A. He was not, to my knowledge. The last time I recollect seeing him was some time in July, 1865.

Q. 46. Do you draw or have you applied for a pension, as an ex-Federal soldier? If so, state the number of your claim or certificate?

A. I am a pensioner; I don't recall the number of my certificate. I haven't it with me.

(Signed)

GEORGE W. BILYEU,
No. 15 L street NW., Washington, D. C.

In the presence of A. C. MacNulty, F. Neill Hughes.

DISTRICT OF COLUMBIA, County of Washington, ss:

On this 12th day of September, A. D. 1893, personally appeared before me, the undersigned authority, George W. Bilyeu, who in my presence subscribing to the foregoing interrogatories and responses, made solemn oath that his answers to the interrogatories were fully made known to and understood by him, and that they are the truth, the whole truth, and nothing but the truth. I further certify that the said George W. Bilyeu further deposes and acknowledges, that his signatures to pages 1, 2, 3, 4, and 5, dated and signed September 9, 1893, and to pages 6, 7, 8, and 9, dated and signed September 12, 1893, of the foregoing statement, and to Exhibits "B," "C," "D," "E," and "F," appertaining thereto, are genuine all and singular, and were and are of his own free act and deed.

Witness my hand and official seal this 12th day of September, A. D. 1893.

(Signed) WM. A. MACNULTY, Notary Public.

Description of the exhibits referred to in the foregoing affidavit:
Exhibit "B" consist of photographs of vouchers upon which Henry R. Gibson was paid as a commissary clerk at Aquia Creek, Va., March 31, 1863, \$6.66; and at Camp Birney, Md., August 31, 1864, \$60; and at Wilmington, Del., July, 1865, \$11.81; which exhibit is signed by George W. Bilyeu, and witnessed by F. Neill Hughes and A. C. MacNulty.

Exhibit C consists of a photograph of a voucher upon which Henry R. Gibson was paid for services as civilian employee in the commissary, September 30, 1864, \$90, which exhibit is signed by George W. Bilyeu and witnessed by F. Neill Hughes and A. C. MacNulty.

Exhibit D consists of a photograph of a letter written by Henry R. Gibson from Knoxville, Tenn., January 13, 1866, to the Adjutant-General of the United States Army, which exhibit is signed by George W. Bilyeu and witnessed by F. Neill Hughes and A. C. MacNulty.

Exhibit E consists of a photograph of a letter written by Henry R. Gibson from Knoxville, Tenn., July 12, 1866, to Hon. E. M. Stanton, Secretary of War, signed by George W. Bilyeu and witnessed by F. Neill Hughes and A. C. MacNulty.

Exhibit F consists of a photograph of a letter written by Henry R. Gibson from Jackboro, Tenn., August 8, 1868, to Hon. L. C. Houk, Clinton, Tenn., which exhibit is signed by George W. Bilyeu and witnessed by F. Neill Hughes and A. C. MacNulty.

Exhibits B and C were duly certified to September 13, 1893, by the Third Auditor of the Treasury Department.

Exhibits D and E were duly certified to September 15, 1893, by the Assistant Adjutant-General, at the War Department.

We hereby certify that the foregoing are true copies of the originals before us, except that an abstract only of the exhibits referred to are above given.

A. C. MACNULTY,
F. NEILL HUGHES,

DISTRICT OF COLUMBIA, County of Washington, ss:

Sworn to and subscribed before me this 15th of September, A. D. 1893, and I hereby certify that the said affiants, and each of them, made solemn oath that the foregoing are true and accurate copies of the originals referred to.

(Signed)

WM. A. MACNULTY,
Notary Public.

R. E. T.

DEPARTMENT OF JUSTICE,
Washington, D. C., September 19, 1893.

SIR: In reply to your communication of the 16th instant I am directed by the Attorney-General to state for your information that according to the records of our department, William A. McNulty is a notary public in and for the District of Columbia, having been appointed by President Harrison on the 29th of March, 1890, for the term of five years.

Hon. JOHN C. HOUK,

House of Representatives, Washington, D. C.

FRANK A. BRANAGAN,
Appointment Clerk.

RECORD AND PENSION OFFICE, WAR DEPARTMENT,
Washington City, September 19, 1893.

SIR: In reply to your communication of the 16th instant, received to-day, in which you request to be furnished with a statement of the military history of Wm. A. McNulty, who served in Company A, Tenth New York Infantry and the Sixteenth Veteran Reserve Corps, I am directed by the Secretary of War to inform you that the records of this office show that Wm. A. McNulty was enrolled April 27, 1861, as a private in Company A, Tenth New York Infantry Volunteers, to serve two years; was appointed corporal July 28, 1861; sergeant April 1, 1862; first sergeant October 20, 1862; was wounded at the battle of Fredericksburg, Va., and was mustered out with the company May 6, 1863.

Under date of May 9, 1864, he was appointed second lieutenant in the Veteran Reserve Corps, accepted the appointment May 31, 1864, and was assigned to the Two hundred and seventeenth Company, First Battalion, Veteran Reserve Corps, subsequently Company I, Sixteenth Veteran Reserve Corps, and served honorably

therewith until January 1, 1863, when he was mustered out in accordance with orders from this Department by reason of his services being no longer required.
Very respectfully,

F. C. AINSWORTH,
Colonel, U. S. Army, Chief Record and Pension Office.

Hon. JOHN C. HOUK,
House of Representatives.

Record of George W. Bilyeu, who was a clerk in the commissary with Gibson under his (Bilyeu's) father, and who swore that Gibson was never anything but a commissary clerk:

HOUSE OF REPRESENTATIVES UNITED STATES,
Washington, D. C., September 8, 1893.

SIR: Please give me at once or as soon as practicable, a full statement of the military history of George W. Bilyeu, formerly a member of the One hundred and twelfth Pennsylvania Volunteers; also a certified copy of the special order discharging him from the military service of the United States.

Very respectfully,
JNO. C. HOUK, M. C.

The Hon. SECRETARY OF WAR.

Subject: Case of George W. Bilyeu. (One inclosure.)
WAR DEPARTMENT, RECORD AND PENSION OFFICE,
Washington City, September 8, 1893.

SIR: In reply to your personal request of to-day, to be furnished with the military record of George W. Bilyeu, late a member of the One hundred and twelfth Pennsylvania Volunteers, and also with a copy of the order discharging him, I am directed by the Secretary of War to inform you that the records show that George W. Bilyeu, Company H, Second Pennsylvania Heavy Artillery (One hundred and twelfth Pennsylvania Infantry), was enrolled August 20, 1862, to serve three years.

He is reported on the rolls of the company as follows: October 31, 1863 (first upon which his name is borne), "present, clerk at regtl. q'r. mr. dept.;" December 31, 1863, "Absent, clerk in brig. com'y. dept.;" He was discharged January 13, 1863, by Special Orders, No. 10, paragraph 3, War Department, Adjutant-General's Office, January 13, 1863.

A copy of the order discharging this man is herewith inclosed, as requested.
Very respectfully,
F. C. AINSWORTH,
Colonel, U. S. Army, Chief Record and Pension Office.

Hon. JOHN C. HOUK,
House of Representatives.

[Special Orders, No. 10.]
WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, January 13, 1863.

3. Private George W. Bilyeu, Company H, One hundred and twelfth Pennsylvania Volunteers, is hereby honorably discharged the service of the United States.

By order of the Secretary of War:
War Department, Adjutant-General's Office, September 8, 1893.
E. D. TOWNSEND,
Assistant Adjutant-General.
H. C. CORBIN,
Assistant Adjutant-General, Record and Pension Office.

Hon. JOHN C. HOUK,
House of Representatives.

To whom it may concern:

Know ye, That George Bilyeu, a private of Lieut. E. De C. Loud's Company, (H) Second Regiment of Artillery (One hundred and twelfth Pennsylvania Volunteers), who was enrolled on the 13th day of August, 1862, to serve three years, is hereby discharged from the service of the United States, this 13th day of January, 1863, at Fort Lincoln, D. C., by reason of Special Orders, No. 10, War Department, Adjutant-General's Office.

No objection to his being reenlisted is known to exist.
Said George Bilyeu was born in Philadelphia in the State of Pennsylvania, is 22 years of age, 5 feet 4 inches high, dark complexion, gray eyes, dark hair, and by occupation, when enrolled, a bookbinder.
Given at Fort Lincoln, D. C., this 13th day of January, 1863.

(Signed) A. A. GIBSON,
Colonel, One hundred and twelfth Pennsylvania Volunteers, Comdg.

*This sentence will be erased should there be anything in the conduct or physical condition of the soldier rendering him unfit for the Army.

TREASURY DEPARTMENT, OFFICE OF THE THIRD AUDITOR,
Washington, D. C., September 21, 1893.

SIR: Referring to your letter of the 16th instant, herewith returned, you are informed that Capt. Aaron P. Bilyeu, commissary of subsistence, United States Volunteers, paid George W. Bilyeu for services rendered as a civilian clerk in the subsistence Department, as follows:

	Per month.
As assistant clerk, January 1 to 31, 1863.....	\$40
As assistant clerk, February 1 to March 20, 1863.....	50
As clerk, March 21 to April 30, 1863.....	75
As chief clerk, May 1 to June, 1863.....	75
As assistant clerk, July 1 to September 30, 1863.....	65
As clerk, February 1 to September 30, 1864.....	75
As clerk, May 1 to July 2, 1865.....	65

Payments for this service appear to have been made at the end of each month.
Respectfully, yours,

SAM'L BLACKWELL, Auditor.

Hon. JOHN C. HOUK,
House of Representatives.

[As a clerk, Bilyeu was present when Gibson went in and out as a clerk.]
LETTERS TO AND FROM THE COMMISSARY-GENERAL—ALSO A LETTER FROM THE SECOND COMPTROLLER.

Mr. Chairman, these letters to and from the Commissary-General and the Second Comptroller explain themselves:

KNOXVILLE, TENN., June 23, 1893.

DEAR SIR: Please be kind enough to answer the following questions at as early a date as practicable:
First. Was Henry R. Gibson a captain and commissary of subsistence at any time during the late war of the rebellion?

Second. Were not all captains and commissaries of subsistence required to give bond?

Third. If Henry R. Gibson was a captain and commissary of subsistence, did he ever file a bond, and if so, who were his bondsmen?

Fourth. Were not all commissary officers during the war of the rebellion required to give bond, and if so, did Henry R. Gibson ever file a bond as an officer of the subsistence department, and if he did, who were his bondsmen?

Fifth. Were the chief clerks and assistant clerks under Capt. A. P. Bilyeu, acting commissary of subsistence, during the late war of the rebellion, in Delaware and Maryland, required to give bond. If so, did Henry R. Gibson file a bond as either chief clerk or assistant clerk, and if so, who were on his bond?

This is an important letter, and I hope you will give it immediate consideration and attention, and if it ought to be referred to another official for answer, please refer it to the proper place and request early action.

Yours truly,

JNO. C. HOUK, M. C.

To the COMMISSARY-GENERAL,
Washington, D. C.

Subject: Statement of service—Henry R. Gibson.

WAR DEPARTMENT,
OFFICE COMMISSARY-GENERAL OF SUBSISTENCE,
Washington, D. C., June 23, 1893.

SIR: I have the honor to reply to your inquiries of 23d instant, in regard to Henry R. Gibson, as follows:

1. Henry R. Gibson was not a captain and commissary of subsistence at any time during the late war of the rebellion.

2. All captains and commissaries of subsistence were required to give bonds to the United States.

3. Henry R. Gibson, not being commissioned a captain and commissary of subsistence, did not file a bond as such.

4. All commissary officers commissioned during the war of the rebellion were required to give bond to the United States; but Henry R. Gibson, not being a commissioned officer, did not file a bond as an officer of the subsistence department.

5. It is not known at this office whether Capt. A. P. Bilyeu, commissary of subsistence, volunteers, required his chief clerks and assistant clerks, if any, to give bonds to him. Such classes of employees were not required by law or regulations to give bonds. It is not known whether Henry R. Gibson gave such a bond.

Respectfully, your obedient servant,

JOHN P. HAWKINS,
Commissary-General of Subsistence.

Hon. JNO. C. HOUK, M. C.,
Knoxville, Tenn.

KNOXVILLE, TENN., July 5, 1893.

DEAR SIR: The following is the military record, as furnished by the Adjutant-General, of Capt. A. P. Bilyeu: "He was on duty in the defenses of Washington from September, 1862, to March, 1863; in charge of beef cattle for the Army of the Potomac, at Aquia Creek, Virginia, to May, 1863; at Alexandria, Va., engaged in forwarding beef cattle to the Army of the Potomac to August, 1863; on commissary duty at Alexandria, Va., to December, 1863; at Benedict, Md., to March, 1864; at Baltimore, Md., to September, 1864, and at Wilmington, Del., to July, 1865."

The military operations, including the battle of Fredericksburg, Va., dated from December 11 to 15, 1862; the battle of Chancellorsville, Va., was fought from May 1 to 5, 1863; the battle of Gettysburg was fought from July 1 to 3, 1863; the battle of the Monocacy was fought July 9, 1864.

After a careful search I wish you would advise me whether the commissary clerks under Capt. A. P. Bilyeu, at the dates mentioned in this military record above given, participated as soldiers in either of these battles mentioned herein. If they did not participate in either of these battles as soldiers, did they in any other way? If so, how?

Yours truly,

JNO. C. HOUK, M. C.

The COMMISSARY-GENERAL,
Washington, D. C.

Subject: Statement of service.—Henry R. Gibson.

WAR DEPARTMENT,
OFFICE COMMISSARY-GENERAL OF SUBSISTENCE,
Washington, D. C., July 12, 1893.

SIR: Your letter of the 5th instant, requesting that after a careful search you may be advised whether the commissary clerks under Capt. A. P. Bilyeu, commissary of subsistence, volunteers, at the dates of battles mentioned by you, participated as soldiers in either of the battles mentioned, and, if they did not participate as soldiers in either, did they participate in any other way, and how, has been duly received. The list of battles mentioned by you were those of Fredericksburg, Va., fought December 11 to 15, 1862; Chancellorsville, Va., fought May 1 to 5, 1863; Gettysburg, Pa., fought July 1 to 3, 1863, and Monocacy, July 9, 1864.

In reply I beg to state that the records of this office contain no reference to any participation of the clerks of Captain Bilyeu in any of the battles mentioned.

Respectfully, your obedient servant,

JOHN P. HAWKINS,
Commissary-General of Subsistence.

Hon. JOHN C. HOUK, M. C.,
Knoxville, Tenn.

TREASURY DEPARTMENT, OFFICE OF THE SECOND COMPTROLLER,
Washington, D. C., July 5, 1893.

SIR: In response to your personal inquiry to-day I have the honor to state that upon examination this office is unable to find any bond filed by Henry R. Gibson, as commissary of subsistence from 1861 to 1865.

Very respectfully,

C. H. MANSUR, Second Comptroller.

Hon. JOHN C. HOUK,
Washington, D. C.

COLONEL BECKWITH DOES NOT REMEMBER MR. GIBSON.

Mr. Chairman, Mr. Gibson claimed that Colonel Beckwith recommended him for the position in the commissary, but the Colonel failed to remember it.

The attention of Congress is called to the following correspondence:

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 9, 1893.

DEAR SIR: Please be kind enough to give me a statement of the military history of Colonel Beckwith late chief commissary of subsistence during the rebellion.

I think he was on duty a part of the time, during the war, in Washington.
I am, very respectfully,

JNO. C. HOUK, M. C.

Col. F. C. AINSWORTH,
Chief of Record and Pension Division, War Department, City.

[Indorsement.]

ADJUTANT-GENERAL'S OFFICE, Washington, September 12, 1893.

Respectfully returned to Hon. JOHN C. HOUK, House of Representatives, with the request that the given name of the Colonel Beckwith herein referred to be furnished this office.

There were two officers named Beckwith, both of whom at one time held the rank of colonel; both served as chief commissary of subsistence during the rebellion, and both were on duty a part of the time in Washington.

Col. Amos Beckwith is now a colonel on the retired list of the Army. Col. Edward G. Beckwith, who afterwards was a major in the Second Artillery, was retired March 20, 1879, and died June 22, 1881.

R. WILLIAMS, Adjutant-General.

WASHINGTON, D. C., September 15, 1893.

Respectfully returned to the Adjutant-General with the information that it is the history of Col. Amos Beckwith I desire, and with request that this letter be returned to me with his answer.

JNO. C. HOUK, M. C.

[Third indorsement.]

ADJUTANT-GENERAL'S OFFICE, Washington, September 16, 1893.

Respectfully returned to Hon. JOHN C. HOUK, House of Representatives, as requested in the second indorsement, with the statement of the military services of Col. Amos Beckwith, United States Army, retired, and with postage stamps amounting to 75 cents, which appear to have been inadvertently inclosed with this paper.

J. O. GILMORE,
Assistant Adjutant-General.

Subject: Military history.

WAR DEPARTMENT, RECORD AND PENSION OFFICE,
Washington City, September 11, 1893.

SIR: In reply to your letter of the 9th instant, received to-day, requesting to be furnished with a statement of the military history of Colonel Beckwith, late chief commissary of subsistence during the rebellion, I am directed by the Secretary of War to inform you that your letter has been transmitted to the Adjutant-General of the Army, to whose office the subject pertains, the officer having been a member of the Regular Army.

The records of the permanent military establishment are in the custody of the Adjutant-General, while those of the volunteer forces are filed in the Record and Pension Office.

Very respectfully,

F. C. AINSWORTH,
Colonel, U. S. Army, Chief Record and Pension Office.

Hon. JOHN C. HOUK,
House of Representatives, Washington, D. C.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, September 16, 1893.

Statement of the military service of Amos Beckwith, of the United States Army, compiled from the records of this office:

Cadet at the United States Military Academy, July 1, 1846, to July 1, 1850, when appointed—

Brevet second lieutenant, First Artillery, July 1, 1850.

Second lieutenant, First Artillery, February 22, 1851.

First lieutenant, First Artillery, August 21, 1854.

Captain and commissary of subsistence, May 10, 1861.

Major and commissary of subsistence, September 29, 1861.

Colonel and additional aid-de-camp, January 1, 1862, to May 31, 1866.

Lieutenant-colonel and Assistant Commissary-General of Subsistence, June 23, 1874.

Colonel and Assistant Commissary-General of Subsistence, August 28, 1888.

SERVICE.

He received the brevet rank of lieutenant-colonel and colonel, September 1, 1864, for gallant and meritorious service in the Atlanta campaign; brigadier-general volunteers January 12, 1865, for faithful and meritorious service in the Subsistence Department during the war and brigadier-general and major-general, United States Army, for gallant and meritorious services in the campaign terminating in the surrender of the insurgent army under Gen. Joseph E. Johnston.

He joined his regiment October 30, 1850, and served with it in Florida to December, 1853; at Fort Monroe, Va., to September, 1854; at Fort McHenry, Md., to October 4, 1855; in Florida to December, 1855; on leave to April 4, 1856; with company at Fort Monroe, Va., to October, 1856; in Florida to September 14, 1859; at Fort Adams, R. I., to November 1, 1859; at Fort Leavenworth, Kans., to January, 1861, and at Washington, D. C., to May, 1861; depot commissary at Washington, D. C., to January 15, 1864; on tour of inspection in the southwestern departments to April, 1864; on staff of General Sherman, as chief commissary, division of the Mississippi, to July, 1865; on duty at St. Louis, Mo., as chief commissary Division of the Tennessee, to December, 1865; at New Orleans, La., purchasing depot and supervising commissary for the Gulf States to October, 1866; chief commissary, Department of the Gulf and of the Fifth Military district (Louisiana and Texas) to August, 1868; of the Department of Louisiana to May, 1870; as depot commissary of subsistence at New Orleans, La., to March 28, 1874; and also chief commissary of subsistence, Department of the Gulf, November 28, 1871, to March 28, 1874; on duty in office Commissary-General of Subsistence at Washington, D. C., to May 22, 1875, and as purchasing and depot commissary of subsistence at St. Louis, Mo., until retired, October 4, 1889.

J. C. GILMORE,
Assistant Adjutant-General.

Colonel Beckwith was on duty at Washington in March, 1863, when Gibson entered the commissary of Captain Bilyeu as a civilian employee, but Beckwith does not now remember Gibson.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 15, 1893.

MY DEAR SIR: Will you please advise me at an early date to what company and regiment of the Federal Army Henry R. Gibson belonged, or what military service he rendered in any capacity, either as a private or officer or otherwise.

It appears that he served as a civilian employee in the Federal commissary under Capt. A. P. Bilyeu, commissary of subsistence United States Volunteers, in Maryland, Virginia, and Delaware between March, 1863, and July, 1865, and that he was employed by Captain Bilyeu upon your recommendation.

Yours, very respectfully,

JNO. C. HOUK, M. C.

Col. AMOS BECKWITH, U. S. Army
(Care War Department),
Washington, D. C.

[Reply mailed at St. Louis, Mo.]

Respectfully returned.

I have no recollection of the man Gibson herein named.
This Captain Bilyeu lives about Philadelphia somewhere.

A. BECKWITH.

CHIEF OF HOOKER'S STAFF AND GEN. H. G. THOMAS.

Mr. Chairman, these letters to and from the chief of Hooker's staff, with whom Mr. Gibson claims to have served, and Gen. Henry G. Thomas, whom Mr. Gibson claims indorsed him for captain and commissary of subsistence, volunteers, explain themselves.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 8, 1893.

MY DEAR SIR: I understand that you were the chief of staff of Gen. Joseph Hooker during the war of the rebellion, and my purpose in addressing you is to ascertain whether you recall one Henry R. Gibson, who claims to have served on General Hooker's staff prior to March, 1863.

Was a man by that name ever connected in any capacity with General Hooker's staff or his headquarters between the spring of 1862 and March 17, 1863, or at any other time?

I wish you would think this matter over carefully, and advise me fully in reply. Please state in your letter for how long you were with General Hooker as chief of staff; by so doing you will greatly oblige me.

Very respectfully,

JNO. C. HOUK, M. C.

Gen. JOS. DICKINSON,
United States Pension Bureau.

WASHINGTON, D. C., September 8, 1893.

DEAR SIR: In reply to your communication of this date, I would state that no such person as Henry R. Gibson ever served on the staff of General Hooker, during his service in the Army of the Potomac. I was his adjutant-general and chief of staff from August 22, 1861, until he was placed in command of the Army of the Potomac, in his different commands of brigade, division, corps and grand divisions, and remained as assistant adjutant-general on his staff until he was relieved from the command in June 1863, and if such an officer ever served thereon or with him, I certainly would remember it. I do not even recollect the name of such a person as serving in any capacity whatever about our headquarters at any time.

Very respectfully,

JOS. DICKINSON.

Hon. JOHN C. HOUK,
House of Representatives.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 8, 1893.

MY DEAR SIR: You have my sincere thanks for your kind, prompt, and specific reply to the letter which I addressed to you yesterday or the day before.

Henry R. Gibson claims to have an "original memorandum appointment," or commission as a lieutenant or some other kind of an officer on General Hooker's staff, and that he was detailed for duty as a commissary clerk under Capt. A. P. Bilyeu, commissary of subsistence, in March, 1863.

The records of the War Department, including a letter written by Gibson after the war had closed, show that he was never either an enlisted soldier or officer in the Federal Army.

The records of the Treasury Department show that he was a commissary clerk, or civilian employee, under Captain Bilyeu, above referred to, from March, 1863, to July, 1865.

Of course the War Department and the Treasury Department and myself are thoroughly satisfied, beyond any and all doubts whatever, that Gibson was never in the Army during the rebellion in any capacity, but I would like for you to explain to me what an "original memorandum appointment or commission" on a general's staff is, and whether such a thing was recognized by the military authorities during the war, and whether it is recognized by them to-day; also, whether it was ever customary during the war to detail members of General Hooker's staff, or of any other officer's staff, to do duty as a commissary clerk or civilian employee in the commissary; also, whether Henry R. Gibson could have been so detailed from General Hooker's staff during the time you were a member of it without you becoming acquainted with the fact.

Please give me an early reply and you will place me under personal obligations.

I am, very respectfully,

JNO. C. HOUK, M. C.

Gen. JOSEPH DICKINSON,
Pension Office, Washington, D. C.

WASHINGTON, D. C. September 12, 1893.

DEAR SIR: Your letter of the 9th inst., this moment received, and in reply would state that "Henry R. Gibson" is, I fear, playing upon your credulity and good nature. "An original memorandum, appointment, or commission" on a general's staff is to me an unknown quantity, or else my military education has been sadly neglected. As to it "ever being customary during the war to detail members of Hooker's staff, or of any other officer's staff, to do duty as a commissary clerk, or civilian employee," is simply absurd and out of the question; particularly so as to General Hooker, who required far different kind of service of his staff. Besides, the staff was made of sterner stuff and would not have submitted to such an indignity; while there were always plenty of bright, capable soldiers in the ranks ready and willing to jump at a detail for clerical or other light duty. As adjutant-general of a command it was my duty to make such details, and it

certainly is beyond my recollection ever to have made a detail of anyone to an officer (Capt. A. P. Bilyeu) of whom I have heard for the first time through the medium of your communication.

General officers did not make appointments of staff officers; they either had them detailed as acting from some organization in their, or others, command, or recommended them to and for appointment by the President of the United States.

Of one thing you may rest assured, my dear friend Houk, that no officer or member of General Hooker's staff was ever detailed therefrom during the time I was a member of it, without my becoming acquainted with the fact. I was chief of that staff in fact as well as name, and General Hooker was kind enough never to interfere in any way with my duties.

This is not the first claim of the kind that has been brought to my notice, but I have always succeeded in running them to earth.

For any further information please command me.

Yours, sincerely,

Hon. JOHN C. HOUK,
House of Representatives.

JOS. DICKINSON.

HOUSE OF REPRESENTATIVES UNITED STATES,
Washington, D. C., September 16, 1893.

DEAR SIR: Please be kind enough to furnish me with a full statement of the military history of Gen. Joseph Dickinson, who was chief of staff under Gen. Joseph Hooker, at the earliest date practicable.

Yours, very respectfully,

JNO. C. HOUK, M. C.

The ADJUTANT-GENERAL OF THE UNITED STATES ARMY,
Washington, D. C.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, D. C., September 23, 1893.

Statement of the military service of Joseph Dickinson, late of the United States Army, compiled from the records of this office:

He entered the service as first lieutenant and adjutant Twenty-sixth Pennsylvania Infantry, June 1, 1861; was appointed captain and assistant adjutant-general of volunteers August 22, 1861, and major and assistant adjutant-general of volunteers August 22, 1862. He served as lieutenant-colonel and assistant adjutant-general of volunteers from November 10, 1862, to November 1, 1863, under the act of July 17, 1862.

He received the brevets of lieutenant-colonel of volunteers, March 13, 1865, "for gallant and meritorious services at the battle of Williamsburg, Va., and Antietam, Md.," of colonel of volunteers, March 13, 1865, "for gallant and good conduct at the battle of Gettysburg, Pa.," and of brigadier-general of volunteers, March 13, 1865, "for gallant and meritorious services at the battle of Gettysburg, Pa."

He served with his regiment in the Army of the Potomac to August, 1861; was assistant adjutant-general of Hooker's brigade and division, Army of the Potomac, to March, 1862; of the same division in the Third Corps, Army of the Potomac, to was wounded at the battle of Fair Oaks, Va., June 1, 1862; September 7, 1862, and of the Third Corps, Army of Virginia, to September 17, 1862; absent with General Hooker and on leave to November 12, 1862; on duty as assistant adjutant-general of the Fifth Corps, Army of the Potomac, to November 16, 1862; of the Center Grand Division to January 26, 1863, and at headquarters Army of the Potomac to July 3, 1863, when wounded at the battle of Gettysburg, Pa.; was absent on account of wounds to January 26, 1864, when he resigned.

GEO. D. RUGGLES,
Assistant Adjutant-General.

HOUSE OF REPRESENTATIVES,
Washington, D. C., September 12, 1893.

MY DEAR SIR: Henry R. Gibson, of Maryland or South Carolina, served as a commissary clerk from March, 1863, to July, 1865, under Capt. A. P. Bilyeu, commissary of subsistence, United States volunteers. These facts are shown by the records of the War Department and of the Third Auditor's Office.

In a letter dated July 12, 1866, now on file in the Adjutant-General's Office, United States Army, Mr. Gibson says that "on the 30th of November, 1864, I applied for a commission as captain and commissary of subsistence, volunteers, said application being indorsed by Lieut. Col. Joseph G. Crane, chief commissary of subsistence, Eighth Army Corps," and others, including yourself. The records of the War Department show that no such application or recommendation was ever received, and these records further show that Mr. Gibson never received the commission indicated. All records in the War Department go to show that he was never a private soldier or officer in the Federal Army during the rebellion, and his own letter, written after the war had closed, now on file in the Adjutant-General's Office, and the archives of the Third Auditor's Office, all show conclusively that he was never anything during the rebellion except a civilian employee in the commissary, and that up to the date of the letter referred to, July 12, 1866, he had never received a military commission of any kind from the Government.

Gen. HENRY G. THOMAS (retired), Portland, Me.

Having made this statement, which is based solely upon the official records of the War and Treasury Departments, I desire to ask you after consideration to answer the following questions:

First. Did you indorse Mr. Gibson's application, and do you know whether he ever received the commission applied for?

Second. Do you know whether he ever served in the Federal Army during the war in any capacity whatever, either as private, or officer, or otherwise?

Third. Have you any knowledge of his having been an officer on Gen. Joe Hooker's staff, and detailed for clerical duty in the commissary?

Fourth. Have you any knowledge of his ever having been honorably discharged, and mustered out of the military service of the United States as a lieutenant and brevet captain or otherwise?

Fifth. Were you well acquainted with him during the war; and if so, what was he doing during your acquaintanceship?

By giving me a prompt and full reply you will confer a personal favor, which I will hold myself ready to return at the very first opportunity.

I am, very respectfully,

JNO. C. HOUK, M. C.

This letter sent also to Col. Joseph G. Crane, care War Department, and Lieut. Col. S. C. Benham, care War Department.

Respectfully returned to the Hon. John C. Houk, Member of Congress.

PORTLAND, ME., September 26, 1893.

First. I do not recall Mr. Gibson, and consequently have no personal recollections as called for in your first, second, fourth, and fifth questions.

As to the third, it is impossible that he could have been "an officer on Gen. Joe Hooker's staff, and detailed for clerical duty in the commissary."

No officer, United States Army or United States Volunteers, was ever degraded or allowed to degrade himself by performing clerical duty. Privates were so detailed, and occasionally a corporal or sergeant; never an officer. I recall Captain Bilyeu, and he of course had a citizen clerk. If I recommended him for an

officer it must have been from a conviction of his fitness and nothing else, he not being from my State, and I being entirely apart from any political consideration. Should judge he could never have been an officer. No man would, I trust, resign a commission to be an underling of one with a commission, unless dishonorably discharged.

If he sought a commission he could hardly have been an officer in service before. It is pretty certain Fighting Joe Hooker never had an officer on his staff who had a mere clerkship afterwards.

H. G. THOMAS,

Ret. Brig. Gen'l, U. S. A., late Brig. and Det. Gen'l, U. S. Vols.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, D. C., September 19, 1893.

DEAR SIR: In reply to your letter of the 18th instant, I have the honor to inform you that Col. Joseph G. Crane and Spencer C. Benham, late commissaries of subsistence, United States Volunteers, are dead. The address of Maj. Henry G. Thomas, United States Army, late brigadier-general of volunteers, is Portland, Me.

Very respectfully,

GEO. D. RUGGLES,
Assistant Adjutant-General.

Hon. J. C. HOUK, M. C.,
House of Representatives.

[All the officers Gibson mentions in his letter of July 12, 1866, are dead except Bilyeu and Thomas. Bilyeu is in the insane asylum (feeble from old age), and we have a letter from Thomas.]

STATE ARCHIVES.

Mr. Chairman, the following papers relate exclusively to an investigation of the archives of the States of Maryland, New York, Delaware, Pennsylvania, and the private papers of Governor Fenton of New York.

Excepting the State of Virginia, it appears these are the only States Gibson was in during the war. Virginia had no Union State records to be investigated.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., August 24, 1893.

DEAR SIR: Please be kind enough to inform me by return mail whether the State of Pennsylvania, through its governor or other competent official, ever issued to Henry R. Gibson a commission as an officer of any kind in either State or United States military forces; and if so please send me by express, C. O. D., a certified copy of any such commission, appointment, or designation. If no such commission, appointment, or designation was made, please certify to such fact, and forward your certificate to me by express, C. O. D. also.

Give this immediate attention and very much oblige. Does the name of Henry R. Gibson appear anywhere in your records, and if so, in what way?

Very respectfully,

JNO. C. HOUK, M. C.

To the ADJUTANT-GENERAL,
State of Pennsylvania.

[Same letter sent to adjutant-general of New York, adjutant-general of Maryland, and adjutant-general of Delaware.]

STATE OF MARYLAND, ADJUTANT-GENERAL'S OFFICE,
Annapolis, August 30, 1893.

SIR: In the present shape of the military archives of this office it would be a difficult task to find the military record of Henry R. Gibson, as your letter of inquiry gives no date to work by. Was he white or black; officer or private; what company or regiment did he serve in; can you say when and where he enlisted; if all or part of the inquiries can be answered, it would materially aid in getting at his record.

Very respectfully, your obedient servant,

H. Y. KYD, DOUGLAS,
Adjutant-General.
Per DUVAL, Clerk.

Hon. JNO. C. HOUK.

STATE OF DELAWARE, ADJUTANT-GENERAL'S OFFICE,
Wilmington, Del., August 23, 1893.

DEAR SIR: Replying to your favor of the 21st, I have the honor to state that the records of this office is in an incomplete shape, having only from the First to the Sixth Regiment Infantry, First Cavalry Regiment, and First Battalion of Artillery. These, however, have been carefully looked over and the name of Henry R. Gibson does not appear as having a commission, appointment, or designation, either in State or United States military service, through the governor or otherwise.

I have the honor to be, very respectfully, your obedient servant,

GARRETT J. HARTH,
Adjutant-General.

JNO. C. HOUK, M. C.,
Washington, D. C.

STATE OF DELAWARE, ADJUTANT-GENERAL'S OFFICE,
Wilmington, Del., September 4, 1893.

DEAR SIR: Replying to your inquiry of August 24, would say that the name of Henry R. Gibson does not appear on the records of this office.

Very respectfully, your obedient servant,

GARRETT J. HARTH,
Adjutant-General.

Hon. JNO. C. HOUK.

GENERAL HEADQUARTERS, STATE OF NEW YORK,
ADJUTANT-GENERAL'S OFFICE,
BUREAU OF RECORDS OF THE WAR OF THE REBELLION,
Albany, August 31, 1893.

SIR: I have the honor to acknowledge receipt of yours of 24th instant requesting information as to whether a commission in the military force of this State was ever issued for Henry R. Gibson, and, by direction of the adjutant-general, to state in reply thereto, that the name has not been found in records of the militia, volunteer, or national guard forces of this State.

Very respectfully, your obedient servant,

FRED PHISTERER,
Assistant Adjutant-General.

Hon. JOHN C. HOUK,
House of Representatives, Washington, D. C.

COMMONWEALTH OF PENNSYLVANIA, ADJUTANT-GENERAL'S OFFICE,
Harrisburg, August 25, 1893.

SIR: Yours of 24th instant, relating to a commission having been issued to Henry R. Gibson, has been received and referred to the secretary of the commonwealth, as commissions are issued from his office.

Very respectfully,

W. W. GREENLAND,
Adjutant-General.

Hon. JOHN C. HOUK,
House of Representatives, Washington, D. C.

PENNSYLVANIA, OFFICE OF THE
SECRETARY OF THE COMMONWEALTH,
Harrisburg, August 28, 1893.

DEAR SIR: Your letter of the 24th instant to the adjutant-general has been referred to this office for answer. In reply I would say that the records of commissions in this office are by regiments and companies, and are not indexed by individual names. Can you give us any data to indicate where we should look for the name of "Henry R. Gibson?"

Was he a soldier in the war of the rebellion; what regiment and arm of the service was he in?

We will be glad to furnish you the information you ask if you can give us the necessary data to guide us.

Yours truly,

WM. F. HARRITY,
Secretary of the Commonwealth.
Per H.

Hon. JNO. C. HOUK, M. C.,
Washington, D. C.

Same letter sent to adjutant-general of New York, adjutant-general of Maryland, and adjutant-general of Delaware.

HOUSE OF REPRESENTATIVES,
Washington, D. C., September 3, 1893.

MY DEAR SIR: You have my thanks for your recent kind reply. I desire to trouble you with one more letter.

The War Department records show that Henry R. Gibson was never a private soldier or officer at any time during the rebellion.

The Treasury Department records show that he was a commissary clerk or civilian employee under Capt. A. P. Bilyeu, commissary of subsistence, volunteers, from March, 1863, to July, 1865, and was stationed all the time either in Maryland, Delaware, or Virginia.

Gibson claims that he was enlisted in March, 1863, in the military service of the United States as a lieutenant and aide-de-camp on the staff of Gen. Joe Hooker, and was detailed for clerical duty under Capt. A. P. Bilyeu, above referred to, and that he was honorably discharged by Col. S. M. Bowman (of the Eighty-fourth Pennsylvania Volunteers, and for a short time commander of the Department of Delaware, from which command he was relieved by General Orders, No. 55, in March, 1865), as a lieutenant and brevet captain in July or August, 1865.

Gibson simply makes the above claims verbally and will not produce any written evidence to sustain them. This is all the data I am able to give you. Now, I wish you would be kind enough to search the records of your office thoroughly at once and notify me whether there is any evidence of any kind to show that your State, through any competent official, ever issued any kind of a commission, appointment, designation, or assignment to Henry R. Gibson (white), (but the commissary in which he clerked from March, 1863, to July, 1865, supplied rations to colored troops from January, 1864, to about March, 1865), in either State or national forces as an officer; and whether he was ever, by any competent State officer, enlisted or mustered in or mustered out or honorably discharged from either your State or the national forces, at any time during the rebellion, as a private soldier. Please give me a careful, direct, full, and specific reply at the earliest date practicable, and greatly oblige me. By so doing you will place me under special personal obligations.

I am, sir, very respectfully,

JNO. C. HOUK, M. C.

Hon. W. W. GREENLAND,
Adjutant-General, Harrisburg, Pa.

HEADQUARTERS NATIONAL GUARD OF PENNSYLVANIA,
ADJUTANT-GENERAL'S OFFICE,
Harrisburg, Pa., September 5, 1893.

Respectfully returned to Hon. JNO. C. HOUK, House of Representatives, Washington, D. C.

There are no records on file in this office showing that Henry R. Gibson was ever an officer from this State. From the within it appears that he was not an officer. The records of this office are kept as to company and regiment and in order to get the service record of an enlisted man it is necessary to know his company and regiment as a guide to the search.

If Gibson was mustered out of service by Col. S. M. Bowman, the colonel only acted as mustering officer, as Gibson's name does not appear on the records of the Eighty-fourth Regiment.

GEORGE C. KELLY,
Chief clerk for W. W. GREENLAND,
Adjutant-General.

STATE OF MARYLAND, ADJUTANT-GENERAL'S OFFICE,
Annapolis, September 6, 1893.

DEAR SIR: I have the honor to report, in answer to your letter of inquiry in regard to the military record of Henry R. Gibson, that his name is not recorded on either the rolls of commissioned officers or of enlisted soldiers of the late war.

Very respectfully, your obedient servant,

HY. KYD. DOUGLAS,
"D." Adjutant-General.

Hon. JNO. C. HOUK, M. C.

STATE OF DELAWARE, ADJUTANT-GENERAL'S OFFICE,
Wilmington, Del., September 8, 1893.

DEAR SIR: Replying to your favor of the 3d instant, I have the honor to say that after a most careful and thorough search of the records of this office we find that the name of Henry R. Gibson fails to appear in any manner or form, but as previously stated, our records are not complete. Any further service this office can be to you, kindly command me.

I am, sir, very respectfully, yours,

GARRETT J. HARTT,
Adjutant-General.

Hon. JNO. C. HOUK, M. C.,
Washington, D. C.

GENERAL HEADQUARTERS, STATE OF NEW YORK,
ADJUTANT-GENERAL'S OFFICE,
Albany, September 8, 1893.

SIR: I am directed by the adjutant-general to acknowledge receipt of your communication of the 3d instant, and in reply to state that there is no evidence of any kind in this office that this State, through any competent official, ever issued any kind of a commission, appointment, designation, or assignment to one Henry R. Gibson, in the forces of this State, militia or volunteers; nor does it appear that he was enlisted or mustered in the service of this State, or the United States as of this State, at any time during the rebellion as a private soldier; nor is there any record of his discharge from the service.

Very respectfully, your obedient servant,

FRED PHISTERER,
Assistant Adjutant-General.

Hon. JOHN C. HOUK, M. C.,
Washington, D. C.

HOUSE OF REPRESENTATIVES UNITED STATES,
Washington, D. C., September 16, 1893.

DEAR SIR: Please advise me at an early date whether Henry R. Gibson was ever enlisted as a soldier, or mustered in as an officer, or served as a soldier or officer, or was ever honorably discharged as a soldier, or mustered out as an officer during the war of the rebellion, in and from either the Fifty-seventh, Eighty-fourth, or One hundred and twelfth Pennsylvania Volunteers.

I am, very respectfully,

JNO. C. HOUK, M. C.

The ADJUTANT-GENERAL OF PENNSYLVANIA,
Harrisburg, Pa.

HEADQUARTERS NATIONAL GUARD OF PENNSYLVANIA,
ADJUTANT-GENERAL'S OFFICE,
Harrisburg, Pa., September 18, 1893.

Respectfully returned to Hon. JNO. C. HOUK, M. C., Washington, D. C.
The name of Henry R. Gibson does not appear upon the records of the Fifty-seventh, Eighty-fourth, or One hundred and twelfth regiments, Pennsylvania Volunteers, now on file in this office.

W. W. GREENLAND,
Adjutant-General.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 20, 1893.

MY DEAR SIR: Judge Daniels, M. C., of New York, gives me your name as that of a gentleman who will answer this letter and will perhaps be able to give me the information desired.

Either in 1864, after November 30, or in the first half of the year 1865, it is alleged that an application for a commission as a captain and commissary of subsistence, signed by Henry R. Gibson, and accompanied by various recommendations, was forwarded by Governor Fenton to Hon. E. M. Stanton, then Secretary of War. The records of the War Department show that the application was never received, and that none of the recommendations were ever received except a formal and perfunctory one signed by R. E. Fenton. What I want to find is the application and the other recommendations referred to, and I would like for you to refer this letter to whoever is now in charge of Governor Fenton's old papers, and ascertain whether it is possible to discover the old papers that I am after.

Very respectfully,

JNO. C. HOUK, M. C.

ROBERT MARVIN, banker,
Jamestown, or Syracuse, N. Y.

THE FIRST NATIONAL BANK,
Jamestown, N. Y., October 3, 1893.

DEAR SIR: Yours of September 20 to Mr. Robert Marvin of this city, regarding papers of Henry R. Gibson in the hands of the late Governor Fenton at the time of his death reached me yesterday.

Do not find any papers connected with above case.

Yours, truly,

F. E. GIFFORD,
Executor R. E. Fenton Estate.

Hon. JNO. C. HOUK.

ALBANY, October 12, 1893.

MY DEAR SIR: Answering your favor of 10th instant, I regret I can give you no information concerning the papers in behalf of Henry R. Gibson.

Such applications made to the governor were usually referred to his military secretary, who, wanting any information relating to the applicant, would seek same in the adjutant-general's office, the papers, however, would be retained in the executive department and acted thereupon from that department. They could hardly be construed as official documents, as only the governor's influence was sought to benefit persons in positions outside the State service.

I will forward your letter to the private secretary of the governor and ask him if there is any evidence in the executive department of any action upon Mr. Gibson's papers, and subsequently advise you of his reply. Meanwhile

I am, very truly,

SELDEN E. MARVIN.

Hon. JOHN C. HOUK, M. C.,
Washington, D. C.

OCTOBER 16, 1893.

DEAR SIR: I think the inclosed letter from the private secretary of the governor is a reasonable explanation that the papers of Mr. Gibson were not filed, or any record made of them in the executive chamber. Governor Fenton probably sent all of the papers handed him on with his letter.

Very truly,

SELDEN E. MERVIN.

Hon J. C. HOUK.

STATE OF NEW YORK, EXECUTIVE CHAMBER, ALBANY,
October 14, 1893.

MY DEAR GENERAL: Your letter of the 12th instant is received. I have looked carefully through the books on file in the executive chamber which record the official acts of Governor Fenton during the time mentioned in the letter of your correspondent, but I have found no allusion to the matter about which he writes. It is probable that if Governor Fenton indorsed the application of Mr. Gibson, the indorsement was given in an informal way by letter, and if any copy of it was retained the same was probably carried away by Governor Fenton when he left the executive chamber. Only the official acts and communications of gov-

errors are preserved in the executive chamber, and such an indorsement would not probably be included as an official act.

Very respectfully, yours,

Gen. SELDEN E. MARVIN,
Albany, N. Y.

T. S. WILLIAMS.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., September 20, 1893.

MY DEAR SIR: I desire to call your special attention to the first sentence of the inclosed letter (true copy) written from Knoxville, Tenn., July 12, 1890, to the Secretary of War by Henry R. Gibson.

You will observe that Mr. Gibson alleges that he made application November 30, 1864, for a commission as captain and commissary of subsistence, Volunteers, said application being indorsed by several gentlemen whom he names and forwarded to Secretary Stanton by Governor Fenton, of New York. The Secretary of War recently certified that said application had never been received; he also certified that the only recommendation ever received was a formal one from Governor Fenton. I wish you would be kind enough to search the archives of your State, and advise me whether you can find the application referred to, and the recommendations said to have been signed by Bilyeu, Bowman, Crane, Benham, and Thomas, and if you can find the same, furnish me with certified copies of them by express, C. O. D. This is a very important matter to me, and I hope you will give it special attention and a thorough investigation. If you can not find the documents themselves, fully advise me of any record of them that you may find. If you can neither find the documents themselves, nor a record of them, please so certify.

I am, very truly yours,

JNO. C. HOUK, M. C.

THE ADJUTANT-GENERAL OF THE STATE OF NEW YORK.

General PHISTERER:

DEAR SIR: I hope that you will have a close research made, and answer very fully Mr. Houk's request. This is a matter of importance.

Yours truly,
(Signed)

AMOS J. CUMMINGS.

GENERAL HEADQUARTERS, STATE OF NEW YORK,
ADJUTANT-GENERAL'S OFFICE,
Albany, September 23, 1893.

SIR: I am directed by the adjutant-general to acknowledge receipt of your communication of the 20th instant, and in reply to state: The term of Governor Fenton commenced January 1, 1865. The book of letters received at this office from April, 1864, to June, 1865, does not show that any communication was received from Henry R. Gibson, A. P. Bilyeu, S. M. Bowman, Joseph G. Crane, S. C. Benham, and Henry G. Thomas. The book of letters sent for the same period does not show that a letter was written by the adjutant-general of the State to any of the parties named. There is no record of the letter written by Governor Fenton mentioned in your letter. Henry G. Thomas is at present a retired officer of the Army, and his address can be no doubt obtained from the Adjutant-General of the Army, if it should be of any value to you. A great many of the actions of the war governors of this State never passed through these headquarters and are not recorded here; in fact, the three governors referred to have, to a large extent, considered letters received and records of action taken by them as personal property, and taken the same with them at the expiration of their gubernatorial term.

I return the copy of a letter of Henry R. Gibson to the Secretary of War.

Very respectfully, your obedient servant,

FRED. PHISTERER,
Assistant Adjutant-General.

Hon. JOHN C. HOUK, M. C.,
Washington, D. C.

GIBSON "SUSTAINED."

Mr. Chairman, "what man of honor can now doubt that Judge Gibson was eligible to membership in the Grand Army?"

Thus spoke Mr. Gibson in the following article prepared by him and printed in his Knoxville Banner February 1, 1894, after his expulsion.

Those who want to behold this man's impudence, cunning, and moral turpitude in their purest form have only to listen to two articles, in the light of the proof I have presented. The statements signed by L. Hovey, William T. Mitchell and W. J. Ramage, embraced in one of the articles, were dictated by Mr. Gibson. The public can judge from the record whether those men have disgraced themselves or not.

Col. T. H. Reeves, a retired Army officer, who was president of the court of inquiry, was not foolish or base enough to allow himself to be prostituted in an effort to give a good character to a confessed and convicted fraud at the expense of the reputation of the Grand Army and himself.

This article is a jewel as a combination of misstatements of fact.

[From the Knoxville Banner.]

Faster and faster the truth comes to light. Blessed is the man who is in the right. Falsehood and trickery, fraud and deception may bedevil him for a time, but the bright sun of truth is shining above the clouds, and will yet pierce them, and drive them away.

This great truth is being manifested in Judge Gibson's case. The facts in reference to Seaman's falsification of the record are coming out one by one, and will soon be all known.

But the best illustration of the great truth, that the right will finally prevail, is shown by the fact that the opinions of the sworn judges of the court of inquiry are now known, and that if the court of inquiry had been allowed to render a decision in Judge Gibson's case, it would have been in his favor on every point.

The decision of the court of inquiry on Judge Gibson's case was eagerly looked for by hundreds of people, and they have been wondering all the time why that decision was not made. In some mysterious way Seaman found out that the court of inquiry, if allowed to make a decision, would decide in Gibson's favor; thereupon he brought it about that no decision should be made at all.

When, however, Commander Adams announced his monstrous decision against Judge Gibson, the secret got out that the court of inquiry was favorable to Gibson. On last Friday Mr. Luke Hovey, of No. 12 Market square, Knoxville, gave Gibson the following letter:

KNOXVILLE, TENN., January 26, 1894.

DEAR SIR: Having known you for nearly twenty years, I think it but justice to you to say that, as a member of the late court of inquiry in your case, had I been called upon to make a decision I would have decided that you were eligible to membership in the Grand Army of the Republic.

But even if I had been of the opinion that you were not eligible I would have been decidedly of the opinion that you practiced no fraud or deception on Ed Maynard Post, and were not guilty of any imposition; but that your dealing with the post had been honorable from the beginning to the end. There was absolutely no evidence whatever before the court that you practiced any fraud or deception.

L. HOVEY,
Past Commander Ed Maynard Post, No. 14,
and Member of the late Court of Inquiry.

Hon. HENRY R. GIBSON.

On receiving this letter, Judge Gibson sent it to William T. Mitchell, esq., of Greeneville, the other member of the court, with a request that he give his opinion in the case, and on the next day the letter was returned with the following addition:

GREENEVILLE, January 27, 1894.

DEAR SIR: I fully indorse the within, and desire to add my name to it.

WM. T. MITCHELL,
Junior Vice Commander, Dept. Tenn., G. A. R.,
and Member of the late Court of Inquiry.

Hon. HENRY R. GIBSON.

There were only three members of the court: Hovey, Mitchell, and Reeves. Reeves was president, and would have had no vote, unless Hovey and Mitchell differed. It will thus be seen that the opinion of Hovey and Mitchell would have been the opinion of the court.

Mr. W. J. Ramage, the recorder of the court of inquiry, and the official prosecutor in the case, was shown the foregoing decision of the judges, and he at once took up the paper containing their decision and wrote on it the following:

KNOXVILLE, TENN., January 31, 1894.

As recorder and prosecuting officer of the court of inquiry in the Gibson case, I make this statement. While there might be room for argument on the question of the eligibility of Henry R. Gibson to membership in the Grand Army of the Republic, there was absolutely no evidence to show that he had obtained his membership in Ed Maynard Post by fraud or deception.

WM. J. RAMAGE,
Past Com. Dept. Tenn., Ga. and Ala.,
Recorder of Court of Inquiry.

There were only three members of the court, Messrs. T. H. Reeves, Wm. T. Mitchell, and L. Hovey. Colonel Reeves was president, and as such would have had no vote unless Messrs. Hovey and Mitchell differed. It will thus be seen that the opinion of Messrs. Mitchell and Hovey would have been the opinion of the court, and have constituted its decision and adjudication. What Colonel Reeves' opinion was is not known, nor is it material, as his opinion would not have been necessary unless Messrs. Mitchell and Hovey disagreed.

But it will be observed that not only was the court of inquiry favorable to Judge Gibson, but that Mr. Wm. J. Ramage, the sworn prosecuting officer of the court, was clearly of opinion that Gibson was eligible to membership, and if not eligible that he obtained his membership without any fraud or deception.

What man of honor can now doubt that Judge Gibson was eligible to membership in the Grand Army? What man of honor will now say that Judge Gibson practiced any fraud or deception to get into the Grand Army? Didn't these two sworn judges see and hear all the proof, including the original papers? Didn't they hear arguments on both sides? And not only do the sworn judges say that Gibson was eligible and honorable; but the very officer, whose sworn duty it was to prosecute Gibson before the court, now comes forward like the honorable man he is, and says that the opinion of the judges is true, just and right, and that Gibson was eligible and honorable.

The failure of the court of inquiry to make any decision was no doubt looked upon by Commander Adams as a silent verdict of condemnation, as a refusal to sustain Gibson.

Seaman was in favor of the court rendering a decision, provided the court condemned Gibson, but decidedly opposed to the court saying anything in case the judges were in Gibson's favor. And when Seaman learned, or suspected, that the decision would be in favor of Judge Gibson, he managed to let the court know that no decision was expected or desired.

But now the opinion of the court is known, and every honest, just, and impartial man is called upon to say who knows best, two unprejudiced judges who saw Gossett and Gibson, who saw or heard all of their evidence, the originals and the copies, saw them, too, before Seaman got his crooked hands on them, or one man up North who saw only such papers as Seaman saw fit to send him.

And thus is Judge Gibson again sustained by his home people. He was first sustained by 53 members of his army post out of 54 and now he is sustained by the sworn judges of the court of inquiry to whom his case was referred.

Surely such verdicts as these in Gibson's favor ought to satisfy every honest man.

But you can't satisfy JOHN HOUK and his henchmen. Nothing will satisfy them but the deluge of Gibson votes that will fall upon him and his strikers on the day of the primary election.

And that deluge is sure to come.

The following article by Mr. Gibson is a companion of the one just read. It, like the first article, presents a fair sample of Mr. Gibson's method of "defense."

Everybody felt that there was some mystery about the action of the court of inquiry in Judge Gibson's case. A court always decides. What in the world is a court for, except to decide? But Hovey and Seaman arranged a nice little programme to this effect: If it shall turn out that the court is against Gibson, we will have the judges so to decide; but if it should turn out that the judges are in Gibson's favor, then we will notify them that no decision is wanted; and that all we want of them is to turn the papers over to Seaman; and then Seaman can doctor them so as to make out a bad case against Gibson, and send them to Massachusetts to Adams, and Adams will do the rest.

The scheme was to get the court to decide against Gibson, if possible; but if this couldn't be done, then to get Adams to decide against him anyway—even if it took forgery, bribery, and perjury, all combined, to have it done.

So, when Seaman found that the court was about to decide in Gibson's favor, he caused it to be made known to the court that no decision from it was required, and that all the court had to do was to turn the papers over to him.

What trickery; "Heads I win, tails you lose." Heads, Hovey wins; tails, Gibson loses. That was Seaman's programme, a programme begotten by Gossett and Hovey expressly for Seaman to carry out.

Was there ever before such trickery under the name and in the forms of justice? It was pretended that there was to be a fair and impartial trial. Judge Gibson was assured of this in advance. The members of the court never dreamed of anything else. Judge Gibson never even suspected anything else.

But when he goes before the court and proves himself eligible to membership in the Grand Army, and proves himself to be an honorable man, and when the court has heard or seen all the proof, and has heard argument on both sides and has made up its mind to decide in Judge Gibson's favor, presto! change. Seaman claps his hand on the mouth of the court and says he does not want any decision from them, not a single word; that all he wants them to do is to turn all the papers over to him, and to turn them over at once.

And thus Judge Gibson was tricked out of a decision in his favor. But that

decision had already been made in the hearts of the judges, and they have now made it known in writing, signed officially, as will be seen in another column.

And so justice has at last been done to Judge Gibson in this matter; and the trickery of Scamman and his coconspirators is exposed to the gaze of an indignant and outraged people.

Mr. Chairman, here is another shining example of Mr. Gibson's able "defense" of himself when expelled by the commander in chief because his commission and discharge are forgeries. The "53 to 1" falsehood and the "home-rule" cry are always placed in front by the foxy warrior.

If JOHN HOUK thinks the people of east Tennessee, with honest hearts and strong minds, can't see through his tricks, he will find himself badly mistaken, and the people's vote at the primary will be a stunner to him.

The place to settle all questions affecting us, or our people, is right here in east Tennessee, and not up in Massachusetts. The people of east Tennessee are abundantly well qualified to decide whether Judge Gibson was a fit man to belong to the Grand Army, and Judge Gibson left it to them, and by a vote of 53 to 1, they decided it in his favor. But JOHN HOUK was not satisfied with this east Tennessee vote; he wanted the vote of a man in Massachusetts, and of only one man at that.

Now, people of east Tennessee, do we need any guardian to act for us? Are we children or fools, so that we are not fit to act for ourselves, and must have a guardian? And, if we must have a guardian, must we go all the way to Massachusetts to get one? And, if we have to go all the way to Massachusetts, must we, after all, take the man JOHN HOUK names. If all these things be so, then are we all poor off indeed.

How the valleys will thunder, how the mountains will lighten, how the creeks and rivers will boom on the day of the primary, when the mighty hosts of east Tennessee freemen go marching to the polls to show JOHN HOUK that they don't need any guardian either from Massachusetts or Alabama, but are abundantly able to take care of themselves.

And now, Mr. Chairman, does not the history of this case, presented so fully and clearly in the copies from a Government record and other unquestioned evidence I have laid before the House, make plain the fact that the law I propose should be on the statute book? True, the individual who figures in this celebrated case did not attempt, at least it is not known that he attempted, to defraud the Government by the use of his forged military papers, yet it is indisputably shown that he used them to deceive his fellow-citizens, and by deceiving them foisted himself into various positions of honor and trust. In several instances he secured, by the aid of these papers, official place that properly belonged to honorable ex-soldiers—in fact soldiers disabled by wounds on the field of battle were pushed aside and out to make room for this military fraud. And by means of this bogus army record, the creation only of his fantastic brain, he has hoodwinked the electors of one of the most loyal—in the days of 1861-65—districts in the Union into sending him as their Representative on this floor in the next Congress.

In one sense his penmanship has served him well—it has helped him up the steep where his ambition pointed. Now that he is there, how will the true soldier, whether he wore the blue or the gray, with whom he comes in contact by reason of his official position, regard him? It seems to me that the soldier who prizes his service, either under the starry banner or the "bonnie blue flag" now folded away, would turn with scorn and contempt from a man who endeavored by fraud and forgery to enroll himself among soldiers with honorable records. And should this bogus "chief of Hooker's staff" attempt to throw dust in the eyes of a soldier by cunning explanation, let him be met with a demand that he show his "appointment" and "discharge" properly authenticated as genuine by the War Department.

All things are possible, and it may be that in the future there may be a case similar to this one. Should there be another individual found possessed of such fraudulent propensities, there should be a law ready to meet his case. The enactment of the law I propose will accomplish this end.

The Carlisle Bill.

SPEECH OF

HON. THOS. G. LAWSON,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 21, 1894.

On the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. LAWSON said:

Mr. SPEAKER: I did not have an opportunity to address the Committee of the Whole on the state of the Union when this bill was pending, and therefore avail myself of the leave granted to print my remarks in the RECORD. I enter upon the discussion of this measure with diffidence. While I have given much study to the subject of finance my conclusions have not reached that degree of conviction that gives assurance of their absolute correctness. I believe, however, that they are based on sound principles and are worthy of some consideration. It seems to me that the greater

part of the difficulties and complexities that are said to be connected with financial questions are mainly produced by the blunders of the politicians. If they had not implicated the Government in the matter, if banking and the regulation and control of finance had been relegated to business men, acting in obedience to the laws of trade and commerce, the currency, in my opinion, would have adjusted itself to the conditions, movements, and fluctuations of trade and commerce, and the anxiety and distress now prevailing in the country would not have occurred.

Some of the troubles come from the idea that the Government only can provide a currency for the people, and others come from the continuance of war measures which, though wise and skillfully adapted to the accomplishment of the purpose for which they were enacted, are wholly unsuited to these "piping times of peace." The great question now is how to engraft upon these war measures a system answerable to the needs of the present time without serious disturbance to the institutions and enterprises grown up under the present laws and so integrated with them that disaster and ruin might follow any unwise change. To accomplish this task is more difficult, perhaps, than the inauguration of a new scheme. The theorist could easily formulate a new plan of finance if there were a clear arena for its operation, but inasmuch as the security and repose of the vast interests of the country are involved in and likely to be affected by any change, the wisest statesman will shrink from the responsibility of suggesting any change at all. But a change for the better is imperatively demanded.

The wheels of industry are everywhere at a standstill, business of every kind is stricken with paralysis, thousands of people throughout the country are overtaken by irretrievable ruin, and there is a prevailing and well-founded conviction that these evils partly result from a vicious financial system. It behooves us, therefore, with great caution and conservatism, and in a spirit absolutely free from partisan bias and factional animosities, to examine the pending measure. It is said to have come from a high and responsible source, to be the conception of a statesman of commanding ability and exalted patriotism, in whose integrity and capacity the whole country confides, and whose official position, as Secretary of the Treasury, insures a wide acquaintance with the condition of our finances and with the defects of existing laws on the subject. The plan may therefore claim, at the threshold, a strong presumption in favor of its feasibility and sufficiency.

We find, however, that it is strenuously opposed by certain classes. One class insists that banks of issue ought to be suppressed, and that the Government alone ought to provide a paper currency for the people. The idea that it is the duty of the Government to provide a paper currency is an antiquated superstition, but it is entertained by so many people that it deserves attention in this discussion. Is the proposition true? When we search the Constitution we find the only delegation of power to Congress over the subject of creating money to be "to coin money and regulate the value thereof." We should not forget that no constitutional power can be exercised by Congress unless it is delegated, and that the power of Congress to legislate differs from legislative powers vested in the State legislatures, for the latter may, as a general rule, exercise all legislative powers that are not withheld or prohibited by the State constitutions.

This is an important distinction to keep in mind. We find in the Constitution no provision authorizing Congress to issue a paper currency. There is power given to borrow money; but no one would confound the right to borrow money with the power to create money. These terms have a well-known signification, and were thus used by the draftsmen of the Constitution. There is also a difference in substance as well as a difference in terms. An instrument issued for money borrowed is the evidence of a debt, while money is wealth or capital. All men understand that real money is made of the precious metals.

To coin metal is a well-understood process, but to speak of coining paper is a solecism. True, a majority of the Supreme Court of the United States at one time decided that the issue of legal-tender paper money by the Government was constitutional, but, with due respect for that august tribunal, I venture to express the opinion that it would not at this day reaffirm that decision. There was a plausible reason to justify the decision. The legal tenders were issued for the purpose of aiding the Government in carrying on the great war in which it was then engaged, and their issue was probably justified by the demands of an inexorable necessity, under whose supreme exactions oftentimes "might makes right." But a paper currency to be useful, and to justify the confidence of people in the use of it, must be convertible into coin on demand; it is not real money, but the representation of real money. It can have no standing in commerce unless it is converted into coin when coin is demanded for it. The agent which issues it, whether it be the Government or a corporation, must therefore be endowed with power to procure coin to protect its issues.

Coin may be procured by the Government in three methods, namely, by purchase, by borrowing, and by taxation. The three methods are resolvable into one, namely, taxation, as the Government has no other means to raise money with which to make purchases or to satisfy its creditors for money borrowed. But the power to tax, being capable of use as an engine of oppression, is limited to specified purposes. In the case of the United States it is limited to the raising of money to pay the debts and to provide for the common defense and general welfare. They may tax to provide an army and navy for the common defense and to pay for the support of their civil establishment, including their courts for the administration of justice, and to pay debts incurred on extraordinary occasions, or to supplement a deficient revenue. But there is absolutely nothing in the Constitution that would countenance the idea that the Government may levy taxes to supply people with the facilities for conducting their private business.

Such a proposition would be monstrous. There could in the nature of things be no limitation to the exercise of such power, except such as might exist in the will or discretion of the legislator. The protection of the citizen in the enjoyment of his property would be dismantled, and chaos would reign supreme, were any set of legislators invested with such unlimited power. It can not be conceived of that the fathers of the Republic, jealous of their liberties, and mindful of the arbitrary nature of the taxing power, even when guarded by the most stringent limitations, could have intended to delegate the right to exercise it without limit for any purpose. The Government, therefore, has no assets on which to issue a credit money.

If it is contended that the Government may issue irredeemable notes it ought to be explained how they are to be kept in circulation without depreciating. No government has ever been able to keep its paper issues at par without satisfactory provision for redemption. The Government of the United States, with all the wealth and patriotism of the people to back it, could not keep its legal tenders at par until provision was made for their redemption. Money is wealth, and no government can create wealth by the fiat of power. None but Deity can do that.

The right of the Government to issue paper currency is not only contrary to our scheme of constitutional government, but to the fundamental principles of liberty as well. Each citizen should enjoy the largest measure of liberty in the pursuit of happiness and in the management of his business that is compatible with the right of every other citizen to do the same. Subject to this restriction the Government should not do for him what he can do for himself, nor restrain him in anything that contributes to his improvement. Government is only the agent of its citizens to accomplish by their combined power what each could not accomplish singly. If, therefore, it aids one person it does it at the cost of one or more persons from whom it derives power to act, and is therefore unjust to them; or if it restrains one in the pursuit of legitimate business it is equally unjust in depriving him of his natural rights.

When our Government was created the right to issue a paper currency was recognized all over the world as a function of banking, a business in which citizens engaged for the promotion of their private fortunes, and for the extension of commerce. It was as much a private business as manufacturing or any other employment. Government sometimes engaged in it, not as a corporate entity on its own behalf, but as a partner in business with its citizens, and on equal terms with them. That was the character of our first national bank. Indeed, the right to supply people with money, outside of coining the precious metals, was never arrogated by governments until some centuries ago, when tyrants found it profitable to debase the current coin and to force it into circulation. Paper currency was always furnished by goldsmiths, bankers, and others.

When we consider the nature of money it becomes apparent that the Government can not supply it. Money is the product of man's labor. Indeed, it is stored up labor, either of the present or of past generations, and thus claims a personal and not a governmental origin. It attaches to the personality of the individual, because it is the offspring of his own exertions. It is earnings. If it had not arisen out of the necessities of barter and trade, and for the convenience of those who engage in them, it would never have existed at all. It depends now for its existence and diffusion on the same agencies. Individuals, laboring independently of each other throughout the world, each for the amelioration of his own condition without regard to the other, produce commodities for exchange with one another. As it is not always convenient to exchange one commodity for the other, they invent a medium of exchange just as they invent a medium of transportation.

As exchangeable commodities multiply a demand for the medium of exchange—money—increases. And thus we have the origin and the reason for the diffusion of money throughout the world. Governments had no agency in it until they became interlopers. The need of money and the invention of money spring from the subtle and complex relations of energy expended and

commodities produced, by men acting independently and separately the world over. At first money was something real, as the precious metals, cattle, etc., but as intelligence and civilization increased, credit money was invented and adopted as an instrument of superior utility. It also arose in response to the demands of business conducted by individuals, not by societies. Governments knew nothing of it until the genius of business men evolved it. They could not have created it because, as I have stated, it arose out of subtle influences and relations which no man could have foreseen or voluntarily brought to pass. Credit money is as much the product of human genius and industry as are the commodities of the farms and the factories, and to be most efficient, ought to be left in like manner to individual control, subject only to the police power of the Government.

To avail to its utmost limits credit money should be present wherever business of any kind is carried on, and ought to be responsive to the ebb and flow of business at all points, expanding as business expands and contracting as business contracts. Fluctuations in business occur not only at different times and places, but at different seasons at the same place, and currency can not completely and adequately perform its office unless it is subject to the same mutations; or, in other words, be subject to the law of supply and demand. It is physically impossible for currency issued by the Government from a central point, and at a remote distance, to perform its appropriate office. Assuming that a Government agent might be located in every community for the distribution of money, we encounter two difficulties:

1. The distributions must be by loans to the people, and no constitutional authority exists for the Government to make loans.
2. The agent would have no personal interest in the loan, as a banker would, no interest in adapting the loan to the demands of business, none in guarding against undue expansion and contraction, and none in determining the value of the securities; and no motive of self-interest, arising from the incentive of gain, to protect either the interests of the public or of the particular community. The latter motive, however, would exert a powerful and controlling influence upon the banker whose private fortune, to say nothing of profits, would be jeopardized by an unskillful and improvident issue of currency. It is he who, with keen vision, keeps constant watch upon the pulses of trade and commerce and upon the status of fiscal agencies, and whose experienced judgment discovers their relations and demands.

From these considerations it is obvious that a Government paper currency can not possess the quality of elasticity, so desirable in the volume of currency. Their expansion and contraction are mechanical rather than automatic, in conformity with the changing condition of trade. Indeed, they have no relation to trade; their volume is determined by other considerations, generally of a political instead of an industrial nature; the Government can not stand in the marts and at the gateways of trade to gauge its ebb and flow. There is ex necessitate rei an undue, or an untimely, contraction and expansion, not coincident with the rise and fall of business, for an enlargement of business without a corresponding expansion of the currency is equivalent to a contraction, and vice versa. The volume of business is the thermometer by which the demand for currency is gauged, and the volume of business may, on the same day, differ in every State in the Union; great activity and prosperity may characterize one section, while decline and paralysis may characterize another. How is it possible, then, for a definite and arbitrary amount of currency, such as Government issues must necessarily be, to answer the demand of trade?

The Government can only issue in payment of its debts, and can only retire the currency as it collects revenue, neither of which acts has any relation to trade whatsoever. The only sound and adequate method of meeting the requirements of business is to invest people who are engaged in it, and know its conditions in their own localities, to issue and retire the currency as each occasion may require. In that event an equal share of prosperity, so far as it depends on currency, will be vouchsafed to all. In seasons of great activity there will be no lack, and in seasons of depression there will be no redundancy. The prudent business man when he can make a profit will borrow from the bank, giving his own notes for the currency of the bank, and when unprofitable will return its currency to be redeemed in his own notes.

The issue of a paper currency, as I have observed, is a function peculiar to banking. It is credit, based upon the capital of a community, so focalized as to afford the largest measure of usefulness. It ought always to be based on capital that is capable of immediate conversion into real money. It is a refinement of civilization, dependent for its soundness and utility upon the intelligence and probity of the people who issue it, and is evolved by the genius of men constantly in search of better implements for the conduct of business, and for greater facilities and economy in its pursuit. As people become more enlightened they become more conversant with the value, utility, and adaptability of credit as a substitute for money. Unnecessary restrictions and

limitations upon its creation and use retard prosperity. And the right to issue it ought to be as free and unlimited as the capital of the people will allow. There are no unreasonable restrictions upon the use of bankers' checks, private checks, and bills of exchange, which are special forms of credit money, and hence their utility in carrying on the trade and commerce of the world is incalculable; it is thought that more than one-half the trade of this country is carried on through their agency.

They are implements exactly suited to the offices which they perform. They are perfect vehicles of trade so far as they go. Credit money is a banker's check of a more general character and of more comprehensive utility, inasmuch as it is designed to circulate without limitation while there is a vacuum for it. Bills of exchange, etc., have hitherto escaped the intermeddling, paternalistic, and fostering care of the politician, and hence enjoy a world-wide utility. And when the politicians learn that the people of this country are as wise as they are, and in many respects wiser; that they are capable of attending to their own business without their officious intervention; that they are abundantly able to utilize their own capital and credit in securing the best interests of the country; when the politicians learn these facts and are induced to give the people a chance, the business of the country will proclaim its emancipation from a noxious paternalism that has for many years embarrassed its free and enlightened progress.

Some people are opposed to banks of issue because they are corporate bodies. I confess that I do not know how to answer this objection. When I remember that all the great industries and enterprises of the world, namely, railroads, telegraphs, canals, mining, manufacturing, etc., are constructed and carried on by means of the combined wealth and intelligence of corporations, and that they could not otherwise exist, and when I know that the capital of private individuals, unincorporated, is unable to supply the paper currency needed in commerce, I fail to appreciate the force of this argument. It can not be contended that the pending measure creates monopolies, for the system of banks proposed are to be founded on a base so broad that all persons who can combine the requisite capital may engage in them. They are monopolies to no greater extent than the mercantile business and other vocations of the citizen.

The proposed modification of the national banking system commends this bill to my approval. That system is unscientific and defective, being founded on debt and not on capital. Their notes are sound and stable, but that is the only valuable attribute that they possess. But that feature, even, is not a necessity of the system. The enormous wealth and resources of the country uphold their credit independently of the system. If this were a poor and barren country, deeply involved in debt, a bond security would not sustain their soundness and stability. Banking currency should be sound, not by accident, but by force of the economic laws with whose conformity they are established. Banks ought to be founded on capital, not on debt, and one founded on the debt of the Government is no exception to the rule.

An economic law is not modified or annulled by the accident of the solvency of the debt. The national banks, I apprehend, were not designed to be a permanent system. The purpose to create a demand for Government bonds and to strengthen the Government credit during war was the paramount object of their creation. The issue of currency was a secondary consideration, as the country then had a better banking system, and one that the national banks could not supplant until it was stricken down by an unjustifiable tax upon its issues. Real money is coin, and a bank note is not good unless it is paid in coin on demand. They ought, therefore, to bear some relation to the substance in which they are paid and not to the debts of the country. What that relation shall be can only be determined by the demand for them, and by the intelligence, honesty, and business experience of those who issue them. That each dollar of currency should be backed by a dollar in coin is not necessary; indeed, such a currency would be altogether too costly and inadequate.

It is said that the Canadian banks carry about seven dollars in paper to one in coin, and that their currency is of the most efficient character, and that it is so entrenched in the confidence of the people that bank failures and panics do not occur. I believe that the intelligence and integrity of our people equal the Canadian standard. Give us a system of banks founded on capital, instead of debts, and we can rival the world. If it were proposed to issue currency upon all the debts of the people as a basis everyone would exclaim against the unwisdom of the policy. But what is the difference in principle? I admit that when founded on government debts, or on private debts, currency may be so limited and restricted and surrounded by such safeguards as to make it good. But when we seek to inaugurate a system designed to be permanent, that may supply the vital fluid of business and progress for generations, it ought to be founded upon principles derived from economic laws, and to not depend for efficiency and security upon strait-jacket legislation. National banks have fulfilled their purpose in relation to the Government credit, and beyond

giving us a sound currency they are a failure. Soundness is not the only (I doubt whether it is the chief) attribute of a good currency. If it is so sound that it cannot minister to the needs of business efficiently and adequately, its soundness is an infirmity. If to insure its soundness it must be so hampered with restrictions that it is deprived of flexible and elastic qualities to the extent that it becomes irresponsive to the movements of trade, it is not a good currency, whatever other attribute it may possess.

Isuppose that the most ardent friends of the national banks will not claim for their currency the quality of elasticity, except within very narrow limits. Its infirmity may be illustrated by an example: Upon \$100 of bonds they are authorized to issue 90 per cent of currency less 5 per cent thereof as a reserve, or \$85.50 in the aggregate. Bonds are offered for sale by the Secretary of the Treasury and they are bought and held at a premium for speculative purposes by a syndicate of bankers in New York. Say they are held at \$115 for \$100 of bonds, what effect will this have in Georgia, where we may suppose an association desires to establish a national bank? The association pays \$115,000 for \$100,000 of bonds, and receives on them when deposited in the Treasury \$85,500 of circulating notes. Georgia, where currency is scarce, parts by this process with \$29,500 of her currency in excess of what she receives, and contributes it to New York, where currency is redundant. The currency is contracted and the rate of interest is raised in Georgia, while by the same act the currency is expanded and the rate of interest is lowered in New York. Is there any flexibility or justice in a banking system that works out such results? Legitimate business is crippled for lack of currency in one State, and illegitimate speculation is stimulated by an unwholesome plethora of currency in another State. To confine people to such a system of banking is unjust and oppressive, and a stigma upon the intelligence and fair dealing of our statesmanship. It falls far short of the intelligent progress of the country on other lines.

The monopolistic character of the national banks thus becomes apparent. They enjoy privileges which it is impossible for many to possess themselves of without serious loss. The large capitalists of the money centers, where money is attracted by a constant speculative demand, own the bonds upon which the banks are based, and in consequence of their limited supply and high value they are unavailable for banking purposes to people in less fortunate communities. The large capitalists and bankers, therefore, have practically the entire control of the currency of the country, and manipulate it to suit their own selfish interests; if an expansion of the currency inures to their profit the banks issue a new supply, but if it is profitable for them to squeeze the market and capture a favorite line of securities by depressing the market, or to raise the rate of interest and discounts, the national banks can call in their currency and decline further loans. In either case the public interests are subordinated to the profit and loss of the bankers. An honest and intelligent people will not sustain such an unequal system when they reflect that the country must become great and prosperous, not by the enrichment of a certain class, but by the diffusion of prosperity among all.

The success of business depends almost as much upon the supply and elasticity of money as it does upon the munificent bounty of Providence; and when we place the control of the currency into a few hands, we had as well intrust them with the keys of Heaven, enabling them at will to shut out the sunshine and rain that generously enrich the whole earth. Were it proposed to invest a certain class (if such thing were possible) with the power to distribute the heat and showers that now dispense their blessings with universal and impartial munificence, the Anglo-Saxon courage would rise in revolt, yet such is the force of custom and such the habits engendered by long submission that people witness with unconcern, and many of them with approval, the existence of a monetary system that, in a different sphere, works an equivalent injustice and injury. There can be no favorites in a free government. "Equal rights to all and special privileges to none" is the motto of a free people.

There are other serious objections to the use of Government bonds as the basis of a banking system, but as I have elaborated these objections on a former occasion I will content myself with a simple and concise statement of them now.

1. Banks, to perpetuate their existence, will coerce the Government to issue bonds and unnecessarily increase the public debt.
2. Heavier taxes will be imposed to pay the interest on the debt.
3. The banks will ally themselves with all those who favor a wasteful and extravagant appropriation of the revenues, so as to continue the debt.
4. Their monopoly of the currency may enable them unduly to influence the legislative power.
5. So long as the Treasury notes are outstanding they will control the public Treasury.

The experience of other countries teaches that a better system of banking may be employed—one that does not rest upon the narrow basis of Government securities, but upon the wealth,

genius, and enterprise of the people. McLeod, in his valuable work on banking, informs us that the monopoly of the Bank of England, in periods of industrial depression, has worked incalculable injury. It could not furnish the necessary currency, and its monopoly of the business prevented from doing so all others who were able and inclined to furnish it. The history of the last panic in this country coincides with the history of the Bank of England in that the national banks, for want of elasticity, aggravated rather than healed the distress; and if the people had not had the courage to break away from the monopoly and, in defiance of law, issue clearing-house certificates and other devices to supplement their currency, no man can measure the financial disaster that would have overwhelmed the people.

Monopoly, therefore, is as pernicious to business as it is inimical to freedom. All sound banking must rest on the wealth and the business of the country. It can not but be so, because banking is the offspring of business—at once its child and its subservient agents. Banks of issue capitalize the credit issuing from wealth, and thereby increase many fold the utility of wealth. It is futile to contend that the Government, though it were Argus-eyed, could do this. It can not be everywhere with its fingers upon the pulses of trade. And it is equally futile to contend that banks should be denied authority to issue currency, lest they might expand and contract it to the detriment of the people. Under a banking system founded on wealth and business the banker could no more do so than he could prevent himself from revolving as the earth revolves. The expansion and contraction of the currency would depend on the combined will and cooperating agencies of every employment and of every human being capable of industrial activity.

Every business, every profession, and all the forces of industry and genius throughout the world would conspire in determining the requisite amount of currency, and the banker could only be the agent through whom the supply would come. His self-interest and the self-interest of all other people would harmonize and coalesce. Competition, also, under such a system would be free, and if one set of bankers, ignorant of their appropriate instrumentality in the caravans of commerce, should deny currency to the people, another set would arise at once and respond to the demand. Under a monopolistic system, such as we now have, it is possible for banks to expand and contract the currency irrespective of the demands of business, but we propose to supplant these with a system that is destitute of every element of monopoly. The banks of Scotland and Canada are said to perform their functions efficiently and adequately; they experience no undue expansion nor contraction, no failures and no panics. I would blush to confess that American citizens could not be trusted to conduct banking institutions with equal intelligence and honesty on the same principles.

The provision which the pending bill makes for the issue of currency is infinitely preferable to the national-bank system. It is free to all, and within the power of all who comply with its terms. If the bill becomes a law it will be as easy and inexpensive to establish a national bank in Georgia as in New York, and the citizens of the former State will occupy the same plane as the citizens of the latter State; no special privileges arising out of the law or its administration will be enjoyed by either. Experts tell us that the scheme will provide a sound, a stable, and an elastic currency, and our own examination of its provisions justifies the conclusion. These elements are all that are necessary in a good and sufficient currency. Viewed, therefore, from the standpoint of the people, the bill is all that could be reasonably desired. Looked at from the standpoint of the Treasury, the Secretary of the Treasury is satisfied with it.

It is his special duty to take care of the Treasury—his reputation depends on the wisdom and care with which he discharges that trust. He is a man of great ability and vast stores of information, with but few equals and no superiors in the United States, and if he, with his great responsibility and his unsurpassed knowledge of the situation, is satisfied that he can protect the Treasury under this bill, I shall not egotistically set up my judgment against his. The old aphorism that "fools rush in where angels fear to tread" shall not be applied to me. I am enamored with the impartiality of the scheme. All sections of the country may share equally in its benefits—an impossibility under the existing system. Currency may be distributed equally everywhere in response to, and in proportion to, the business needs.

Currency will not congest in the money centers, and communities remote therefrom will not be charged, as now, with the cost of transporting the currency they use, nor suffer, as now, from exorbitant interest charges. The system will emancipate our industries from the constriction inflicted by monopolistic money, and everywhere impart a new impetus to the industrial energies of the people. This feature in the bill is enough to cure all its infirmities, if it have them, and were every other feature grossly obnoxious to me, I would support it for the good there is in this one. By all means let banks everywhere be free to issue their

circulating notes, subject only to necessary regulations to insure their soundness, so that the people of every community may enjoy equal facilities of trade and commerce. The people will thank you for the boon, and it will inspire their love and confidence when they realize that while enjoying equal political privileges they are also made equal in business opportunities.

Some gentlemen quote Mr. Jefferson's writings in opposition to banks of issue, and argue therefrom that they are undemocratic institutions. No man yields greater fealty to the surpassing genius of Mr. Jefferson than I do. He believed in coin money, and perhaps we all do. If coin could do the business of the world no one probably would advocate the use of paper. Gentlemen who believe in the use of irredeemable Government paper money can not quote Mr. Jefferson in support of their vagaries, for if I remember correctly he only advocated, in times of war, the issue of a limited amount of Government paper, to be paid in a given time, and that provision should be made for a contemporaneous appropriation of certain revenues for their redemption. This is wholly unlike the Government money now contended for, namely, that it shall be an inconvertible legal-tender paper money. But be this as it may, in the first place the history of the world has demonstrated the unsoundness of such money, and in the second place Mr. Jefferson's imperial genius acquired wisdom from his environment and from the circumstances of the times in which he was a most conspicuous actor.

Prior to the American Revolution paper money issued by the Colonies was a legal tender, with no provision made for its convertibility on demand. The subtle intellect of Jefferson must have condemned such money, just as experience condemns it now. But had he lived until this day, and witnessed the meager trade and commerce of his time increased more than a hundredfold, and the rapid transportation by railroads and steamships, and the instantaneous transmission of intelligence by telephones and telegraphs, and had witnessed the progressive genius of the people, and the improved implements and refinements of trade and commerce which a paper currency furnishes, no man of this generation would more ardently or more powerfully cooperate in the extension and improvement of the paper currency. His was a progressive genius; passing events left their impress on his mind, and what was good in them he seized and appropriated. I would as soon believe that he would, if among us, condemn the construction of railroads and telegraph lines as that he would condemn the modern methods of banking. The refinements of credit as a factor in monetary science are of modern growth. And as Jefferson was far in advance of his contemporaries in his efforts to ameliorate the political condition of the people, there is strong reason to suppose that he would lead the van in financial reform.

The bill is also assailed because, as is alleged, it makes provision for national banks, and the shades of Jackson and Benton are conjured to rebuke it. In point of fact, the banks provided for are not national banks in any proper and substantial meaning of the term. The Government has no proprietary right in them, is not a stockholder nor guarantor, and need not be even a customer. The safety fund is of Government money, but it does not belong to the Government, and no more implicates the Government in the business and fortunes of the bank than if the fund were of gold and silver, which are another form of Government money. The Government retains supervision over them, not for the good of the banks, but for the good of its citizens; its attitude toward them is only that of a policeman. In no sense are they national banks, except in name; but, granting for the sake of the argument that they are, there is no sensible reason why a legislator who is bitterly opposed to national banks may not cooperate in an effort to modify and improve them for the relief of the people. If the evils of their existence can be diminished 50 per cent or even 5 per cent, it is worthy of patriotic effort. No sane physician ever hesitates to mollify a disease merely because he can not eradicate it.

It is also assailed because of its provisions in behalf of State banks of issue. If the bills of the national banks were not as they now are a legal tender when offered to other national banks, and were compelled to be sent home for redemption when not employed in legitimate trade, there would be, if this bill became a law, very little use for State banks, and very few if any would ever be established. State banks might be set up in some sections, where people could give real-estate mortgages only as security, but with the liberal plan of banking suggested there would scarcely be any use for a State bank in the event that the bills of the national banks could be forced to return home. I do not join in the hue and cry against State banks. I believe that they would be just as sound, and their management just as intelligent and honest as the national banks. I do not believe that the Federal Government can rightfully have anything to do with them, and I affirm that it is the right of every State to have them if it desires. I had the privilege of submitting my views upon State banks on the 26th day of May, 1894, when there was a motion pending in the House to repeal the 10 per cent tax on their issues, and shall therefore say but little concerning them now.

Unless the legal tender quality of the national-bank note is dispensed with the repeal of the tax on State-bank issues is very essential to the section in which I live. In that event the notes of the State banks will be more serviceable than national-bank notes. A national-bank note will circulate everywhere. There is no one directly interested in its movements except to keep it in circulation, and hence it will, by a sort of commercial gravitation, drift on the tide of speculation to the money centers where trade is enormous and speculation active and gigantic. Although payments may be made in checks the money must be accessible somewhere to protect the check. There is nothing to compel the notes to return home; other banks are bound to receive them; they collect in large amounts at the money centers. Money thus becomes redundant at these points, and can only be used at a low rate of interest, which tempts to speculation and the locking of it up in illegitimate dealing in future contracts; and there it remains to the injury of both its adopted and its native home.

Money is thus drawn from sections where it is not in continuous demand and use, and can not be wooed back without loss of express freight and the payment of a higher rate of interest than it is earning elsewhere. If no one was compelled to receive it it would return home for redemption and lie in the vaults of the issuing bank without cost to any one until the incoming harvest, or other business demands, invited its reissue. It would be expelled from the money centers, not for want of soundness, nor because tainted with distrust, but because its presence there would be an actual injury to the money and business that belong there. Its presence there produces redundancy, and cheapens the use of all other money, and hence bankers, ever mindful of their own interest and looking to the profitable use of their own issues, would send it home for redemption. When we who favor State banks of issue speak of a local currency this is what we mean, not a currency that will fail to go abroad because of its unsoundness or because it labors under suspicion, but a currency that offers no inducement to the hoarder, that no one is obliged to receive, that no bank will keep when it appears as a rival to its own issues upon its own arena, and which every bank, to shun its rivalry, will be glad to send home. Coin money and legal-tender money have no home; they are cosmopolitan in character and become wanderers and tramps. A local currency, such as I have described, is more useful than either.

The opposition of gentlemen who favor the free coinage of silver impresses me as a serious mistake. In the first place many gentlemen who have hitherto voted for the free coinage of silver honestly believe that this measure will afford more substantial relief, and when they find that the conspicuous advocates of free coinage are bent on having no other relief they may be tempted to part company with them. In the second place every one knows that it is impossible during this administration to secure the free coinage of silver, and that to insist on it will foment discord and dissension in Democratic ranks. In the third place, when we cannot get the specific relief we want in the manner we want it, it is wise to get as much of it as we can in the manner that other people seek it. And in the fourth place, this bill, if it becomes a law, will achieve more for the protection of silver than any legislation has done since its demonetization. Under its provisions the silver already coined and the paper certificates representing it will be mechanically forced into the circulation and kept there. People will be obliged to use it because they can have nothing else with which to replace it.

I approve this bill also for the reason that it implies confidence in the integrity of the American people. It assumes that men of capital, men of credit in the business world, and men who by intelligence, honesty, industry, and frugality have accumulated fortunes, may, contrary to the teaching of demagogues, be trusted in affairs of the greatest magnitude without being incarcerated in strait-jacket laws. By its passage we announce that we do not believe that every man who has achieved success in business is either a thief or a scoundrel. Words of this import coming from the Congress of the United States will bear beneficent fruit. We seem to live in an age of distrust and suspicion. No man's motives or conduct is exempt from harsh and cruel criticism and censure. The shafts of falsehood and slander are aimed at every shining mark. The character of every man in position, from the Chief Magistrate of the country to the humblest official, and of every man to whom fortune has been generous in the distribution of her favors, is the subject of malignant calumny and vituperation by the sensation monger who, in every market, obsequiously barter the slimy products of his pen for the fickle applause of the multitude. The putrid sluice of lies and slander ought to be averted. The American people are an honest and Christian people, worthy of the highest trust and confidence in every sphere of life, and we ought, whenever it is opportune in our work, to train everyone in that faith.

Mr. Speaker, I felt it my duty to offer these general observations in support of the bill. I have made no attempt to explain its details, for that has been far more intelligently done than I can do it. Despite all its alleged defects, I give it my hearty support.

I have listened attentively to the arguments against it, and they seem to end in a "lame and impotent conclusion," namely, that the bill is imperfect, and that frauds may be perpetrated under it. Certainly that is true. No sane man ever contended that it was either perfect or impregnable to fraud, and no sane man ever believed that it is possible to enact such a law. It provides a system of banking in accord with the growth of monetary science and is infinitely superior to the system that it aims to supplant. In my judgment it is fraught with more substantial and comprehensive relief than any measure that we have had the opportunity to support. It is a scheme on which the people may build an enduring prosperity as soon as the evil days on which we are fallen have passed away.

The Currency.

SPEECH

OF

HON. J. C. BELL,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 21, 1894.

On the bill (H. R. 8349) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes.

Mr. BELL of Colorado said:

Mr. SPEAKER: At the very threshold of this discussion we should take a retrospective view of the means used and of the persons involved in bringing the world to its present deplorable condition.

If the same forces are employed to urge this measure, or the same objects sought as have been in view by certain classes so long in the past, then this may aid in penetrating the prospective objects of the originators of the present bill.

It is not sufficient to say this is an improvement on our present partial and expensive banking system. This is more than a mere banking amendment. It is intended as a complete change of our monetary policy. It is offered as an ample specific for the incongruities of our present financial chaos.

The sires of this measure intend that it shall supplant the automatic money circulation of gold and silver with bank paper. They hope to substitute the arbitrary bankers' limit as to the necessary quantity of our currency for the capacity of the mines and Government limitations. The primary object of the original authors of the ideas permeating this bill is to consummate the long-cherished design of the bankers of the world to have the American Republic, the exemplary standard of freedom and equal rights, delegate to its banks the exclusive right to issue and control the paper currency of the country.

This is an integral part of the grand plan of operating on a single gold standard as the international money and measure of value for the world. The \$4,000,000,000 of gold in the world equally distributed among 1,500,000,000 inhabitants would give each \$2.75 or \$22 less than our own per capita circulation. The banks would corner this little mite of gold coin and issue from \$25 to \$30 of bank paper as the exclusive money for circulation among the people. Unquestionably this bill, if passed, will be considered and urged as a settlement of our financial difficulties for many years to come.

The United States does not stand alone in her financial chaos and distress. The contagious disaster following the international gold scramble and consequent contraction and money famine has blighted the hopes and aspirations of the producing and nonruling classes in all lands and climes.

For more than a generation the unified bank powers of the world have been tugging at a single cable endeavoring to drag down the national money and hoist the bankers' paper.

As the misfortunes of war or panic have overwhelmed a province or nation it has been forced into the international gold scramble; into the international banking scheme, and into permanent poverty and distress.

This maudlin sentiment of the banker and professional money changer as to sound finance, honest money, and unimpaired public credit is an ingenious specious plea in their self-defense.

Who is or should be dearer to this Government than its own individual citizen? The enlightened statesman Burke, in speaking for the people rather than for bankers, pertinently said: "It is to the property of the citizen, and not to the demand of the creditor of the State, that the original faith of society is pledged. The claim of the citizen is prior in time, paramount in title, and superior in equity."

This bill is another master stroke in the name of the people, but in the exclusive interest of the banking world.

If passed it is expected to and it will in all probability sound the requiem of the circulation of gold and silver money of the Constitution for a generation to come. The alleged financiers of this country, who are nothing but mere specialists in so handling ready cash as to make the largest possible private gain, are seeking to have delegated to the International Banking Association the right to determine the quantity as well as the quality of money that shall circulate.

This is a herculean effort of the bank power to crown with shining glory the aspirations of the banking world to secure the alliance of this Republic with the European banking oligarchy for the control of the money and per necessity the destiny of the world.

When the stern and patriotic Jackson so effectually checked the encroachments of the banking power Thomas Benton truthfully said: "Jackson has beaten the bank; yet the bank power is not conquered, but, like a royal tiger driven to the jungles, will return again."

The bank power did return when the life of the nation was in the throes of a bloody internecine war, and relaid the foundation of new banks of issue ostensibly for temporary war purposes and to increase the price of United States bonds which the Government then felt it was compelled to put upon the market. In the midst of this dire distress the bank power has audaciously reappeared and impudently demanded that we yield up to the banks independent national money, except the little pittance of gold not used as a circulation, but as a mere measure of value.

In all ages as the people's money, the government currency, has been contracted or destroyed the masses of the people have been impoverished and property has rapidly drifted from the possession of the many to that of the few.

The financial issues between the rich and the poor, between the debtor and the creditor, between the money changer and the people, have been well defined and clean-cut for quite three-quarters of a century.

The annuitant and creditor have always demanded a scarce and dear dollar and limited quantity of legal-tender money and cheap property, while the people at large have demanded an abundance of good, cheap money and dear property.

This division of sentiment is impregnable proof that no individual should be permitted to issue or control the currency. What is meat for one class is unquestionably poison for the other at the monetary table.

The country thoroughly learned the lesson of money in the former half of the present century.

Eighteen hundred and eight ushered in a money famine which was unbroken until after the discovery of gold in California in 1849 and in Australia soon after.

The United States monetary commission of 1876 reported to Congress that our dollar increased in purchasing power 145 per cent between 1808 and 1848. In other words, if a dollar borrowed at the former period would have paid for a bushel of wheat or a day's labor, at the latter period, under this greatly increased value of the dollar, it would have required the sale of 2.45 bushels of wheat or the performance of 2.45 days' labor to have obtained a dollar with which to repay.

The very essence of good money is to maintain it in quantity and quality, as compared with all other purchasable things, in such a manner that the prices of stable products and human effort, under normal conditions of things, will be substantially the same when a debt is required to be paid as they were when it was contracted. This is all the toiler, the debtor, and masses of the people have ever demanded. But the security holder and creditor are determined to obtain their payments in a dollar of twice the value of the one they loaned under the misleading guise of sound and honest money.

The money famine broke away gradually as the increase in the money volume established the proper equilibrium between it and the quantity of purchasable property in the world, after the developments of the gold discoveries in California and Australia. As prices rose in proportion to the general increase in the money supply, which invariably occurs, there developed such a general contentment and prosperity in every civilized and semicivilized country as never had been witnessed before.

And yet this did not bring universal happiness and contentment. The annuitant and bondholder of Europe complained to their Governments that by the combined use of gold and silver as money the general prices of the necessities of life would range too high, making their incomes and their annuities buy a smaller amount of the products of labor than before the increase in the gold output, and therefore they then and there organized to destroy the money functions of one of the metals. Gold then promising to be the more abundant was selected for the onslaught. In pursuance of this determination Germany and Austria demonitized gold in 1857. The intention was to make this move general in Europe, but France became stubborn and would not join in the crusade, and as the charter of the Bank of England

required it to purchase at a fixed price all gold offered at its counters, England could not join the movement, and therefore Germany and Austria rehabilitated gold, and the movement was inaugurated in 1865 for the destruction of silver.

The owner of ready money and securities had watched them go up and up in value during this forty-year money famine just in proportion as the price of general property went down as money became scarce. With equal anxiety they watched the purchasing power of their annuities and annual interest collections go down and down as the outpouring of the gold from the mines so rapidly increased the volume of legal-tender money in the world and general prosperity and the prices of general property and labor went up and up in proportion to this increased money supply.

During these contrasting periods the inflexible economic principle that any increase in the volume of money increases the prices of general property and any decrease in the money supply, as compared with the population and quantity of property and labor to be exchanged, likewise decreases the general prices of property and labor, was so burnt into the quick and marrow of the owners of ready money, securities, and those receiving annuities, that they redoubled their efforts to destroy the money functions of one of the metals. They preferred to destroy gold, but could not; and hence, in 1865, they firmly moved on silver, not because it was depreciated, because it was then at a premium over gold, but for the sole purpose of making money dearer and scarcer and necessarily property and labor cheaper everywhere.

The minority of the French monetary commission of 1869 reported to its Government to this effect, and declared that by the use of the two metals for money that it made general property high and injuriously affected that class of people having fixed incomes and nothing to sell but everything to buy.

The United States Monetary Commission of 1876 reported to Congress, among many other things, as follows:

Manifestly the real reason for the demonetization of silver was the apprehension of the creditor classes (money-lending classes) that the combined production of the two metals would raise prices and cheapen money unless one of them was shorn of the money function. In Europe this reason was distinctly avowed.

These reasons, so conspicuously stated when the annuitants and creditors were trying to establish a silver standard and when they were trying to fasten a gold standard upon the world, ought to be continually impressed upon the minds of the farmers, miners, and toilers generally until they see the true cause of our distress and correctly spot the special classes fastening it upon the world.

Gold and silver money of practically the present standard value constituted the legal-tender money of this Government from its foundation down to the destruction of silver in 1873. That it was destroyed without the knowledge or request of the people, and simultaneously with the destruction by so many nations in Europe, is conclusive that the objects sought in the United States and in Europe were in pursuance of a common and fixed purpose of an international money power to destroy silver; not because it was depreciated, for it was then at a premium of 3 cents above the price it was proportioned to gold by the parity act.

With the destruction of silver the producer's trouble began. As the prices of his products went down, the value of mortgages, securities generally, and ready money went up.

The money changers of the world own \$35,000,000,000 bonds and debts of the different national governments, which they have been trying for a quarter of a century to reduce to gold debts by having the contracts actually changed by legislatures, and when that can not be done, by having the executive branches of the governments do as they induced ours—that is, adopt a governmental policy of allowing the creditor and bondholder to choose the kind of money he will accept on his debt.

A casual review of the legerdemain used by our Government in the interest of and at the dictation of our bondholders may serve as a pertinent illustration of what the combined and associated bondholders of the world are doing.

This Government, while overwhelmed with the anxieties of an internecine war in the 60's, was forced to permit its financial ship to be steered under the money-changer's compass. They systematically and premeditatedly stranded it upon a rock of their own choosing, where they can daily loot the Treasury.

When Lincoln and Chase as a dernier resort secured the issue of \$60,000,000 in noninterest-bearing greenbacks or demand notes, and afterwards made them full legal tenders and receivable for import duties, it brought every professional money-changer and banker of the land to his feet. They peremptorily demanded and secured an exception clause in all subsequent issues, making them partial legal tenders, not acceptable for import duties or for the interest on our public debt by them held. The first notes never depreciated and no speculator ever made a dollar out of them, but those with the banker's exception-clause dictation were by him depreciated and bought in for an average of about 68 cents on the dollar.

They secured an act of Congress permitting them to exchange these depreciated greenbacks for interest-bearing bonds at par.

These bonds were purchased with greenbacks and upon their face made payable in "lawful money." The owners of these bonds cunningly, under an ostensible aim to strengthen the public credit, secured a Congressional act on July 14, 1870, making them payable in coin of the standard value of that day, which included our present standard silver dollar with our gold coin. The public thought but little of this, because silver was at that time more valuable than gold, according to the established ratio of 16 to 1. The owners of these bonds, however, in some mysterious way secured the demonetization of silver in 1873, covertly, without even the vigilant newspaper representatives detecting the act. This was not sufficient, however, because their bonds by law and upon their face were payable in gold or silver of the standard value of July 14, 1870, and even the new bonds issued by Secretary Carlisle are so payable, because the act under which they were issued provides that all bonds issued or hereafter to be issued shall be payable in coin of the standard value of July 14, 1870, including the standard silver dollar. The inflexible rule of law is that any or all debtors, public or private, may choose any kind of legal-tender money for the payment of their debts, and their creditors are compelled to accept the money offered. The bondholder fully recognized this rule of law, but plaintively appealed to Secretary Hugh McCulloch under the fraudulent guise of an honest-money league that the Government pay its creditors in any kind of money they might desire. He promptly decided to adopt a governmental policy different from every other government of earth of allowing the creditor instead of itself to choose the kind of legal-tender money it will accept.

They lately secured the decision of the Secretary that he has the right to issue interest-bearing bonds for the ostensible purpose of redeeming greenbacks, but really to pay the expenses of the Government, and then to reissue them ad infinitum. With all of the Treasury machinery rigged in the interest of the Treasury looters, a continuance of present conditions will be inevitably ruinous.

But the laws are not so blamable as the law officers of the Government. The letter and spirit of the laws have been abandoned for a so-called public policy, dictated by and for the special benefit of the great creditor classes of the world. This policy is not that of the law, but dictated by a class of men schooled and tutored only in handling ready money for hire rather than investments in developing enterprises. Had good fortune smiled on the masses rather than the classes in the last Presidential campaign and have placed in the Executive chair a JONES, a MORGAN, a HARRIS, a TELLER, or a RICHARD P. BLAND, instead of the present incumbent, the country would have had a complete reversal of policies and conditions. The debts of the Government would have been paid in gold and silver at the option of the Government; the seigniorage would have been coined and paid out on current expenses. We would have had no gold scramble, no repeal of the Sherman act without something better as a substitute, no bond issue, no shutting down of mines, mills, and manufactures, no bankers' panic, and no Carlisle bill.

No well-informed person can have the temerity to deny that this would have been the course of any one of these gentlemen, or to assert that any one of them has less patriotism, less governmental experience, less ability, or has been less successful in the correctness of his governmental forecasts than the present distinguished Executive. With all due deference I will ask, Why all of this cringing to the one-man power? It is subversive and destructive of a republican form of government. What has become of all of the dire threats of members of this House, if bonds were issued without the consent of Congress? Whither are all those grandiloquent silver pledges finding such secure hiding places since the election? Were these sincere? Have so many changed their convictions since November, or were they mere electioneering paraphrases? Every specific the Executive furnished has betrayed his common human weakness, for each remedy has aggravated the diseased body politic.

You have blindly followed him in the past against your better judgment. The currency remedy, the seigniorage bill, presented him by a majority of his own party lawmakers from the House and from the Senate, was arrogantly vetoed and cast away as trivial and dangerous.

These things are enough to cause the advocates of a republican form of government to stop and inquire what special training or qualification is required of an Executive? He is not chosen to direct the making of laws, but rather to execute those enacted by the law-making branch of the Government.

It is true the Executive is expected to suggest defects and point out remedies for the consideration of Congress, but it never was expected that an Executive would pit his own judgment against the combined and deliberate judgment of his party in Congress.

The history of this country has shown for the past half a century that men are not selected for Presidential nominees because of individual greatness, but rather because of availability and

prospects of carrying pivotal States. Generally the less national record the more availability.

With all due deference to those in high places, their countrymen recognize no one in position to-day as standing out distinctly above his fellows in morals, intellect, or political sagacity. This is not intended as a disparagement to anyone. It is simply the recognition of a well-known truth that humanity is monotonously alike in every station of life, and that no one has been given by nature a monopoly even on common sense or ordinary sagacity. Anyone who assumes to have such is a dangerous imposter and clearly demonstrates his unfitness for public place.

The intention of our republican form of government is that the combined and unbiased judgment of Congress, as enlightened by an intelligent and practical constituency, should furnish the governmental policy and the specific for the country's legislative maladies.

The President, because he hails from the great money center of the nation, has no moral right to ignore the will of the people at large as expressed by his own party representatives in Congress in the interest of his own domicile. This bill is primarily in the interest of the banker and money changer. It is true that it does not even go far enough to fill the measure of their greed, but it is practically the Baltimore plan.

The people, the farmers, the miners, and the producers generally, demand more absolute money and less bank power and less bank dependence. The great Federation of Labor that met in Denver a couple of weeks ago, with representatives from every vocation and from every State in the Union and some from abroad, did not resolve for more and better bank paper, but they did resolve for more and better absolute money; they did resolve for the free and unlimited coinage of silver at 16 to 1. They did resolve for a curtailment rather than an augmentation of corporate power.

In a report of the Committee on Coinage to this House in the Fifty-first Congress it is said:

Almost every man who appeared in opposition to free coinage was a president or other executive officer of some bank, some great insurance company or other firm, corporation or association controlling vast aggregations of capital. Upon the other hand, it may not be out of place for us to mention the circumstance by way of contrast, that at the conclusion of Mr. Atkinson's statement Mr. Dunning, the duly accredited agent of the Knights of Labor and various other kindred organizations comprising nearly 4,000,000 voters, stepped forward and laid on the table the petition of these tolling millions, praying for the free coinage of silver.

In addition to this it is proper for us to call attention to the further fact that the great organization known as the Farmers' Alliance has adopted a demand for the free coinage of silver as the cardinal feature of its creed.

The Transmississippi Congress, representing twenty-two States, has from time to time in the past three years, and with great unanimity, demanded the free coinage of silver. These organizations represent all shades of people and vocations. Not a whisper from any one of them about more or better bank paper. At the meeting of the National Banking Association at Baltimore it declared for this bill in substance. The local banking associations in New York and everywhere have declared for it in substance, but nowhere in Christendom has a labor organization, a citizens' meeting not dominated by the professional banker, declared for more or better bank notes as a specific for our distress. We have no prejudice against banks within legitimate lines. They are a necessary convenience in commercial intercourse, but the great banking associations are now seeking to direct the Government, not for the good of the people, but so as to enable their class to thrive at the expense of every man that exchanges a product or day's labor for cash.

In 1878, after the people learned of the disreputable jugglery by which silver was destroyed in the interest of the creditor and bondholder, it made a peremptory demand for its restoration. The sponsors of these interests graciously yielded to the people the Bland-Allison Act in 1878 and the Sherman Act in 1890, but, however, after they had converted each of them from free coinage acts, that had been demanded by the great masses of the people, to purchasing acts, with premeditated designs of finally destroying silver.

Senator SHERMAN in 1892 introduced a bill to repeal the purchasing clause of the Sherman Act. When asked why he sought to repeal his own creation he justified his action by saying on the floor of the Senate that he introduced the original bill to prevent the passage of a free silver bill at that time, and also to save President Harrison the responsibility of vetoing it after its passage. Is not this enough to cause the people to distrust public men and their general sincerity?

In the very inception of the panic last spring the Secretary of the Treasury threatened to obey the law and pay demands in gold or silver according to the contract and the law. The money changers threatened to continue the panic and other dire disasters if he consummated his threat. The Administration, with much meekness and trembling, made an insipid and childish surrender.

A concession of these sacred privileges of the people is not a dernier resort of the Government. Every interest-bearing bond of this Government, whether old or new, is payable by contract

and by statute in coin of the standard value of July 14, 1870, which is the present gold and silver coined money. The greenback is not payable in gold, but in the same coin. It does seem that the banker, the creditor, and the legislatively favored few would be content with their lot and with their accumulated millions while so much distress and misery go unrelieved in the land. I know it is in keeping with vain human nature for them to lay the pleasing unction to their souls that the unprecedented accumulations of the past quarter of a century are attributable to their superior business acumen rather than to the partial and venial legislative favors they have received from the Government.

It is idle folly to attempt to conceal the fact that as the outburst of inventive genius has applied labor-saving machinery and overcome distance by rapid transit and quick communication that the destiny and fortunes of the rich and powerful of every vocation and of every country have been linked together for a common aggression and defense as against the balance of the world. Any great corporate interest in this House can touch a heartily responding chord in any other great corporate interest here represented, regardless of individual rights. No doubt but that an international gold standard, with an international banking system dominated and owned by the rich, would aid them in controlling the destiny of the world. It was once a national business emulation; now it is the rich and powerful of all nations against the balance of humanity. In the light of these proceedings, will it be effective in the future to appeal to the farmer, the miner, and the toiler with the old threadbare platitude that they are better off than formerly? They ought to now see, to know, and they ought to see clearly that they enjoy a less percentage of the value of their products than formerly—that the opulent's lot, with the progress of the age, has improved a thousand per cent faster than theirs.

It is hard for me to believe that the Democratic party of the South and West are going to turn tails to the common people and to the matchless teachings of Jefferson and Jackson, to join the oppressors of the industrious poor in all lands. Are they ready to admit with their erring Eastern brethren, that all of the cardinal doctrines of their adored creed have reversed themselves since the days of its founders?

Thomas Jefferson, the ideal of the old Democracy as well as of all lovers of true manhood, proclaimed that "bank paper must be suppressed and restored to the nation to whom it belonged;" that "the power to issue money should be taken from the banks and restored to Congress and the people to whom it belongs."

Said he:

I sincerely believe that banking establishments are more dangerous than standing armies. . . . Interdict forever to both the State and National Government the power to establish any paper banks.

Jackson said banks of issue threatened the perpetuity of our institutions. Benton said all property was at the mercy of banks of issue. The new Democracy says it would be an ideal condition to completely divorce the Government from banks of issue and to delegate the whole responsibility to the banks.

If this bill and the conduct of this Administration evinces the new Democratic creed to be promulgated and if the past record of the other great party shall be the light of its future on this subject, then it is high time indeed that from the abandoned ashes of the adored Democracy of Jefferson and Jackson and upon the cold embers of the Republicanism of Lincoln and Chase the masses of the people who weave and spin, mine and plow, and those of every caste who live by labor were aligning themselves with some party wherein humanity instead of accumulated wealth can get some recognition, where the debtor as well as the creditor will be considered, where the laws passed for the benefit of the masses may not be subordinated under the fraudulent guise of a governmental policy for the benefit of the favored few.

The critical Emerson declared parties perpetually corrupted by personality; that the masses of the association might be absolved from dishonesty but that the same charity could not be extended to the leaders; that they reap the reward of the docility and zeal of the masses which they direct; that as between the two great parties the Democrats have the better cause, for the liberalities and justice of which the philosopher, poet, and religious sects would like to vote, "but he can rarely accept the persons whom the so-called popular party proposes to him as representatives of these liberalities. They have not at heart the ends which give to the name of Democracy what hope and virtue are in it." What a precise diagnosis of the party condition to-day. In the light of recent events, can the "docility and zeal of the masses" who adore the precepts and examples of Jefferson and Jackson and the beneficence of pure Democracy be further impoverished and enslaved through the glare of insane partisanship for a moneyed oligarchy, and will they continue their "docility and zeal" though the heavens fall? I think there is a limit even to political and partisan endurance and that it has been about reached; that some party will, that some party must present men in the coming years who will have at heart the true and pure Democracy as taught by the founders.

The Currency.

SPEECH

OF

HON. J. O. PENDLETON,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 21, 1894.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. PENDLETON of West Virginia said:

Mr. CHAIRMAN: Since the history of our country began as an independent nation the American people have entertained as many irreconcilable opinions on financial questions as the entire civilized world has held with regard to matters of religion. I do not propose, in the few remarks that I shall address to the committee, to claim that I know more about these questions than others do. In fact, I think that gentlemen have already spoken upon this bill with more learning, with more lucidity, and more depth of thought than may be found in anything that I can hope to contribute to the current of the debate. I simply apologize for participating in the discussion, not only on account of the interest which seems to animate all my fellow-members, but on account of the interest that my constituents take in this matter, and also because I believe that every member should present his views upon these important subjects. And I am only sorry that in talking on a question of this character I have not had the business experience of the argumentative and disputatious gentleman from Massachusetts [Mr. WALKER], or that I have not had the benefit of having lived in a great commercial community, like the gentleman from the city of New York [Mr. WARNER]. I think myself that those two gentlemen probably embody in their minds a greater range of knowledge upon the financial questions that are at present disturbing the minds of the American people than any others on either side of the present House.

But, Mr. Chairman, although we can not contribute to the debate information of such a character as can be obtained from those trained experts, I think we can at least say something that will give our views on the existing situation and at the same time present to the House of Representatives the ideas that are entertained by the constituents whom we represent here. I do not suppose that in a period of fifty years our country has been more at sea upon the financial question than it is to-day. I think that the currency to which our people are at present subject inspires more distrust than any that we have had since the year 1837, when the old system of "wild-cat" banking flourished in its fullest amplitude and when bad finance and monetary disorder were the order of the day.

In this country we are in a different position from the people across the water. We still have financial questions agitating our people to a great extent. Other nations—I mean European nations—are involved in disputes over questions of liberty and government. They have in a great degree been able to solve their currency problems to their own satisfaction, but we have never yet been able to agree upon a financial system that met with any unqualified support from our people. Since the war between the States came to an end all political parties have been wrestling with the finances, and the long debate still seems to be without end. Until something is done that shall win to its support the suffrages of the majority of our people the debate will go on, the agitation will increase, and the discontent will not die.

All our people are not thinkers or students. They are neither financiers nor philosophers. They have, however, two ideas deeply planted in their minds. They do know that a large amount of their happiness depends upon the legislation affecting the circulating medium of the people and the method of assessing and collecting the taxes with which to support their Government. They believe, and correctly so, that the prosperity of the country depends, in a great measure, upon a speedy and a wise settlement of these vexed questions. At the first attempt to legislate a great difficulty faces us. We find that our people are disposed to divide on these questions, not according to the very right of the matter, not through an effort to find out what is best for all the people living beneath our flag, but nearly every man approaches this discussion from a sectional standpoint or with a desire to establish the truth of some pet doctrine and an unwillingness to let anything be done unless it proceeds from himself. But few of us are so patriotic or so self-sacrificing as to try to ascertain what is for the general good and what will bring great and lasting prosperity to the entire people regardless of the temporary interests of any locality.

Take a gentleman representing the State of Colorado or Nevada on this floor. He regards the currency question, which influences and decides the weal or the woe, the happiness or the misery of all our people, simply according to the narrow limits of the State of Colorado or Nevada. Gentlemen from those States, if they had their own way, would give the country what? Not only an unlimited coinage of silver at a ratio of 16 to 1, but every citizen of Colorado, every citizen of Nevada, everyone interested in the great silver mines of the West, would be willing to give the balance of the country, and have it sustain, a free and unlimited coinage at a ratio of 1 to 1. Then those people would be in the very sublimity of their happiness, the very paradise of their hopes. A great prosperity would be theirs for the time. Now, we should not in taking up this question suffer ourselves to be led by such considerations.

There is still another large body of people in the West and South who find a happy solution in the idea that if they obtain an expansion of our currency they may secure a cheap and a depreciated dollar with which to pay their indebtedness. There is a large class of our population animated by desires of this character; and that is all that more money means to them. There is still another large class in the cities of the East, where the great banks of the country are located and where accumulated wealth has been piled up until to-day in the State of New York and in the cities of the East you can find more wealth accumulated than was ever to be found in all the Roman Empire in its days of glory, in India in its period of greatest wealth, or in any other country of the world to-day, save in England alone—those people are the creditor people of our country; they are the money lenders; they are the people who, when they have loaned money, desire to obtain from the debtor in return, not what they have loaned him, but to make the dollar appreciate, to make the currency dearer, to make it more difficult to be obtained—they are the class of people who desire to have a dollar that shall be dear, and when dearest, shall be found entirely in their hands, so that when they obtain back the property or the money that they have loaned, they may obtain back a far greater sum or value than they have granted to the debtor.

I say we should not consider this question from the standpoint of any one of these three classes of our people. We should not try to pass a law in order to give a benefit to the creditor at the expense of his debtor, nor should we attempt to shape our legislation in order to give the debtor a benefit at the expense of the creditor, nor at the same time should we adopt a monetary system which will compel the balance of the country to pay tribute to the great mines of the West, and by legislation add a few hundred to the number of our silver millionaires. But we should attempt to solve this problem upon the idea that we are going to legislate for all the people; we should try to give our people what they need, what they have been crying for during generations, and what our Government should see that they have, if there be wisdom in our legislation and information in our statesmen; that is, a currency that will circulate from one end of the country to the other, that will be the same in intrinsic value to-day, to-morrow, and in the indefinite future, that will always be sufficient in volume for the wants of the business of the country, that will expand with the expansion of business, that will contract with the contraction of business, that will come out as the demand increases, and will retire to its hiding place in proportion as the demand decreases.

This is the automatic currency. This is the ideal circulating medium. This is what the mass of the people want. A medium of exchange that is the least liable to fluctuation, that approaches fixedness in its value, and enables creditor and debtor to do business with an approach to certainty. Unite with this feature the automatic theory of expansion and contraction and you will have given the American people a medium of exchange equal to that possessed by any people of the ancient or modern world.

Right on the threshold of this debate we are met by the question: What is a sufficient volume of currency with which to do the business of the country? How is it to be determined? Can the amount be fixed by legislation? Why, the very moment the law-making power establishes a fixed amount, a final quantity, that moment your medium of exchange loses expansion, contraction, is no longer responsive to the demands of business, and ceases to be automatic. It is evident to me that this question of volume can not be determined by law. I believe that the supply should depend upon the demand, and that the demand will always depend upon the business needs of the passing hour.

Now, what is a sufficient quantity of money with which to carry on the business of the country? Has any man ever yet discovered what is a sufficient quantity? Can any man tell what is the amount of money that our people need with which to carry on the mighty commerce of our great Republic? I will venture to say there is not a man within the sound of my voice who can tell me the amount of money that we ought to have. No man will solve that problem. The amount will rise and fall with the rise and fall of

business. It may be so much to-day, so much more to-morrow, and so much less the day after. We should legislate so as to place business, trade, and commerce in a position to answer this question for themselves. This bill is a long march on the right road, and for that reason, after it has been amended in some respects, it shall receive my hearty support. It is a pillar of fire that is casting a strong light on our financial clouds.

There are some people who seem to think that they can tell the amount which is needed to do the business of the country. They are the members of that party which has sprung up in recent years; I allude to our friends, the Populists. They tell us that if you give to the American people a fixed amount of money per capita—so much per head—that amount will be sufficient; and they have assumed an arbitrary ratio of \$50 per capita as the amount necessary with which to conduct the enterprises and the commerce of this magnificent country. But when you ask a votary of that theory to give his reasons why the amount per capita should be \$50, no more and no less, you can not find one who will give you a reason so intelligent that he can either understand himself or give anyone else the capacity to understand.

Mr. KEM. Will the gentleman permit me to ask him a question?

Mr. PENDLETON of West Virginia. Yes, sir.

Mr. KEM. I wish to ask the gentleman if he means to say that the People's Independent party, in State convention or otherwise, have declared that the circulating medium of the country should be \$50 per capita, no more and no less?

Mr. PENDLETON of West Virginia. My understanding is that the members of the Populist party in this country have attempted to tell the country just how much money is necessary to carry on its business, and for all the purposes to which money is applied; and that in reaching the solution of that question, of pointing out the quantity they deem necessary, they have arrived at a per capita circulation of \$50 for this country. That is my understanding, and I think it is a correct one.

Mr. KEM. If that is the gentleman's understanding, that the Populist party have hold, or held, or declare, that we should have \$50 per capita circulation in this country, and no more and no less, then I wish to state to him that his understanding is not good.

Mr. PENDLETON of West Virginia. Well, I differ with the gentleman as to the question of understanding.

Mr. HENDERSON of Iowa. The Omaha platform goes far beyond that.

Mr. PENDLETON of West Virginia. Yes.

Now, let me see if I understand the gentleman from Nebraska. His proposition is that at least \$50 per capita should be furnished to the people of this country, and as much more as the Populists may deem necessary.

Mr. KEM. Well, that is altogether a different proposition from the one the gentleman first stated.

Mr. PENDLETON of West Virginia. I want to get at your proposition. Now, what is it?

Mr. KEM. You have substantially stated it, or made a fair statement of it, at least, in the last portion of your remarks—that is to say, that we should have in this country a circulation of at least \$50 per capita.

Mr. PENDLETON of West Virginia. That is, the amount in the aggregate?

Mr. KEM. Yes, sir.

Mr. PENDLETON of West Virginia. And how much more?

Mr. BOEN. Let me ask the gentleman from West Virginia this question: Has the volume of currency in circulation anything to do with the prosperity of the country?

Mr. PENDLETON of West Virginia. No, sir; provided the amount in circulation is sufficient for the business needs of the country.

Mr. BOEN. That is the gentleman's opinion?

Mr. PENDLETON of West Virginia. Yes.

Mr. BOEN. Well, we contend that it is a matter of vital consequence, and that the volume of currency has a great deal to do with the prosperity of the country, and political economists agree with us on that point. Now, I hold that the prosperity of the country—

Mr. PENDLETON of West Virginia (interrupting). Oh, my dear friend, I can not undertake to run a little political kindergarten for the benefit of the Populist party while I am discussing a question of importance like this. If the gentleman desires to ask a question I will yield to him for that purpose, but only for a question.

Mr. BOEN. Then I will ask the gentleman what was the condition of the prosperity of the country in 1866?

Mr. PENDLETON of West Virginia. The country was exceedingly prosperous at that time.

Mr. BOEN. Well, in 1866 the per capita circulation was \$52.01 in this country, and you say the prosperity was good?

Mr. PENDLETON of West Virginia. Yes.

Mr. BOEN. Now, we claim that there is less than \$5 per capita—

Mr. PENDLETON of West Virginia. The gentleman must see that I can not yield to him for a speech in the brief time that I have. If he has a question I hope he will submit it.

Mr. BOEN. Then the question is this: We contend, I will say first—

Mr. PENDLETON of West Virginia. If I understand your contention, it is that the country should have at least \$50 per capita of circulation issued by the National Government?

Mr. BOEN. Yes, sir; that there should be about \$50 per capita, and the reason is this—

Mr. PENDLETON of West Virginia. Oh, well, now, if the gentleman will allow me I can give a good many reasons why it should not be so. I have no contention with him on that point. What I want to get at is as to his suggestion that \$50 per capita is the maximum, or is it the minimum?

Mr. BOEN. Our platform says "not less than \$50 per capita."

Mr. PENDLETON of West Virginia. And anything above that amount which you can get—

Mr. BOEN. Experience shows that \$50 per capita is about right.

Mr. PENDLETON of West Virginia. I do not care for the kind of experience the gentleman is referring to.

Mr. BOEN. Well, if you do not care about experience, what do you care about?

Mr. PENDLETON of West Virginia. I want to understand the Populist policy; that is what I am after now. It is not a question of experience at this time. Now, we have arrived at one point of agreement as to the Populist platform. We agree that the circulation should be at least \$50 per capita?

Mr. BOEN. Yes; that is Populism.

Mr. PENDLETON of West Virginia. Now, how much more?

Mr. BOEN. Well, \$50 is about the amount.

Mr. PENDLETON of West Virginia. And no more or less?

Mr. BOEN. Do you suppose you could get Congress to agree to a thousand dollars per capita?

Mr. PENDLETON of West Virginia. Then you mean that the people ought to have at least \$50 per capita, and as much more as Congress and the President, acting together at any time in the future, think proper?

Mr. BOEN. Yes, sir.

Mr. PENDLETON of West Virginia. And that is your policy?

Mr. BOEN. That is my policy.

Mr. DUNN. And he might add that they want that taken from the rich and given to the poor.

Mr. PENDLETON of West Virginia. Now, Mr. Chairman—

Mr. LACEY. I hope the gentleman does not concede that there were \$52 per capita in 1866?

Mr. PENDLETON of West Virginia. No; I do not concede any of the gentleman's propositions at all. While the country was prosperous in 1866, I do not concede that the volume of the currency had anything to do with it. I could give many reasons for that prosperity.

Mr. BOEN. We do not ask you to concede anything.

Mr. PENDLETON of West Virginia. I do not concede for a moment that the prosperity of any country depends in the slightest degree upon the quantity of currency in circulation among the people, provided that quantity be sufficient with which to carry on the business of the country. The question of the quantity of money per head of population is idle, childish, and the veriest trash ever uttered.

Mr. BOEN. That is all that the Populists demand—a sufficient amount of currency to carry on the business of the country.

Mr. PENDLETON of West Virginia. Yes; but you attempt to fix it by saying that it shall be at least \$50 per capita, and as much more as Congress and the President acting together may think proper to give, and I do not agree with that. I do not believe that Congress and the President know or ever will know what is the necessary amount with which to carry on the business of the country.

Mr. BOEN. How would the gentleman have the volume fixed? Whom would he have fix it?

Mr. PENDLETON of West Virginia. I propose that the volume of currency in this country shall be fixed by those who carry on the business of the country, and that is one reason why I am favoring the present bill, because I believe that it will give to the country an elastic currency that will respond to the demands of the business of the country. When business demands a thousand dollars, under this system it will be brought forth. When business demands that it be retired, under this system it will go back to its home. The prosperity of the country does not depend upon whether our circulation be \$10 per capita or \$100 per capita. This year or this month \$10 per capita may be amply sufficient for the business of the country. Next year or next month six times that

amount may not be sufficient. Business itself will tell the amount needed and, if you permit, will regulate the whole matter.

Mr. BOEN. Whom do you say is carrying on the business of the country?

Mr. PENDLETON of West Virginia. About seventy millions of the American people.

Mr. BOEN. Exactly.

Mr. PENDLETON of West Virginia. Farmers, plowmen, workmen, mechanics, lawyers, bankers, merchants, one and all.

Mr. BOEN. They should say it, but must they not say it through Congress, by legislation?

Mr. PENDLETON of West Virginia. No, sir; the demand will vary from time to time and legislation can not say what will be needed to-day or to-morrow. There are 356 wise and sober philosophers sitting in the House of Representatives of the United States. I think that, more or less, they are all intelligent men, but I say that there is not one of them, in his capacity as a Congressman, or all acting together collectively as Congressmen, who can give you the slightest idea as to the volume of money with which it is necessary to carry on the business of this country, and that Congress cannot regulate it because Congress knows nothing about it.

Congress can so legislate as to put it in the power of business to regulate it, and this is what by the principle of this bill we are trying to do.

Mr. KEM. Will the gentleman permit a question further?

Mr. PENDLETON of West Virginia. What is it, please?

Mr. KEM. You say the amount of money in circulation must be determined by the business—

Mr. PENDLETON of West Virginia. By the business of the country—the proper amount to be in circulation.

Mr. KEM. Then you say that the people who carry on the business of the country are composed of about 70,000,000 of people.

Mr. PENDLETON of West Virginia. Yes.

Mr. KEM. Will you please tell me how those 70,000,000 of people are going to determine the amount of money that is to go into circulation, and how you are going to get it into circulation?

Mr. PENDLETON of West Virginia. Very easily.

Mr. KEM. Wait until I get through. Let me ask my question.

Mr. PENDLETON of West Virginia. I am trying to make a talk upon this subject, and that is one of the questions about which I intend to speak, but you should allow me to approach it in my own way instead of switching me off on side issues.

Mr. KEM. I beg your pardon if you did not yield to me. I thought I had the gentleman's permission to ask a question.

Mr. DUNN. Will the gentleman from West Virginia allow me to ask a question of the gentleman from Nebraska?

Mr. PENDLETON of West Virginia. I can not go right on speaking all the time if gentlemen are going to carry on a side colloquy all through. I yield to the gentleman from New Jersey to ask a question of the gentleman from Nebraska.

Mr. DUNN. Is it not the idea of Populism that Congress has the right and the power to pass a bill here to give everybody something, and especially the Populists?

Mr. KEM. It is not. That question is on an average seemingly with the intelligence of the gentleman who asks it.

Mr. PENDLETON of West Virginia. Well, that is sufficient on that subject. I have been diverted to a considerable extent by these interruptions from the line of argument on which I started.

Now, the trouble has been in this country that there never yet has been, from the organization of our Government to the present time, a satisfactory currency with which to carry on the business of our people. We have never yet had an elastic currency, a currency that would respond to the needs of business and be at the same time a safe medium of exchange; be abundant when there was a great demand for money and become narrowed and confined when that demand for money ceased. We are to-day in a very different condition from the European countries. Nearly every great civilized European country—France, England, Germany, Austria, and Italy, one and all—has practically arrived at a solution of this question that is satisfactory to its people.

The English Government does not issue a currency for the people; the German Government does not issue a currency for the people; the French Government does not issue a currency for the people; nor does the Italian Government; and yet in all of these four or five great civilized nations at the present moment you will find no demand for an expansion or for a contraction of their currency. You do not find the British House of Commons taking up its time by debating financial questions that relate to the people's medium of exchange; and yet it is a fact that for the past twenty-five years more than half of the debates upon general subjects in the Congress of the United States have been upon the theory of attempting to arrive at a solution of this very question of medium of exchange.

Mr. BOEN. Do I understand the gentleman—
Mr. PENDLETON of West Virginia. Now, my friend—well, go on with your question.

Mr. BOEN. I understand from your argument that the Government should legislate for the banks?

Mr. PENDLETON of West Virginia. I have said nothing about the Government and the banks. You have not found the French Parliament giving up its time to the discussion of this question. You have not found the Italian Parliament devoting its time to determine whether Italy has too much or too little money. You do not find Germany discussing any such question as that. It is true that we find cranks in Germany upon many questions, but throughout Germany you heard of no cry arising as to inflation by the Government or contraction by the Government; and if the people of that country under their present financial system were suffering from want; if they were meeting with great disasters and this wreck and ruin were coming upon their country, with all the cranks that have been turned loose in Germany, with all the social philosophers running up and down that happy land, with all their quack nostrums afloat, and with all their anarchists running loose across that vast plain, with wild and foolish notions in their crotchety heads, you would have, under universal suffrage, a party springing up and trying to uproot the monetary system under which the German nation has been flourishing for the last twenty-five or thirty years.

These people have a currency that expands or contracts, that responds to the business demands whether that business be mercantile, manufacturing, or agriculture, or be any kind whatever; and you will find that condition to prevail to-day in nearly all the countries of Europe with one or two exceptions. But this country, which is supposed to be the most ample in resources; this country, which is believed to be in itself a whole continent in wealth and the most unlimited in capacity to furnish the means of comfortable and of decent livelihood—this country for more than twenty years has been delivered up to the mercies of all the quacks that have been allowed to run in the land; and every fad has had its day and every crank his hour, and we have had every theory of finance, every theory that strong and powerful parties could suggest or the brain of disease could invent and foist upon the people for their adoption or rejection, their bewilderment and general demoralization.

Now, I say that the man who can give the country a system of currency that will have the benefit of responding to the demands of the business of the country, expanding when business expands and contracting when business contracts, will furnish the country what it wants, will be the patriot of our times, and will do much to bring again to our doors that progress, prosperity, and happiness to which the intelligence, the morality, and good citizenship of the American people give them as ample a title, as unlimited a right, as any people in the world. As I said before, I shall support this bill, not because it is perfect, but because it is a step in the right direction. I support it for another reason. Something must be done. It does something. It is the only opportunity to do anything for a year to come. The people are demanding action. They are suffering. They are crying out, "Do for us what legislation can do." Let us on, then. Let us take this bill in our hands, perfect it if we can. The whole subject is before us, and this is no time for hesitation. From ocean to ocean a cry of distress has gone up to the heavens. You know, we know, that the country is in a disastrous condition. It has been so for at least two years.

You Republicans lay the blame on the Democrats—we hurl the charge back upon you. The legislation under which these conditions exist is yours. The superstructure is yours, and it has given away and has come down upon all our heads with a mighty, overwhelming crash. You made these conditions. We ask you to help us meet them like men.

The Democratic Congress came into power on the 4th day of March, 1893, and a Democratic President along with it. We did not find our pathway strewn with roses. We did not find that we were upon a bed of ease. We found that for thirty years the Republican party had been making the laws of the land; that the currency system under which we were living was of Republican origin. We found that the tariff system of taxation under which the country had been living for a third of a century was also of Republican origin.

We found every law on the statute books of a general character, for the weal or woe of this land, had originated with the Republican party; and on the 4th day of March, 1893, we further found a bankrupt, a discredited, and dishonored Treasury as the result of the preceding financial legislation. I do not know whether our Republican friends are to be charged with the misdeeds that had come upon the country or not, but I do say that for thirty years the legislation affecting the finances of the country was theirs; for thirty years the legislation affecting the tariff of the country was theirs; for thirty years the legislation affecting the prosperity of the land was theirs; and yet on the 4th day

of March, 1893, the very moment that party retired from power, we found that the result of thirty years of their legislation meant panic and crash, ruin and destruction from one end of the land to the other. Our Republican friends sneer and laugh with derision when their attention is called to the net result of their misgovernment, and battle as fiercely as a gladiator against every attempt at reform and every measure for improvement. They will not originate anything, and proclaim their intention to fight, hinder, delay, and obstruct—anything and everything that anyone other than themselves may originate or propose. Verily of such is the kingdom of Heaven.

We found a financial system that required us to maintain three hundred and forty-six millions of greenbacks as redeemable in gold, and yet under that system what did we find could come to pass? We found that astute bankers, that people who desired gold for shipment abroad or for other purposes, had the absolute power to bleed the Treasury of every dollar of gold in it. We found no protection against that except, what? An indefinite issue of Government bonds. Whenever the people desiring gold took one hundred millions of it out of the Treasury, as, under the law, they had a right to do, the only way we had to replace that gold was to negotiate a hundred million dollars of bonds and thus obtain another hundred millions of gold; and within the last year and a half we find that we have been twice compelled to negotiate large amounts of bonds in order to replenish the gold taken from the Treasury.

We find to-day that the same danger continues to lurk in our system, and in all probability in a few weeks, or at most in a few months, we shall find the Treasury again compelled to negotiate more bonds in order to again supply the gold which will have been taken from it under our present system. There is nothing to prevent in this way the creation of an indefinite amount of bonded debt. Now, that system is not of Democratic origin. It is a system which our Republican brethren devised. But this is not all that we found when our Republican friends retired from power. What else did we find? We found the financial system in disorder, the Treasury bankrupt, and in addition to that a business panic coming upon the country. All of these things, I know, have been charged by the Republicans upon the Democracy, but it does seem very strange that, after thirty years of control of the policy of this Government by our Republican brethren, the very moment a time of storm and stress came the structure which they had reared gave way like a house of cards.

As I have already said, in addition to a disordered financial system and a bankrupt Treasury, a great business panic came upon the country; and all these things came at once. Why? Gentlemen, it was your vicious financial system and your vicious tariff system, acting together, that brought us to this pass. In 1890 you had a tariff whose average rate of taxation was 47 cents on the dollar. One would have supposed that that was high enough to afford the protection that some of our people desired, but by the McKinley law that average rate was suddenly raised from 47 to 59 cents on the dollar. What was the consequence? The very manufactures around which the "protection" of that tariff was thrown increased in profit and in value, and, as the tariff was raised higher and higher upon certain articles, more and more capital, more and more plants, more and more people were brought into those industries, so that in a few years, under the extraordinary stimulation that you had given by your new tariff, you found that in many instances our people could manufacture more goods in two years than the country could consume or purchase in three or four years. In that way, inside of a short period of time, you had completely glutted the markets of this country, had completely overstocked our markets far beyond the demands of the people.

As a consequence, when you had oversupplied the market in all its demands, you were compelled to allow your mills to stop, and men were thrown out of employment and compelled to wander up and down the country, like tramps, seeking work. Then, when by an artificial development of manufactures in the way I have described, you had disturbed and disorganized the business of the country, by producing the most gigantic glut of manufactured goods that this country had ever experienced, finding that your manufactures had suddenly to stop until the demand could catch up with the supply, you turned around and blamed your panic upon another party that really had nothing to do with it. Now, I do not say that it was your intention, by enacting your McKinley law, to create a panic.

I do not say that it was your intention by your Sherman act legislation to produce any disturbance in the finances of the country; but I do say that by your financial legislation and your tariff legislation, especially your Sherman silver act and your McKinley bill, you did more to bring hardship, want, distress, and misery upon the American people than was done by all the other legislation that has been on our statute books since the year 1837. And now when a proposition is made here to do something for the benefit of the country which you have plunged into distress, when a bill regu-

lating the financial system of your land is, as it were, tossed into the House of Representatives without recommendation, with every opportunity for amendment, with every opportunity given to perfect it and make it not a party bill but a bill for the benefit of all the country, I say it is as much the duty of the Republicans as it is of the Democrats to try to improve that bill and see if we can not together accomplish some good for the entire country by enacting it or something similar into law.

But as I understand the attitude of gentlemen on the other side, it is this: "You shall have no financial legislation unless it be of Republican origin; you shall have no legislation to try to improve the financial condition of the country unless it be legislation that we Republicans ourselves agree upon and pass, and you must wait a year until we take hold." That is the spirit with which one side of the House, the Republican side, meets this great question. On the other side we find a disposition on the part of some gentlemen to say: "Unless you give us unlimited coinage of silver at the ratio of 16 to 1 you shall have no financial legislation to improve the condition of the people." Mr. Chairman, between ideas and influences of this character I fear the present bill is going to have a very troublesome voyage as it sails its way along through the House.

This is not the spirit of the fathers. This is not the voice of the Clays, Calhouns, or the Websters of a happier and a purer day. This is not the example of Lincoln, Sumner, Seward, and Chase. In their day, when the enemy was at the gates, every voice said that all should see that the Republic suffered no harm. But I say it is your duty, Republican brethren, as well as the duty of the Democrats, to see that we do get some legislation at the present Congress which will do something to give the American people the kind of relief they should have.

How are you going to give them an elastic currency? Are you going to give them a currency by leaving the total amount of currency just as it is to-day in this country? We now have nearly \$1,700,000,000 of circulation throughout the country; it consists of greenbacks, of gold and silver, of gold and silver certificates, Treasury notes, and national-bank notes. If the business of the country should suddenly become three times as great as it is to-day, there is not the least provision under our present financial system for expanding that currency to the extent necessary to meet the new condition of business; and there is no provision to prevent the congesting of the money in a few centers. That is the situation in which we are to-day.

Mr. HENDERSON of Iowa. I have listened with some interest to my friend's arraignment of the Republican party—

Mr. PENDLETON of West Virginia. I always like to have you do that.

Mr. HENDERSON of Iowa. And I would like to know whether the gentleman is giving us the argument he made in West Virginia during the last campaign?

Mr. PENDLETON of West Virginia. No, sir; I did not talk on the financial question at all. I made the tariff my text.

Mr. HENDERSON of Iowa. But you arraigned the Republican party on the whole business.

Mr. PENDLETON of West Virginia. I arraigned the Republican brethren on extravagant expenditures—

Mr. HENDERSON of Iowa. It looks to me as though you were putting on record here the speech you made last fall—

Mr. PENDLETON of West Virginia. No, sir.

Mr. HENDERSON of Iowa. And if so I should like to know whether you got the people of West Virginia to believe what you are now saying.

Mr. PENDLETON of West Virginia. I am only putting on record the speech I am making now. If I had been able last fall to go to the Republican citizens of West Virginia and tell them—

Mr. HENDERSON of Iowa. Did not you give them the benefit of your ideas last fall?

Mr. PENDLETON of West Virginia. Let me get through. If I could have gone before the people of West Virginia while the last election was pending, especially the Republican citizens of that State, and have told them that a party which on every hill-top, in every valley, and on every plain of that State has proclaimed that it possesses the learning, the intelligence, and wisdom of all the people of the country would lie here supinely upon its back when a great financial measure for the benefit of the people was introduced into this House, doing nothing and attempting to do nothing and proclaiming that it did not intend to do anything, it is my opinion that instead of there being 13,000 Republican majority in West Virginia, that party would have been buried as dead as the corpse of ten thousand years ago.

Mr. HENDERSON of Iowa. Was the gentleman muzzled during the campaign?

Mr. PENDLETON of West Virginia. No, sir; but I did not think you were going to come here at this session and take this position.

Mr. HENDERSON of Iowa. It is a great misfortune West Virginia did not hear you.

Mr. PENDLETON of West Virginia. Certainly it was a great misfortune. You and I agree on that.

Mr. HENDERSON of Iowa. Yes; and I am lying like a thief when I say so. [Laughter.]

Mr. PENDLETON of West Virginia. The gentleman and I agree entirely on that proposition. As to your capacity for "lying," I have nothing to do with that; and I desire to have nothing to do with it. The gentleman can reserve to himself the amplest capacity for "lying" that he may desire to have. West Virginians know nothing about that kind of politics. We try to tell the truth.

Mr. HENDERSON of Iowa. It is too bad that West Virginia did not hear you last fall.

Mr. PENDLETON of West Virginia. Now to come back to the question at issue—the bill before the House. As I have said, I do not suppose there is a single man present who is in favor of this bill as it was presented to the House of Representatives. I do not suppose a single member of the committee is for the bill without the dotting of an "i" or the crossing of a "t." And that is one reason why I like this bill. It has been thrown by the committee into the House of Representatives without recommendation, with the widest opportunity for debate that could reasonably be asked under our rules, in harmony with the duration of the present session.

It has been thrown in here that the 356 members of this House, one and all, Republicans and Populists and Democrats, may try to respond to the duty that has devolved upon them under the commissions which they hold to legislate in this Hall for the American people. It is just as much the duty of my friend, General HENDERSON of Iowa—because he is a gentleman of far more experience and learning and national reputation than I, and has been for a long time a great leader among the people—I say it is his duty if he disapproves of this bill, if he does not believe in it, but knows that the people are suffering, and that while men are fiddling Rome is burning—it is his duty on this floor to suggest something better than has been offered; and if his proposition be such as commends itself to my discretion, such as I can advocate, I will welcome it just as heartily from General HENDERSON of Iowa as I would from John G. Carlisle, of Kentucky.

So that our Republican brethren, when they leave this House on the 4th of March next and go home and tell the people that a great financial measure for their relief was before the House, and they had ample power to amend and improve it—they must not tell the people that they did not embrace such an opportunity because they were not in the majority. It is their duty to contribute their mite; it is their duty to contribute their information to the general fund. But, Mr. Chairman, instead of that, when they have been asked to contribute in that regard and not to wait a year, until December next, to show the country what they could or might do, their answer is in substance that they will have nothing to do with the bill; that they are only here to obstruct.

I think the system that has been advanced in this bill is a strong and a sound one in many respects. I do not agree with it in all of its details; I do not accept it in toto, but I think that it responds to the demands of our people in favor of an elastic currency. What is the system? It is hardly necessary for me to go through it in detail, for the House has had it already ad nauseam. Everybody has probably heard what it is. It means that any banking association with a capital stock of say \$100,000 may take out, under the regulations provided in the bill, 75 per cent of its capital stock in circulation and use that as bank notes are ordinarily used; that is to say, it may take out \$75,000 of circulation for every \$100,000 of capital.

As security for the notes it proposes to use, what does the bill do? It requires that 30 per cent of that circulation in greenbacks or Treasury notes of the act of 1890, or about \$22,500 on every \$75,000, shall be left with the Treasurer of the United States as security for the redemption of the notes. In addition to that, all of the banks that enter into the system are taxed one-half of 1 per cent per annum upon their circulation, all of which is to be collected and paid into the Treasury of the United States to form a fund called a safety fund, and that system of taxation is kept up until that fund reaches an amount equal to 5 per cent of the outstanding circulation of all the banks. Here is ample security for the safety of the notes. In addition to this the notes of each bank are to be a first lien upon all the assets of the bank issuing them. Each stockholder of a failed bank is to be liable for the notes of the bank to an amount equal to his holding of stock. Thirty-one years of experience have shown under the present national banking system that the redemption fund of 5 per cent now required has always proved sufficient to redeem the notes of the national banks that have failed during that time. It is not likely that the guarantee fund of 30 per cent would ever be called into use.

I do not believe that any system could be presented here which would make them stronger or safer. I do not believe that better security in all respects for the safety of the notes could be invented. It is better than the security offered by the Bank of England for

its issues. Take the Bank of England to-day. It issues its notes, and in every hour of its history of two hundred years there never has been one moment that the bank was not able to redeem its notes. It has been in existence ever since 1694, and during that long period of two centuries the Bank of England notes have been, throughout all the civilized world, as good as gold. And yet the security for the Bank of England note is not as good as the security proposed here.

Mr. HEPBURN. Will the gentleman allow me to ask him a question for information?

Mr. PENDLETON of West Virginia. Certainly.

Mr. HEPBURN. I would like to ask for information, while the gentleman is on that branch of the subject, this question: It is stated that a tax of one-half of 1 per cent a year must be levied on all of the banks to form the safety fund.

Mr. PENDLETON of West Virginia. Yes.

Mr. HEPBURN. It will take ten years to form that fund in its completeness. Now I want to ask, during that period when the statute fixes the limit of the tax, namely, one-half of 1 per cent a year, would a bank be liable to be required to make good the deficit in the safety fund at any period before the expiration of the ten years?

Mr. PENDLETON of West Virginia. I think it would. I think that is the spirit of the bill, but it may require some verbal corrections in order to make it complete.

Mr. KEM. Will the gentleman yield to me for a question in this connection?

Mr. PENDLETON of West Virginia. Certainly.

Mr. KEM. You said a few moments ago that the Bank of England had been always able to redeem its notes in gold during all of the years of its existence, some two hundred years.

Mr. PENDLETON of West Virginia. Yes, sir.

Mr. KEM. Now, for information, will the gentleman please state how many times the Bank of England has suspended specie payments?

Mr. PENDLETON of West Virginia. Never.

Mr. GEAR. The gentleman is mistaken in that.

Mr. KEM. I am sure the gentleman would not go on record with that statement.

Mr. PENDLETON of West Virginia. I know that in 1797 the Bank—

Mr. GEAR. Let me call the gentleman's attention to the fact that the bank suspended specie payments half a dozen times since it resumed, originally, after the Napoleonic wars, by orders of the Government Council.

Mr. PENDLETON of West Virginia. I never heard of a suspension of specie payment except in 1797, when the bank was forced to pay out pennies and small silver coins in its business—

Mr. GEAR. I am sure the gentleman wants to be correct.

Mr. PENDLETON of West Virginia. Certainly.

Mr. GEAR. The bank suspended specie payments six times by order of the British Council.

Mr. PENDLETON of West Virginia. The gentleman's information is superior to mine. That does not contradict my statement. It is true that the council has at different times compelled the bank to temporarily suspend specie payment, but the Bank of England has ultimately redeemed every obligation in gold and no one has ever lost a cent by holding a Bank of England note at any time during its long history of two hundred years.

But, Mr. Chairman, what is the security for the Bank of England notes? It is not anything like that which is offered here. Here is a security not only of the 30 per cent which is withheld in the Treasury, and here is the security of the 5 per cent safety fund added, and in addition to that here is a security of all of the assets of the insolvent bank.

We have, then, the security of all of the assets of the broken bank in addition to the security which comes from the double liability of the stockholder and the compulsory liability of all of the banks to be exposed to assessment in order to make up a deficiency or failure in the 5 per cent guaranty fund, and that provision makes every bank in the system responsible for the money that may be issued by the other banks—the greatest security that could be given. I do not believe you could to-day make any security of the United States as strong; certainly you could not make it stronger than that. The Government in the time of storm, in stress, has never yet been able to maintain its credit unimpaired. During the civil war when the Chemical Bank of New York, a private institution in that city, was able to stand the pressure and able to help the other banks and institutions that were in trouble, the Government credit ran down until the obligations of the Government were worth but little more than one-third of their face value. But I do not believe that the time will ever come when the entire bank capital of the United States could be wiped out under this system.

I do not believe that the time would ever come in our history when the entire assets embarked in the 4,000 national banks in the country to-day, or any other 4,000 banks, could be so completely

destroyed as to make them unable to meet the notes that would be issued under this system.

Mr. HEPBURN. May I be permitted to suggest to the gentleman in this connection that there are 3,800 of these national banks?

Mr. PENDLETON of West Virginia. Something over 3,700.

Mr. HEPBURN. The failure of 100 banks, perhaps, during the year, would not be a large number; but has the gentleman ever thought that to make these requisitions good would require the writing of 380,000 requisitions upon these banks?

Mr. PENDLETON of West Virginia. I do not suppose that would be any great amount of trouble. I suppose they could easily write 3,800 letters.

Mr. HEPBURN. Three hundred and eighty thousand.

Mr. PENDLETON of West Virginia. I thought you said 3,800 letters? Why should you write 380,000 letters?

Mr. HEPBURN. Because there might be a hundred failures in a year, at a small estimate, and a requisition would have to be made upon each bank for each failure.

Mr. PENDLETON of West Virginia. Well, I think that could be done without any trouble, but at the same time I think my friend is a little imaginary in his idea. It might necessitate a little more clerk hire. Take any average of one hundred banks, and if during the year they fail, that of itself would not be sufficient to begin to use up the safety fund. In order to suppose that these notes would not be good in the hands of the people, you have to suppose that nearly four thousand million dollars' worth of the assets of the banks are nine-tenths utterly destroyed, and, in addition to that, you have to suppose that the whole guaranty and safety fund in the Treasury would be wiped out. Now, you have in existence what? You have a guaranty fund of 30 per cent of the circulation, and you have a safety fund of 5 per cent. In addition to that, you have the total assets of 3,800 or 3,900 banks, with four thousand million dollars capital—all to redeem what? At the outside, not over five hundred millions of circulating medium. You have that gigantic capital, and never in the history of our country has any commercial disaster of any kind, any ruin or desolation that has fallen upon our country, ever destroyed one-twentieth part of that quantity of banking capital. Why, in the panic of 1893, when we had this great commotion, only about 140 or 150 banks suspended.

Mr. GEAR. Suppose we had such a panic as we had in 1857-1860, when all the banks went under?

Mr. PENDLETON of West Virginia. The banks might suspend, but the assets of the banks would be there. We have had many panics that compelled banks temporarily to close up their business, but we never yet in the present century have had a panic in this country nor in any other civilized country that wiped out or destroyed one-third, or one-fourth, or even so much as one-tenth of the assets of the banks engaged in the banking business.

Mr. HEPBURN. Admitting that the bill holder might ultimately secure his money, what would the business of the country do during that time when these banks were in suspension, or perhaps in process of liquidation? While you were trying to realize upon the assets what would become of the circulation?

Mr. PENDLETON of West Virginia. I do not think there would be any trouble about it. I think the circulation would just go on, because that feeling of confidence would be among the people, who, knowing that all these assets were to meet these notes, would know that it was just as good security as the National Government itself.

Mr. GEAR. I call the gentleman's attention to the fact that during the panic of 1857-1860 hundreds of banks suspended.

Mr. PENDLETON of West Virginia. I know.

Mr. GEAR. Hundreds of banks failed.

Mr. PENDLETON of West Virginia. I know.

Mr. GEAR. And never paid the bill holders anything?

Mr. PENDLETON of West Virginia. I do not know anything about that; but I know this, and the gentleman will not dispute it, that no commercial disaster ever occurred in any year in the history of this country which wiped out or destroyed one-tenth of the assets of the banking system of the country.

Mr. GEAR. Let me call the attention of my friend to the fact that under the wild-cat system there were no assets.

Mr. PENDLETON of West Virginia. I am talking with regard to national banks, not wild-cat banks. We do not propose any wild-cat banks under this bill. We propose banks with assets. If they have none they will be promptly closed.

Mr. GEAR. The national banks as we have them to-day are one thing, but the national banking system proposed under this bill is another.

Mr. PENDLETON of West Virginia. Recollect that I am talking simply with reference to the national banking system, and not with reference to the other part of the bill at present. When I get to that I hope to be able to satisfy the gentleman.

The CHAIRMAN. The time of the gentleman from West Virginia [Mr. PENDLETON] has expired.

The Currency.

SPEECH
OFHON. R. E. DE FOREST,
OF CONNECTICUT.

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 21, 1894.

On the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes.

Mr. DE FOREST said:

Mr. SPEAKER: The existence of dangerous defects in our present financial system and the imperative necessity of immediate Federal legislation to correct them appear to be universally conceded.

Upon this one point at least all the discordant theories of opposing parties, of rival sections, of selfish schemers, and concerted theorists blend into harmony.

Moreover, the officers of the Government, from the President down, burdened by the actual experience of the difficulties and dangers now attending the management of the Treasury, proclaim the need of such relief—the business public demands it. The press, of all shades of opinion, clamors for it. No gentleman upon the floor of either House of Congress denies the justice of this appeal.

It must, therefore, be admitted that no conscientious member of this body will refuse to contribute his strongest efforts to the enactment of some law—the best law that under the circumstances can be agreed upon for the attainment of this end.

Impressed with this sense of duty, I shall vote for the bill presented by the committee in its revised form, believing that, of all the projects submitted, it is the one most calculated to gain the approval of the majority of the House, one from which no evil results can be reasonably apprehended, and one which, to some degree at least, promises escape from the perils that now environ us.

It does not in every respect conform to my individual opinions or to the preferences of all my constituents. It would be folly to expect it. The member of Congress who expects to stamp the peculiar conceit of his own brain or of his own section on every line of every statute for which he casts his vote has failed to learn the first lesson in legislation. We gather here from widely separated and differently situated localities, we represent constituencies of all peculiarities of sentiment and thought and of vastly diverse and often conflicting interests.

In the enactment of laws for our common government each is expected to contribute the views and present the claims of his own district, but it is equally expected that in every case the result of our deliberations will partake of the nature of a compromise.

The committee of the House to whom this matter was referred have considered it and reported upon it from that practical standpoint; have heard the testimony and listened to the argument of the representatives of every quarter and of the exponent of every financial doctrine, and have recommended this bill, not as the perfection of wisdom, not as exclusively embodying the ideas of any particular school, but as one conducing to certain general results desired by the great majority, and so freed from objectionable features as to invite the support of all who in the scale of motive hold the love of country above private greed or party zeal.

And, sir, I must be permitted to say that, all other considerations aside, in my humble judgment, almost if not quite a sufficient guaranty of the wisdom of this measure is found in the character of the opposition that assails it.

One wing of this opposition is composed of that school of philosophers who profess to believe that the material salvation of society depends upon the unlimited coinage of silver at the ratio of 16 to 1. It is the voice of the mine owner asking the Government to furnish him a market for his product. It is the voice of the insolvent debtor yearning for that happy time when he can discharge his financial obligations by paying 50 cents on a dollar.

There doubtless is an element of popularity in this cry.

In those sections of the Union where its mineral wealth has fallen into certain dominant hands that hold the laboring population in their power by giving or withholding employment at their option, and where by the unscrupulous exercise of that power that population has been made to believe that their livelihood depends upon the governmental purchase and consumption of silver, it is easy to see that free-coinage statesmanship is a simple and flowery pathway to greatness.

Again, in those sections where a majority of the people have borrowed from wealthier sections and are unable to pay, that prophet who depicts in glowing colors the coming year of jubilee, in which by an abundant supply of cheap money that burden of indebtedness can be lifted at half price, will undoubtedly be received and

heard and followed and supported with boundless devotion and enthusiasm. This sentiment is no more than might be expected from a purely local and selfish standpoint, and men, perhaps, can not be fairly blamed for it, in view of the stupendous examples of class legislation that have been set in the proceedings of Congress during the last thirty years. But it is none the less a dangerous departure from sound, safe, and honest principles of government; it is none the less an attempt to prostitute the powers of the State to private, not to say dishonorable, purposes; it is none the less an attempt to perpetuate robbery under the forms of law.

It stands upon no foundation of public good. It rises to no height of pure philanthropy or comprehensive patriotism. It has no legitimate place and deserves no recognition in the field of our Federal operations. And the more its advocates antagonize the pending bill the more the pending bill is commended to our favorable consideration.

Another wing of the opposition is made up of our Republican friends. Admitting the urgent necessity for some such legislation, assuming to be veritable paragons of wisdom and virtue in public affairs, pretending that they know precisely what ought to be done and how to do it, bound, moreover, as they are by their solemn oath of office to use their utmost endeavors to provide such laws as the general welfare requires, they nevertheless, without any other apparent excuse or pretext than the hope of some paltry partisan advantage, ignore that solemn and sworn obligation, and presenting no substitute and offering no suggestion, substantially by their conduct avow their determination to defeat any measure, no matter what its merits may be, formulated by the present House to avert the impending financial dangers.

The hostility to any measure of a party that will deliberately place itself in such an attitude is strong evidence in favor of its enactment. It is safe to assume that a party governed by such motives would be more apt to oppose a bill of Democratic origin by reason of its recognized merits than because of its alleged defects.

True it certainly is that the Republican party has good reason to distrust itself and the public has good reason to distrust it in any part it may attempt to play in the monetary and economic affairs of the country. Among many, perhaps the most cogent reason for action to-day is found in the fact that the incoming Congress will be under Republican control.

We have been passing through and have not yet fully recovered from a financial and industrial depression which derived its origin and destructive force from the period of Republican supremacy and chiefly by means of Republican misgovernment.

The stupendous fraud practiced upon the people in the recent election by folly on the one hand and falsehood on the other, the fraud by which the recent business reverses and labor losses were charged to the Democratic party instead of to their real Republican authors, is, of course, obvious to every intelligent student of history. The bankrupt condition of the Government, the disturbed and enfeebled state of every kind of private enterprise, the impairment of capital, the loss and reduction of wages, which culminated in the early months of the present Administration, before the Democratic party, just coming into power, had been able to enact a single law or enforce a single line of its policy, every thoughtful citizen well knows, and every honest one will admit, the Democratic party was not in the slightest degree or particular responsible for.

It was, however, and no sophistry or falsehood can disguise the truth—it was the natural, anticipated, and distinctly predicted result of vicious Republican legislation then in force, and which for many years had been drawing us on to this ruinous crisis—vicious financial legislation, vicious tariff legislation.

And, sir, both these vicious and ruinous policies of legislation were persevered in by that party against the light, in the face of their own testimony, and with full knowledge of their disastrous tendencies.

When that party inflicted the Sherman silver-purchasing law upon the country its managers knew its dangerous character as well as when they conceded the necessity for its repeal.

They had before their eyes the practical and unmistakable demonstration of that dangerous character in the experiment in silver purchase and silver coinage which they had been carrying on since 1878. They very well knew that the uniform effect of that experiment had been the greater and greater depreciation of the intrinsic value of that metal, and that its continuance meant an inevitable drift toward the silver standard, public and private debt repudiation, and the endless train of calamities and dishonors accompanying such a course and involved in such a conclusion.

Yet they deliberately passed that law, doubling the annual governmental purchase of silver, doubling the speed and certainty of our progress toward that financial stringency which constituted the most potent factor in the recent depression. They did it against the light; against the testimony of their own consciences—House, Senate, and President; that party of great moral ideas, that assumes, through its press, and through the utterances of that same dis-

tinguished gentleman, ex-President Harrison, who signed the bill, and through its orators upon this floor and in the Senate who were parties to that business, assumes to teach political virtue and wisdom to its opponents. They did it—and they did it, as the hand of impartial history has recorded it, and as to all time it shall stand so recorded—from no other reason or motive than to gain by that base means, at their country's expense, the support in the then coming Presidential election of those States that were seeking, and thereby obtained, a market for their silver.

Well, indeed, may the people distrust a party that thus flagrantly betrayed the public weal; well, indeed, may they look with profound solicitude to the present Congress for the perfection of those currency reforms inaugurated by the Democratic party in the repeal of the Sherman silver law.

The incoming Congress can not safely be intrusted with this important work. That Congress will be controlled by the same distinguished gentlemen who before this bartered away the welfare of the land for the support of silver-mining communities. Another Presidential election is coming on. Republican success in the Electoral College and supremacy in the Senate may again depend upon those Northwestern boroughs created by that party for that purpose. The same unscrupulous spirit that prompted the former betrayal may lead to its repetition. We hear to-day ominous mutterings from Republican oracles pointing in that direction. Our only safety lies in such a prompt and thorough settlement of the question by the present session of Congress as will leave no necessity or excuse for its subsequent agitation.

Again, the tariff policy and legislation of the Republican party was one of the principal causes of our recent depression; and this also that party persevered in against the teaching of all experience and the dictates of their own better knowledge. In the earlier and better days of that party, before it had entered into the infamous league which it afterwards formed with special interests to rob the great body of the taxpayers for the enrichment of a privileged class, its great founders and leaders, almost without a single exception, pronounced in favor of tariff reduction, and such reduction it repeatedly, expressly promised in its national platforms. In 1882 its own tariff commission, composed chiefly of Republicans, appointed by a Republican President, pursuant to a vote of a Republican Congress, after the most careful, thorough, and impartial investigation of the entire subject, and speaking with reference to the tariff then in force, a tariff far lower than those that have since prevailed, in their report made use of this significant language:

Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinions of the country, including that which in former times has been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as a due recognition of public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction.

No rates of defensive duties except for the establishment of new industries, which more than equalize the conditions of labor and capital with those of foreign competitors, can be justified. Excessive duties of those above such standard of equalization are positively injurious to the interests which they are supposed to benefit. They encourage the investment of capital in manufacturing enterprise by rash and unskillful speculators, to be followed by disaster to the adventurers and their employees, and a plethora of commodities which deranges the operations of skilled and prudent enterprise. Numerous examples of such disasters and derangement occurred during and shortly after the excessive protective period of the late war, when tariff duties were enhanced by the rates of foreign exchange and premiums upon gold.

Excessive duties generally, or exceptionally high duties in particular cases, discredit our whole national economic system and furnish plausible arguments for its complete subversion. They serve to increase uncertainty on the part of industrial enterprise, whether it shall enlarge or contract its operation, and take from commerce as well as production the sense of stability required for extended undertakings. It would seem that the rates of duties under the existing tariff, fixed for the most part during the war under the evident necessity at that time of stimulating to its utmost extent all domestic production, might be adapted through reductions to the present conditions of peace requiring no such extraordinary stimulus. And in the mechanical and manufacturing industries, especially those which have been long established, it would seem that the improvements in machinery and processes made within the last twenty years and in the high scale of productivity which has become a characteristic of their establishments would permit our manufacturers to compete with their foreign rivals under a substantial reduction of existing duties.

Entertaining these views, the commission has sought to present a scheme of tariff duties in which substantial reduction should be the distinguishing feature. The average reduction in rates, including that from the enlargement of the free list and the abolition of the duties on charges and commissions at which the commission has aimed is not less on the average than 20 per cent, and it is the opinion of the commission that the reduction will reach 25 per cent. The reduction, slight in some cases, in others not attempted, is in many cases from 40 per cent to 50 per cent.

But the Republican Congress to which that report was made turned a deaf ear to its warnings, and in response to the demands and promises of its monopoly seeking favorites increased instead of reducing tariff taxation.

Then once more, in 1890, having again in the previous campaign given out the assurance that if intrusted with a further lease of power tariff rates should be reduced, in place of the relief thus

solemnly and repeatedly promised, they gave us the crowning violation of all pledges in the yet higher and more extortionate and even prohibitory rates of the McKinley law.

The natural results of such folly in the disarrangement and discouragement of all legitimate industry precisely as prophesied by the Tariff Commission, came in the period of hard times through which the country has lately been passing.

We have seen the "investment of capital in manufacturing enterprises by rash and unskillful speculators to be followed by disaster to the adventurers and their employees, deranging the operations of skilled and prudent enterprise." We have seen how the "excessive duties generally—the exceptionally high duties in particular cases," thus imposed upon the people by the Republican party, not only prohibited importations till the Treasury was bankrupt and distrust and stagnation thereby created in every department of industry, not only raised the price of all the necessities of life and thus added to the distresses of the laboring poor, but also "discredited our whole national economic system—increased uncertainty on the part of industrial enterprise whether it should enlarge or contract its operations, and took from commerce as well as from production the sense of stability required for extended undertakings," just as the Tariff Commission of 1882 foretold.

These afflictions came upon us under the McKinley tariff law, as a result of that species of legislation; a result which the Republican party well understood, as we have seen, would be the inevitable consequence of such a policy; a result clearly anticipated, and knowingly and deliberately precipitated by them in perfidious violation of repeated promises to the country, in obedience to the demands, in compliance with the inducements of an unscrupulous lobby.

With a due regard, therefore, for the general welfare, this Congress can not permit any important question to pass unsettled into the hands of a party that has thus proved itself recreant to its trust.

True it is that our Republican friends have professed some degree of contrition, and have intimated that in future they will pursue a more conscientious and judicious course. True it is that they have admitted their error in the passage of the silver purchasing law, and conceded the necessity for its repeal. True it is that some of their leaders have apologized for McKinleyism, and said that the excessive rates of that law were due to some mistake in the formation of the Committee of Ways and Means under Speaker REED.

But, unfortunately, these same distinguished gentlemen have more than once before made similar professions when on the stump and ignored them when in authority.

Besides, there is a tone of ambiguity in the voice of the prophet. The buzzing of the Presidential bee mingles with and tempers the notes of the soothsayer. The distinguished gentleman from Maine, who sings the same old song of high protection to the Home Market Club in Boston, in Ann Arbor says McKinleyism was a mistake. In New England he says the reformed tariff enacted by the Democratic party last September assassinated American industry. To New York and points further west, he says that he and the other statesmen, who assume to be the guardian angels of that American industry, will not attempt to rescue it from the hands of the spoiler, at any rate until after the next Presidential election, and that in the meantime he and the other angels will study up the situation and endeavor to find out whether the murdered industry really desires any tariff changes at all, or on the whole would prefer to go on being assassinated.

Here is a distressing uncertainty. We hardly know what to expect.

Judging, however, from the light of experience, it is probable that if by such plausible utterances as these such flexible and accommodating assurances, adapted to the differing tastes and opinions of the several localities to which they are addressed, these statesmen succeed in again obtaining control of every branch of the Government we shall have the same old play reenacted—promises again repudiated, the interests of the consumer and the rights of the taxpayer trampled out of sight, the deluded laborer under collar and whip like a dray horse, fastened to the chariot of protection in which political hypocrisy and avaricious monopoly together triumphantly ride, and the work of Ways and Means committees, and Finance committees, and Banking and Currency committees bodily turned over and surrendered to the dictation and service of the rich, powerful, and privileged few.

It therefore behooves the Democratic party in the present Congress, while these momentous questions are still under its control, to place them, so far as possible, upon such a basis of stable and wholesome settlement as will render odious their further agitation.

The fear of this on the part of those who desire plausible pretexts for further class legislation is the principal secret of their opposition to the pending bill. They assail it, not because they consider it unnecessary, unsafe, or unjust, but because they are apprehensive that its passage will so obviate existing evils and

prove so satisfactory to the business public as to deprive them of the opportunity of safely promoting their party, sectional, and personal schemes under the pretense of a public exigency.

All of these elements of opposition to which I have alluded—the Republican element, the silver-mine element, the insolvent-debtor element—unwilling as they would perhaps be to acknowledge their relationship, “are of imagination all compact,” are born of the same pernicious theory—the theory of paternalism—the theory that the powers of the civil government should be exercised to regulate the private business affairs of the citizens—that it should be constituted a general trustee of the property rights of the whole people, and under the guise of the taxing power be permitted to give and to take away, to collect and to distribute, to fine and to reward, to oppress and to protect, at its mere discretion, without process of law or appeal to courts, or recognition of any legal principle, a doctrine that gives to Congress alone tyrannical sway over the toil, the trade, the possessions, and the opportunities of the people.

If such a doctrine is to prevail we may as well tear up our Constitution and burn the archives of our jurisprudence. If legislative favoritism is to usurp the place of legal muniment, let the poor and humble flee for protection to the embraces of Oriental despotism. For nothing is more certain than that under the operations of such a system modest merit, helpless weakness, and silent suffering will pass unnoticed, while soulless avarice, oppressive arrogance, and brazen importunity will gather in the spoils.

In my judgment, sir, the paramount duty of the hour is to throttle this insidious foe of free institutions, that under alluring promises of material aid would rivet again the shackles of arbitrary tyranny on the limbs of American freemen.

All issues of mere finance and economies are of little consequence in comparison with this. What care we for the mess of pottage if our birthright of freedom is being bartered away? Why should we fritter away our time and energies over considerations of mint, anise, and cumin, and forget the weightier matters of the law?

Entirely apart from the particular merits of the pending bill if by its passage we defeat and rebuke that enemy of constitutional government whose various forces here seem to be arrayed against it, if we thereby repel the advance of that enemy against the portals of our rights, if we thereby deprive it of one of its fraudulent pretexts for enslaving mankind in the name of protection, depend upon it we shall serve our country well.

The Currency.

SPEECH

OF

HON. ROBERT ADAMS, JR.,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 3, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. ADAMS of Pennsylvania said:

Mr. CHAIRMAN: The numerous resolutions and memorials which I have received from my district make it incumbent on me to enter a protest, as their Representative, against the passage of this bill.

What is demanded by the manufacturing and business interests of the district which I have the honor to represent, and what, in my opinion the country at large needs, is rest; peace to continue their avocations and to develop the resources of our country.

Ever since the incoming of this Administration—and I speak, sir, in no partisan sense—our country has been in a state of financial and business turmoil. The silver question for six long months agitated this country, until it was finally settled by the patriotic efforts of the men of both political parties.

No sooner was this question removed from the arena of agitation than the tariff question was precipitated upon the country, and again business waited in suspense to see what its outcome would be.

At the adjournment of the first session of this Congress last August a spirit of business revival began, the people took heart, the mills opened, some employment was received, and the outlook was more propitious, at least for a time. But no sooner did this session of Congress assemble than the party in power, which is responsible for its direction, precipitated another issue into the halls of legislation, which has again brought business to a stand-

still and made people halt and wait before entering into any new financial relations.

What is the necessity, sir, for the introduction of this measure at this time? It is claimed that our currency lacks those qualifications which tend to business prosperity and that that is the necessity for this measure.

There are three qualifications which seem to be universally admitted, which tend to form a sound currency. The first is security, the second is uniformity, and the third is elasticity.

Great should be the pressure to force this question upon the country. Let us see if any of these three reasons are of sufficient force to press this question into the halls of legislation at the present time.

First, as to the security. The present issues being based upon the deposit of Government bonds with the United States Treasury, the fear was raised that owing to the rapidity with which the national debt was being paid off, this kind of security might no longer exist with which to secure the said issues. But, sir, surely that question has been removed by the necessities of the Treasury under the present Administration, \$100,000,000 of bonds having been placed upon the market; and, as far as human foresight can see, further issues will be necessary, owing to the exigencies of the Treasury. Therefore, the lack of security for the foundation of the issue of national bank notes is removed, at least for the present.

The second qualification, that of uniformity, is surely not going to be met by the provisions of this bill. I will refer to that further on; but it is sufficient to refer simply to the one fact, that the bill authorizes State banks to come again into numerous existence. This means at least forty-four different kinds of currency, in accordance with the different laws of the forty-four States.

Furthermore, the reason of elasticity is not pressing at present. With \$100,000,000 lying in the vaults of the banks of New York, which can not be loaned out at 1 per cent, there is no immediate pressure in regard to this qualification of our currency. Therefore, sir, I repeat, I rise to protest not only against the passage but the agitation of this measure at this time, in the interest of the district which I have the honor to represent, in which there are business, mercantile, and manufacturing interests equal to those of any district of the United States.

Sir, if this necessity does not exist in pressing form, this question should not be precipitated upon the country at this time. We are beginning to realize what the agitation we have already experienced during the past year, since the panic of 1893, on the two questions to which I have referred has cost this country. The mercantile and business returns for 1894 are beginning to come in. What do they show? The largest increase in the national debt in the history of our country in a time of peace has been made. The prices of commodities have fallen to the ruin of farmers and manufacturers. Iron has fallen \$1.50 a ton and wheat and cotton has touched the lowest point on record. The values of the leading railway shares has fallen \$125,000,000 and the net earnings of 136 railways decreased \$37,000,000 as compared with 1892, costing the bond and share holders \$15,000,000 of income. As compared with 1892-93 the bank clearings decreased 15 to 36 per cent monthly up to July. Since then they have gained 2 to 6 percent over the panic period of that year. Coal has averaged about 50 cents a ton less, making a loss of \$20,000,000 to the producers and a loss of 1,500,000 tons in the output as compared with 1893.

Let us consider what necessity required the introduction of this bill into the halls of Congress at this time and in so precipitate and undeliberative a way that the majority of the committee declared to be held personally responsible for its provisions and the minority was not even accorded the usual privilege of discussing it in committee.

Mr. SIMPSON. Will the gentleman allow me to ask him a question right there? I want to understand this matter as we go along. I take a deep interest in it. The gentleman said, if I understood him right, that the decline in the price of coal of 50 cents a ton was that much loss to the people of this country. Now does the gentleman mean loss to the people who produce the coal, or to the people who consume it?

Mr. ADAMS of Pennsylvania. I mean the people who form a part of the population of this country to the extent of thousands—the miners.

Mr. SIMPSON. You mean the people who mine the coal?

Mr. ADAMS of Pennsylvania. And I mean the people who own the railway shares and the bonds?

Mr. SIMPSON. Oh, that is it?

Mr. ADAMS of Pennsylvania. They have lost also.

Mr. SIMPSON. That is what I want to get at. I want a fair understanding as to the people upon whom these losses have fallen. If it has been a loss to the consumers of coal to have it reduced 50 cents a ton in price, I am surely shocked at that condition of affairs.

Mr. ADAMS of Pennsylvania. I will tell the gentleman upon whom the loss falls. Like all those of his party he wishes to speak as representing a single class; but when you come to legislate for

these great United States, you have got to consider all sorts and conditions of men, and you have got to consider the capitalist and the miner and the consumer; and I will tell the gentleman that when the producer is hard up, he has that much less to buy with, and it permeates through the whole country and reaches every section.

The CHAIRMAN. The time of the gentleman from Pennsylvania [Mr. ADAMS] has expired.

Mr. SIMPSON. I just want to make a suggestion. It occurs to me—

The CHAIRMAN. But the time of the gentleman from Pennsylvania has expired.

Mr. SIMPSON. I move that he be allowed time enough to finish his remarks.

The CHAIRMAN. But the time belongs to the gentleman from Illinois [Mr. HENDERSON].

Mr. SIMPSON. I ask that his time be extended ten minutes.

Mr. DALZELL. Can not the gentleman have unanimous consent that his time be extended?

The CHAIRMAN. The time reverts to the gentleman from Illinois [Mr. HENDERSON], if he claims the floor.

Mr. HENDERSON of Illinois. I reserve the balance of my time.

Mr. DALZELL. I ask unanimous consent that my colleague may have ten minutes to control—

Mr. SIMPSON. In his own right.

Mr. ADAMS of Pennsylvania. I should like twenty minutes.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. DALZELL] asks unanimous consent that the time of his colleague be extended ten minutes. Is there objection?

There was no objection.

Mr. PENCE. I ask that it be made twenty minutes.

The CHAIRMAN. The gentleman only asks ten.

Mr. PENCE. I ask that he may have twenty minutes. I heard the gentleman from Pennsylvania [Mr. ADAMS] say he would like twenty minutes.

The CHAIRMAN. The gentleman from Colorado [Mr. PENCE] asks unanimous consent that an additional ten minutes, or twenty minutes in all, be given to the gentleman from Pennsylvania [Mr. ADAMS]. Is there objection?

There was no objection.

Mr. SIMPSON. Now, Mr. Chairman, I hope the gentleman will yield to me for a question.

The CHAIRMAN. Does the gentleman yield to the gentleman from Kansas?

Mr. ADAMS of Pennsylvania. I want to be courteous. If I have the amount of time I will yield to the gentleman; but I want to conclude my remarks.

Mr. PENCE. Then I withdraw the ten minutes I asked for. [Laughter.]

The CHAIRMAN. The gentleman from Pennsylvania is entitled to control his time.

Mr. ADAMS of Pennsylvania. I yield one minute to the gentleman from Kansas.

Mr. SIMPSON. Mr. Chairman, I am with the gentleman in opposition to this bill. I understand his argument was that because of my belonging to a particular party I am in favor of a special class. I object to that, and desire to refute it. I am in favor of all classes. Now, when the gentleman said that a reduction in the price of coal of 50 cents a ton was a great calamity to the people of this country it occurred to me, inasmuch as the consumers of coal are so very much more numerous than the producers of coal, that it was not a calamity, and that it was really in the interest and for the benefit of the general public. I merely make this suggestion in order to prevent him from putting me in a wrong light.

Mr. ADAMS of Pennsylvania. I will answer the gentleman by stating that while the consumer may be benefited by the reduction in the price of coal, it would bring the miners to starvation wages; and if he should visit the State which I have the honor in part to represent he would find that there were thousands of miners whom this reduction of 50 cents a ton in the price of coal seriously affects.

Mr. PENCE. Will the gentleman permit me to ask him a question?

Mr. ADAMS of Pennsylvania. Yes.

Mr. PENCE. Did not this condition of starvation wages for Hungarians, imported as miners, exist before any reduction in the tariff upon coal?

Mr. ADAMS of Pennsylvania. No, sir. These people were well off and happy and living well, and we had no disturbances of any kind. [Laughter and jeers on the Democratic side.]

Now, I would like to ask the gentleman from Kansas a question; and that is, if the present value of wheat does not bear the same relation to the producer and the consumer as the price of coal?

Mr. SIMPSON. Mr. Chairman, I would say yes; that it certainly does, and it ought to under certain conditions, but that under our present system governing transportation, and the low

price of wheat, after it passes through the hands of monopoly—the milling and railroad monopolies—unfortunately the consumers do not get the benefit of it.

Mr. MILLIKEN. Is not that true of coal also?

Mr. SIMPSON. It is largely true also of coal.

Mr. ADAMS of Pennsylvania. The gentleman has now answered the question that he put to me in regard to coal himself, and after his answer it is not necessary that I should go any further.

Mr. WARNER. Will the gentleman allow me to ask him a question?

Mr. ADAMS of Pennsylvania. If the House will extend my time.

Mr. SIMPSON. Your time has been extended.

Mr. ADAMS of Pennsylvania. I really want to finish my remarks.

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from New York?

Mr. ADAMS of Pennsylvania. Not just now. I must decline to yield.

Dun's Review quotes wages as 1.2 per cent less in November, 1894, than November, 1893, and 8.59 per cent less than in November, 1892. The number of hands employed is larger than last year, but 12.02 per cent less than in 1892, while the loss in wages is 21.77 per cent as compared with November, 1893. This should have been a year of recuperation but for legislative disturbance, and I repeat, sir, that what the country needs at present is rest from this financial agitation.

Mr. WARNER. Will the gentleman yield now?

The CHAIRMAN. Does the gentleman yield to the gentleman from New York?

Mr. ADAMS of Pennsylvania. I can not yield.

The CHAIRMAN. The gentleman declines to yield.

Mr. TAYLOR of Indiana. We will give you more time.

Mr. ADAMS of Pennsylvania. I yield to the gentleman from New York for a question.

Mr. WARNER. My friend from Pennsylvania referred to coal being 50 cents a ton cheaper than heretofore and the general effect upon labor occupied in mining coal. Do I understand that the coal operators who own the mines have lately reduced the price of labor in Pennsylvania coal mines?

Mr. ADAMS of Pennsylvania. Yes, sir.

Mr. WARNER. How much have they reduced wages—50 cents a ton?

Mr. ADAMS of Pennsylvania. I can not answer. I suppose not that amount.

Mr. WARNER. Ten cents?

Mr. ADAMS of Pennsylvania. They are in line with the rest of the sufferers and governed by the same conditions which govern the others, and much of it depends upon freight charges.

Mr. WARNER. I want to find out how much labor has been reduced.

Mr. ADAMS of Pennsylvania. I can not answer that question.

Mr. WARNER. My impression is that there was no reduction made to the miners.

Mr. ADAMS of Pennsylvania. There has been a reduction made to the miners. I do not claim to the extent of 50 cents a ton.

Mr. WARNER. Has there been any reduction since the price of coal has been falling?

Mr. ADAMS of Pennsylvania. Yes, sir.

Mr. WARNER. How much?

Mr. ADAMS of Pennsylvania. Coal is 50 cents a ton cheaper.

Mr. WARNER. Has there been any reduction recently in Pennsylvania in the price of labor per ton?

Mr. ADAMS of Pennsylvania. What do you mean by recently?

Mr. TAYLOR of Indiana. Since the enactment of the tariff law.

Mr. ADAMS of Pennsylvania. Certainly not. If the gentleman had paid attention to what I was saying—

Mr. WARNER. When was the—

Mr. ADAMS of Pennsylvania. One moment. If the gentleman from New York had paid attention to what I was saying—I dare say it was not worthy of his great attention—but if he had—

Mr. WARNER. It is going to be.

Mr. ADAMS of Pennsylvania. Well, if he had paid attention he would have seen that I was simply calling attention to what this agitation has cost our country in the past and was quoting the statistics from Dun. I was not giving them as my own, but giving them as Dun's statistics that had come in at the close of the year.

Mr. WARNER. If I understood the gentleman, he said that the people of this country have been getting coal 50 cents per ton cheaper than before the passage of the Wilson bill, but he complained (and in that I sympathize with him) that perhaps some of the poor miners had been getting less for their work than they had received before. Now, I wanted to ascertain from the gentleman how much the miners had had to lose per ton in order to enable the people to get their coal 50 cents per ton cheaper. I was simply asking for information.

Mr. ADAMS of Pennsylvania. I will answer the gentleman

from the papers of this morning, which announce that one of the largest collieries in Pennsylvania has been compelled to shut down and throw its men out of employment because there is no market for the coal.

Mr. WARNER. Have there been as many collieries shut down this winter as there were the winter after the McKinley bill was passed?

Mr. ADAMS of Pennsylvania. Yes, sir.

Mr. WARNER. Has the gentleman any facts on that subject?

Mr. ADAMS of Pennsylvania. Mr. Chairman, I can not go on answering the gentleman's questions all day. I try to be courteous, but—

Mr. WARNER. I simply wish to ask the gentleman whether his statement is based on a general estimate or opinion, or whether he really knows the facts. Have you the Dun statistics of that period also?

Mr. ADAMS of Pennsylvania. The collieries have been shutting down ever since the Democratic party came into power. [Applause on the Republican side.]

Mr. WARNER. Were they not shutting down before the Democratic party came into power?

Mr. ADAMS of Pennsylvania. And if the Democratic party continues in power they will all shut down. [Laughter and applause on the Republican side.]

Mr. WARNER. Were not more of them shut down under the McKinley bill than there ever have been since?

Mr. ADAMS of Pennsylvania. There was not a man who lost a day's work by the passage of the McKinley bill, but the workmen have been losing wages ever since the passage of the Wilson bill.

Mr. WARNER. Were there not more cuttings-down after the McKinley bill was passed than there ever have been since?

Mr. PENCE. Mr. Chairman, as attorney for the speaker entitled to the floor, I object to the question. [Laughter.]

Mr. ADAMS of Pennsylvania. Mr. Chairman, I rather like these questions, and if my time was not so limited I should be glad to play the balance of the afternoon. [Laughter.]

The present banking system has served the country for over thirty years and while it can not claim to be perfect it has answered the needs of the country so well that we should move very cautiously and with deliberation in making changes, let alone abolishing it entirely. The holder of a national-bank note reads on its face that it is secured by a deposit of United States bonds with the General Government and no matter at what distance from the bank of issue he feels secure, for the faith of the Government is behind it. It is this characteristic more than any other that makes them received in all sections of our country without question. Even when burned or partially destroyed they are redeemed at their full or partial value as the presenter is able to establish. No man has ever lost a dollar through the worthlessness of a note of a national bank which has failed, while the liability of the stockholders to the additional amount of the value of their shares, together with the required reserve of 25 per cent of their deposits, have as a rule protected the depositors from serious if any loss.

The security in the act under consideration calls for a deposit of 30 per cent of the issue of notes to be made in legal tender and Treasury notes of the act of July 14, 1890. In addition a tax of one-half of 1 per cent on the average circulation is to be paid by each bank until it amounts to 5 per cent of all the national-bank notes outstanding. Should this security be insufficient, all the solvent banks are to be assessed pro rata to make up the deficit. To my mind this is offering a premium on illegitimate and speculative formation of banking associations, and I doubt if prudently managed institutions will enter into a system which holds them jointly liable for the recklessness and dishonesty of others. On the other hand, should they not accept the provisions of this bill they will be driven out of business by the greater profits under the more favorable provisions relating to the establishment of State banks. In either case the \$150,000,000 of national bonds owned by them will be thrown upon the market, thus hurting the credit of the Government. The defects claimed for our present currency, lack of uniformity, want of elasticity, and that the redemption of United States bonds removes the basis of security, do not exist in a pressing way at the present time.

This bill, by allowing the establishment of State banks, will practically create as many different currencies as the laws of the several States differ one from the other. With \$100,000,000 lying idle in New York loaning at 1 per cent, the question of elasticity need not trouble us at this time. Therefore, Mr. Chairman, I can see no necessity for the undue haste with which this measure has been brought, so far as our financial situation is concerned, relating to the currency. The issue of \$100,000,000 additional bonds in the endeavor to replenish the gold reserve, and with further issues plainly required, removes the fear of insufficient security available for deposit for national-bank notes, and so removes that necessity for the immediate consideration of the question.

The ostensible necessity offered for this bill is the depletion of the Treasury of its gold reserve. The best evidence of the hurried and short consideration of this measure is that, if enacted, it will utterly fail even in its professed purpose. If all the existing national banks under this bill took out 75 per cent of their capital and deposited the 30 per cent in legal tender and Treasury notes, it would retire but \$150,000,000 of the \$500,000,000 in circulation, thus leaving \$350,000,000 outstanding with which to draw the gold from the Treasury, sufficient to soon exhaust the \$100,000,000 it professes to hold in reserve for their redemption.

The causes of the drain of the gold reserve must be looked for elsewhere than want of faith in the currency alone. It is largely owing to the depletion of the revenues of the Government by the reduction of duties that the Treasury finds its income less than expenditures. Under these conditions the same result happens to a government as an individual firm, its promissory notes become discredited, and the people realize on them at once.

In proof of this I cite that of the gold withdrawals from the Treasury for the week ending December 23, out of the \$18,000,000 only \$3,500,000 was for foreign export. The gold reserve can not be maintained permanently by the issue of bonds for the very gold to purchase them is withdrawn after, if not before, the issue. Why does not the Secretary of the Treasury sell the bonds in Europe demanding the actual gold coin in payment? We would at least hold it longer in the Treasury than selling them in New York where the gold can be withdrawn within twenty-four hours. Having thus secured a foreign supply, put such difficulties around its export as foreign banks do, and give Europe to understand we will protect our reserve as well as they do. The balance of trade has been in our favor, and yet \$75,000,000 in gold has flown away from us, because we allow foreigners to recoup their gold reserve from us without cost. Vienna, Paris, and St. Petersburg buy gold from London and she draws it from us for nothing.

Mr. Chairman, I said the ostensible necessity for this bill was the depletion of the gold reserve. I will now state the real reason. The Democratic party realizes that the last chance it will have to legislate upon some of its favorite measures closes with this session of Congress for many years. Having failed in their effort to repeal the 10 per cent tax on State banks, they make one more expiring effort to rehabilitate their favorite bank scheme.

I again protest, Mr. Chairman, against legislation of this question so soon again to unsettle business conditions, especially as it has already been debated and decided adversely during the present session of Congress, when the chairman of the committee [Mr. SPRINGER] led the opposition to repeal the 10 per cent tax on State banks, which was defeated by a vote of 102 to 173 against said repeal, and we now behold the same gentleman reversing his position and sustaining this feature of the bill. Sir, a greater calamity could not befall our country than a return to the system of banking under the State laws. When this subject was under discussion last June, I brought and exhibited to the House a copy of Peterson's Bank Note Detector, a more forcible proof could not have been exhibited of the evils attending the existence of State banks. It was a necessary adjunct to every office of every store, bank, and countinghouse to determine the market value of each note as presented over the counter. There is nothing in this bill to make more safe the security of the note issue of State banks than existed at that time.

The provision to accumulate a 5 per cent safety fund for the national-bank issue in this bill does not apply to State banks. The 30 per cent security fund for this circulation is not to be deposited with the Treasurer of the United States, but with some State officer designated by State law. No provision is made that this deposit must be kept separate from the other State funds or preventing said State officers from redepositing the money in the bank that gave it as security for its circulation; no provision that State banks shall not loan on real-estate security, a class of loans that breed panics, as they are not quickly convertible at such times into current funds. The banks of the different States will exist under the laws of the several States, thus making as many different kinds of currency as the said laws may differ, and yet this bill is claimed to make our currency more homogeneous.

The object of this bill is to reestablish the wild-cat banking system that existed before the war. It shows it in its face and proves it in its provisions. National banks are taxed one-half of 1 per cent annually on their circulation and one-half of 1 per cent annually in addition for the safety fund. Why are State banks exempted? It is answered that the shareholders of State banks are individually liable. Who are the stockholders, and what will their assets to a great extent exist in but the shares and deposits of the failed bank, and when it goes they go, and when the note holders turn to the 30 per cent deposit held by the State and find that it was redeposited in the same bank, their notes of issue will sell for the price of old paper and the bank-note detector in its next issue will report them as of no value.

Who is to gather in and wind up the affairs of these banks? No

provision is even made for such settlement of the national banks in this bill, and the holders of State notes are left to the mercy of the State laws for their own issues. There is no provision for the maintaining of a 25 per cent reserve of the deposits in State banks as security for the depositors. The shareholders are only liable to the extent of their stock, and no assessment funded as under existing national-bank law. Under this bill national banks can issue no notes under \$10, while no such limitation is placed upon the issues of State banks. This is a great advantage, as the small notes are one of the most profitable issues of the national banks, and will be an inducement to the State banks to repeat their old methods of circulating their notes as far from home as possible in hopes they will never be called upon to redeem them, and ultimately they will be lost or destroyed, thus enhancing their profits at the cost of the people.

National banks are required to receive each other's notes in settlement of any liability. State banks are not. National banks must make reports five times a year to the Comptroller. State banks need not. National banks are required to report to the same officer their dividends declared and profits in excess of said dividends. State banks are not. National banks are subjected to visits by examiners to look into their affairs. State banks are not. National banks are restricted to one-tenth of their capital in any one loan and forbidden to loan on their own stock as collateral. State banks are not. A national bank retiring or reducing its circulation receives no rebate from the safety fund of the amount it had paid in to secure the said circulation about to be retired, which constitutes a loss. A State bank, having made no such contribution to the safety fund, can incur no such loss.

These provisions, so discriminating in favor of State banks, would ultimately drive the national banks out of existence or force them to reorganize under the State laws and thus lose to the people the value of the safety fund as provided in their case as national banks. The two facts that State banks are relieved of the 1 per cent tax and the mutual liability for failed banks place them at a disadvantage as compared with national banks under this bill.

Mr. Chairman, the debate already had on this bill has so demonstrated its impossibility as a practical measure, and so numerous are its faults that amendment was out of the question, that the committee has offered a substitute. The changes amount to but little and offer even further objections to this bill. The removal of the compulsion upon the national banks to come in under this pact or permitting them to retain their bond deposit as security for circulation, as at present, is done to avoid the catastrophe of \$700,000,000 of Government bonds being thrown upon the market and breaking down the credit of the Government in the hope that a slower change would avert that damage. That this will be futile is already demonstrated by the fall in price on the market of Government bonds, and, as I have already endeavored to show, the national banks will be compelled to adopt the State system under this bill, as competition will be impossible under the burdensome conditions placed upon them and not upon State banks. Besides, should they adopt the provision in the substitute, in this respect it would add one more kind of currency, which is certainly not a step toward uniformity.

Another provision in the substitute reimposes the tax for the safety fund the moment it falls below the 5 per cent limit of the whole circulation, thus making the national banks perpetually liable for the insolvency of the weaker ones, a burden not imposed on State banks, and another clause provides that notes of failed banks shall bear 6 per cent interest from date of suspension until thirty days after notice of their redemption is made, and be a first lien thereafter on all moneys received into the safety fund, thus increasing the liability of the national banks. None such imposed on State banks. The last amendment in the substitute endeavors to drive the nail into the coffin of the national banks by authorizing the Secretary of the Treasury and the Comptroller of the Currency, upon being satisfied that a State bank has complied with the State banking laws and certain conditions imposed by this act, to issue certificates to that effect, thus endeavoring to give these State corporations a national character while not imposing the same conditions as are meted out to the national banks.

I have thus endeavored to substantiate, Mr. Chairman, my claim, before advanced, that the real object is to rehabilitate the system of State banks. The people have a great interest in this question, far in excess of the bankers, who with their knowledge of the value of different issues of notes can always protect themselves. Indeed, large fortunes were made in discounting the notes of the various States to the loss of the innocent and hard-working owners who had received them in payment of their services. No such loss has been incurred by any man under the present banking system, and we should proceed with much more deliberation than has been accorded this measure.

Mr. Chairman, this whole question should be relegated to a commission to report to the incoming Congress.

[Here the hammer fell.]

The Currency.

SPEECH

OF

HON. WALTER GRESHAM,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 4, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. GRESHAM said:

Mr. CHAIRMAN: In discussing a measure which is to meet the requirements of a great financial emergency like the one now confronting our country, we must take into consideration the changes in business methods that have been brought about by improved banking facilities and the application of electricity and steam to the uses of commerce. We must also consider the fact that the former duties of a bank were principally if not entirely confined to receiving moneys on deposit for safe-keeping and for discounting. But now, without the use of banks as mediums of exchange, the trade of our country and the commerce of the world could not be quickly and economically handled. The machinery of the banks is as essential to the business wants of the world as the steam engine that pulls the cars or the propeller that carries our commodities on the high seas. Formerly a vessel hunted the world for a market for her cargo, and after many months brought back what she received in exchange therefor. Now, by the use of electricity, her cargo is disposed of before she reaches her destination, its proceeds transmitted by bank exchange, and her return cargo secured and paid for through the same mediums, thus effecting a great saving in time and expense both to the shipowner and to the merchant. Formerly remote nations had little commercial intercourse. Now, through the improved methods of modern civilization, the uttermost parts of the earth are commercially nearer to the great markets of the world than many of the States of the Union were to each other fifty years ago.

You can now reach almost any quarter of the globe easier and in less time than the products from the frontier of Texas could thirty years ago be transferred to Galveston, its chief commercial city.

The result of these changes has demonstrated that a million dollars of gold to-day will transact more business in a shorter time and with less expense than ten times that amount would have done forty years ago.

Under our existing banking and monetary system we find the press and the Representatives of one section of the country complaining of a redundancy of our currency and a plethora of money, while those from other sections are clamoring for and demanding more money and greater facilities for securing a circulating medium. Some are willing to take "flatism" for money.

These are the conditions confronting us to-day. How are we to deal with them? Does the pending measure in any way tend to correct the evils? If it does, we should adopt it; if it does not, we should amend it so that it can be made to accomplish the desired ends.

The position taken by the South and West, that more money and better banking facilities are needed, can not be controverted by any man who knows the conditions of those sections of our country. I believe the complaints of a redundancy of currency which come from the East and from the great financial centers of the world, caused, as they say, by the laws, which force nearly \$500,000,000 of United States demand notes in circulation, at the expense of the credit of our Government, is also well founded. Can we in any way satisfy these apparently conflicting interests and adopt a plan to meet the needs of all sections? I believe we can, and that the proposed substitute, with certain amendments in regard to the sale of bonds as repeatedly recommended by the President and Secretary of the Treasury, will produce the desired results. The national banking system was devised as a war measure, while the nation was in the throes of a great revolution, and it had for its objects the creation of a market for the bonds of the Government and the retiring of a redundant and rapidly increasing national currency, and for these purposes it served its part well.

But now, after thirty years, you find the conditions that I have just described—too much money in one section and not enough in another. The present banking laws have evolved in the last thirty years two requisites that are essential to any successful banking system, whether in this or any other country. One is safety and the other uniformity.

SAFETY.

Does the proposed Carlisle substitute insure safety both as to depositors and as to note holders? I think it does. It provides that any banking association desiring to take out circulating notes may do so to an amount not exceeding 75 per cent of its paid-up and unimpaired capital upon depositing with the Treasurer of the United States legal-tender notes as a guaranty fund equal to 80 per cent of the circulating notes it proposes to then take out. As security for these notes we have—

First. A deposit of United States legal-tender notes in the Treasury of the United States equal in amount to 80 per cent of bank notes in circulation.

Second. We have a 5 per cent safety fund derived from a semi-annual tax of one-quarter of 1 per cent upon the circulating notes of all banks that may take out notes under the provisions of this act. This safety fund, if it had been in force since the organization of the present banking system, and this tax been continuously collected, the notes of every failing bank could have been paid and the amount of the safety fund remaining would have been \$50,000,000, and this without any increase of the burdens upon the banks under existing laws.

Third. We give to the note holder a first lien upon the assets of the bank. The experience of this country and of the balance of the world demonstrates that a bank currency, backed by such security and protected by such safeguards as will be thrown around it by the law, will be absolutely safe.

Mr. COX. Will my friend allow me to call his attention to the fact that additional to this is that liability of the stockholders?

Mr. GRESHAM. Yes; that is a part of the assets of the bank, I take it. The proposed plan is modeled after the Canadian system, but with additional security for the note holder. No holder of a Canadian bank note has ever lost a dollar thereof by reason of the bank's insolvency; and yet it is secured only by a first lien upon the assets of the bank, including the double liability of its stockholders, and by a safety fund equal in amount to 5 per cent of the notes issued by the banks, paid by the banks to the minister of finance and receiver-general.

Mr. DUNN. Will the gentleman allow me to ask him a question?

Mr. GRESHAM. Yes, sir.

Mr. DUNN. Do you believe it is constitutional for the Government to tax one enterprise for the benefit of another?

Mr. GRESHAM. I do, if the Government imposes the tax as a condition precedent to the exercise of a franchise.

Mr. WARNER. Do I understand the gentleman to suggest that under the present Canadian system a single dollar has ever been lost to any holder of a circulating note?

Mr. GRESHAM. I understand that there has not been a dollar lost.

Mr. WARNER. That is the fact. I misunderstood the gentleman.

Mr. GRESHAM. Mr. Chairman, the note holders under the Canadian system, with only a 5 per cent safety fund and a first lien upon the assets of the bank, have never lost anything. There the banks have a right to issue, not to the limited amount of 75 per cent of their unimpaired and paid-up capital, but to the par value thereof. We propose to give to the note holder the same securities Canada gives, and to cut the right of issue 25 per cent, making the notes to that extent safer than the Canadian system. We also require a deposit of a 80 per cent guaranty fund in addition thereto. Now, if that system is a success, and has furnished an elastic and safe currency that circulates over that entire country, which in its business relations and extent of territory is very much like our own, how it is possible for a currency issued under the proposed system, with the additional securities and safeguards, to be anything else but secure?

Let us now compare the security of the currency issued by the Imperial Bank of Germany with that issued under the Carlisle plan; that bank with a capital of 120,000,000 marks, has the right to issue notes to the amount of about 273,000,000 marks, more than double its capital stock, but the notes issued, while they must be covered as to one-third by the gold held in its vaults, and the other two-thirds by not exceeding ninety days' bills on German towns, they are not secured by a lien on the assets of the bank, nor is there any double liability of the stockholders to secure them. The maximum amount of the notes that may be issued by that bank under certain conditions may be exceeded on payment of a tax of 5 per cent on notes issued in excess thereof.

This 33 1/3 per cent gold reserve and its bills receivable upon which its notes are issued has, as its counterpart under the Carlisle plan, a deposit with the United States Treasurer of legal-tender notes equal to 80 per cent of the outstanding notes, a first lien upon all the bank's assets, which includes its bills receivable as well as the double liability of its stockholders, and in addition the 5 per cent safety fund, made up from a tax upon the circulation of all of the banks. In the light of this comparison, who can doubt the absolute safety of the notes under the proposed plan?

In Sweden, the Enskilda banks, which mainly supply the currency of that country and which have been in successful operation for more than fifty years without a failure, have the right to issue notes upon the assets of the bank, limited only by the amount of securities held by them. These notes are not secured by a first lien upon the assets of the bank.

Thus we see that the security provided for the note holder by this bill is largely in excess of that required by three of the most successful banking systems in the world.

Let us now examine the condition of the depositor under the proposed system, for it is more essential to a successful banking system that the depositor have confidence in the bank than it is for the bank to have the right to issue currency. Under existing law the note holders have as security a deposit of United States bonds, about 14 per cent in excess of the notes, and as long as this Government is solvent and can sell its bonds at par there can be no better security than that now given to the notes that are issued by the national banks.

Will the depositor be as secure under the proposed system as he is now? Under existing laws the bank's available capital is diminished to the extent of the cost of the bonds it has to deposit to obtain its charter and secure its circulating notes, which is a much larger per cent of its capital than the 30 per cent required to be deposited under the proposed bill. The larger amount of available capital for investment will augment the assets of the bank and thus diminish the chances of failure, but should the bank become insolvent its notes will be paid first out of its immediately available assets, its guaranty fund, and then out of the 5 per cent safety fund which all the testimony shows will be ample, leaving a much larger amount of the assets as security for the depositor than he now has, and the safety fund under the proposed substitute has no lien upon the assets of the bank to repay it.

I do not know whether this change in the substitute was noticed by the committee or not, but it is quite plain, and I hope it will be retained. The safety fund can not recoup from the assets of the insolvent bank for the loss it may have sustained. Thus depositors who put their money in these banks will have a much larger per cent of the assets of the bank as security for their deposits than they have under existing laws.

Mr. SIMPSON. Will the gentleman allow me to ask him a question?

Mr. GRESHAM. Certainly.

Mr. SIMPSON. I would like to ask the gentleman if this bill specifies what the assets of the bank shall be?

Mr. GRESHAM. What the assets of the bank shall be?

Mr. SIMPSON. Yes, sir.

Mr. GRESHAM. No, sir; that is left to the officers of the bank under the restrictions now prescribed by law.

Mr. SIMPSON. They might only be a little office furniture, some old ink bottles, and some wild-cat stock.

Mr. GRESHAM. The law is not changed in that regard. Whenever you find a man of brains and ingenuity enough to accumulate \$100,000, or plausibility enough to persuade others to put that amount in a bank and let him manage it, you can, as a rule, trust him.

Mr. SIMPSON. The experience of the past, under the old banking system, was not as you suggest. They generally found an absence of available assets when they came to collect.

Mr. GRESHAM. We are discussing national banks and not State banks. We will discuss them later on.

Mr. SIMPSON. I understood you were discussing State banks.

Mr. GRESHAM. No, sir; I am not discussing State banks; I am discussing national banks.

Mr. SIMPSON. National bank currency is secured by the bonds.

Mr. GRESHAM. No, sir. The gentleman has evidently not read the bill.

Mr. BELL of Texas. I would like to ask my colleague a question there.

Mr. GRESHAM. Certainly.

Mr. BELL of Texas. I am sure your understanding is very different from that of many others with reference to the lien of the safety fund upon the assets of the banks under the proposed bill. I know it is different from that of gentlemen sitting around me. I think it would be well for you to elaborate your idea on that subject. I think that you are mistaken; but, if you are not, it would be a good idea for you to explain the matter to us.

Mr. GRESHAM. In the first place the second section of the bill—

Mr. BELL of Texas. Let me ask you this: Your idea is that if a bank of \$100,000 capital fails, then, under your substitute bill, it has put \$22,500 with the Government to secure the \$75,000 notes. The \$22,500 is used to redeem the notes to that amount, which leave \$52,500 to be redeemed. Now, your idea is that if the safety fund should contribute \$30,000 toward the redemption of the \$75,000 it would have no lien on the assets of the bank superior to the claim of depositors.

Mr. GRESHAM. That is, the immediately available assets.

Mr. BELL of Texas. Of course I understand you to draw some distinction between the immediately available and other assets. But I assume that the immediately available assets are \$22,500, and consequently \$30,000 has to be paid out of the safety fund. Now, my understanding is that the safety fund would become the holder of the notes, and being the holder of the notes would have a lien on the entire assets of the bank, which will be a prior lien to that of the depositors or other creditors. I understand your position to be exactly contrary to that, and therefore I think it would be well for you to explain it more in detail.

Mr. GRESHAM. I think the Secretary agrees with me.

Mr. BELL of Texas. Perhaps you are correct, but I think your construction is wrong, and therefore I wished you to elaborate your views.

Mr. GRESHAM. It is true that the second section of the bill declares the notes to be a first lien upon the assets of the association issuing them, and as between the note holder and the depositor there can be no question of the superior right of the former, but section 5 provides for the accumulation in the United States Treasury of a 5 per cent safety fund, collected by a semiannual tax of one-fourth of 1 per cent from all of the banks upon the average amount of their respective circulating notes outstanding.

This section then provides that when a national bank becomes insolvent, its guaranty fund of 30 per cent, held on deposit in the Treasury, shall be transferred to the safety fund, and out of the safety fund, augmented by the guaranty fund, the notes of the failing bank shall be paid, and then the immediately available assets, which is the cash on hand at the time of the suspension of the bank, shall be used to reimburse the safety fund; and should it be insufficient for that purpose, this section provides how the deficiency shall be made good by requiring a continuation of the tax until the notes are all paid and the amount of the safety fund is again restored to its maximum amount. Where the law declares a particular fund out of which these notes shall be paid, that method would exclude the idea of resorting to any other fund. The bill does not give to the safety fund a lien nor has that fund any superior equity over the depositors in the assets of the bank, and therefore the doctrine of subrogation could not be applied.

Mr. Chairman, this bill gives safety both to the note holder and the depositor. The security of the former, all experience demonstrates, is ample, and that of the latter is superior to what he now has. It is absolutely essential that we should have a system in which the people have confidence. We have an illustration of this in India, where it is estimated, by authorities referred to by the Director of the Mint in his report, that since 1835 one-third of all the money in the world has gone, and is there being hoarded. A lack of confidence on the part of the people in the safety of the banks of the country is largely the cause of this. Great Britain has endeavored, through the instrumentalities of modern banking institutions, to establish confidence and to bring out from its hiding this vast capital that now lies idle, and to use it in the channels of trade, but thus far has been successful only to a limited extent.

In Persia, where the people have been accustomed to hoard the precious metals and have been poverty stricken for thousands of years, an imperial bank, modeled after the English system, has been recently established and is inspiring such confidence that the people are depositing with it. The officers of that bank report that they anticipate that within a few years ample money will be collected from the people to handle the commerce of the country without the aid of outside capital.

The report of the Secretary of the Treasury shows that the banks of this country are very generally used by the people as depositories. In this way they accumulate the money of the country and use it in the channels of trade, so that a much smaller amount is required to do the business than would be if, from lack of confidence, they did not deposit with the banks. The confidence of the people in our banking institutions, which has been the slow growth of years, should not be impaired by any legislation enacted by Congress. We of the Southwest require a much larger amount of circulating medium in proportion to the volume of our business than the people of the East; we do not have banks every 5 or 10 miles. The country is sparsely settled by an agricultural people who do not have adequate banking facilities and can not use checks as freely as they are used in the more thickly settled parts of our country. The result is that they are compelled to keep in circulation a much larger amount of currency in proportion to the volume of business than is necessary in the East.

Again, we have a large number of laborers who do not understand the use of bank checks, and consequently we are compelled to furnish them with the actual money. For this reason, also, it is essential that we should have a larger volume of currency. Now, let us see what would be the effect on my State of this proposed change—and I think the gentleman from Kansas and the gentleman from Colorado and the gentleman from Nebraska will find their people benefited in the same proportion by this bill as we will be. We have a little less than \$25,000,000 invested in national banks

under the provisions of this bill; we can on that capital increase our currency over fifteen and a quarter million dollars, which, experience has demonstrated and the testimony of experts shows will be just as safe as the money that we now have. With the ability of our banks to put this additional amount of currency into the channels of trade when needed, without having to borrow it at a high rate of interest, they will become more independent, confidence will be restored, business revived, and prosperity assured.

Mr. PENCE. Do you mean that much increase in your national-bank currency?

Mr. GRESHAM. Yes. I mean that much increase of bank currency. We now have very little bank currency in proportion to our banking capital. It is too expensive. When a national bank wants to get permission to do business it deposits the least amount of bonds authorized by law and consequently can take out but a small amount of currency.

Mr. Chairman, I represent, in part, upon the floor of this House a country that is rapidly growing, and is being settled by a young, vigorous, energetic, industrious, and thrifty people, who have little else for their capital than brawn, sinew, and integrity, and must rely upon foreign capital for aid.

The present system keeps too much money locked up and lying idle. We must remember that every expense put upon the banking institutions of the country has to be borne ultimately by the people. We in the West and South who are clamoring for more money want every facility possible to induce capital to come among us. Notwithstanding the relief this bill would afford, we still will have to go into the markets of the world as borrowers. We have to convince those who have the money, and from whose coffers we wish to draw more capital to help us develop our country, that we can and will meet our obligations in accordance with the terms of our contracts. This confidence we can never gain by advocating "fiat money" or legalizing any system of currency that is not immediately convertible and at all times redeemable on demand in the legal-tender money of the Government. This redemption of the bank notes is amply provided for by the fourth section of the bill under consideration.

Mr. HALL of Minnesota. You are referring now entirely to national banks.

Mr. GRESHAM. Yes, sir; I am not discussing anything but national banks.

UNIFORMITY.

The people of this country have become used to a uniform national-bank currency, and would not, in my opinion, be willing to part with it. They do not have to examine it when they go from one part of the country to another. They want something that will circulate everywhere, just as the gold dollar does; money that they do not have to examine and find out first where it was issued and then inquire whether the bank which issued it is solvent or not. A uniform currency is essential, and in this particular the national-bank system has been a great success, and I hold that wherever experience has demonstrated a plan to be a success it is the part of statesmanship to avail ourselves of it and not to discard it for something that is at least less certain. The pending measure does not change existing laws in regard to uniformity of bank currency. But, having said this much, it is all that I can say in behalf of the present banking system.

Let us now examine the imperfections of the present system and the remedies proposed by the pending measure.

TOO EXPENSIVE.

First. The present banking system is too expensive. To illustrate: Parties desiring to go into a banking business with a capital of \$100,000 are required under existing laws to deposit with the Government \$25,000 in United States bonds before they can obtain a license to commence business. They are compelled to go into the market and buy these bonds, for which they have to pay, say, a premium of 14 per cent. This would make the \$25,000 in bonds cost them \$28,500, which, deducted from the original capital of \$100,000, leaves cash on hand \$71,500. The \$25,000 in bonds are deposited with the Government and the Comptroller issues to the bank notes thereon to the amount of 90 per cent of the face value of the bonds, which is \$22,500, and then deducts from that amount 5 per cent for the redemption fund, which would equal in this case \$1,125, so that the amount of notes received from the Government would be \$21,375, for which the bank has paid in cash \$28,500. The \$21,375 in notes received, added to the \$71,500 of the original capital, would enable the bank to open its doors and commence business on just \$92,875.

Under the proposed plan, parties desiring to establish a bank with a like amount of capital (\$100,000) can take \$22,500 thereof in greenbacks or Treasury notes, and deposit the same with the Treasurer and receive back from the Government not to exceed \$75,000 in bank notes. This \$75,000, added to the \$77,500 of its capital stock remaining after deducting the \$22,500 of legal tender and Treasury notes paid into the Treasury as a guaranty fund, makes \$152,500 as the amount of cash on hand that the bank would

have when it commences business, as against \$92,875 under existing laws; in one case their working capital is diminished \$7,125, and in the other it is increased \$52,500. As I have already demonstrated, this additional currency would be as safe as that in use under any banking system in the world.

ELASTICITY.

Elasticity in the volume of currency is provided for by this bill. Under present conditions the greater the demand for an increased supply of currency the more difficult it is to obtain. Suppose a bank wants currency—it is demanded by its customers and the business necessities of the country—and it goes to the Treasury to get it. Why, it takes more money to pay for the bonds to be deposited in the Treasury to enable it to secure currency than such currency received by the bank would amount to. The result is, if it has to buy the bonds it will not do so, and therefore can not get any increase of currency. It may possibly be asked why it is that the banks which have bonds already on deposit do not draw out currency to the extent of the amount authorized by the law. The answer is simply because the banks that have not taken out the circulation to which they are entitled do not need it. They can not keep it at interest and the expense is too great to keep it in their vaults. Their money is now lying idle and they do not want more currency. But you do not find that condition in my country. Every dollar that the banks are entitled by law to take out on the bonds they have deposited in the Treasury is in circulation.

Mr. WALKER. And they could circulate thousands more.

Mr. GRESHAM. Yes, we could; and if you will give us a good banking system we will do it.

Mr. Chairman, I say our bank currency is not elastic because it can not be increased when an emergency arises or when the wants of trade demand it. This bill seeks to remedy this evil. It provides for an increase in the volume of currency when the business wants of the country demand it without the expense and delay incident to obtaining it under existing laws.

The advantages of an elastic system of currency has been demonstrated in Canada and Germany, where there has never been a financial panic or a currency stringency since the establishment of their respective banking systems. The Bank of England, without such a provision in its charter, has on three occasions since 1844, to avoid closing its doors, been compelled to issue its notes without authority of law.

The power conferred by the French Government upon the Bank of France, immediately after the Franco-Prussian war, to increase its note issue enabled it to assist the French people in meeting promptly the German indemnity and to supply an adequate and safe currency for the demands of trade. Thus the experience of the banking systems of the greatest commercial nations in the world demonstrates the importance of elasticity in any system of currency.

We must act upon this bill if we expect this Congress to give the people any relief from the evils of the present national-bank system. Let us perfect it by amendments and then pass it. The question of elasticity in the currency will not avail, in my opinion, very much in my country, because the demand for capital is so great that most of our banks will use their 75 per cent at once. But the people in the East will not do this. They will not take out the full amount of currency to which they are entitled until they can use it profitably, which, from the statements made by the representatives of Eastern banks before the Committee on Banking and Currency, they could not now do.

Should a stringency arise, even though our banks may not have authority to issue any more notes under the provision of this law, if the banks in the East can use it profitably they will take it out and put it in circulation. In this way we can increase the volume of currency just so long as the wants of trade demand it. As soon as money can not find profitable investments and begins to accumulate and lie idle in the banks—which I hope it will not do in my country for a long time to come—so that it can not be used in the channels of commerce to advantage, it will go back to the bank that issued it for redemption and be retired; when it is needed it will be reissued and go into circulation again, just as is done in Canada.

This bill provides for an elastic currency to the extent of nearly 61 per cent of the national-bank capital of this country. If this does not furnish a sufficient volume of safe currency—a currency redeemable in legal-tender money on demand—I ask how and when it is possible for us to get the relief the people are asking?

Mr. PENCE. Will the gentleman allow me to ask him a question?

Mr. GRESHAM. Certainly.

Mr. PENCE. Is it not your opinion that under this bill, either the original Carlisle bill or the substitute proposed by the gentleman from Illinois [Mr. SPRINGER], parties will take out State-bank charters?

Mr. GRESHAM. I am not talking about State-bank charters at all. I have not come to that.

Mr. PENCE. I know that. I have been waiting for the gentleman to get to the question of State banks.

Mr. GRESHAM. Wait until I get through discussing national banks.

Mr. PENCE. Is it not your opinion that under the original bill, or the substitute, parties will take out State-bank charters rather than national-bank charters?

Mr. GRESHAM. No, sir; in my judgment they will not.

Mr. HENDERSON of Illinois. I hope not.

Mr. GRESHAM. I said our present banking system did not have elasticity and have tried to demonstrate it.

COMPULSORY RESERVE.

Now, in regard to a compulsory reserve. I listened to-day with interest to the remarks of the gentleman from New York [Mr. HENDRIX], in which he advocated retaining the provisions of the law requiring the banks in certain cities to keep a reserve of 25 per cent of their deposits and those of other sections 15 per cent. The operation of this law results in a profit to the banks in the reserve cities at the expense of the banks in other sections of the country. At the very time the banks want to use this fund for the relief of their customers they are prohibited from doing so.

Under the provisions of this bill compulsory reserves are eliminated from the law, but it is not supposed that the banks will not keep reserves, for experience shows that every well-managed bank in this country, though there is no compulsory law upon the subject, keeps an average reserve larger than the amount required by our laws. All well-managed banks of the world keep a reserve, but it is done by reason of the fact that their business experience teaches them that it is right; but when the time comes to use it they can do so, and protect themselves and their customers without being subjected to the possibility and probability of being put in the hands of receivers and having their charters revoked. Therefore I think we can safely trust to the banks, as they are trusted in all other civilized countries, to say how much reserve they will keep.

REDUNDANCY OF CURRENCY.

The people of the East are contending that there is a redundancy of currency; while this is not true of much the largest portion of our country, it is doubtless true in the great moneyed centers through which the commerce of our country passes; there business men who handle this commerce and have to settle our balances in gold see and realize most clearly the dangers that imperil our credit by reason of the Government leaving in circulation \$500,000,000 of promises to pay on demand. The credit of a nation, like that of an individual, is based upon two things: First, the belief that it has the ability to pay its obligations; and, next, confidence in its honesty and integrity of purpose to meet them in accordance with its contracts. Take from a nation either of these requisites, destroy confidence in its ability to pay or its intention to do so, and you sap the foundations upon which its credit is based. How our national credit is being affected by these \$500,000,000 of Government demand notes now outstanding let the report of the Secretary of the Treasury answer. He says:

Since the resumption of specie payments, on the 1st day of January, 1879, United States legal-tender notes and Treasury notes issued under the act of July 14, 1890, have been redeemed in gold to the amount of \$200,000,000, and all the notes so redeemed have been reissued and are now outstanding. They are a constant menace to the gold reserve, and no scheme of financial reform can be complete or effectual which does not provide at least for their gradual elimination from our currency system. To retain them as a part of the currency of the people and refuse to redeem them in standard coin on demand, would be repudiation in its most odious form because the larger part of these notes were forced into the circulation by the Government at a time and under circumstances which justified the most implicit reliance upon its good faith. On the other hand, to continue their redemption and reissue under present conditions endangers the entire volume of our currency, discredits the obligations of the Government and people, increases the public debt, and seriously embarrasses the administration of our financial affairs.

As was said a little while ago by the gentleman from Maine [Mr. DINGLEY], we are in the condition in which the balance of trade is in our favor, and still there is a constant drain of gold from this country. During the last two years our exports of merchandise, including silver bullion, exceeded our imports by \$300,594,458. In addition to this amount \$91,069,940 of gold was shipped out of the country to meet the demands of our creditors. Why this extraordinary demand by foreign creditors to realize upon American securities? It was because they believed that if we adopted the financial policy advocated by quite a large number of the American people, the time was not far distant when we would be unable to meet our obligations in gold, and they wanted to draw their money from this country before we were forced into such a position.

There is no use in shutting our eyes to these facts. I want to say to my Southern and Western colleagues that whenever confidence in our securities is impaired we are the first to suffer. Let our foreign creditors place upon the markets of this country at once \$500,000,000 of American securities—not necessarily Government bonds, because I believe comparatively few of these are held abroad, but railroad bonds, municipal bonds, bonds of private

corporations—and demand their payment in gold, the loss to the American people would be incalculable. Nearly all our bonds held abroad have in them a clause of this kind: Thirty years (or whatever the time may be) after date we promise to pay so many dollars in American gold of present weight and fineness.

If you will examine the bonds issued throughout the country you will find nearly every one of them containing a similar provision. Whenever these securities are thrown into the market of Wall street, it is compelled to protect them to the utmost of its ability. Similar securities are held largely by banking and other moneyed institutions in this country, and if they could not find a market for them they would soon find themselves bankrupt.

We of the South and West, who have not accumulated a surplus of capital, are compelled to look to the moneyed centers of the country for aid in moving our crops. It is absolutely essential that we should borrow money for this purpose. Our banks, after exhausting their capital, which is very limited, take the securities that their customers have deposited with them, carry them to Wall street, where they are rediscounted. Whenever a drain is made by our foreign creditors, as before stated, upon the banks of Wall street, they are frequently compelled to refuse accommodations to our banks and to demand payment of the obligations they have discounted.

Our banks are then forced to call upon their debtors to pay, and in times of stringency such as we have had it is impossible for them to borrow the money or to realize upon their property, and they are forced into bankruptcy. Thus it is that we, being a debtor class, are the first to be forced to the wall when our foreign creditors become alarmed and demand the payment of their American securities. Hence we are more interested in maintaining the credit of this Government than the people of any other section of the Union.

The \$500,000,000 of Government demand notes are being used by the brokers of the world to withdraw the gold from the Treasury and to force the Government to sell its bonds to replenish the Treasury gold.

I say, therefore, that we must devise some means by which this unlimited power to extract from the Treasury its gold and to force the sale of bonds shall be stopped. This bill provides a remedy (not an adequate one, in my judgment, but I hope it will be amended and improved in this particular). It requires that 30 per cent of the circulating notes shall be deposited with the Secretary of the Treasury in legal-tender notes. This will take out of circulation, according to the estimate of the Secretary of the Treasury, two hundred and twenty-five millions of these demand notes if all the banks avail themselves of the provisions of the act.

Then there should be inserted in the bill a clause authorizing the sale of a limited amount of gold bonds, bearing not exceeding 3 per cent interest, for the purpose of retiring these obligations in the manner suggested by the Secretary of the Treasury and as repeatedly recommended by the President.

Mr. PENCE. You mean retiring the legal-tender notes?

Mr. GRESHAM. Yes, sir. But I want coupled with that the authority for our banks to increase their circulating notes, as provided for in this bill. Then we will have an increase of a safe and convertible currency, and the Government will go out of the banking business.

I have heard it stated to-day that in order to protect our gold reserve we must increase our revenues, and I inferred from the manner in which it was stated that the only method recognized by the speaker as practicable for this purpose was to restore a high protective tariff. Now, the revenues of this Government are dependent upon the volume of trade and the facility with which it is moved. If you stop the wheels of commerce, you may put on the tariff as much as you please and you will not collect the necessary revenue. On the other hand, set the wheels of industry in motion, let the currents of trade flow without obstruction, and under existing laws you will have revenue enough to meet the ordinary expenses of the Government. But with the financial condition now confronting us we can not realize that result under the present tariff law or any other. Give us a good banking system, give us proper machinery by which the commerce of the country can be handled, and business will revive, and when it does the revenue will increase and we will have enough money in the Treasury to meet our obligations.

Now, how is this gold taken out? This Government says to the world, "I will maintain my paper on a parity with gold, and whenever it is presented at my counters I will redeem it in gold." As was said to-day by the gentleman from New York [Mr. HENDRIX], there is not a country in the world that offers such inducements for the withdrawal of its gold. You advertise to the world exactly what you will sell it for and furnish the medium with which to pay for it. Whenever the Bank of England wants to stop the drain of gold it raises its rate of discount to such a price as to prevent its export at a profit.

Mr. BROSIUS. Will the gentleman allow a question?

Mr. GRESHAM. Certainly.

Mr. BROSIUS. Do you mean to say that the Bank of England ever refuses to redeem its notes in gold when presented for redemption?

Mr. GRESHAM. No, sir; it always redeems them in gold.

Mr. BROSIUS. Then I misunderstood the statement.

Mr. GRESHAM. It always redeems its notes; but if you want to buy gold from the Bank of England for the purpose of exporting it, and it does not want the gold to leave the country, it will raise its rate of discount. You can buy from it gold coin or bullion, which you can not do from our Treasury. The same is the case in Germany. When you go to the Bank of Germany for gold, and it does not want it withdrawn, it puts up the price of discount; and if that does not accomplish the desired result then an intimation to a German subject that the imperial bank does not want the gold taken from its vaults is sufficient, and he looks elsewhere. The Bank of France, when it desires to retain its gold, raises the price and puts a premium on it and keeps it. When Russia, Austria-Hungary, or any other nation wants gold its brokers do not look to England, Germany, and France for the supply, but they come to this country, because they know they can get it at a fixed price, and if the amount in the Treasury is not sufficient to supply their wants they can easily force the Government to sell its bonds and raise the amount they may require, as we furnish them the medium by which they can withdraw it from the Treasury. Just so long as we continue to sell bonds to raise gold to pay greenbacks and Treasury notes that are reissued and put back in circulation we will be looked to by the balance of the world as the goose from which to draw their supply of golden eggs. Such a policy will inevitably result in the increase of our bonded debt, the impairment of our national credit, and the withdrawal of foreign capital from our country. Let us meet the issue and authorize the Executive to sell gold bonds bearing a low rate of interest for the purpose of paying and canceling this "fiat money" as it is paid into the Treasury, establish a good banking system under Government supervision, compel the banks to supply the currency and gold demanded by the wants of trade, and let the Government retire from the banking business.

BRANCH BANKS.

There is one other provision I would like to see engrafted into this bill. It is that national banks with a capital of not less than \$1,000,000 shall have the authority, under such rules, regulations, and restrictions as may be prescribed by the Comptroller of the Currency to establish branch banks both in this country and abroad. Go to-day to the largest commercial city on this continent, and if you want to buy a cargo of coffee in Rio or of tea in China you are compelled to make your deposits in London before you can draw your bills of exchange in payment therefor. The result is that our foreign exchanges are handled by foreigners at an annual loss to the people of this country of millions of dollars.

Not only is our exchange drawn through foreign banks, but our commerce is carried in foreign vessels. Let me dictate the rate of freight and of exchange that a nation must pay upon its commerce and I will pocket—at the expense of the producer—the profits on the commodities transported.

We will sooner or later carry our foreign commerce in American bottoms, and to facilitate its quick and economical handling we should authorize the establishment of branch banks in foreign countries. Give to the banks of this country the authority, and they will establish foreign branches, as the banks of Great Britain have done.

Mr. WALKER. Does the Bank of England have branch banks?

Mr. GRESHAM. It has in England. I do not know whether the Bank of England has foreign branches or not, but other English banks have.

Mr. SPRINGER. The Scotch Bank has branch banks, but not the Bank of England.

Mr. GRESHAM. The banks of England have both foreign and domestic branch banks. I believe the Bank of England only has branches within the Kingdom.

Mr. SPRINGER. There are branch banks in England of the Bank of England, but not abroad.

Mr. GRESHAM. But the banks in England do establish them abroad.

Mr. WARNER. The Bank of Canada has a branch bank in New York City.

Mr. GRESHAM. Now, Mr. Chairman, I say that the time has come when our banks should aid in building up our foreign commerce.

Mr. WARNER. I will say that the other banks to which reference has been made—the great banks of England, not the Bank of England, but banks of England, Scotland, and Ireland—all have branches, not merely in different parts of the country in which their main office is situated, but in the city of New York and on the Continent, and, I believe, in every part of the world.

Mr. GRESHAM. The time has come when we must find a foreign market for our surplus products, and in doing so we should let the American go abroad with as few trammels and as many

privileges as possible. Give our merchants the opportunity to compete upon an equal footing with the balance of the world and they will take care of themselves. But let me say to the gentlemen on the other side that we must change our shipping laws. We can never build up our merchant marine under existing restrictive laws. I will illustrate this by an incident that came under my observation within the last two years.

The Reymerhoffer Brothers of Galveston, with a view of facilitating their flour trade with Cuba and Porto Rico, were desirous of getting two American steamers because they could engage in the coastwise trade between Galveston, New Orleans, and Mobile on their voyages to and from Cuba and Porto Rico, which the foreign ships now engaged in this trade could not, under our laws, do.

Plans and specifications for two steam vessels of the capacity of about one thousand gross tons each were drawn by marine architects and submitted to shipbuilders in this country and abroad. The cheapest bid received was from the Clyde, \$55,000 for each vessel. The cheapest bid from any American shipbuilder was \$96,000 each. Now, is it possible for an American vessel that cost \$96,000 to go upon the high seas and compete for the commerce of the world with a vessel equally as good that cost only \$55,000? Never. We must remove the protective duties that produce such a difference in cost.

Mr. Chairman, I regret that I will be unable to discuss other provisions of this bill, particularly the one in regard to State banks; but my time is about to expire. Let me, therefore, in conclusion say, if the bill be amended as I have suggested, and the bonds as well as legal-tender notes are made the basis of our national-bank currency, we will, I believe, have a banking system that provides a uniform currency, insures safety to the note holder, augments the security of the depositor, allows an elastic volume of currency commensurate with the wants of trade, and that requires its notes to be redeemed in gold and silver legal-tender money, thus furnishing to the people of this country what they want, a greater volume of cheaper currency, convertible by the banks on demand into legal-tender coin. [Applause.]

The Currency.

SPEECH

OF

HON. W. J. TALBERT.

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 4, 1895.

On the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. TALBERT of South Carolina said:

Mr. SPEAKER: It seems to me, sir, that the American Congress is disposed to grant everything to corporations and millionaires and nothing to the great mass of the people. Only a few days ago this House by an overwhelming vote passed a bill giving the railroads of this country the right to form combinations, and trusts, and pools, etc., and now comes a bill to allow the banking corporations to form some kind of similar arrangements, all the time claiming for the benefit of the people while they remain at home dumb as oysters looking to their party for protection. Now, what have these parties done for their people—Democratic, Republican, Populist? The Democratic party having had possession of the Government for nearly two years, at least both houses of Congress and the Executive partially, as the gentleman from Maine would say, has simply played the coward, and the traitor, too, in failing to carry out the pledges made to the people, in consequence of which they have been swept from power and ought to have been, for no party deserves to hold the reins of Government who will not drive, or to be in the saddle who will not ride. Then, the Populist party have had no chance to do anything for want of power, and the Republicans have controlled legislation for the past thirty years, have driven over the rights of the great mass of the people, and ridden roughshod over them with their high-tariff robbery and financial schemes until they have fastened upon this country a monetary system, with its finances so adjusted as to be utilized by a few to the utter impoverishment of the great mass of the people, so much so that the great question of the day is one of money. Under this Republican system of finance we see centralized capital, allied to corporate powers, invading our temples of justice, subsidizing the press, controlling conventions, corrupting the ballot box, dictat-

ing the platforms of parties, overriding individual rights, and directing legislation, State and national.

Look at it as you will, mystify it as you will, the great question of the day is whether the dollar or the citizen shall rule this country; whether manhood or money shall make our laws for us. Here we have had a Congress with all parties pledged to free silver, and no free silver yet. What does this mean?

The three parties remind me of an old man, his pet monkey and calf boy. The old man, in order to frighten his calf boy to make him bring up the calves earlier at night, wrapped himself up in a white sheet one evening and wended his way into a patch of woods and sat upon a log by the path where the calf boy must pass in bringing up the calves. The monkey seeing the old man, also covers himself and follows along behind unseen and perches himself on the log just below the old man. About dark the boy came in sight with the calves. The old man turning his head to look spied the monkey all covered in a white sheet, which frightened him so much that he broke for the house, of course followed by the monkey, while the amazed and astonished calf boy hallooed out, "Run, big devil; little devil will catch you! Run, big devil; little devil will catch you!"

So it seems the Democratic party is on the run, with the Republicans after them, with the Populists crying out, "Run, big devil; little devil will catch you!"

Now, then, in discussing this question let us leave off partisanship, all prejudice and feeling, and look alone as one man upon the present distressed condition of our country with a view of passing some measure of relief in a financial way. It has been said that, and it is true, king and peasant, knight and vassal, master and servant are terms common to the records of the past, both sacred and profane, but to-day it seems to me that we have but two classes, in common parlance known as the skinner and the skinned, in our country. It has also been said that—and equally true—brute force and gross superstition tyrannized over the ancient valor and discipline, the bow and the spear were the political factors of the middle ages, but legislation, artifice, and financial craft enslave the modern, thus separating the people to-day, in modern times, only into two classes, the skinner and the skinned, saying nothing of parties. This bill will, in my opinion, finally establish a moneyed aristocracy in the United States if passed in its present shape.

Let us examine the general provisions of the bill.

It proposes to let the banker have the paper money of the Government already issued, and for every \$30 of this Government money issue \$100 in bank money.

I would like to ask if this will make it better by loading it down with three times its own weight in bank paper?

The money of the Government amounts to \$500,000,000, upon which banks can issue. For every \$30 of this banks can issue \$100 of their own.

Then you see we will have according to this about \$1,700,000,000 of bank paper, which is to be used by law as money. Now, then, why be compelled to pay interest on this enormous amount when the Constitution says the Government should create what money we need? There is nearly this amount already in circulation.

These questions I ask for information. The Government could either make for itself or the people, or save entirely the interest on this money to the people. Eight per cent on \$1,700,000,000 is \$136,000,000, a considerable amount in the hard times.

Why not the Government issue the money in the place of the banks doing it? Four things are needed for the currency of the country, viz: Security, uniformity, elasticity, and convertibility. The Alliance demands this.

In Government issue of currency the notes would be based upon the credit of the Government, just as the bonds are, and the Government has the right to tax every dollar's worth of property amounting to \$67,000,000,000. Every note would have this security, making it perfectly good. Besides, the Treasury note can be made a legal tender and thus have a separate and distinct value as currency, and notes issued in this way are paid out in pensions, salaries, current expenses, and thus they go directly from the Government to the people. No middleman stands between the Government and the people to take toll out of the money as it passes. These Treasury notes would take the place of paper money burned up since the war. It would increase the amount of currency and increase prices. It would make debts and taxes easier to pay. Now, will the present plan do any of these things? Can it be amended so as to give security, uniformity, and elasticity to the currency? If so, I will vote for it. If not, I will vote against it. Will the money issued by both State and national banks be uniform, or will we have forty-four different kinds of money? Will the currency be national? It will not be, without some amendments are attached to the bill; and under it we might have forty-four different kinds of money.

Then, again, it seems to me that this bill proposes to retire the greenbacks and the Treasury notes of 1890. If so, why? Now,

then, tell me why this money should be retired? I am opposed to destroying Government issue. Why should the people be deprived of this money? Is it hurting anybody? Is anybody losing anything by it? Is it not the money that fought your battles and saved the Union? And if it is good enough for the people why not for the banks?

Of course these notes represent a debt the Government owes the people, but they bear no interest; the interest is saved to the people, which they would have to pay if the debt took the shape of bonds.

One reason, possibly, why some men hate this kind of money is that it affords them no safe cover under which their wealth can escape taxation and at the same time draw annuity.

Why, it seems to me that the object in retiring these notes, which cost the people nothing in interest, is that some men shall have bonds to draw interest and pay no taxes.

The \$10,000,000 per annum saved by the Government to the people is to be lost to please the banker and throw that much into his pocket. I want to vote for some measure of relief, but do not want to jump out of the frying pan into the fire. I am opposed to the present financial system, but do not want to make matters worse.

It is claimed by some that this plan would provide for a reserve of paper money in order that the raid on the gold reserve might be stopped, that the profits of the banking scheme would be so alluring that all the greenbacks and Treasury notes which are now used to take gold out of the Treasury would be retired into bank reserves, but after the entire amount needed has been utilized under this bill would there not be enough left outstanding to take the entire gold reserve out and bonds forced to sale to get it back again, or if this is not done it would inevitably lead, it seems, to the utter annihilation or destruction of the balance of the Government money, thus leaving the bankers in possession of the whole field. If not, why not? It would be good-bye to greenbacks and Treasury notes. Then the Democrats would proceed to burn up what the Republicans, as venturesome as they are, did not dare destroy, and the whole country would be placed at the mercy of the money sharks.

That seems to be the milk in the coconut, anyway. If not, why not? I hope it is not the case, and would like to be convinced against it, or have the bill so amended as to prevent it. If these objections can be met I would like to support some measure of relief and relieve the inactivity of the party in power. The substitution of bank paper for Government paper seems to be the only object. The one enriches the banks and the other protects the people. Will you stand by the people or banks? I will stand by the people to the bitter end.

Must the Government take a back seat and let the bankers issue their interest-bearing notes when the Government could issue them without any interest, or at least a very low rate?

See, gentlemen of the House, if you can not so arrange as to have the Government say what interest shall be charge^d. See if you can not make this bank issue conform in security, uniformity, and elasticity and cheapness to the greenback and Treasury notes. Do that and I will vote for the bill. Let us come together and adopt some plan under the Constitution compelling our Government to perform the plain letter of that Constitution and regulate the finances in the public interest, instead of legislating so that a few can monopolize our money and rob everybody else.

Our people must have relief from the power of money to oppress or go into practical slavery. Our currency must by some means be taken out of the control of a small class of men, who at present control and monopolize its benefits. It must be scattered among the people or they are lost, and the country with them. Its volume must be regulated in every section so that it can be borrowed at lower rates of interest. Will this bill do it? I think not without amendments. Then let it be amended to that end. Strike out the section authorizing the retiring and utter destruction of the greenbacks and Treasury notes (section 9). Then change the section authorizing State banks so that the money issued by them will be uniform and national in character, being all Government issue.

Change the provisions of the present bill so that the money issued by both State and national banks will be uniform and national, and have it so arranged that the money issued shall be the same as that now in existence, issued by the Government. At the same time let every bank be responsible for the redemption of its own currency. At the extra session of Congress I introduced a bill for the increase of the circulating medium and distribution of the same, which I think will, with some amendments, go very far toward relieving the present conditions. I herewith insert a copy of the bill and a portion of my remarks made before the Committee on Banking and Currency on said bill, as follows:

A bill for the enlargement of the volume of currency and the distribution of the same.

Be it enacted, etc., That upon the demand of any State of the United States, expressed through any legally authorized officer of said State, the Secretary

of the Treasury be, and is hereby, authorized and directed to issue notes of the Government of like denominations as the Treasury notes at present issued and in circulation, which notes shall be a legal tender at their face value for all debts, public and private, and noninterest bearing and an amount of said notes, not to exceed \$30 per capita upon the population of each State according to the last census preceding the application, shall, upon application to the Secretary of the Treasury by said officer, be issued to such State upon the conditions hereinafter prescribed.

SEC. 2. The State making a demand in accord with the first section of this act shall deliver to the Secretary of the Treasury the lawful bonds of said State to the full amount of Government notes demanded, and such bonds shall be taxable at the rate of 1 per cent per annum, said tax to be covered into the United States Treasury on or before the 1st day of April of each year by the proper State authorities, said bonds to fall due at the expiration of twenty years from their date: *Provided*, That such State shall have the right at any time before the said bonds fall due to turn over to the Secretary of the Treasury the full amount, or any part thereof, of Government notes issued to such State; or in lieu thereof said States may redeem and recover such bonds, or any part of the amount thereof, with lawful money of the United States. When such bonds are recovered by the return of said notes, the Secretary of the Treasury shall destroy said notes.

SEC. 3. That each State to which said notes may be issued shall make provision for the distribution of the same as it may deem best for the welfare of the inhabitants thereof.

I said to the committee at that time:

PROPOSED MEASURES OF RELIEF.

"We see to-day, figuratively speaking, the will of one man, at least, attempting to rule the Congress of the United States. The President of the United States stands, as I said in a speech the other day, scepter in hand, daring Congress to give the people what they asked for. We see the rich growing richer and the poor growing poorer, and yet with each recurring year we continue to sow in faith, toil in hope, and reap in despair. Surrounded by the most wonderful progress and development the world has ever witnessed, yet standing appalled with impending bankruptcy and ruin.

"Now, Mr. Chairman, these being facts which I do not think can be successfully controverted, such a system ought to be changed; and believing this and knowing this to be the sentiment of the people I represent, I have brought forward this bill as a substitute for the present banking and funding system, which bill I do not claim to be original entirely, but, as I have said, something like it was introduced last session by Colonel LIVINGSTON of Georgia.

"I have also brought it forward as a substitute at the same time for the State banking system. I conceive this to be a substitute for the famous subtreasury system which has been so much abused and so little understood. It is nothing more nor less to-day than a plan to change the present financial system of the National Government. I also conceive this to be a substitute for the State banking system. This plan, I think, covers the financial plank in the Ocala platform, one of the Alliance demands. And just here let me say, that while I am an Alliance man I am a Democrat. I want to disabuse the minds of the members of this honorable committee of this one idea, that an Alliance man is a Populist. It is no such thing; and there is a wide gulf between them. I claim to be an Alliance man, advocating certain measures; and yet I have done and expect to do it within the Democratic party, as long as the Democratic party stands by its principles and platform; and that I submit to be the financial plank of the platform of the Farmers' Alliance, strictly speaking.

"The General Government has reserved to itself the right to coin money and emit bills of credit. You can find that in Article I, section 8, of the Constitution, and section 10 of Article I is plain that the State shall make nothing but silver and gold a legal tender. This Government has, however, neglected to supply the necessary kind and quantity of money to effect exchanges essential to the interests and welfare of every section alike. It is the duty of every national government to institute and regulate a medium of exchange; but that this duty has been imperfectly performed appears from the fact that when specie is made the only tender in payment of debts neither the Government nor the mass of the people have or can have any adequate control over it. The capitalists control the money and through the money control the Government.

"The defects of the present monetary laws further appear in the great power given to national banks, so well described a few mornings ago by Colonel Oates of Alabama to your committee; also from the variations in the rates of interest of Government stocks constantly fluctuating in value. If the Government does not secure a uniform value to money for its own use, it can not regulate as it ought the currency of the country. It is impossible to secure to labor its earnings under systems by which the Government and the public depend upon a few capitalists to furnish the medium and standard for the distribution of the productions of labor.

"The bill in question will give to us a uniform currency, a currency to be issued by the nation and the States respectively, each State receiving only so much as it requires under the act when demanded by any regularly legalized officer, and such funds to be disposed of as each State may direct by law; and that is what I

conceive to be a substitute to the State-banking system; for each State, by its legislature, can direct how this money shall be loaned. It can be loaned upon any security which is good. The State, of course, places bonds in the National Treasury to secure the National Government, and then loans its money to citizens in South Carolina or Pennsylvania under State laws as they may direct. They might in South Carolina lend money on one thing and in Pennsylvania they might lend on another, hence you could not adopt any uniform system, and hence I leave it to the States themselves to arrange that matter.

"It is clear that Congress has the constitutional right to coin money, etc. This makes it the duty of the General Government to provide the money of the nation, and it is accordingly bound to make money in quantities adequate to the wants of business and to institute it in a way which will secure the effectual regulation of its value. The present deplorable condition of the country is a sufficient argument against the national banking system, and, as I have said, it is a pernicious system. All of the old authorities are against national banks—Jefferson, Madison, and Benton."

So much for the bill as I then saw it, and now back to the subject in hand.

In the convention that framed our Constitution, Roger Sherman, of Connecticut, said:

The people immediately should have as little to do as may be about the Government.

It would be hard to find a single man in public life to-day who would give utterance to this sentiment, but my observation in Congress, from the limited service I have seen, impresses me with the conviction and belief that national legislation for the past thirty years has been largely influenced and dominated by it. It has seemed to me at times within the last twelve months that popular government was a mockery. Our Government was instituted for the common good; it was intended for a government of the people, by the people, and for the people; it was meant for their protection and their safety; it was created for their happiness and not for the benefit of trusts, corporations, and monopolies. I have witnessed their annoyance, their insolence, and, in common with others, felt their iron power in legislation.

The history of legislation for more than thirty years shows that national legislation has been for the profit and private interest of the money class and not for the public good.

Abraham Lincoln warned the American people against just what had occurred. He said:

Beware of the money power, which seeks to perpetuate its reign until the wealth of the country has passed into the hands of the few and the nation is lost.

One-half the wealth of the country has already passed into the hands of a mere handful of speculators, and if the country is not on the down grade without brakes, then all signs lie.

To-day two elements, opposing and hostile, representing diametrically opposite ends and aims, are arrayed against each other. One is the people, the other the plutocracy which Lincoln referred to, which has no pride of country nor of popular government, whose sole end and aim is to control legislation, thus giving us two classes—

THE SKINNER AND THE SKINNED.

At the risk of parliamentary censure and public ridicule, I have raised my voice in protest and condemnation of oppression, tyrannical class legislation, when to have remained silent was to accept the deepest humiliation and shame. I may have offended the dignity of the House, I may not have been strictly in order, under the rules, but I have rarely failed to point out abuses, so flagrant in many cases as to call for the strongest denunciation. My own pledge I have kept. Every promise I made, or every promise my election as a Representative implied, I have sacredly observed. I was vain and conceited enough when sent to Washington to believe that by diligence and prayer, by unremitting toil, by vigilance, by circumspect conduct, by high purposes, that I might to some extent influence legislation for the common good. I was practical enough to look beyond and above local or sectional questions, and will continue in this course.

By an overwhelming vote the people elected the Democratic ticket in 1892. With a powerful majority in the House, a safe working majority in the Senate, a Democratic President, the opportunity was presented the Democratic party to redeem every pledge it had ever made the people. What the party promised in 1892 it had promised in every campaign previous to that year. The great question in every national campaign for fifteen years has been the tariff. Every Democratic defeat has resulted in a higher protective tariff. The limit was reached in the passage of the McKinley bill in 1890.

The national Democratic platform adopted at Chicago emphatically condemned this law in the strongest language. This is the tariff creed of the Democratic party:

We denounce Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few. We declare it to be a fundamental principle of the Democratic party that the Federal Govern-

ment has no constitutional power to impose and collect tariff duties, except for the purpose of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered.

We denounce the McKinley law as the culminating atrocity of class legislation.

The English language can not make anything plainer than is the Democratic declaration against protection. Now I do not intend to make a tariff speech, God forbid; I voted for what has been branded "the sugar-trust tariff bill." I voted for the Senate bill as a choice between that monstrous Democratic deformity and Republican robbery under the McKinley law. It is necessary that I should explain my vote, and clear my conscience so far as I may be able to do, or otherwise I shall not allude to the tariff question. I am tired of it; you are sick of it; the country is disgusted and almost ruined by its disastrous agitation. It has been a matter of party contestation for nearly 100 years; we have had the tariff since Washington's days. We had high tariffs and low tariffs; war tariffs and peace tariffs; Republican tariff and Whig tariff; manufacturers' tariff, and lastly a trust tariff. We have had every sort of tariff except a Democratic-platform tariff. That is what the people demanded in the last election.

The election of a Democratic Congress and a Democratic President meant a Chicago-platform revenue tariff. It meant that or it meant a stupendous lie. That was the sole issue in the campaign.

The great question of financial reform in which the people are deeply and vitally concerned was ignored. With an explicit platform declaration in form of the free and unlimited coinage of silver, it was the expectation of every honest man who voted the Democratic ticket that silver legislation in conformity to the demand would be the immediate result of Democratic ascendancy. No question was raised about it. A Southern and Northern interpretation of the platform was not then heard of. It was the tariff. It was free wool, free iron, free sugar, free coal. It was the repeal of the McKinley law. It was a tariff for the farmer, the mechanic, the laboring man, as against the capitalist, the manufacturer, the monopolist. "McKinleyism is the culminating atrocity of class legislation" was heard from every stump in South Carolina and all over the United States from the Democratic party. It was robbery, we declared, and the people believed it. Why was it robbery? Because it maintained a system of taxation which allowed the farmer about 6 per cent on his gross income, while the capital of the protected received more than 200 per cent.

There is no country upon the earth where population is so great as it is in ours, and constantly increasing, where agricultural value does not outweigh all other values, unless such values are interfered with by unjust laws, because agriculture is the natural occupation of all mankind, and is the sole groundwork of all wealth.

You have heard this platitude until you are tired of hearing it. But it answers the purpose of illustration. It is a demonstration that in the last campaign the people were confronting a most disastrous condition, and not a speculative theory in political economy. It emphasizes the peril of the situation to-day in the light of recent tariff legislation. The correction of this abuse, the enactment of a law and the permanent establishment of a system of taxation for the support of the Government, in consonance with the interests of the whole people, you expected and it was your right to demand.

Within thirty days after the inauguration of a Democratic Administration it was your belief and my belief that Congress would be called together and the last vestige of Republican tariff robbery wiped from the statute books. That was the obligation imposed by the election. It was not done. That omission was a crime. No Democrat can justify it. It is indefensible. It is beyond vindication. I would not vindicate it if I could, and I could not if I would. It was a fatal blunder. It was treachery. It was an ignominious surrender before the first gun was fired. It was a dastardly submission. It was base stultification. It was bad faith. It gave the lie to every Democratic assertion. It was a repudiation of the party platform and party pledges. It was a plain, imperative duty, urged upon the President, but treated by him with stolid indifference.

The people had been deceived. I did not hesitate to say so then, and I repeat it now. I did not hesitate to denounce the deception then, and everything in the way of tariff legislation since abundantly justifies it.

Five months after the inauguration the President convened Congress in extra session. To repeal the McKinley bill? No. To carry out a single pledge to the people? No. In recognition of a single obligation in the national platform? No. To correct a single abuse growing out of Republican rule? No. To repeal class legislation? No. To protect the people against further robbery under Republican tariff legislation? No. What, then? To destroy the money of the people, the money of the Constitution.

At the dictation of Wall street Congress was called together on

the 7th of August to repeal the Sherman law; to stop the coinage of silver; to establish a single gold standard system of finance in this country; to complete the demonetization of silver; to eliminate it as a money metal from our currency. But of this I shall speak hereafter. I want to dispose of the tariff; it is a nasty job. You know it is bad when Grover Cleveland speaks of the Senate bill as "the product of perfidy and dishonor." I voted for the bill and without going into discussion of its merits or demerits, its deformities or inconsistencies, its "perfidy and dishonor." I voted for it because it taxes the ill-gotten gains and the remorseless greed of the capitalist, the speculator, the stock gambler, the monopolists, and the plutocrats. I voted for it because it lessens taxation upon the necessities of the people over \$200,000,000 annually. I voted for it upon the assurance that legislation would immediately follow putting iron, sugar, and coal on the free list. I conceded the sugar trusts its \$30,000,000 or \$40,000,000 in order to save \$200,000,000 to the people. I voted for the bill not because I indorse the method employed in its preparation. I despise the juggling and jobbery, and trading and duplicity, and hypocrisy and lying, that have characterized it from its inception to its scandalous consummation. There is not a clean spot in the bill from the enacting clause to the end. It is not only branded by the President as "the product of perfidy and dishonor," but the whole country denounces it as a cowardly and corrupt submission to the manufacturing interests and the sugar trust.

But whatever its inspiration, whatever the motives that influence GORMAN, SMITH, and BRICE who held the Democratic party by the throat, I could not dispute its advantages over the McKinley law. The fact that its operation would benefit the people in the reduction of taxation, and that it introduced the income tax as an element in our system of taxation, compelled me to vote for it. It was a desperate alternative. I am not responsible for the conditions that developed it. Democratic leaders have been false to party pledges, they have wantonly repudiated the party platform, they have forced the party into shameful and cowardly submission to the dictations of trusts and monopolies. They have changed the policy of the party and branded its principles with ignominy and disgrace. They have wrecked the party organization and made Democratic promises a term of reproach. The man who would attempt to justify or extenuate what has been done in the name of the Democratic party is a fool or a knave.

I wash my hands of all responsibilities. I follow that leadership no further. It is not Democracy. The majority in Congress is not a tariff-reform Democratic majority. The Democracy of Grover Cleveland and his cuckoos and the Democracy of South Carolina are as wide apart as the poles. On the great and paramount question of financial reform the Democracy of Cleveland and the Republicanism of John Sherman is one and the same thing. Wall street controls the financial policy of the Administration as absolutely as the Czar does the Russians. Elected on a platform that every honest Democratic voter construed to mean the free coinage of silver and the restoration of silver in our monetary system, Grover Cleveland repudiated the platform, obeyed the dictation of the money powers, and, with the assistance of John Sherman, struck silver down. It was the dastardly blow of the assassin.

The Sherman law was repealed; the coinage of silver was stopped; silver as money was destroyed, at whose behest? The people? No. Who demanded it? Whence the emergency? What influence directed it? Was there too much currency? No. It was Wall street and the national banks; it was the open and defiant plutocracy. The influence that dictated the money plank in the Chicago platform, which had one construction on Wall street and another radically different in South Carolina and elsewhere, demanded the repeal of the Sherman law. It has been said that the contract was made at Chicago; the obligation was then imposed on Grover Cleveland. Unfortunately for the country it was not known. It has also been said it was then agreed that the demonetization of silver should follow his nomination and election.

It has been publicly asserted and nowhere denied, so far as I know, that Cleveland's nomination at Chicago was the result of bribery. It has been charged that his manager, Mr. Whitney, bought enough votes to secure his nomination on the first ballot. That money was freely used in the convention to effect his nomination hardly admits of question. Where it came from is equally certain. Wall street, through certain national banks, furnished it. The pound of flesh nominated in the bond was the repeal of the Sherman law. The people are paying the debt. The iron hand of Shylock is at their throat. The price of wheat and cotton under the gold standard tells the story of their wrongs more eloquently than human tongue can express it. The panic was the alleged excuse for the century crime. It was a subterfuge and a lie. I said so then; I know it now. The law was repealed; the crime was consummated. Did it end the distress in the country? Did it restore confidence? Did it raise the price of wheat or cotton? Did it cheapen money? Did it add a dollar to the volume of

currency? Did it put a single idle spindle into operation? Did it raise the mortgage on a single acre of ground? No! No! No!

Business is prostrated; millions of idle people are clamoring for work and bread; factories are closed; the furnace fires are out; trade has been destroyed; disaster and woe and lamentation fill the land; the country is driven to the very verge of bankruptcy and ruin.

All this distress, poverty, suffering, and starvation have followed the repeal of the coinage laws. Is that the cause? Who can say to the contrary? Why not, with one-half of the circulating medium of the country destroyed without warning, without notice, without the consent of the people—against their indignant protest. Who did it? Grover Cleveland, with his brigade of cuckoos. How? By the corrupt use of patronage.

The bill was rushed through the House under the dog whip. The muzzle and gag were applied to prevent free discussion; it was passed by the aid of Republican votes. I have the record of shame and dishonor; it shows the influence and power of patronage in legislation; it shows, too, who the Democrats are that wear the collar of the money power; it shows what Wall-street Democracy means; it shows what fatal influence has paralyzed the efforts of the Democratic majority to redeem party pledges; it shows the futility of any attempt to carry out Democratic reform under the present leadership of the Democratic party. And now these same leaders, Carlisle and Cleveland, with their followers here, are attempting to force another measure down our throats, but I, for one, am not willing to swallow it without a number of amendments, which I have already mentioned; and I, for one, am unwilling to vote for any measure which in any way looks to the destruction of Government issue and the establishment of a bank monopoly.

The Senate vote shows the same influence, same corrupt considerations, the same trading, the same shameless use of patronage. The same irresistible deduction follows, in this as in tariff legislation, that the money power, monopoly, trusts, control and dominate the Administration and the Senate. I might read the names of the Democratic Senators who voted for this iniquity and in so doing voted their own political condemnation. In considering this bill we are carried back to the days of 1791, when the first national bank was established, and to the times of Andrew Jackson.

There is material and thought here for a whole day's speech. I can only touch the glaring points. Now, my fellow-citizens, imagine Andrew Jackson in Grover Cleveland's place. I hope the old hero will not turn over in his coffin at the suggestion of such a comparison.

How did Jackson treat the national bank when it attempted to control the legislation of Congress? These powerful corporations, created by the Government and mainly supported by the deposits of the public fund, had grown so proud and insolent by long continuance of arbitrary and irresponsible power as to threaten the very Government itself, and to exercise an influence over the trade and industry of the country incompatible with the freedom of either and the rights of the people.

The same condition of things exists to-day. Jackson fought the bank. He resisted the attempt to recharter it. He removed the public deposits from its custody.

It was a tremendous undertaking even on the part of the hero of New Orleans, but his courage, determination, and patriotism were equal to the demand of the occasion. The bank, on its part, prepared for the fight. It had its branches in all the great cities of the Union. It controlled the financial operation of the Government and of the people just as it does to-day. It regulated exchange, it put up or put down prices of commodities at will as at present. It first essayed to corrupt the people, and it expanded its line of discounts to \$70,428,270, which was an increase of \$28,025,766 in less than two years, being an extension of 66 per cent on its loans at the beginning of the contest. It subsidized a portion of the press and does the same thing now. It employed a large number of public men throughout the country as its attorneys, and these attorneys and borrowers were found both in the Senate and the House. And history again repeats itself. Jackson won the fight. The whole thing was rotten. Upon investigation the bank books told the tale of infamy and corruption; it held among its assets the obligations of more than fifty members of Congress.

The bank subsequently went to pieces, and Biddle, its president, and several of its officers were indicted for a conspiracy to cheat and defraud the stockholders of the bank, and they were only saved from the penitentiary for their crimes by a habeas corpus. As it happened to this great money power, so may it may it happen to the money power which essays the same rôle now in demonetizing silver, its aiders and abettors in high or low degree, in office or out of office.

The day of reckoning is near at hand; the common sense of the plain people will assert itself. It is the plain people, "whom the Lord must have loved for he made so many of them," who constitute the court of final appeals of all political and social movements.

Once the people wake to the error, they demand that the truth and right shall prevail. The people stand for honest politics, honest money, honest morals, law, order, decency, faith in man, and belief in God.

The people have grown tired of this arrogance of popular right and usurpation of popular authority which the anarchy of wealth has forced upon them. They demand that their Government be restored to them; that it become in deed what to-day it is but in name, the Government of the people. They know their rights; that the right to govern carries with it the consent of the governed, the incontestable, inalienable right to institute government alone; that the Government of this country was intended for the common good; that it was created for the protection, safety, prosperity, and happiness of all, and not for the profit, honor, or private interest of any man, family, or class of men. That they will assert and vindicate their manhood, I believe as strongly as I believe in the existence of a God.

The remedy is with the people. The crisis is at hand. I am no alarmist. But it is a speedy correction of abuses by the peaceful methods of legislation or it is revolution. If the Democratic party prove recreant to the sacred trust imposed by the people it should be driven from power. When it was invested with power by the people in the last election, it was the demand of the people for a change. Under Republican legislation, in the interest of capital and the classes, a gigantic money oligarchy had been built up. It controlled Congress, it controlled the Republican party. Its ascendancy was in its power.

The country was corrupted by this condition when Cleveland was for a third time nominated for the Presidency. The people doubted him. South Carolina entered her solemn protest against his nomination.

He was under suspicion of the money power. His identification and associations and education all smelt of Wall street. But the leaders of the party pledged him to a performance of all party obligations. We know now how that obligation has been kept. We know now how the very leaders themselves repudiated their own platform, threw party principle to the dogs, defied party obligations, and subjected Democrats to the humiliation of public contempt. The history of the Senate tariff bill and the repeal of the Sherman law is a history of Democratic shame and of party perfidy and dishonor. It is a blot upon Democratic manhood. It is a stigma and disgrace.

You ask me what the remedy is. People have been betrayed. The traitors must be punished. The United States Senate stands between the people and the money power. A Democratic Administration is prostituted by campaign obligations to influence legislation in the interests of trusts and monopolies. The people have been wantonly deceived.

An honest observance of platform obligations and party pledges demanded the prompt, fair, honest revision of the tariff, and the speedy restoration of silver to our monetary system and a change in the financial policy of the Nation. It has not been done. A Democratic President and a Democratic Senate are responsible for it, as well as the Democratic leaders in the House. Another betrayal, and the cause of honest government is lost.

Another Grover Cleveland and another sugar-trust tariff bill and the country is helpless in the hands of the money oligarchy. I hope it will never happen. The mutterings of the plain people are already heard throughout the land. Their protest is not heeded. The denunciation of monopolies and trusts and plutocrats is treated as the madness of socialism and anarchy. Give us free silver and some financial legislation in the interest of the people—not in the interest of banks—and all will be well. That is the remedy which will give relief. Then let us relax no effort on account of the seeming hopelessness of the impending situation. The future has its forebodings. But the darkest hour is just before the dawn. Revolutions never go backward. Reformations in government and politics cost great sacrifices. They triumph at the expense of long years of bitter disappointment.

Our country is unsurpassed in the globe. No people on the earth are braver, truer, nobler, more patriotic than ours. Our heritage is worth a dozen revolutions. Let the people rule. Down with the anarchy of wealth, the result of plunder and greed and rapacity. Down with the traitor and hypocrite. Let the honest people have a chance. Give us honesty, courage, morality in public life.

One hundred years ago this great, rich, powerful nation of nearly eighty million souls was a scattered agricultural nation of less than four million people. It is the love of liberty that has made our country great. Our people love freedom next to Heaven. They have fought for it; have perished with human effort to maintain it.

Eternal vigilance is its price. It comes high, but is worth all the sacrifice it demands at the hands of our common manhood. Let us come together and unite upon some financial reform by amending the proposition so that it will meet the approbation of the House and be the means of extending to the people of this great country the relief so much desired.

The Currency Question.

SPEECH

OF

HON. JOHN DAVIS.

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 8, 1895.

On the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. DAVIS said:

Mr. SPEAKER: In a former session of this Congress I discussed very fully the dangers of permitting the control of the finances by banking corporations. Sir, the Constitution of the United States places the business of coining and issuing money entirely in the hands of the General Government. The coining and issuing of money is an act of sovereignty, and to delegate the business to corporations is in that respect to abdicate government. The issuing of currency is in no respect a proper branch of the banking business. It is, in effect, "making money," and it should not be performed by any other power than the sovereign Government, as mentioned in the Constitution. The proposition that the coining and issuing of money is a sovereign act is so plainly expressed in the organic law that it should not be doubted for a moment. And as to the dangers arising from delegating that sovereign power to banking institutions, they are so plainly seen in the history and experiences of the past that we can not too often recur to them. The old Democratic platforms uniformly condemned the policy of surrendering the control of the finances into the hands of banking corporations. They declared such a policy to be "unconstitutional and dangerous to liberty." And, five times, at as many Presidential elections, the people have decided that the Democratic platforms were right.

Mr. Speaker, I know it is disputed that the language of the Constitution authorizing the General Government to "coin money" and to regulate its value applies to paper. It is well, sir, to be right in the matter, and I appeal to the writers contemporary with the Constitution, and to the very highest authorities to prove that the words "coining money" applies to both metal and paper, and to one as truly as to the other.

Webster's Dictionary admits that the word "coin" means to "stamp," and that the act of stamping may apply to either metal or paper.

Dr. Franklin, discussing the subject of trade and industry, said:

As to paper circulating as money, it is highly profitable, as its quick passing from one to another is a gain of time, and thereby may be understood to add hands to the community; inasmuch as those who would be employed in telling and weighing, would follow other business. The issuers or coiners of paper are understood to have an equivalent to answer what it is issued for or valued at; nor can any metal or coin do more than find its value.

Any paper in the general chain of credit and commerce is as useful as they are; since the issuers or coiners of that paper are understood to have some equivalent to answer for what the paper is valued at; and no metal or coin can do more than find its value. Moreover, as incontestable advantages of paper, we must add, that the charge of coining or making it is by no means proportionate to that of coining of metals; nor is it subject to waste by long use or impaired by adulteration, sweating, or filing.—*Franklin's Works* (1809), volume 4, pages 166-184.

Sir Archibald Alison, of England, discussing the French finances, said:

In the midst of the apparent prosperity produced by that excessive increase (of paper) the sagacious mind of Napoleon perceived the seeds of future evil; and amidst all the turmoil of his military preparations at Boulogne, he repeatedly wrote to the minister of finances on the subject, and warned him of the danger of the Bank of France trusting too far the delusive credit of individuals engaged in extensive transactions, or pushing to an undue length in the form of a paper circulation the royal privileges of coining money.—*Alison's Europe*, volume 7, page 92. London, 1860.

Napoleon Bonaparte, writing from Boulogne, September 24, 1805, said:

The evil originates in the bank having transgressed the law. What has the law done? It has given the privilege of coining money in the form of paper to a particular company. . . . In a word, in discounting after this manner, the bank is coining false money. So clearly do I see the dangers of such a course that, if necessary, I would stop the pay of my soldiers rather than persevere in it. I am distressed beyond measure at the necessities of my situation, which, by compelling me to live in camps and engaging in distant expeditions, withdraws my attention from what would otherwise be the chief object of my anxiety, the first wish of my heart—a good and solid organization of all that concerns the interests of banks, manufactures, and commerce.—*Alison's Europe*, volume 7, pages 92, 93—note. London, 1860.

David Hume, of England, said:

In our colony of Pennsylvania the land itself, which is the chief commodity is coined and passes into circulation.—*Harvey on Money*, pages 60, 61. London, 1877.

Prof. J. Stanley Jevons, discussing the subject of bank notes, said:

The right of coining bank notes. According to the view which I adopt, the issue of notes is more analogous to the royal function of coining than to the ordinary commercial operation of drawing bills. We ought to talk of coining notes, as John Law did; for, though the design is impressed on paper instead of metal, the function of the note is exactly the same as that of a representative token. As to the right to issue promises, it no more exists than the right to establish private mints. For our present purposes that alone is right which the Legislature declares to be expedient to the community at large.

As almost everyone has long agreed to place the coinage of money in the hands of the Executive Government, so I believe that the issue of paper representative money should continue to be practically in the hands of the Government, or its agents acting under the strictest legislative control. M. Wolowski, in his admirable works on banking, has maintained that the issue of notes is a function distinct from the ordinary operations of a banker; and Mr. Gladstone has allowed that the distinction is a wholesome and vital one. Bankers enjoy the utmost degree of freedom in this country at present in every other point, so that it is wholly a confusion of ideas to speak of the unrestricted emission of paper representative money as a question of free banking.

Albert Gallatin, who was Secretary of the Treasury for two terms under Jefferson, and also under Madison, wrote:

The right of issuing paper money as currency, like that of issuing gold and silver coins, belongs exclusively to the nation, and can not be claimed by any individuals.—*Gallatin*, volume 3, page 429.

Mr. Gallatin further said:

But issuing a paper currency is not dealing in money, but making money. . . . The unrestricted right of coining gold or silver might be claimed with as much propriety as that of coining a paper currency.—*Gallatin*, volume 3, page 431.

Quotations might thus be extended indefinitely, but the above will suffice to show conclusively that contemporaneous writers agree that the right to "coin money" as given to Congress by the framers of the United States Constitution applies to paper as well as metal money. And, as a logical consequence, neither States, corporations, nor individuals have any better right to issue currency than they have to "coin money." The coining and issuing of money is an act of sovereignty, and it can not properly or legally be performed except by the sovereign authority of the General Government, as authorized by the Federal Constitution.

Speaking of Napoleon's sentiments on this subject, Senator JOHN SHERMAN said:

Surely, when Napoleon was so jealous of the power of the Bank of France, as William Pitt was of the Bank of England, which were institutions of a national character, under the control of the national legislature, and carefully watched by executive power, to coin money, or, which is the same thing when specie payments are suspended, to issue paper money, we should be jealous of the power exercised by a multitude of local banks chartered by twenty-eight States, whose issues are not secured by any uniform standard and are not restrained by the obligation to redeem in coin.

This idea expressed by Napoleon Bonaparte embodies the real objection to bank paper money issued in time of war when specie payments are suspended. It is a power that ought never to be exercised except by the Government, and only when the State is in danger. It is the power to coin money; because when a bank issues its bill without the restraint of specie payments, it substantially coins money, and false money. Sir, this is a privilege which no nation can safely surrender to individuals or banks.—*Sherman*, in *United States Senate*, February 10, 1863.

Mr. Speaker, having settled the point that money may be coined from either metal or paper, and that the coining and issuing of money is an act of sovereignty which should be performed by the Government only, the next point is the regulation of the value of the money. This, too, is the business of the Government. The Government must "coin money and regulate the value thereof." Now, money is valuable in proportion to its volume, and the value of a dollar can only be regulated by controlling the number of dollars afloat. Hence, the value of money can be regulated by regulating or controlling its volume, and in no other way.

Yes, sir, this is the only way that the value of money can be "regulated." I know there is a theory abroad that when the law fixes the number of grains of a given metal that shall be coined into a dollar that by that act the value of the dollar is fixed. Yet when the number of metal dollars are scarce they are much more valuable than when plentiful. Gold is the most fluctuating of commodities and is the least reliable of the money metals as a standard of value. It is of greater or less value in proportion to the plentifulness or scarcity of the metal from time to time. Hence the one and the only way that the value of money can possibly be regulated is by controlling its volume or quantity as compared with the commodities of commerce. It is in practice an agent or commodity of commerce, and, like other commodities, it is cheap or dear in proportion to its supply compared with the demand for it.

Mr. Speaker, it is now plain that the Government has both the authority and the power to coin money of any proper material, and to regulate its value by regulating the volume or supply as compared with the demand for it.

The next question is as to preserving the value of money which is coined from a material without value. I reply that all money must be redeemed. That is what money is for, to be redeemed. An irredeemable money is a worthless money. But let us not be misled by terms. Swapping dollars is not redemption. All dollars, both metal and paper need redemption. Money does not depend for its value on the value of the monetary material, but on the

values that are behind it; on the values of the commodities with which it is redeemed.

Mr. E. G. Spaulding, a banker of Buffalo, N. Y., who was a member of Congress and chairman of the subcommittee of Ways and Means, in 1861-62, stated the subject of redeeming money very plainly and truly as follows:

Every time a hundred-dollar bill passes from one person to another it is a practical redemption of it by the person who takes it. Every time a merchant at Chicago pays to a farmer \$500 in national currency for a car load of wheat, the farmer by the operation redeems such national currency not in greenbacks, nor in gold, but in a commodity better than either, namely, wheat, a staple article, useful to all. So every merchant in New York that sells a bale of cotton goods and receives his pay for it in currency redeems such currency, not in the way that banks redeem it, but in cotton goods, which is far better, because it performs the true functions of money by facilitating the legitimate sale of commodities. So every time that a merchant or manufacturer pays his internal-revenue tax to the United States collector in national currency, the Government redeems such currency by receiving and discharging such tax. So every mechanic or laborer that receives national currency for his services redeems such currency by the labor performed. So it will be seen that just so long as the national currency is practically redeemed every day in its passage from hand to hand in the payment of commodities and services, and in the ramified operations of trade and business, both with the Government and the people whose operations it greatly facilitates, there is not the slightest necessity for resorting to the expensive and risky operation of assorting and sending it home for redemption.—*Spaulding's History*, appendix, page 10.

Dr. Franklin, discussing the money question before a committee of the English House of Commons, said:

The English bank bills being payable in cash upon sight by the drawer is indeed a circumstance that can not attend the colony bills, for the reason just above mentioned, their bullion being drawn from them by the British trade; but the legal tender being substituted in its place is rather a greater advantage to the possessor, since he need not be at the trouble of going to a particular bank or banker to demand the money.

On the question of issuing a legal-tender paper, Senator JOHN SHERMAN, in his speech of February 13, 1863, said:

The power to fix the standard of money, to regulate the medium of exchanges, must necessarily go with, and be incident to, the power to regulate commerce, to borrow money, to coin money, to maintain armies and navies. All these high powers are expressly prohibited to the States, and also the incidental power to emit bills of credit, and to make anything but gold and silver a legal tender.

But Congress is expressly invested with all these high powers, and, to remove all doubt, is expressly authorized to use all necessary and proper means to carry these powers into effect. Congress is not prohibited from emitting bills of credit or from making a standard of value, nor are these powers expressly conferred. Congress has repeatedly issued bills of credit; it has fixed gold and silver as the standard of value, and made them a legal tender. Certainly gold and silver coin is the best standard of value, for it has inherent value in all commercial countries; but if, in the course of events, gold and silver can not be had in quantities sufficient to form a medium of exchange for the increased wants of the country, then Congress may establish another medium of exchange—another standard of value. This was twice done by establishing a Bank of the United States. I much prefer the credit of the United States, based as it is upon all the productions and property of the United States, to the issues of any corporation, however well guarded and managed.

Further along in the same speech Mr. SHERMAN said:

If you strike out this legal-tender clause you do it with the knowledge that these notes will fall dead upon the money market of the world; that they will be refused by the banks; that they will be a disgraced currency that will not pass from hand to hand; that they will have no legal sanction; that any man may decline to receive them, and thus discredit the obligations of the Government. I ask again if that is just to the men to whom you have contracted to pay debts? When you issue demand notes and announce your purpose not to pay any more gold and silver coin, you tender to those who have furnished provisions and services this paper money. What can they do? They can not pay their debts with it, they can not support their families with it, without a depreciation. The whole, then, depends upon the promise of the Government to pay at sometime not fixed on the face of the note, and you bring about an era of irredeemable, depreciated paper money.

In his speech of January 8, 1863, Senator SHERMAN discussed this subject again and said:

There can be no doubt about the power of Congress on this subject; and, in order to fortify my opinion and show that the whole question has been examined by much wiser men, I will read an extract from the report of Mr. Dallas, in December, 1815. I read this short extract to show that never was the exclusive power of Congress over the currency denied even by those gentlemen who were in favor of gold and silver as the standard of all values. Mr. Dallas, in his famous report made in December, 1815, says:

"By the Constitution of the United States Congress is expressly vested with the power to coin money, to regulate the value of domestic and foreign coins in circulation, and (as a necessary implication from positive provisions) to emit bills of credit, while it is declared by the same instrument that 'no State shall coin money or emit bills of credit.' . . . The constitutional authority to emit bills of credit has also been exercised in a qualified and limited manner. During the existence of the Bank of the United States the bills or notes of the corporation were declared by law to be receivable in all payments to the United States, and the Treasury notes, which have been since issued for the services of the late war, have been endowed with the same quality. . . ."

"The constitutional and legal foundation of the monetary system of the United States is thus distinctly seen; and the power of the Federal Government to institute and regulate it, whether the circulating medium consist of coin or of bills of credit, must, in its general policy, as well as in the terms of its investment, be deemed an exclusive power. It is true that a system depending upon the agency of the precious metals will be affected by the various circumstances which diminish their quantity or deteriorate their quality. The coin of a State sometimes vanishes under the influence of political alarms, sometimes in consequence of the explosion of mercantile speculations, and sometimes by the drain of an unfavorable course of trade. But whenever the emergency occurs that demands a change of system, it seems necessarily to follow that the authority which was alone competent to establish a national coin is also competent to create a national substitute."

These extracts from a document of great ability state the whole question in a few words. Congress has the power to regulate commerce; Congress

has the power to borrow money, which involves the power to emit bills of credit; Congress has the power to regulate the value of coin. These powers are exclusive. When, by the force of circumstances beyond our control, the national coin disappears, either because of war, or of other circumstances, Congress alone must furnish the substitute. No State has the power to interfere with this exclusive power in Congress to regulate the national currency, or, in other words, to provide a substitute for the national coin.

Mr. Speaker, from all that has been said it appears that a money, either metal or paper, that is receivable in the revenues of the issuing government is good money, and, then, if in addition to that receivability it is endowed with the quality of general legal tender, it becomes redeemable with all the commodities or values that are for sale in the country. Such a money rests not on gold alone, but on all values, and all men are eager to redeem and accept such money to the utmost extent of the values they have for sale.

But, sir, an important point like this can not be too closely examined or too strongly supported. I therefore call attention to the following discussion of the matter from an English standpoint. The *Daily Star*, of Montreal, December 6, 1893, discussing my paper in the *Arena*, of Boston, on the "Bank of Venice," said:

But let us suppose that the whole people of the United States, for instance, would mutually agree to accept such a system, would that solve the problem? This is what Congressman Davis proposes. He says:

"As Americans we may learn a lesson from the Bank of Venice and improve upon the system. We may admit the deposit of gold and silver in the Treasury as Venice did, and instead of placing it to the credit of the depositor we can issue him a legal-tender Government note. That note should read, 'Receivable in the revenues of the Government, and lawful money in all payments.' The deposits and the issuing of the notes in the proper denominations and amounts should end the transaction. There need be no money held in the vaults of the Government for redemption purposes."

Let us suppose the United States is satisfied with this. Then what about the rest of us? What would a London merchant say if asked to sell goods for a United States note, redeemable nowhere in particular, unless he wanted to pay some United States customs charges? His prices would go up like a balloon. How could such money compete with gold that would do all it could and immeasurably more? It would be the old mistake of imagining that when trade is world-wide the machinery of trade can be safely tampered with by one nation. Even the powerful and rich Venetian Government, we are told by Mr. Davis, used coin "in foreign countries and among barbarous peoples, where paper credits could not be used."

If the editor of the *Star* had read his own British writers on this subject he would not have asked the above questions. Men and nations do not make payments in foreign countries with money, but with commodities—with wheat, cotton, pork, bullion, etc.—never with money. Venice used bullion when trading with barbarians, and, having a domestic money not subject to exportation, the republic was able to devote all its bullion to the foreign trade without deranging its domestic finances. My critic will observe that London merchants do not sell goods payable in foreign money, but in exchange convertible into English money. With a domestic non-exportable currency in the United States, all of our bullion could be used abroad without deranging our home finances. This doctrine is not new, and it seems strange that a great British editor should still remain in the kindergarten class on so important a subject.

Sir Archibald Alison, in his *History of Europe*, Volume VI., Chapter XXXV., new series London edition, 1860, discusses this subject very fully. He argues that the great objects of a currency are to be "adequate and retainable." It must not be exportable. Nor should it be established on a basis "which is either too narrow or liable to fluctuation." Mr. Alison says:

A system of currency mainly dependent on the retention of gold leads to alternations of prosperity and suffering as inevitably as night succeeds day and day night, and that altogether irrespective of drains of gold from extraneous causes, such as war loans, extensive importations of grain owing to bad harvests, or the like, which necessarily, and still more immediately, lead to a ruinous contraction of the currency, and consequent stoppage of credit and general suffering. . . .

In the first place, if the gold can only be retained, when exchanges become adverse, by strengthening industry, starving the country, and so lowering the prices of the produce of every species of industry, the remedy is worse than the disease. Gold is a very good thing and necessary for foreign exchanges, but it is not worth purchasing by the ruin of the country. In every one of the great monetary crises which have occurred every five or six years during the last thirty, from a hundred to a hundred and fifty millions sterling have been destroyed. Is the retention of gold worth purchasing at such a price? What is the use of it, if it can only be retained by making the capitalists rich and all other classes poor?

In order to establish a safe and satisfactory domestic currency, Mr. Alison says:

The currency should be issued by Government and Government only, and the nation responsible for its value as it is for the 3 per cents. Nothing would be easier than to establish such a currency, and confine it within the requisite limits. . . .

It belongs to practical men to devise the details of such a system; but if honestly set about by men of capacity nothing will be more easy of accomplishment. And it may be safely affirmed that if the requisite change is not made the nation will continue to be visited every four or five years by periods of calamity which will destroy all the fruits of former prosperity, like the unfortunate culprits who, under the former inhuman system of military law, when sentenced to one thousand or fifteen hundred lashes, were brought out at successive times to receive their punishment by installments as soon as their wounds had been healed in the hospital.

The sad experiences of England for several hundred years, with her full bullion value exportable silver coins, should have taught our critic a lesson. Finally that conservative Government, in 1816, determined to coin 6 pence from an ounce of silver instead

of 62. After that the British silver coins were nonexportable; they then stayed at home and served the people. At the present time the bullion value of the English silver coins is about half their coin value, with no evil results. I wonder that my critic has not considered these facts.

Suppose a British subject should buy wheat in America and offer English silver money in payment? What would be done in the premises? Simply this: The payment would not be made with English money at all, but with bullion, or some form of valuable commodities, or with exchange convertible into American money. When my critic graduates from the kindergarten class and reads the horn books on finance, he will learn that there is no international money. Money is and should be a domestic device only. It should be nonexportable. It should not be based on an exportable commodity, but on the quality of legal tender. Then, and not until then, it may become adequate and retainable, which, Mr. Alison claims, are "the greatest objects of a currency."

Mr. Alison discusses the fluctuations of gold as a basis for money in Volume I, page 132, as follows:

He [Mr. Horner] saw clearly that oscillations in the value of money, and consequently in the price of every article of commerce, were among the most grievous evils which can afflict society, and rendered property and undertakings of every kind to the last degree insecure; and he thought that he would guard effectually against them by fixing the entire currency on a gold basis, forgetting what he himself at the same time saw, that gold itself is an article of commerce, and, like every other such article, is subject to perpetual variations of price; and that, from its being so portable and valuable, and everywhere in request, it is subject to more sudden and violent changes of value than any other article in existence.

That is British history and British sentiment; and yet we find a British subject in Canada contending for the oscillating, exportable, and unsafe gold basis for money, under the infantile impression that money is or should be international. The bank funds of Venice were a nonexportable domestic money, setting free all bullion for the foreign trade; yet, to a greater extent than usual, those bank credits performed also the functions of an international money for large payments among the commercial and more civilized tribes and nations bordering upon the Mediterranean.

Mr. Speaker, the discussion of the money question seems to pervade the very air in all parts of the country. I have letters asking the status of the first \$60,000,000 of United States Treasury notes issued during the war. In reply I will state that the first fifty millions were authorized by the act of July 17, 1861, and another ten millions were authorized by the act of February 12, 1862. These two issues made up the sixty millions of notes in question. They did not bear interest. They were not at first legal tender. They were legally redeemable in coin "on demand," which caused them to be called "demand notes." But as the coin of the country disappeared during the first six months of the war they could not be redeemed in coin when demanded, so they began to depreciate. In this emergency the Secretary of the Treasury ordered them to be received for duties on imports. As soon as they were thus received they rose to par with coin. In addition to being receivable in the revenues of the Government, the act of March 17, 1862, made the demand notes legal tender to the same extent as the greenback.

To recapitulate: The demand notes, amounting to \$60,000,000, were not actually redeemed in coin during the war because the coin was not on hand, but they were receivable by the Government the same as coin, and were legal tender to everybody except bondholders. These qualities of legal tender and receivability kept them as good as gold at all times, while the greenbacks which were not receivable by the Government depreciated badly.

It will be noted that the greenback and the demand note were equally redeemable on demand. The greenbacks bear no future date of redemption, hence they are due on demand in accordance with a recognized principle of law, that a note demanding payment with no date of maturity is due on demand. Such in practice and in law is a demand note. Hence the greenbacks were due and redeemable in coin the moment of issue the same as the demand notes, but through lack of coin, in point of fact, neither was so redeemed during the war.

So, in the matter of coin redemption, the demand notes and the greenbacks were on the same legal footing. In the matter of legal tender to individuals they were on the same footing after March 17, 1862. The demand notes were, however, receivable in the revenues of the Government and the greenbacks were not. That was the only legal difference. This gave rise to the difference in values of the two classes of notes during the war and up to October, 1878, when the Government began to receive the greenback in the revenues.

The late Judge Martin, in his work on the *Money of Nations*, cites numerous examples of the efficacy of receivability on the part of the Government in the maintenance of money at par. At page 168 he says:

Any paper money issued by the United States, and made receivable for all debts due the Government will always be preferred to coin.

Every step of United States history under the Constitution proves this: "1. The notes of the first bank of the United States, from 1791 until 1811,

were made by the law creating the bank full legal tender for all debts due the United States, whether the bank paid coin or not. These notes were always preferred to coin.

"2. The Treasury notes issued, with and without interest, in 1812, 1813, 1814, and 1815 were full legal tender for all debts due the Government, and Gallatin and Campbell, Secretaries of the Treasury, say were equal to coin, though the banks opposed them as they do legal-tender notes now. (1830.)

"3. The notes of the Bank of the United States from 1816 until 1836 were made by the law creating the banks full legal tender for all debts due the United States. They were for twenty years, at home and abroad, better than and preferred to coin. From 1837 until 1848 the Treasury notes of the United States, to the amount of nearly \$100,000,000, with and without interest, were not only par with but preferred to coin, for the reason that the law made them receivable for all debts due the United States.

"4. In 1857 Congress authorized the issue of \$20,000,000 Treasury notes, which the law made full legal tender for all debts due the Government. They were equal with and preferred to coin.

"5. In 1861 and 1862, before the issue of legal-tender notes, Congress issued \$50,000,000 demand notes. They were payable in coin, but at first they were not made legal tender for debts due the Government. They went to a discount, though payable in coin. But when, by the order of Secretary Chase, they were made receivable for duties on imports, they were at once not only equal with coin, but preferred thereto. In 1862 they were made full legal tender."

On page 164 Judge Martin states that \$69,000 of the demand notes were still in circulation in 1890. The rest has been redeemed and retired.

Mr. Speaker, much is said about the necessity of having a flexible currency. A currency that will be plentiest at those times when most needed to move the farmers' crops to market, and which then may be retired when not so much needed. It is argued that, in order to insure flexibility, the power to control the money should be surrendered to the banks, with the infantile "confidence" that they (the banks) will control the volume of the money in the interest of the people. Sir, our sad experiences and observations as to bank management of the currency has proven the dangers of such a policy. When money is most needed it has been the practice of the banks to make money scarce, that they may put up the interest and reap a larger profit. When money is less needed they will ask less for its use, and it can be had cheaper. This is the logic of the matter, and the facts prove it to have been the practice. The banks are not doing business for charity's sake and they never do, but for profit, and if permitted to control the currency they will make it flexible in their own interests and against the interests of the people. This, sir, has been the uniform history of the past, and in the very nature of things it can not be otherwise.

Mr. Speaker, we do not need or want a flexible currency, but, on the other hand, we need a steady, unfluctuating currency. There is no period of the year when money is not needed. The wheat crop is ready for market in the South in May and June, in the Middle States in July and August, farther north in September and later. And, sir, wheat will keep in the bin of the farmer and may be marketed and sold and the flour handled the entire year. The same general principle holds good with corn and all the cereals, and with wool and cotton. As to pork and beef, with cold storage and frozen shipment the marketing season lasts all the year. The marketing of fruits and vegetables begins with the early berries and other early fruits in the spring and ends with potatoes, winter apples, oranges, and lemons the following spring. The sale of horses and other live stock on foot is confined to no particular season. Nor are the products of the shops, factories, and mills thrown on the market in bulk, to be sold at any special time of the year.

Mr. Speaker, when we come to examine this subject in all its parts we find there is no particular season of the year when all the products of land and labor must be thrown upon the markets to be sold, but, sir, on the other hand, when we consider our various climates and products, and our diversified industries, it will be seen that salable commodities dovetail into each other as to times and seasons most beautifully and perfectly, and that there is never a month of the entire year when there is not a steady stream of commodities flowing into the markets. Hence, then, we do not want a flexible or fluctuating money. Such a money as we need has never been furnished by the banks, and, in the very nature of things, can never be. But, on the other hand, it can be furnished by the Government, and the Government only.

This is the uniform testimony of all history and experience in this country. Give us a uniform, steady, and unfluctuating currency, issued by the Government, receivable in the Government revenues, legal tender in all payments, and in sufficient volume to maintain a normal sea level of average prices, and the people will have firm ground to stand upon. A commercial system thus founded will have stability, safety, and firmness. It will be built upon a rock which will not be shaken by the shifting sands of other systems founded on "flexibility" in the hands of banking institutions. A flexible or elastic currency in the hands of the banks means unlimited power over the people and their dearest interests. A steady, unfluctuating currency in the hands of the Government means prosperity for the people and the country. It is the simplest possible system of finance, older and better tried than all others, and always successful and satisfactory when fairly tried.

Mr. Speaker, the President and most of the journals of the East insist on a paper remedy for our distresses in the form of interest-bearing bonds. Sir, there is a better way. Since gold, by its scarcity and cowardly absence, fails to meet the necessities of the occasion, and, since we must appeal to paper, why not choose the best form of paper? And since the best paper is the least costly for the people, there are two great reasons for adopting it. It seems, by the admission of all, that a legal-tender currency in this country at the present time is about as good as 3 per cent bonds, and they are both at the present time on a par with gold coin. This being so, the gold reserve can be as easily and readily replenished with a legal-tender noninterest-bearing Treasury note as with a 3 per cent bond. In other words, endow your noninterest-bearing Treasury note with all the legal-tender qualities attached to gold coin and we can buy gold coin with it as readily as with a 3 per cent bond. This will save the interest on the bonds, and the currency will enter into circulation as money and give prosperity to the country.

As to the redemption of the Treasury notes, of course that must be provided for. All money must be redeemed with value. Gold redemption is neither safe, satisfactory, nor necessary. We must provide a better, broader, and safer redemption than that. In the first place, as already stated, the currency must be receivable in the public revenues. That is primary redemption by the Government. In the second place, the currency being legal tender in all payments, it will be eagerly redeemed by the people with all the values in the country that are for sale. And a currency so redeemed, resting on all the revenues of the National and State Governments and on all commercial values, need not be otherwise redeemable. Hence there would be no necessity for maintaining a gold reserve. Any gold needed for special purposes could be readily purchased with the Government currency. No interest-bearing bonds would be needed and the financial prostration of the country would be changed to financial and industrial prosperity.

Mr. Speaker, I am not mentioning any new or untried experiment. I appeal to the facts of history as they have transpired in commercial nations. It is a well-known uniform fact that the lawful currency of a given country is more valuable than the bonds of that same country, until sufficient interest or usury has been attached to the bonds to bring them up to par with the currency.

Mr. Speaker, I ask attention to some illustrations of the position I have here taken. The case of the Bank of Venice is the oldest well-authenticated case in point. And I ask special attention to three principal features of the Venetian finances.

Besides the bank funds for large payments by transfers on the books, and besides the cash office for smaller special purposes, there was an interest-bearing debt. This debt arose from the policy of limiting the bank deposits to the needs of business and not expanding the bank funds recklessly to the full amount of the expenditures of the Republic. And gentlemen may be surprised to learn that, while the noninterest-bearing bank funds were at all times above par as compared with coin, the interest-bearing bonds were never at par.

Mr. Sidney Dean, in his *History of Banking and Banks*, states a well-known fact, as follows:

Near the close of the eighteenth century, while the bank credits were at a premium and in demand, the bonds of the Venetian Government were quoted at 60 per cent of their nominal value. It is clear from this that the bank credits had something behind them more substantial than popular confidence in the Government of the Republic itself. (Page 15.)

The question at once arises in full force and prominence, What was that "something" behind the circulating bank credits "more substantial" than was behind the Government bonds? Both the bonds and the bank credits had the "popular confidence in the Government of the Republic" behind them. The bonds also had the promise of coin redemption and the profits of interest to sustain them. The bank credits had neither the promise of coin redemption nor, at that date, the profits of interest to rest on, but "something more substantial." What was that "something"? There can be but one answer. That "something more substantial" than confidence in the Government of the Republic, more substantial than coin redemption and the profits of interest, was the demand for payments—for use as money—arising from the quality of legal tender in the usual transactions of business.

To show that this apparently strange fact is nothing unusual, it may be remarked that during the Napoleonic wars the noninterest-bearing, legal-tender English currency was twice as valuable as the 3 per cent gold-bearing bonds of England. In proof of this I ask attention to the following statement of Mr. Alison in his *History of Europe* (Volume VIII, page 68, note).

Mr. Alison says:

The public creditors were frequently, in the 3 per cents, inscribed for much more than 100 pounds in consideration of 60 pounds advanced. In particular in 1807 they received no less than 140 pounds of stock for each 60 pounds paid.

That is to say, the British 3 per cent bonds were worth only 40 to 60 per cent of their face value, while at the same time British

legal-tender currency was circulating in the channels of business at par with gold. On this latter point Mr. Alison (Volume IV, pages 224, 225) says:

Notwithstanding all that the spirit of party may have alleged, there does not appear ever to have been any trace of the latter effect (the depreciation of paper) in this country, or that at any period a higher price was exacted for articles when paid in bank notes than in gold.

These facts clearly prove that the demand for payments, arising from the quality of legal tender, is far more powerful in sustaining the value of Government paper than is the expensive adjunct of interest or usury. The same thing is plainly proven by the fact that during our late war the gold-bearing American bonds were frequently 20 to 50 per cent below par as compared with coin, while that portion of our currency which was receivable in the Government revenues was uniformly at par with coin.

Mr. Speaker, a savage can readily perceive that the earth will support heavy burdens, and that a burden may be lifted by a man or drawn by a horse; but he may doubt that the yielding water of the sea can bear a ship with a cargo of 1,000 tons, and that said ship can be driven to all parts of the globe by the fickle and unreliable winds of heaven. And when we tell him that a few ounces or pounds of superheated vapor of water will drive a ship of iron through the billows of the ocean at the rate of hundreds of miles per day, we excite his derision. Then if we say to him that the unseen and imponderable thing known as electricity can act more powerfully and more speedily than steam, he will lose patience. If we go still further and try to explain to him that the entity known as the mind and will of man is still more powerful, subtle, and active than either water, steam, or electricity, and that this godlike attribute can harness to its service all the potent elements of nature, he will no longer listen to us.

Now, it is this last and greatest power, known as the will of man, enacted into law by a sovereign government, which is the true basis for money. Of course the untutored mind can not comprehend this; and yet this is the broad, sound, and stable basis for money which has always succeeded and never failed when fairly tried. It is this broad and safe basis for money that the gold vultures desire to discredit and abolish. They desire to bind the Prometheus of our civilization to the rock of savagery, and to give us, instead, the open box of Pandora. To do this they corrupt the corruptible; they flatter and cajole the ambitious; and, through a truckling and subsidized press, they mislead the unsuspecting. All this has been done and is being done to degrade silver and to destroy the sovereignty of the Government over money.

Mr. Speaker, in an editorial of the Times, of this city, dated December 22, 1894, I find the following:

There is plenty of money in the country if a way could be found to make it circulate. At present most of it lies locked up in banks and other places of deposit, there to remain until a revival of trade puts it in circulation. Start up our mills and factories on full time, give working people a remunerative employment, create a demand for our products, and there will be no scarcity of money. Our monetary system needs remodeling, but not on the Carlistis plan.

Mr. Speaker, if we will cast aside all prejudices and preconceived opinions on the subject and look at the naked facts in the case the money question is not difficult. First, the money hoarded in the banks does not belong to the banks, but to individuals. Second, it fails to circulate because of general falling prices. No man will invest his money on a declining market if he can help it. So the money lies in the banks waiting for prices to touch bottom. Third, now if some one will put in operation a plan by means of which prices will cease falling and commence to rise, then the hoarded money will at once leave the banks and enter into active circulation.

It is a fact plain to every thinker and student of history that money will not circulate in a time of declining prices. On the other hand it can not be prevented from circulating during a time of rising prices. This statement is as true and self-evident as is the fact that water does not naturally run up hill, but uniformly runs freely down hill. Then when it is desired that money should circulate all we have to do is to create the conditions which uniformly insure its circulation.

To make the subject very plain, I will state it in the form of an arithmetical example in long division, thus:

Divisor. Commodities.	Dividend. Volume of money.	Quotient. Average prices.
--------------------------	-------------------------------	------------------------------

The divisor in this example is the people and the commodities they have for sale. The dividend is the volume of money afloat to do business with. The quotient is the general average of prices. Now, it is a fact, that the people and commodities of this country, and the people and commodities of the money-using world, are increasing; that is to say, the divisor in our example is continually increasing. This being so, then the dividend, or volume of money, must equally increase, or, as is plain, the quotient must decrease; that is, the general average of prices must continually decline. And, as already seen, as long as prices decline the money in existence will not circulate. It will remain locked up in the banks waiting for prices to touch bottom. The

hoards will never circulate; the enforced idleness of labor will continue. Enforced idleness of labor means public distress, which must grow worse continually until, in the delirium of starvation, the suffering people may commit unlawful acts. Then to keep the peace the hungry people are usually suppressed by force; in other words, if we do not adopt the just and civilized plan of increasing the volume of money as the people increase, then may be forced upon us the unjust and savage plan of reducing the divisor, because we refuse to increase the dividend as the divisor grows.

Our true remedy in the matter is obvious. We can double the money of ultimate payments by using both gold and silver on equal terms, instead of gold only. And then the metals may be supplemented with legal-tender Treasury notes, receivable in the revenues of the Government, but not otherwise redeemable. Such a money is uniformly as good as the issuing Government, and in our case that is good enough. There is not a case on record in this country or in England where a full legal-tender Government currency, receivable in the revenues of the issuing Government, has fallen below par with gold coin; but on the other hand such notes have usually been preferred to coin.

It may be replied to what I have here said that the money of the United States has been increasing and still is increasing as the people and their commodities increase; that the monthly Treasury reports show that the money per capita is as great or greater now than ever before.

In reply to that position I desire to say, with all due deference to the Treasury officers, that the monthly reports do not state all the facts. They do not show all the exports of gold coin, nor the waste, loss, and destruction of coins and notes. The late Senator Plumb, a very high authority on this subject, stated the matter in 1888 as follows:

It is estimated that there are in circulation, including that which is locked up in the Treasury and held in the bank as a reserve fund, about \$1,000,000,000 of all kinds of currency of the United States, gold and silver, the overplus of gold and silver certificates, greenback notes and national bank notes, all told, and there are more than \$50,000,000 of property which must finally be measured by this volume of currency. It has been contracted during the last year more than 5 per cent in addition to all that has occurred by reason of abrasion and loss. No man can tell the volume of greenbacks outstanding. Nominally it is \$26,000,000 and a fraction, but that volume has been subject to all the accidents which have occurred during the past twenty-five years, whereby money has been consumed, worn out, lost, and it is doubtful if the amount is really over \$30,000,000 to-day.

In June, 1890, Senator Plumb continued the discussion of this subject, as follows:

Let us see, therefore, how much money is available for actual use among the people. From the total of \$1,500,000,000 arrived at as above, must be deducted an average of \$200,000,000 which the Treasury keeps on hand, and about which something has heretofore been said in the debate on this bill, and that leaves as the maximum which can by any possibility be used \$1,300,000,000. There ought, in fairness, to be deducted from this \$150,000,000, error in estimate of gold in the country, which would reduce the money outside the Treasury to \$1,150,000,000. From this is to be subtracted the \$500,000,000 as a reserve, as before computed, leaving a balance of \$650,000,000 which is available for delivery or use in the transaction of the business of all the people, or a trifle over \$5 per capita. But the force of my argument is not materially weakened by conceding the gold coin to be as estimated by the Treasury Department, which would leave in actual circulation \$700,000,000. In order to make up this amount all doubt must be resolved in favor of the Treasury and against the people, both the doubt as to the amount of lost and destroyed notes and that as to the gold supply.

If I were deciding this case upon what I consider the best evidence, I would be bound to say that I believed the money in actual circulation did not much, if at all, exceed \$500,000,000. Upon this narrow foundation has been built the enormous structure of credit of which I have spoken. It is the greatest of the kind that was ever built, because it was built by the best people that ever built anything. Over twenty thousand millions of debts, the enormous and widely extended business of 65,000,000 people, all rest upon and must be served by a volume of currency which must seem to the most veteran financier as absolutely and dangerously small.

Mr. Speaker, I think it is plain to every candid person that the monthly Treasury reports are false and misleading; that there is no such increase of available money as is demanded by the increasing numbers and needs of our people. It is only on this ground that we can explain why we witness hoarded money, declining prices, enforced idleness of labor, and general distress among the people.

Now let us look at some historical examples. At the close of the war money was plenty and times were good. In 1866 a law was enacted to sell registered bonds for currency and to cancel the currency by burning. This at once caused decreasing money, falling prices, general hoarding, and hard times. The New York clearings ceased to increase with an increasing population. The hard times and popular discontent caused the repeal of the contraction law in 1868. This at once "restored confidence." The hoarded money went to work and the New York clearings bounded up from twenty-eight billions in 1868 to thirty-seven billions in 1869. But as there was no actual increase in money corresponding to the increase of the people the good times, founded on confidence only, was fitful and could not last.

Then came the law of 1869, making the currency bonds payable in coin, and the laws of 1873-74, demonetizing silver. This caused hard times, as is plainly shown in the New York clearings. In 1875 was enacted another contraction law, preparatory for specie payments. This intensified the public distresses. Anarchy seemed

imminent. Pittsburg was partly burned, and troops were called out in places to shoot starving people. The New York clearings indicated the situation, and were smaller in 1876 than they had been since 1863. Though the people had increased about a dozen millions in ten years, yet the New York clearings were seven billions less in 1876 than 1866.

To relieve the situation Congress passed two remedial measures in 1878. One (May 31, 1878,) forbade the further retirement of greenbacks; the other authorized the coinage of over \$2,000,000 per month of silver, to be added to the circulation. These laws assured the holders of money that prices had touched bottom, and at once, as if by magic, the hoarded millions of money in the banks was at once checked out and put into circulation. The New York clearings immediately registered the good times. They bounded from twenty-two and a half billions in 1878 to forty-eight and a half billions in 1881.

But these good times were not pleasing to the banks. In 1882 there was about \$360,000,000 of bank currency. By 1888 it had been reduced to less than \$200,000,000. This contraction caused falling prices and hard times. The New York clearings promptly noted the fact, and to this day the banks have not loosened their grip on the currency of the country. Since 1880 our population has increased nearly 20,000,000; yet the New York clearing house records about \$15,000,000,000 less business per annum in the nineties than in 1881.

If asked how we may dissipate the hoarded money from the banks and set it to circulate the answer is plain and certain:

1. Let silver be remonetized and placed on an equal footing with gold.
2. Let there be issued fifty millions of greenbacks to replace the lost and destroyed notes, in accordance with the intent of the law of May, 1878.
3. Let there be issued one hundred and fifty millions of greenbacks to replace the bank currency which has been retired since 1882.
4. Let all newly issued notes be legal tender and receivable in Government revenues, but not otherwise redeemable, and let all new notes be covered into the Treasury and paid out in the lawful disbursements of the government.

These issues of money can in no just sense be considered an "inflation" of the currency. They would only be restoring the lost, wasted, and retired currency which the banks and the Government considered as necessary for a population several millions less than we now have.

Mr. Speaker, the policy here indicated would start every wheel, furnace, pick, spindle, hammer, and plow of the industries. It would employ every man, woman, and child able to work in all this broad land at good wages. There would be no longer any necessity to increase the standing Army for the purpose of reducing the population, as recently intimated by the General of the Army. No, sir; but, on the other hand, we would have good times, as so truly described by Col. R. G. Ingersoll prior to the contraction of the currency. The colonel said:

On every hand fortunes were being made, a wave of wealth swept over the United States, huts became houses, houses became palaces, tatters became garments, and rags became robes; walls were covered with pictures, floors with carpets, and, for the first time in the history of the world, the poor tasted of the luxuries of wealth. We began to wonder how our fathers endured life. Every kind of business was pushed to the very sky line.

Mr. Speaker, in order to bring out of its hiding the money that "lies locked up in the banks," it is not necessary to start any scheme of unlimited currency inflation, but merely to restore the ancient coin of the world as it has existed from the days of Abraham, and, in this country, until 1873; to reissue the lost and destroyed currency since 1878, in the form of new greenbacks, and then to gradually increase the money as the people increase. How easy and simple this would be if the money changers who have us by the throat would only permit it! As a matter of hope in this line I am glad to note, recently, some symptoms of sound policy, even among the banks. Once in a while some of the bankers open their eyes, and begin to see that even the banks could do more and better business by dealing with a prosperous people than they are now doing by skinning the dead. Let us then work and patiently hope that deliverance may yet come to the working people of America and of the world.

Mr. Speaker, I am utterly opposed to the currency bill now before the House. I am opposed to any and every bill which enables the banks to usurp the rights and powers of the General Government in the matter of supplying a sound and stable currency for the use of the people. Through such a measure there can be no permanent relief or prosperity for the country.

But, sir, a measure in accordance with the platforms of Jefferson, Jackson, and Benton, so often approved by a general vote of the people at the Presidential elections from 1830 to 1860, giving us the standard coins of gold and silver, supplemented by legal-tender Treasury notes, will afford instant relief, with assured and permanent prosperity. Sir, in the light of all monetary history

and in accordance with the principles of equal justice, there is no other certain and safe policy for the relief of the country's distresses.

Already our civilization shows symptoms of distress and decadence. Through shrinking money and falling prices, industry is stagnant, bankruptcies are increasing, debts and taxes are becoming more burdensome; families are losing their homes through foreclosures and forced sales; able-bodied men by millions are tramping and begging for bread; women and children are famishing for the want of food, raiment, and shelter; mothers and little ones infest the streets, or retreat into loathsome dens and slums, no longer able to live otherwise; churches and schools are languishing for lack of money, the revenues of colleges and great universities feel the stringency of the times, and teachers and professors are dismissed because of insufficient funds to meet expenses. I wonder that gentlemen have not observed these threatening symptoms of social decadence.

Rome experienced the same distresses through the failure of the gold and silver mines of Greece and Spain. Roman society was disintegrated, and the population of Europe fell off one-half. The history of those times is very painful to read. The Christian civilization of the present day is entering the penumbra of the same eclipse which darkened, distressed, and decimated Europe for a thousand years. Relief came through the discovery of the American mines, expanding money and rising prices for labor and its products. An expansive money system is the chief remedy in such cases. With the broad and safe basis of legal tender, we may at once have increasing money and rising prices. This will give quick and lasting relief. The cries of distress will cease; the recuperation of society will begin; the burden of debts and taxation will gradually wear away; and our Christian civilization and free institutions will be preserved. Popular enlightenment is the necessity of the hour. Patient, earnest, and persistent work in spreading the light among men is the duty of every patriot.

Maritime Canal Company of Nicaragua.

SPEECH

OF

HON. DONELSON CAFFERY,

OF LOUISIANA,

IN THE SENATE OF THE UNITED STATES,

Thursday, January 10, and Friday, January 18, 1896.

The Senate having under consideration the bill (S. 1481) to amend the act entitled "An act to incorporate the Maritime Canal Company of Nicaragua," approved February 20, 1896—

Mr. CAFFERY said:

Mr. PRESIDENT: At the outset of my remarks I will disclaim any hostility whatever to the scheme of connecting the Atlantic and Pacific oceans by a canal or other means of transit, but I will announce with distinctness that I am opposed to the means of effecting that purpose presented in the pending bill. The instrumentality selected is the Maritime Canal Company of Nicaragua, incorporated under a statute of the United States in 1889.

I understand that the ground upon which the distinguished Senator from Alabama [Mr. MORGAN], who is in charge of this bill, assumes that the bill can rest upon constitutional authority is that the Congress of the United States has power to regulate commerce with foreign nations. He then places it upon another ground, upon the right to acquire territory, and he instances the three cases of the purchase of Louisiana in Mr. Jefferson's Administration, the purchase of our Pacific territory under the treaty of Guadalupe Hidalgo, and the purchase of Alaska. I understood the Senator from Oregon [Mr. MITCHELL] to place the authority of the Government of the United States to construct the canal by this instrumentality under the general welfare clause of the Constitution. So, Mr. President, we have three distinct grounds on which the authority to construct the canal is based.

Mr. MITCHELL of Oregon. Will the Senator allow me?

The PRESIDING OFFICER (Mr. PASCO in the chair). Does the Senator from Louisiana yield to the Senator from Oregon?

Mr. CAFFERY. Certainly.

Mr. MITCHELL of Oregon. I do not wish to have it understood that I place the constitutionality of the bill solely under the general welfare clause, because I stated distinctly that I place it also under the clause which provides that Congress shall "regulate commerce with foreign nations and among the several States," and also upon the clause which authorizes Congress to make provision for the common defense.

Mr. CAFFERY. "To provide for the common defense and pro-

mote the general welfare" is generally called in its full extent the blanket clause of the Constitution.

So, Mr. President, I undertake to discuss somewhat these different grounds, in order to see whether or not we have a constitutional right to construct a canal over foreign territory that does not belong to the United States.

The power to regulate commerce with foreign nations is one of the enumerated powers of the Constitution. It is a power that implies sovereignty. It requires a sovereign to execute that power. Under the clause of the Constitution giving every power necessary and proper to carry into execution the enumerated grants in that instrument it has been held that any construction facilitating commerce, aiding commerce, supporting commerce, was a means to that constitutional end. The end is the regulation of commerce. The means whereby that end is to be effected or can be effected is through the medium of various works of internal improvements.

The language of the Constitution is that Congress has power "to regulate commerce with foreign nations," and that power implies in its execution a commerce to be regulated. As the Constitution deprives the Government of the United States of the right to lay any tax or toll upon exports from the State, it is manifest that the commerce spoken of, that we can regulate "with foreign nations," is that commerce which is brought within the grasp of our foreign jurisdiction. No other commerce can be regulated but that commerce of a foreign character over which the United States has jurisdiction. To give that jurisdiction it is necessary that that commerce shall be brought within our borders, so that our territorial jurisdiction may attach to it. That, to my mind, is absolutely clear. That proposition I do not think can be controverted successfully. The commerce must be foreign. It must be by and between the citizens of the United States and foreign States, and it must be within the grasp and scope of our jurisdiction.

Apply this principle to the Nicaraguan Canal. How is it that the doctrine of regulating commerce with foreign countries can be so construed as to apply to the construction of an instrumentality of that kind? The construction of this canal is not the end sought. It is not the purpose for which the power can be put into execution. It is only a means to promote, to bring about, and facilitate such commerce with foreign nations as the United States may have jurisdiction over. We have no more right, in my opinion, to regulate the commerce that may flow between the two oceans or between the uttermost parts of the earth, owing to that canal, than we have to regulate the commerce that flows through Bering Straits or the Straits of Bab-el-Mandeb or the Dardanelles or upon the wide ocean. I can not conceive of any construction that jumps with the constitutional power to regulate commerce which would authorize the construction of a work to regulate commerce on foreign territory not owned by the United States.

This work is to be undertaken, I understand, upon the broad ground that we have every power, and we can resort to any means to execute that power which any foreign nation possesses in regard to subjects of foreign import, in regard to international subjects.

Mr. President, it is manifest that the powers of the Government of the United States operate externally both in regard to the States and in regard to foreign States. All minor regulations in which States are concerned, all lesser authority, if I may so speak, is vested in the States. The United States operate in the States directly upon the citizens of those States, in the application of its external authority over the States; and the United States deals with foreign nations upon all subjects of an international or foreign character as a great nationality.

Commerce is one of those external objects upon which the foreign jurisdiction of the United States, according to the terms of the Constitution, operates. All matters concerning war and peace, the making of treaties; all matters concerning the rights, privileges, and interests of our citizens abroad, concern the Government of the United States. All matters of every kind, character, and description that are the subject-matter of international law fall within the domain of the power of the Government of the United States. Is there anything loose in that power? Is there that floating, indefinite, vast, uncircumscribed power over foreign subjects that is contended for by the Senator from Alabama, and, I believe, by the Senator from Oregon? Is there no restraint upon the Government of the United States in relation to every matter of a foreign character?

Mr. President, I think there is restraint and check. I think that the rights of the Government of the United States in the exercise of foreign jurisdiction (which is almost synonymous with international jurisdiction) are clearly defined in the code of international law and by our Constitution. We have no further nor greater right than any other nation on the globe, but those rights are almost as well defined as the rights of a citizen in a municipal code. There is hardly a subject of international import that has not been the subject of international arbitration and settlement.

So that the code of international law obtains among civilized nations to-day, and its sanction is that whichever nation violates this code, disregards the principles of this code, becomes subject to an enlightened public opinion and censure. It can not be violated with impunity, and it must be obeyed with respect.

Now, Mr. President, what international or foreign power is invoked for the construction of this canal? I have heard none. I do not think I will ever hear any. The right to make war is a constitutional right. The right to make treaties is a constitutional right. In this connection I would say that the right to make treaties involves every subject about which and concerning which treaties are made among civilized people. There is no difficulty in discovering the constitutional right to acquire the vast territory mentioned by the Senator from Alabama. We have acquired it under treaty power, under constitutional power directed to that end, for one of the usual subjects-matter of treaties is the acquisition of territory. It is as much the subject-matter of treaties as the negotiation of commercial privileges or negotiating concerning the rights of some of our citizens abroad, either in their person or their property.

It is a right which flows directly from the power to make treaties. Although history tells us Mr. Jefferson had doubts upon the subject, and wanted an amendment to the Constitution of the United States passed, in order to clothe him with the power of purchasing the magnificent domain out of which so many States were carved, I think it clear that his warrant to purchase Louisiana under a treaty ratified by the Senate of the United States was the warrant of the treaty-making power. That precedent set by Mr. Jefferson was authority in the case of the purchase from Mexico of the Pacific Slope possessions and in the case of the purchase of Alaska from Russia.

Therefore, Mr. President, there is nothing indefinite, or vague, or undefined, or loose in the acquisition of territory. It flows directly from a constitutional grant. If the United States Government were to-day to negotiate a treaty with the Republics of Nicaragua and Costa Rica for the purpose of purchasing sufficient land to make a competent route over that territory for a canal or ship railway that treaty would come within the scope of the Constitution. The soil we purchased would be ours, the canal constructed would be ours, and the jurisdiction that we might set up there over commerce would be our jurisdiction and would be fortified and held up and sustained by our power to regulate commerce.

Mr. MITCHELL of Oregon. May I ask the Senator from Louisiana a question?

Mr. CAFFERY. Certainly.

Mr. MITCHELL of Oregon. Does the Senator deny that he is going outside of the treaty-making power for the present? Does the Senator deny the right of a foreign power to make a cession to the United States and that the United States could accept the cession and it would be binding between the nations?

Mr. CAFFERY. It would be a treaty.

Mr. MITCHELL of Oregon. That is no treaty.

Mr. CAFFERY. It would be a treaty for the United States to accept a cession. It would have to be done through the instrumentality of negotiation. It would have to be obtained by a treaty. It can not be done otherwise. I ask the Senator, does he mean to imply by his question that the United States have got any cession of territory under this grant to the Maritime Canal as the transferee of the Nicaragua Canal Association?

Mr. MITCHELL of Oregon. I mean to imply that the United States have a cession of certain very important rights and franchises which would authorize them to take the controlling stock in this company, and in that way control not only the construction of the canal across this foreign territory, but control it after the canal is constructed.

Mr. CAFFERY. I will say to the Senator from Oregon that in the concessionary grant from Nicaragua and Costa Rica there is an absolute and peremptory inhibition against the transfer of any of the concessions to any foreign power.

Mr. MITCHELL of Oregon. I know there is a difference of opinion as to the construction to be placed upon the grant. I understand that thoroughly.

Mr. CAFFERY. Mr. President, this Maritime Canal Company of Nicaragua is a private corporation. It is not a public corporation. It has been asserted over and over again by every Senator, I believe, who has advocated the construction of this canal under the present instrumentality, that the Maritime Canal Company was a public corporation. I propose to read from an approved authority on corporations what a public corporation is. I read from Angell and Ames on Corporations, eleventh edition, section 14:

There are various kinds of corporations which are distinguished by their degrees of power and the object and purpose of their creation, and the members of some corporations are subject to certain liabilities which do not attach to the members of others.

It is therefore proper, having explained the meaning and general object of a body corporate, to clear the way to private corporations, and perhaps

at the same time gratify the curiosity of some readers by a preliminary notice of corporations of a higher kind.

The word "corporation" is, we know, oftentimes significant of a community clothed with extensive civil authority, and a community of that kind is sometimes called a political, sometimes a public, and sometimes a municipal, corporation.

It is generally called public when it has for its object the government of a portion of the State; and yet although in such a case it involves some private interests, yet as it is endowed with a portion of political power the term "public" has been deemed appropriate.

Another class of public corporations are those which are founded for public, though not for political or municipal, purposes, and the whole interest in which belongs to the Government.

The Bank of the United States, for instance, if the stock belonged exclusively to the Government, would be a public corporation; but inasmuch as there are other and private owners of the stock it is a private corporation.

Though a public corporation is one which has for its object the administration of a portion of the Government, and although, if the Government owned the entire interest in the corporation not created for such a purpose, it may be a public corporation, yet if other parties together with the Government own a portion of the stock of the corporation, it is a private corporation, even though its object be a public one.

Tested by this rule, what is the Maritime Canal Company of Nicaragua, and what portion of governmental power will it administer? Have governments the whole stock in it?

Very great and particular pains are taken that the Maritime Canal Company, a private corporation, have stock in it, and this stock can be sold to other individuals. So that it is a private corporation; it is not a public one; and because the United through its directors may sit at the board as directors, and because Nicaragua and Costa Rica may likewise sit at the board through their directors, yet the corporation is a private one because of the interests of private individuals or private corporations in that stock and because its objects relate to private gain.

Mr. President, the purpose of this corporation is that of a private corporation; it is to collect tolls, to manage the traffic which may go through the canal built by the money of the United States.

Here, Mr. President, another point arises. It is contended on behalf of the advocates of this bill that the United States will virtually own this canal, that the United States will virtually operate this canal by having a majority of the stock, and that therefore—I presume that that is the implication—having the majority interest, having this virtual control, any regulation which the United States may make in regard to the traffic which may flow through that canal is a regulation of the United States in regard to commerce, and therefore justifiable and within the purview of the Constitution.

Mr. President, can the United States delegate to any instrumentality any of its sovereign power? The Government of the United States is one of enumerated powers, of delegated authority from the people of the States, but there is no power whatever upon the part of the Government to delegate to any corporation or to any body of men any part of its sovereign authority. To say that the United States, having the majority of the stock of the Maritime Canal Company of Nicaragua, actually controls or would control the commerce going through it is not stating the point correctly. The Maritime Canal Company would be regulating commerce; it would be doing so as a corporation. It would, therefore, be usurping a power—a sovereign power, which belongs solely to this great Government, and which can not be delegated. If the United States had the right (which I do not concede) to regulate commerce flowing through the contemplated canal, and were to allow this company to regulate that commerce, the supreme sovereign authority of the United States would be delegated to a private corporation to do an act which the United States itself only can do and can not delegate to another to be done.

Mr. MITCHELL of Oregon. I would ask, in answer to the suggestion of the Senator from Louisiana, what would he say of the Interstate Commerce Commission? Is not the establishment by Congress of the Interstate Commerce Commission a parallel case?

Mr. CAFFERY. No, sir; I do not think it a parallel case at all.

Mr. MITCHELL of Oregon. What is the difference?

Mr. CAFFERY. In that case the United States is doing it directly through one of its agencies. They exercise their powers in pursuance of an act of Congress. They have no right to make any substantive law; they can only apply laws which exist. It is a quasi court. There is no sort of parallel between that case and the case of the United States delegating its original independent authority to a corporation to legislate in regard to matters about which the United States is solely clothed with power and jurisdiction.

Mr. President, the United States has vast power. It reaches to every individual citizen in this land. The United States courts expound the law, and the United States marshals execute the decisions of the courts throughout the length and breadth of this land; that is a constitutional power; that is not a delegated power. When the United States erects an interstate commerce commission to regulate interstate commerce, the United States clothes that commission with the power to regulate, in pursuance of its statutes,

in pursuance of its regulations, and there is no independent authority whatever given to the Interstate Commerce Commission to make laws or regulations other than the laws or regulations prescribed by the United States itself.

There can be no delegation whatever of authority of any kind which the United States possesses. It must execute its authority itself and through the proper instrumentalities laid down in the Constitution—the judicial authority through its courts, the legislative authority through the Senate and House of Representatives, and so on; but it has no power to delegate such a supreme sovereign power to a subordinate private corporation as that of regulating commerce. That is the only constitutional ground on which Senators who advocate the construction of this canal have placed the right of the United States to give their subvention to the Maritime Canal Company of Nicaragua.

If the United States have no authority to delegate this power of regulating commerce to the Maritime Canal Company of Nicaragua, if this Maritime Canal Company of Nicaragua is not a proper means of carrying into execution the enumerated powers of the United States in regard to commerce, or in regard to any other power of the Constitution, what about the constitutionality of the charter of this corporation? If the United States has power to do or to perform a certain act or thing it is conceded that the United States can use any means necessary and proper to the execution of that authority. That is well-settled law ever since the celebrated case of *McCulloch vs. Maryland* was decided by Chief Justice Marshall.

In that case the decision was that the United States Bank was a valid corporation, because it was a necessary and proper means to carry into execution the power of the United States to lay and collect taxes, and one of the grounds of the decision was that it was necessary and proper for that purpose. But can anybody say this Maritime Canal Company is necessary to carry into execution the power of the United States to regulate commerce over which it has no jurisdiction?

If a suit at law was brought to test the liability of the United States upon this guaranty of the bonds of this company to the extent of \$70,000,000, would it not be likely to be held by the Supreme Court that Congress had transcended its power in chartering this Maritime Canal Company of Nicaragua to construct a canal in foreign territory in order to regulate commerce not within the scope of the jurisdiction of the United States? It can only be to regulate commerce over which we have jurisdiction; it can only be to facilitate commerce between the States that we can construct canals in the States, and if you go outside of the States to construct canals the sine qua non is that the United States own the territory in which the canal or other work is constructed. Without that the United States have no sort of jurisdiction. That is the condition precedent. Unless you can bring the commerce within the jurisdiction of the United States—and you can only do it territorially—you can not place the constitutional power to construct this canal anywhere under constitutional grant.

Mr. President, on the point which I have attempted to maintain relative to the treaty-making power of the United States as the only means to acquire territory, I will read from Justice Story's Commentaries on the Constitution, part of section 1508:

The power to "make treaties" is by the Constitution general; and of course it embraces all sorts of treaties for peace or war, for commerce or territory, for alliance or succor, for indemnity for injuries or payment of debts, for the recognition and enforcement of principles of public law, and for any other purpose which the policy or interests of independent sovereigns may dictate in their intercourse with each other.

That the United States have all the power of every foreign nation or any other nation on the globe in regard to all matters of international moment it is hardly necessary to quote any authority, but as the Commentaries of Chancellor Kent are full on that subject, I propose to read an extract. In part of lecture 1 in Kent's Commentaries I find:

When the United States ceased to be a part of the British Empire, and assumed the character of an independent nation, they became subject to that system of rules which reason, morality, and custom had established among the civilized nations of Europe as their public law.

During the war of the American Revolution Congress claimed cognizance of all matters arising upon the law of the nations, and they professed obedience to that law "according to the general usages of Europe."

By this law we are to understand that code of public instruction which defines the rights and prescribes the duties of nations in their intercourse with each other.

The faithful observance of this law is essential to national character and to the happiness of mankind.

According to the observation of Montesquieu, it is founded on the principle that different nations ought to do each other as much good in peace and as little harm in war as possible, without injury to their true interests.

But as the precepts of this code are not defined in every case with perfect precision, and as nations have no common civil tribunal to resort to for the interpretation and execution of this law, it is often very difficult to ascertain, to the satisfaction of the parties concerned, its precise injunctions and extent; and a still greater difficulty is the want of adequate pacific means to secure obedience to its dictates.

Mr. President, this matter has been before the Congress of the United States before I had the honor of coming into this body. It was pretty thoroughly discussed in the second session of the Fifty-second Congress. There were a great many reasons assigned why

the canal should not occupy this present route. I read very recently the speech of the Senator from Minnesota [Mr. DAVIS], in which he set out that Nicaragua was the home of the earthquake, and that nearly all the seismic disturbances which have convulsed this continent had their origin in this protean bed of earthquakes in the confines of Nicaragua.

He cited a number of scientists—Humboldt, Professor Squire, Professor Kneeland, and others—and he established from their writings, although there had been no earthquakes there recently, that this canal, if built in that country, might be liable to be destroyed at any moment by the recurrence of one of these frightful convulsions. I do not know whether this would be, in the opinion of experts, a sufficient ground to change the route or not, but it is sufficient for me that this whole subject-matter ought to be very carefully and fully examined before we establish a route at one place or the other over the Isthmus in the event that any canal is to be constructed.

The Panama route has been condemned principally by the failure of M. De Lesseps to construct it. It is charged that the Chagres River is absolutely uncontrollable; that after the expenditure of \$250,000,000—or francs—dollars, I believe.

Mr. TURPIE. Dollars.

Mr. CAFFERY. That it would be a piece of unpardonable folly to attempt to dig the canal at that point on the Isthmus.

There was a very great engineer who solved the problem of deep water at the mouth of the Mississippi—Captain Eads—who claimed that the Tehuantepec route is safer and better for transit from ocean to ocean by means of a ship railway.

It is stated that Captain Eads having died he has left no heir to his magnificent engineering genius. I am not prepared to admit that statement; I am not prepared to concede that the engineering skill of this present day among the able engineers in the United States and in Europe can not produce one man who can construct a ship railway across the Isthmus of Tehuantepec. That route is said to possess peculiar advantages; it is shorter to connect the Pacific Slope with the Atlantic Seaboard by some thousand miles on an average. A railway is easily constructed. There are no terrors of dams; sluices of rain do not fall, as the Senator from Indiana [Mr. TURPIE] says they fall at Nicaragua; and if it were possible to construct a ship railway across the Isthmus of Tehuantepec out of the way of the regions of calm that beset the seas round about Nicaragua, where sailing vessels could come, where there are better harbors, in my opinion—which, however, I hold at very little myself about these engineering matters—I should prefer the Tehuantepec ship railway, but the whole matter, in my opinion, when it comes down to the point of constructing some means of communication between the oceans, ought to be fully and carefully and scientifically examined.

I fully agree with the Senator from Indiana that before a spadeful of dirt is put upon this work by and through the United States a commission of engineers, as proposed in his substitute, should examine every single inch of territory over which the canal is to be constructed, and should make full and careful estimates of expenses, and should select a route by canal or railway, either at Tehuantepec or at Nicaragua or at Panama, just as their judgment and science dictated. I think it would be exceedingly unwise as a general proposition to take the plan of this route as laid down by the Maritime Canal Company as the plan upon which we should construct the canal without further investigation.

It is manifest, Mr. President, from reading the reports, that the allegation of the Senator from Indiana is entirely supported, that no competent survey, no such survey as ought to justify the United States in a subvention of this magnitude has been made of the Nicaragua route. It is true that a very competent engineer, Mr. Menocal, has surveyed this route; it is true that a consulting and advisory board of engineers in the city of New York have examined the plans and profiles and estimates of expenditure; it is true that engineers in the United States at various times have passed over this route and have examined it, but no survey of a kind that would justify such an expenditure of money as is asked for here has been made anywhere, nor has been made at any time by any competent engineer of whom we know, except Mr. Menocal. So I say, as preliminary to the construction of a canal, if this route is adopted, there should be a practical, thorough, and exhaustive survey of the land over which the canal is to be built by the Engineer Corps of the United States, as proposed in the substitute offered by the Senator from Indiana.

Mr. President, when we come to consider this bill I must confess that there are provisions in it which I can not indorse. The great pivotal provision of the bill, around which all the other provisions group themselves, is the provision for the guarantee of the bonds of the Nicaragua Canal Company by the United States Government to the extent of \$70,000,000. That is the great pivotal provision; that is the center of the bill. This enormous sum of money is to be paid out by the Government of the United States through the sale of its bonds for the purpose of aiding in the construction of the canal.

The assertion that the Maritime Canal Company of Nicaragua is a suppliant at the door of Congress for a subvention has been somewhat indignantly denied. How that can be denied in the teeth of the exertions to pass the pending bill for this company is something I can not conceive. When this company first came before Congress the declaration was made by it, or by its supporters, that all that was wanted was the imprimatur of the United States; that they wanted the seal of the United States; that they wanted a charter from the United States; that they wanted no money from the United States. It was claimed that the marts of Europe were open to them, that the money centers would flow out in streams of living gold into the treasury of this company to construct this great work, and that all they wanted was this charter. Now it occurs that that was not all; that that was just the commencement of their wants.

What will be the end of their wants if the Government of the United States ever undertakes this measure there is no man in the Senate wise enough to say. We start with \$70,000,000. That is the pivotal point of the bill. Four million and a half of this money are to be given in the way of bonds to take up the expenditures of the company. Seven million dollars of stock are to be disposed of to certain persons or corporations with whom the Maritime Canal Company have made contracts of various sorts. The provisions of this bill are voluminous, they are as voluminous as the subject is vast, and it will take a very considerable time for me to discuss them with that degree of fullness which I shall attempt to do.

[At this point the honorable Senator yielded the floor for a motion to proceed to the consideration of executive business.]

Friday, January 18, 1896.

Mr. CAFFERY. Mr. President, when I was last addressing the Senate on the pending bill I had commenced to discuss its provisions. I will, however, revert to a matter germane to the points that I had discussed before going into the discussion of the bill.

The distinguished Senator from Alabama [Mr. MORGAN] stated that the United States Government has all the foreign power and jurisdiction that any other Government has, and he instanced the case of taking stock by England in the Suez Canal as authority and precedent for the United States to take stock in the Nicaragua Canal Company. It occurs to me that before the Senator from Alabama can cite the taking of stock by England in the Suez Canal as a precedent to establish the right of the United States to take stock in the Nicaragua Canal Company he must first establish that the taking of stock in a private corporation is the exercise of foreign power.

In order to discuss that question intelligently, it occurs to me that we must first ascertain what are foreign powers as distinguished from domestic powers. I think it may be laid down as a safe proposition that a foreign power of any government is one to be exercised solely by the government as against or in conjunction with other governments. It is a power external. It is a power to be exercised by the sovereign only. It is a power that can not be exercised by individuals nor be delegated to individuals. A foreign power is one in the exercise of which there is involved some international relation. Any question of the right of our citizens in foreign territory, either as to person or property, would legitimately come within the limits of the definition of an international or foreign right.

Now, tested by these rules or this definition, is the taking of stock in a private corporation organized for purposes of gain to that corporation the exercise of any kind of power or jurisdiction? I do not think that there can be any answer given in the affirmative to that proposition. It is a domestic right or a domestic power, if any. It is a private right which can be exercised by any citizen of this Republic. It is not a power residing solely in the Government. In this particular instance I do not see how it would affect our international or foreign relations, even conceding that the United States had a right as a business matter to take stock in a private corporation.

The argument of the learned Senator from Indiana [Mr. TURPIE] on that point appears to me to be entirely convincing. He propounded a query as to what constitutional authority the United States had to indorse or guarantee the bonds of a private corporation. I think I have shown by citations of eminent authority that this is not a public corporation. It is a private corporation; the query of the Senator from Indiana remains unanswered; and I claim that it is unanswerable under constitutional limits.

Therefore, I take it, Mr. President, that the taking of stock in the Nicaragua Canal Company by the United States is a mere private right, a domestic right. It is the exercise of no sort of foreign power, nor can any stretch of the Constitution be made to cover the exercise of any such right as an international or foreign right.

The power is invoked on behalf of the United States to take stock in this Maritime Canal Company of Nicaragua under the

commerce clause of the Constitution. It is invoked under the power of the Constitution to regulate foreign commerce, and it is invoked under some indefinite, vague, illimitable right to exercise any authority or power that any foreign government may exercise.

Concede, Mr. President, that England can take stock in a private canal company anywhere organized, for any purpose, in any foreign territory, does it follow that the United States can do so? Concede that the British Parliament is paramount and supreme over all matters, and Parliament votes a sum of money to purchase stock in the Suez or other canal, can the United States Congress vote likewise for the United States to take stock in a private corporation organized for any purpose whatever?

The right is one that must flow directly from the Constitution as a domestic right. It is not a public right or power; it is not the exercise of any foreign jurisdiction whatever, and it can not come under this wide canopy of indefinite rights that is attempted to be stretched so as to include the foreign jurisdiction of the United States.

I consider, Mr. President, that the Senator from Alabama and the advocates of this bill in the Senate are no happier or more fortunate in attempting to establish the right of the United States either to construct the canal or to take the stock in the construction company under the power to regulate foreign commerce than they are under the power to regulate commerce between the States. The power to regulate commerce among the States is clearly a domestic power. The power to construct the canal can not extend to regulating commerce among the States, commerce mingled among the States. That authority can not extend to allowing the United States Government to construct canals or other works in aid of commerce anywhere on the civilized globe. It would be a contradiction of the terms of the grant itself. To regulate commerce among the States has always been held to include such works in aid and in facility of commerce as were established in our borders and would be under our jurisdiction.

The Democratic party for a long time resisted the implied power of the Government to facilitate commerce by the erection of such works as canals, breakwaters, and other works tending to facilitate commerce under the specious argument that the power to regulate did not include the power to facilitate; but it occurs to me, while I think I am as fair a Democrat as most in this body, that that construction was not warranted. I believe the construction is warranted that tends to make the regulating power of commerce a live power, an active power, and that anything which would energize that power and set in motion the instrumentalities to facilitate commerce would tend directly in aid of the constitutional grant to regulate commerce.

But that must be among the States. That must be in our own borders so far as State commerce is concerned. By no implication however broad, by no construction however wide, was it ever contended, and, in my opinion, it never can be contended, that this power to regulate interstate commerce could include the erection of works to facilitate commerce outside of our own territory. A construction of that sort appears to me entirely foreign to the letter and spirit of the Constitution. As I said before, and as I repeat now, I believe that the sine qua non for the erection of any work for regulating commerce, either interstate or foreign, is that the work be upon our territory; that we have complete jurisdiction and authority over the work; and that we would not be subject to the numberless embarrassments that would flow from police power and eminent domain of a foreign territory over a work constructed by the United States.

Mr. PEPPER. Will the Senator from Louisiana allow me?

Mr. CAFFERY. Certainly.

Mr. PEPPER. I agree in the main with the purpose of the Senator's argument, but there is one point which I think he is about to pass from that is not quite clear to my mind. I wish to inquire of the Senator from Louisiana, supposing that the object of this bill is to facilitate interstate commerce or commerce among the several States of the Union, whether he believes that going outside of our territorial jurisdiction, as we would have to do in this case, takes it out of the constitutional limitation as to the regulation of commerce among the several States?

For instance, if I can make myself clearer, in order to connect closely the commerce of the Atlantic States with the Pacific States, it will be much more easy and convenient for us to pass from the ports of one to the ports of the other through the foreign country across the isthmus. Does the Senator hold that that fact would take it out of the jurisdiction of Congress, under the provision of the Constitution with relation to domestic commerce among the several States?

Mr. CAFFERY. I do. I do not believe, for instance, to illustrate my meaning, that the United States Government can give its aid or subvention to a railroad to be constructed across the British Dominion to connect Alaska with Washington, nor do I believe that the United States Government can give its aid or subvention to a canal to be constructed across the Isthmus of Darien, unless the United States, under Constitutional authority and power,

acquire the territory over which the means of transportation are located.

I believe it is absolutely necessary to have the transit under the power and jurisdiction of the United States, because the end of the authority is not to construct the work. The end of the authority is to facilitate commerce. But the commerce flowing through the canal must be under the regulation of the United States, and how can you regulate by the United States when you intervene an instrumentality beyond the power and jurisdiction of the United States? What right have we here to prescribe by Congress any kind of regulation in regard to speed, the lights, and the landing of ships navigating the canal; or in the case supposed of a railroad from Alaska to Washington, what right would the United States have when it gave its subvention to a private company, to regulate tolls, to regulate traffic, to impose regulations of various kinds necessary to the full exercise of the jurisdiction of the United States in regard to regulating commerce?

Mr. PEPPER. Mr. President—

The PRESIDING OFFICER (Mr. PLATT in the chair). Does the Senator from Louisiana yield to the Senator from Kansas?

Mr. CAFFERY. Yes, sir.

Mr. PEPPER. I understand the Senator to be of the opinion that we have constitutional authority to acquire (with the consent of the other nations, of course) a strip of land across Nicaragua.

Mr. CAFFERY. Yes, sir.

Mr. PEPPER. And that having so acquired such a strip of territory, that would bring the construction of the works there by our Government within the constitutional limitation.

Mr. CAFFERY. Yes, sir; we would have full jurisdiction over the commerce flowing through the canal.

Mr. MITCHELL of Oregon. Will the Senator from Louisiana yield to me?

Mr. CAFFERY. Certainly.

Mr. MITCHELL of Oregon. If that be true (and I have no doubt it is true as the Senator states), what is the difference between that kind of a status and the status that would exist where a foreign government has a concession—not by treaty, but a concession as in this case—which authorizes the Government of the United States, as we hold, to go there and construct a canal? What is the difference between the two? If, in the case put by the Senator, the United States has the power, in order to regulate commerce among the States, to construct a canal over foreign territory, the United States owning that foreign territory, why can the United States not do the same identical thing when it has a right to go there and construct a canal, even though it does not own the territory?

Mr. CAFFERY. The Senator's question, I think, illustrates somewhat the proposition. If the United States have the right, as I understand the question—I will put it and answer it—to construct a canal over foreign territory, owning the territory, then the United States can construct a canal over its own territory; it does not do it over a foreign territory. What is the difference between that case and a case where the United States virtually does it through a private corporation? I will state the distinction.

It is the private corporation that regulates commerce; it is not the United States which regulates commerce; the power of sovereignty of the United States can not be delegated that way; the United States must act directly, as it has done in the numberless bills that have passed Congress to regulate commerce. What right has the Congress of the United States to impose any regulation whatever on the Maritime Canal Company of Nicaragua? None whatever.

Mr. MITCHELL of Oregon. Will the Senator from Louisiana allow me?

Mr. CAFFERY. Certainly.

Mr. MITCHELL of Oregon. If the United States did own a strip of land across the Isthmus, then the Senator admits that the Government directly could build a canal there in order to regulate commerce?

Mr. CAFFERY. Yes, sir.

Mr. MITCHELL of Oregon. Does he hold that in that case the Government of the United States could not employ as an appropriate instrumentality a corporation in which the Government of the United States held the controlling stock, and then through that instrumentality the company might construct the canal; and if not, why not?

Mr. CAFFERY. It would depend upon the kind of instrumentality. An instrumentality that itself regulates commerce the United States could not employ. An instrumentality that might be self-regulating the United States could employ, as in the case of the United States Bank, which was incorporated under the power to borrow money and to collect taxes. That directly tended to the result. The result was accomplished. Constructing the canal is only the means to an end. It is not the end of the power. When the United States undertakes to regulate commerce through an instrumentality which has no power to regulate commerce

under the Constitution, then the United States, in my opinion, is doing an unconstitutional act.

Mr. MITCHELL of Oregon. The United States must control, undoubtedly.

Mr. WHITE. If it will not annoy the Senator, I should like to ask him a question.

Mr. CAFFERY. Certainly.

Mr. WHITE. Does the Senator hold that the Government of the United States, if it became aware of the existence of obstruction, such as hidden rocks in the ocean outside of the jurisdiction of the United States, which was, in the opinion of the Government, an obstruction such as would interfere with commerce, does the Senator hold that in that event Congress would have no power to appropriate money to remove that obstruction, if it were outside of our territorial jurisdiction?

Mr. CAFFERY. I do not. The foreign jurisdiction of the United States extends over the high seas. Our jurisdiction follows our ships on the high seas.

Mr. WHITE. I would ask if in aid of our commerce we could not cut through an island, for instance, which we did not care to pass around because of the existence of reefs.

Mr. CAFFERY. If the imagination of the Senator from California will construct or build out of one little obstruction in the vast ocean an immense isthmus, I can not follow him.

Mr. WHITE. It was the principle for which I was contending.

Mr. CAFFERY. Those rocks in the ocean would be under the jurisdiction of every power to remove obstructions to commerce. The territory of Nicaragua is under Nicaraguan jurisdiction, and none other; it is the sole possession of that sovereignty; and I do not think there is any parallel whatever in the case supposed by the Senator from California and the case which I am attempting to illustrate.

If we can find a constitutional way to construct this canal, rather than to stretch this instrument so much that it might part in twain, I submit to the Senate whether it is not wiser so to do.

I would ask Senators what is there in the Maritime Canal Company of Nicaragua which claims any especial attention at the hands of the Senate of the United States? To me it is nothing more than any other private corporation. I believe the gentlemen who promoted this vast scheme were actuated by honest and patriotic purposes; I believe that they had the ordinary incentive which moves human conduct; I believe that they entered into this scheme in order to make a good investment upon the capital employed by them, and that they might have been carried away with the glamour and fascination of this vast enterprise, yet I think that in the main it is a private enterprise for private gain. I have not a word to say against either the intelligence or the patriotism of these gentlemen, whoever they are, nor do I think that the scheme which they propose is so wild and so impracticable as to be dismissed without considerable scrutiny and investigation—I mean the scheme of the route which they have located.

Mr. President, I shall attempt briefly to run over the provisions of the bill, and comment upon them as I go along.

The first section simply states that the shares shall be \$100 each, and not in excess of a million, making \$100,000,000 of capital stock.

The second section provides that the words "the Nicaragua Canal," wherever they appear in the act, shall be held to include all property, real and personal, franchises, rights, privileges, and immunities which belong to the company under the provisions of the bill.

The third is quite an important section. The third is that, in consideration of the provisions of the act and before any bonds are issued under it, all the stock of the Maritime Canal Company of Nicaragua heretofore subscribed for or issued, except as in the act provided, shall be called in, canceled, and returned to the treasury of the company; that all bonds issued by the company and obligations to deliver bonds shall be redeemed; that all outstanding liabilities of said company shall be satisfied, and that all contracts and agreements heretofore made not consistent with the provisions of the act shall be canceled.

Mr. President, this matter has been before the Senate of the United States ever since 1891. It appears fully from the evidence springing from the promoters of this enterprise themselves, found in the report submitted by the distinguished Senator from Alabama, the Chairman of the Committee on Foreign Relations [Mr. MORGAN], that all these companies are pretty much the same. The first association, the unincorporated association which obtained the concessions from Nicaragua, the Canal Construction Company, which was incorporated under the act of the legislature of Colorado, and the Maritime Canal Company, the one which asks this subvention, are all composed, or were composed, of nearly the same individuals. This appears from pages 238 to 243, inclusive, of the report, where it is stated that the gentlemen who compose, or did compose, these various companies, were nearly all the same.

Mr. VEST. That appears from Hitchcock's testimony.

Mr. CAFFERY. It appears from the testimony of Mr. Hitchcock, the president of the Maritime Canal Company. It occurs in

the proof that when these concessions were made the Maritime Canal Company of Nicaragua immediately entered into a contract, you may say with its alter ego, through ostensibly the agency of the Nicaragua Canal Construction Company, to construct this vast work.

In this section provision is made that all contracts heretofore made not consistent with the provisions of the act shall be canceled. All the stock, all the bonds and obligations to issue bonds, and all the contracts theretofore made are to be canceled, except the contracts consistent with the act, whatever those contracts heretofore made may be. It appears that the original draft of the bill, as presented to the Senate in 1891, contained the words "heretofore made or to be hereafter made."

Those words are stricken out; but in the interim between that time and this those promoters, who can so easily deal with one another—it does not take long to make a trade when you are trading with yourself—can easily change the nature of these contracts, and can transfer them from one party to another, and if these contracts are consistent with the provisions of this act they are not to be canceled. Any contract made for the construction of the canal is entirely consistent with the provisions of the act. The contracts made for the construction of this canal are precisely the kind of contracts which I think the Senate of the United States ought to carefully investigate before it grants this enormous subsidy of \$70,000,000 in the way of a guarantee of the bonds of this company.

I will state in this connection that I believe it is in section 7 that provision is made for calling in and cancelling whatever contracts may have been heretofore made with the Nicaragua Canal Construction Company, for that provision is very easily evaded by the facilities with which these gentlemen can trade with one another, and that the contract with them might have been cancelled long ago and let to some other of these promoters; and because it is technically provided in section 7 that this contract of the Canal Construction Company of Colorado shall be canceled, it does not follow that an identically similar contract with one of the companies should not be transferred over to one of these promoters, and it is quite likely that that is the case.

Section 4 is the pivotal provision of the bill, taken in connection with section 5. That is the provision which authorizes this Maritime Canal Company of Nicaragua to issue \$70,000,000 of bonds. These bonds are to be engraved in the Engraving Bureau of the United States; they are to be issued from the Treasury to this company, and provision is made in this section that prior to the 1st of July, 1897, not in excess of \$30,000,000 of these bonds are to be issued to the Maritime Canal Company. There is provision made for a mortgage in this case to secure the payment of these bonds. I shall hereafter have something to say about that mortgage; whether or not it is a futile mortgage, or whether or not it is a material mortgage, or one which affords any security whatever.

The fifth section of this bill, the main clause of it, relates to the guarantee of these bonds by the United States. The guarantee is very full and explicit. These words are to be indorsed upon the bonds:

The United States of America guarantees to the lawful holder of this bond the payment by the Maritime Canal Company of Nicaragua of the principal of said bonds and the interest accruing thereon, and as it accrues.

Provision is made in section 6, in case the obligor company, whose bonds are thus guaranteed, fails to pay principal or interest, and the United States pays according to the tenor of its guarantee, the United States is thereby subrogated to all the rights of the holders. It further states that the subrogation of the United States to the rights of the holders of the bonds secured by mortgage shall not be exercised until five years after the canal is put in successful operation, or until default is made prior to the canal being put in successful operation.

I have somewhat anticipated section 7, but it is substantially that before any bonds indorsed under its provisions are issued, and after the surrender and return to the treasury of the company of all stock that may have been issued, and after the surrender and cancellation of all bonds, bond scrip, and obligations to issue bonds, and the cancellation and extinguishment of all contracts, except the concessions from Nicaragua and Costa Rica, but including agreements with the Nicaraguan Canal Construction Company, the directors of this company shall call a meeting to see whether or not they will accept the provisions of the act.

I hardly think there is much use in putting that provision in the bill. After the very strenuous efforts to get this subvention, I hardly suppose that they would put away the tempting offer in the bill, but it was put there out of abundant caution, I suppose, lest they might change their minds and think they could dig this canal with their own money; more especially would this thought be a very lively and imaginative one after it had been ascertained that the assets of the company had been sold out, or are in the hands of a receiver.

The section goes on to provide for the distribution of the capital

stock of this company—\$70,000,000 of the capital stock, nonassessable and fully paid, to belong to the United States; \$6,000,000 of stock to belong to Nicaragua; one and a half million dollars of it to belong to Costa Rica, and the remaining stock of the company, to wit, twenty-two and a half million dollars, to be distributed as provided in section 2, and it is distributed thus: Not in excess of \$7,000,000 of the stock at its par value and nonassessable are to be given to such persons as the Maritime Canal Company may designate, in order to cancel and extinguish all its issues of stock heretofore made, except only those made to the Governments of Nicaragua and Costa Rica, and all outstanding obligations for stocks, bonds, or bond scrip heretofore entered into by the company. That leaves fifteen and a half million dollars of stock.

Section 9 has this provision, that the proceeds of the remainder of the capital stock, fifteen and a half million dollars, if sold, shall be applied exclusively to the construction of the said canal; and the company may offer this stock for subscription and sale at such time or times and at such prices as they shall in their discretion determine; but provision is made that in no event shall the stock be sold for less than par and for cash.

Why, Mr. President, this gift? We find out further along that this company gets four and half million dollars of bonds to aid in the payment of the actual expenditures of the canal cost. Now, we find that it has fifteen and a half million dollars of stock given to it, with the discretion to sell it.

Mr. MORGAN. If the Senator will allow me, that is the reorganized company in which the United States is a stockholder.

Mr. CAFFERY. Yes.

Mr. MORGAN. This \$15,000,000 of stock is reserved.

Mr. CAFFERY. Exactly; but this stock belongs to the Maritime Canal Company.

Mr. MORGAN. As reorganized.

Mr. CAFFERY. Yes, sir; it belongs to the company. Now they say, if sold, the proceeds of this stock shall be applied exclusively to the construction of the canal.

The next provision is that if this stock is not sold in a reasonable time, the officials of this company shall apply to the Secretary of the Treasury, and he shall deliver to them \$2,000,000 of the guaranteed bonds of the United States to carry on the work.

Mr. MORGAN. That is to begin the work.

Mr. CAFFERY. That is to begin. Why this provision giving a discretion to the Maritime Canal Company to sell bonds? It is put in here for the purpose of construction, of being sold so as to yield the means of construction. Why not have them sold? It is manifest that the company will not sell this stock; it is manifest that if the money can be derived from the Government of the United States, as provided for in this section, the holders of this stock are not going to sell it. If they can have the canal built and keep their stock, as wise men, as men who have entered into this undertaking not entirely from lofty motives of patriotism, I imagine they certainly will keep this stock, and they certainly will avail themselves of the brilliant opportunity of this stock being at par by the construction of this canal by the Government of the United States. A provision is made at the outset which destroys the sale of the stock. While this undertaking is inchoate, while it is an untried experiment, the condition attached to the sale is that the stock shall bring its par value. It is entirely manifest that under these conditions the stock will not bring its par value, and it could not be sold. While the power of sale is given on the one hand, it is practically denied on the other.

I have anticipated section 10 in stating that the company shall get \$2,000,000 of bonds if they do not sell their stock.

Section 11 provides that the Secretary of the Treasury shall cause an account to be started with the Maritime Canal Company as soon as practicable after the passage of the act, and that account shall include all necessary and proper expenditures made in and about the construction of this canal up to the time of the opening of the account; but for the liquidation of this amount not more than four and a half million dollars of these guaranteed bonds are to be turned over to the Maritime Canal Company.

I suppose, Mr. President, that it will be very unlikely that any less amount than \$4,500,000 of these bonds will be called for to liquidate the expenses in and about the construction of this canal up to the date of the delivery of the bonds.

Section 12 gives the President of the United States—

Mr. VILAS. Before the Senator passes to that I should like to ask him if he is able to explain what the purpose of section 8 is in providing for the issue of \$7,000,000 to extinguish the stock issued and outstanding obligations and at the same time to be accompanied by section 11, which provides for reimbursement of all the cost of building the canal?

Mr. CAFFERY. I must confess, in answer to the question of the Senator from Wisconsin, that that has been somewhat of a puzzle to me. I went over the report and I discovered from the testimony of one of the promoters of the canal what are said to be the reasons, not exactly the reasons why this provision is incorporated in the act, but such reasons as may have been the

foundation for it. It puzzled me a great deal in reading this bill when I discovered that four and a half million dollars of these bonds paid for everything that had been done up to date, why \$7,000,000 more of stock was to be given to liquidate the obligations and the scrip of the company; but I discovered in this report evidence showing that some of this scrip had got into the hands of third persons, so it is alleged, and it would be necessary to have an additional amount beyond the four and a half millions to take up the stock, scrip, bonds, or what not, that might have been issued by the Maritime Canal Company and held by third persons.

I imagine that to be the reason, and also that it was a bonus, as it were, to these persons for obtaining the concessions. I see that that is made the ground of turning over this amount of stock—the work of getting the concessions from Nicaragua and Costa Rica—these franchises which are alleged to be so excessively valuable, that I believe my learned and distinguished friend from Indiana stated that the whole franchises were sold out for \$285,000. Is that so?

Mr. TURPIE. The assets.

Mr. CAFFERY. The assets, I suppose, including these concessions; but it was made the ground, I suppose, of the additional issue of the \$7,000,000 of stock. If that is not the explanation, I am incapable of giving one. When everything has been paid off by the four millions and a half, when everything is liquidated, and they provide for the maximum of four and a half millions of dollars to liquidate everything, I could not see why there should be any additional issue of \$7,000,000 of this stock which, in the event of the United States taking hold of the canal, would certainly go to par, or likely go to par, and be worth that much money; and I believe it is explained by such lame explanation as I have been able to give.

The President of the United States is charged in the twelfth section with a very onerous work. He is authorized and directed to cause careful and detailed estimates and statements to be made by duly appointed inspectors, not less often than quarterly each year, of the actual cost of all work done, of the plant, material, and services supplied on the canal, including reasonable costs of administration during each quarter, and upon the filing with the Secretary of the Treasury of these detailed estimates, certified to by the inspectors, the amount of work done for that quarter is to be paid for.

I think that is a very onerous service to require of the President of the United States. He appears to be robbed entirely of any supervision over the canal. He can not say whether the work has been done properly or improperly. He can only inspect through the inspectors and cause these careful and detailed estimates to be made. I would ask what sort of protection the people of the United States, who have to pay those bonds, would derive from this kind of supervision? No authority whatever is given to the President to suspend the work, to correct the work, to alter the work, but simply to find out how much work has been done, certify to it, and the money will be paid.

Section 13 goes a little further into the matter. It diverts somewhat from the section as to inspection, and provides that ten of the fifteen directors of the company shall be appointed by the President of the United States, by and with the advice and consent of the Senate. I shall have something to say about that hereafter.

Section 15 appears to have been drawn with great care, in order to conserve whatever rights the United States may have in the premises, but I think that the paper guaranty of this section falls very far short of its purpose. In order to secure the feasibility and permanence, etc., of the canal the President of the United States may select three engineers, one from the Corps of Engineers of the United States Army, one from the Navy, and one from civil life. Their powers are that they shall visit and carefully inspect the route of the canal, to examine and consider the plans, profiles, sections, prisms, specifications for its various parts, and report thereupon to Congress.

In the address of the distinguished Senator from Indiana [Mr. TURPIE] he adverted to the fact that this is not at all mandatory on the President of the United States. It simply resides in his discretion, and he may or he may not appoint the engineers, as he sees proper. But what is the authority with which they are charged? They have but little, if any more, authority than the inspectors provided for in the preceding section. They examine the route; they inspect; they consider the plans, profiles, sections, and prisms and specifications. They have no original work to do; they are charged with no authority to alter anything.

Mr. TURPIE. They can direct nothing.

Mr. CAFFERY. They can direct nothing, but the whole thing is cut out in advance. They have to examine and report upon what the engineers of the Maritime Canal Company have done or are about to do. There is no sort of original authority to discontinue the work if in their opinion it is found to be impracticable.

In this connection I will revert to a clause in one of the sections, the number of which I do not now remember, which says that

the President of the United States may suspend the operations on the canal. But it is to be observed that it is a mere discretionary authority, without the slightest basis to rest upon. Suspend for what? Is the President of the United States going to imagine grounds upon which he might suspend? Here is a discretion given to him in the pending bill to suspend the work, but there are no grounds whatever laid out in the bill upon which to base the Presidential action.

I say the provision is powerless or futile; that no President of the United States would undertake arbitrarily to suspend unless for grounds laid out in the act. There is no general authority given to him to suspend for any purpose or for all purposes. But the whole of the proposed act is teeming with provisions which lay out the work in advance. It must be done according to the profiles, plans, and specifications of the engineers of the Maritime Canal Company. The President could not interrupt action on that line; he could not hinder it. Where would there be an opening for the President to exercise the discretionary power granted to him in the bill?

Mr. President, I will now take up the concessions somewhat. According to the eighth article the present concession is transferable only to such company of execution as shall be authorized by the Nicaragua Canal Association, and in no case to governments or foreign public powers, nor shall the company cede to any foreign government any part of the lands granted to it by the contract, although it may make transfers to private parties under the same restrictions. The Republic of Nicaragua can not transfer its rights or shares by selling them to any other Government.

I will also read article 10 of the concession, and the concessions from Costa Rica are about identical with those from Nicaragua. The company shall be organized in the manner and under the conditions generally adopted for such companies. Its principal office shall be in New York or where it may be deemed most convenient. It may have branch offices in the different countries of Europe and America, where it may consider it expedient. Its name shall be the Maritime Canal Company of Nicaragua, and its board of directors shall be composed of persons one-half at least of whom shall be chosen from the promoters who may yet preserve their quality as such. In view of the article from which I have just read, what becomes of the provision in the pending bill that the President of the United States may appoint ten of the fifteen directors of the Maritime Canal Company?

Mr. President, it is manifest to my mind that the basis of the rights of the company spring from the concessions of Costa Rica and Nicaragua. Those concessions are paramount. When the Government of the United States intervenes in the matter and incorporates a company on the basis of those concessions, the Government of the United States is bound by the concessions. The concessions are paramount to any act of the American Congress. In another part of the concessions it will be found that Nicaragua and Costa Rica each maintain the right to appoint one director. So if my contention is correct, that the concession is paramount to an act of Congress, then a majority of the directors may be in the hands of persons inimical to the interests of the United States, even conceding that the United States would grant a subvention and pass the pending bill. Here, to my mind, is an absolute obstacle to the realization of the claim made by the advocates of the pending bill that the Maritime Canal Company will be virtually under the control of the United States through its directors.

How would the directors of the United States vote? Who would control them? There is another question. Would we in advance pass an act of Congress that they should vote so and so? Is it to be supposed that they of their own volition, knowledge, and conscience would always undertake to represent the interests of the United States? This is a suggestion that occurs to my mind. Even supposing we had ten of the fifteen, a majority of the board of directors, how would we manage them? By what process? How would the United States act? But here is an absolute bar. Here is an obstacle to the United States having the control, and the language of the concession is peremptory. The board of directors shall be composed of at least one-half of the promoters of the original scheme who may yet preserve their quality as promoters.

Mr. VEST. How would they get one-half of fifteen?

Mr. CAFFERY. They would have to have sixteen directors, or you would have to give them a half man; you might give them seven and a half votes. But the board of directors would have to be organized so as to give the original promoters half. If this provision of the concession is paramount there must be sixteen directors or an even number of directors in order to give them half. It is paramount in control, and I can not see how there can be any two opinions as to the paramount bearing and operation of article 10 of the concession.

Mr. VILAS. It is the law of the sovereign of the land.

Mr. CAFFERY. Yes, sir; and the law of the sovereign of the territory; the sovereign who maintains and keeps the police power; the sovereign who under other terms of the concession has stipulated in advance for 50 per cent less tariff on tonnage than any

other nation traversing the canal by its ships; the sovereign who has the right in another section to supervise any modification of the tariff that the board of directors may adopt.

Provision is made in article 43 that by way of compensation for the expenses of survey, construction, etc., the company shall have the right to lay tolls; and it says that the tariffs may be modified by the company at any time on condition that all modifications that may be introduced shall previously be communicated to the Government of Nicaragua, which in case of finding them within the limits established by article 42 shall cause them to be complied with as if they were regulations enacted by itself.

Mr. President, what sort of a figure does the United States cut in a corporation of this kind? Under any construction of these concessions they are paramount. Nicaragua and the promoters can control every single regulation of that company, and the Government of Nicaragua takes especial pains even to say that after the establishment of tolls, of regulations of any kind relating to commerce, when any modification of the regulations is attempted or proposed those modifications must come within the jurisdiction of the Government of Nicaragua and its supervision, denuding us of all authority, depriving us of any right whatever to regulate commerce.

Who would regulate the commerce under this bill? In the first place, as I have contended, it would be the Nicaragua Canal Company at best, even under a state of affairs where the United States has a majority of the directors; but the articles of this concession show that the United States could not regulate even that instrumentality, if regulation you might call it; that it would be deprived of any power of regulation even in an indirect manner.

Mr. VILAS. Will the Senator from Louisiana allow me?

Mr. CAFFERY. Certainly.

Mr. VILAS. I call the Senator's attention to the way in which that reinforces the argument which he made in respect to the want of constitutional authority in Congress. It demonstrates, as the Senator puts it (and I call his attention to it to see if I am not correct in the idea), that it could not be possible for Congress to find the power in the Constitution to employ the money of the United States to create a work for the facilitation of commerce which would be regulated by a foreign government.

Mr. CAFFERY. Certainly; the concessions preserve every substantial power and authority of Nicaragua over the canal. Nicaragua reserves to itself the right to police this canal. Further than that, in this article 37 it is provided that—

The Government shall establish all along the line of the canal included between the two terminal ports such police stations and revenue offices as in its judgment are necessary to preserve order in the region of the canal and for the observance of the fiscal laws of the Republic. All expenses incident to this service, including those of buildings, endowments, salaries and allowances of employees, and transportation of the forces, shall be paid to the Government by the company.

Not only have we no authority or jurisdiction either over the canal or over regulating traffic through the canal, but we are compelled to pay for the police supervision of the Government of Nicaragua. What that may be nobody can tell. With the tinsel army, with the flare and flash of the tropics, with the extravagant tastes of those people, which crops out in their fanciful military trappings, to what kind of an expense would this company be put to keep up all these trappings of police powers?

Mr. President, it occurs to me that the Senate must pause before it goes into the construction of a work of this sort, garnished all around about with such innumerable difficulties. There are a number of articles in the concession which show that the Government of the United States must own the territory lest it be complicated with thousands of embarrassments growing out of foreign jurisdiction concerning this enterprise.

Mr. President, I was very much instructed and pleased with the able exposition the Senator from Oregon [Mr. MITCHELL] made of the claim of the Pacific Slope for easy and cheap transportation by water to the Atlantic seaboard. I share in every aspiration of that Senator in behalf of his people for cheaper transit for the immense trade of that growing empire on the Pacific Slope, if I may use the word empire in relation to it; I only do it in the sense of territorial extent and magnitude.

Sir, I will say to him, and I will say here in the Senate, that there is no amount of money which can be judiciously appropriated to open the waterways of the United States, to facilitate commerce between the States, whereby cheap transportation will be afforded to conduct the wealth of this great Republic to the door of every man, woman, and child in it, that I will not willingly vote for. But when I stumble across these constitutional barriers I must pause. I have not invoked them out of any hostility to the bill.

I have not invoked them out of any hostility to the project. I am heartily in favor of it, and I believe, as the distinguished Senator from Washington [Mr. SQUIRE] stated, if the President of the United States had now before him the Freylinghuysen-Zavala treaty he might not withdraw it from the consideration of the Senate. That treaty might have been so modified in regard to

guaranteeing the sovereignty of Nicaragua as to have met with both the Executive approval and the approval of the Senate of the United States. However, I find not only these constitutional barriers, but I find barriers springing out of the very concessions which form the basis of the construction of the canal, and I pause, and I say that my judgment and my conscience will not permit me to vote for a bill which I think violates the Constitution of the United States.

Now, Mr. President, in answer to a question propounded by the Senator from Kansas [Mr. PEPPER] the distinguished Senator from Alabama [Mr. MORGAN] stated that we could not build or construct the canal over territory to be acquired by us by treaty with Nicaragua or Costa Rica, or any of the Isthmian governments, because of the obstacle of the Clayton-Bulwer treaty and because such a work might result in war with Great Britain. I look over this report and I discover that the distinguished Senator from Alabama, on behalf of the Committee on Foreign Relations, April 14, 1894, submitted a report in regard to this Nicaragua Canal Company and stated that in the opinion of that committee the Clayton-Bulwer treaty did not stand in the way of the United States constructing a canal across the Isthmus of Darien, or substantially to that effect.

Mr. MORGAN. Under these concessions.

Mr. CAFFERY. Yes, sir. I will read on page 45:

The next step taken after the convention of 1850 was in 1853, when a legislative assembly was constituted to manage the affairs of the settlement.

The report is speaking about the Mosquito settlement.

This was followed by a convention between Great Britain and Guatemala, in 1859, for the establishment of the boundaries between what the treaty chose to call "Her Britannic Majesty's settlement and possessions in the Bay of Honduras" and the territories of Guatemala. The country, or the largest part of it, belonged to Guatemala as the successor to all the sovereign territorial rights of Spain in that region; but by this treaty that which was before a licensed industrial establishment became instantly a possession of the British Crown.

The settlement government continued until 1862, when the settlement was declared a colony of the British Crown and a regular colonial establishment was set on foot; and so from that time to this the form and substance of a regular colonial government as a part of Her Majesty's dominions has continued. It is understood that its geographical dominion has been vastly enlarged from the licensed wood-cutting limitations and boundaries that existed in 1859. All this has taken place systematically and persistently, notwithstanding the declaration of Her Majesty's Government that it should not "colonize or assume or exercise any dominion over" the Mosquito coast or any part of Central America.

Now, say the committee:

If these proceedings of Her Majesty's Government, in respect of one of the most important subjects of the convention—

Referring to the Clayton-Bulwer treaty—

and in absolute opposition to it, do not discharge the United States from all and every of their declarations and engagements stated in that convention, it is impossible to conceive what could.

So I have the authority of the Foreign Relations Committee to state that the Clayton-Bulwer treaty is not an impediment to the acquisition of such territory in Central America or any part of Central America as will suffice for the construction of [the inter-oceanic canal.

But, Mr. President, the circumstances surrounding the negotiations of the Clayton-Bulwer treaty, I believe, would warrant the United States to abrogate it or to disregard it. That treaty was made mainly with reference to the construction of a canal which was thought then to be imminent. The provisions that neither government would assume any jurisdiction over or colonize any part of the country appear to be subsidiary to the main point of the convention, which was to construct the canal. As I heard the Senator from Alabama say, it was one of the most extraordinary treaties and conventions that was ever entered into between civilized nations. Without any sort of regard to the rights of Nicaragua or Costa Rica or Central America these two powers, Great Britain and the United States, undertook to say that they would construct a canal over their territory under their joint supervision, and that they would see that no other nation should exercise any controlling power over that country.

But be that as it may, if the Clayton-Bulwer treaty does stand in the way, and I do not think it does—I am willing to submit to the authority of the Committee on Foreign Relations and its distinguished chairman on that point—if it does stand in the way it is easy enough to enter into negotiations with Great Britain and modify it or abrogate it. If this canal is of such transcendent moment as to warrant the United States in taking hold of it and constructing it, I imagine that we could easily proceed to do so, without violating treaty rights or the rights of the country over which it is to pass. Under the conditions prevailing when the treaty was negotiated, and under the broad statement made that Great Britain herself has violated it and has therefore released the United States from any of its obligations, I take it that if Great Britain has done what the Foreign Relations Committee say she has done, there can be no impediment or obstacle whatever in the United States constructing the canal over the territory in question.

Mr. President, I think that our people in the South, especially

my people, are dwelling somewhat in lofty hopes of what might be the immediate results of the construction of this canal. I do not believe their hopes would be realized immediately or for a considerable period were the canal to be immediately constructed.

Mr. President, trade runs in great currents. Great Britain has absorbed nearly all the carrying trade of the world. Great Britain monopolizes the markets of South America. Great Britain has more traffic with the countries immediately surrounding this proposed canal than the United States. We can approach the east side of South America without the intervention of a canal. We are nearer to it than any other nation on earth. The ports of Brazil and the Argentine Republic are open. The Argentine Republic is fast becoming one of the great competitors of the world in cereal trade. Her exports of wheat are becoming enormous.

I heard some Senator on the floor of the Senate not long ago, I believe it was the distinguished Senator from Colorado [Mr. TELLER], say that the Argentine Republic is fast becoming the competitor of the United States for the foreign wheat market of the world. That is true, and in a little while, if enterprise continues in that country and progress is made at the rate it is now going on, she will be more than a competitor; she will be more than a successful rival. With the undeveloped resources of that country, with its fertile soil and its easy transportation, I do not know but that in the near future the wheat market of London will be controlled by Argentina wheat. But that is mere speculation.

Now, Mr. President, let us look at the imports into the Argentine Republic from the United States and her exports to the United States:

Imports into the United States from Argentina.....	\$5,239,695
Exports.....	4,979,596
Imports from Great Britain.....	21,975,332
Exports.....	28,112,070

What a discrepancy between Great Britain and the United States! About 600 per cent more from Great Britain than the United States! Sir, there is a country right at our door that we could reach without the intervention of a canal, and this table, which I will ask leave to insert in the RECORD, will show the vast discrepancy between the trade of the United States and the trade with the east coast of South America and with the west coast of South America likewise. It likewise shows the trade between the United States and China and Japan and Great Britain.

	United States.		Great Britain.	
	Imports.	Exports.	Imports.	Exports.
Argentine Republic.....	\$5,239,695	\$4,979,596	\$21,975,332	\$28,112,070
Brazil.....	76,222,138	12,388,124	16,996,794	39,975,362
Chile.....	3,906,441	2,980,831	18,737,571	19,501,995
United States of Colombia.....	3,572,918	3,155,777	2,212,334	5,890,225
Ecuador.....	900,228	817,435	619,674	1,306,732
Guam and West Indian Islands.....	22,105,168	18,515,979	14,006,074	15,951,899
Peru.....	819,166	630,721	7,617,254	4,176,958
Uruguay.....	1,623,380	960,006	1,395,465	6,374,294
Venezuela.....	3,625,113	4,297,061	1,242,616	1,861,567
China.....	20,636,565	3,900,457	17,342,220	28,249,129
Hongkong.....	878,078	3,316,032	3,904,496	9,449,005
Japan.....	27,454,220	3,105,494	5,391,374	15,883,156
Central America.....	11,169,067	7,351,005	5,271,504	4,138,163
	178,321,204	67,400,979	115,213,638	180,896,495
Bolivia.....			5,476	24,849
United Kingdom.....			182,659,700	421,134,551

For our Southern ports, outside, perhaps, of coal (and whether it will be cheaper to carry coal from British Columbia to our Pacific States and the Orient that might need it I do not know), the greatest outlet that I can see is for cotton to Japan. But it is distinctly asserted by a writer in the New York Journal of Commerce, a copy of which I got sometime ago, that it is closer to Yokohama by the Suez Canal from England than it is by way of the Nicaragua Canal from the United States. It is closer from Liverpool to Yokohama by Suez than it is from New York to Yokohama by Nicaragua; so I do not see what gain we make in the trade to the Orient. The trade of India can not be taken away from England by way of Suez. We have already the trade of the east coast of South America.

But the great point with me in dealing with this subject is the immense benefit that would be derived to our country. The possibilities of a foreign trade may be enormous. The trade may grow beyond our fondest expectations. We might open a trade with the western coast of South America and with the Orient, Japan, China, Australasia, and New Zealand, and all these countries; but we have a trade at home. Washington, Oregon, California, Alaska cry aloud for this intercommunication between the two oceans; and if I had to put it anywhere under the Constitution I would not put it where the Senator from Oregon [Mr. MITCHELL] put it.

He said that the interstate trade was subsidiary to the foreign

trade. I think in that he erred. He placed the right to construct this canal by this agency under the power to regulate foreign commerce. I would place it, if I wanted to stretch the Constitution, under the power to regulate interstate commerce, commerce among the States. I think it would be infinitely more valuable, infinitely larger in volume, than any foreign trade. The very example that the Senator from Oregon cited shows that 80 per cent more of tonnage passed through the Sault Ste. Marie Canal last year than through the Suez Canal. With all the vast trade between England and her dependency of 250,000,000 people in India, and all the vast trade of Europe with the East, one internal improvement in one year in the United States exceeds the gross tonnage that passed through the Suez Canal by 33 1/4 per cent, I think.

That shows the transcendent importance of stimulating and facilitating our domestic trade. It shows the illusory character of the high expectations of developing an enormous foreign trade through the Nicaraguan Canal. When the Senator from Indiana [Mr. TURPIE] was addressing the Senate the other day, by the magic power of his eloquence and imagination he conjured up from the shades the illustrious dead. He placed the immortal Columbus upon a lofty peak of the Isthmus and caused him to survey with calm, dignified mien the artificial waterway connecting the two oceans.

Were I permitted, Mr. President, with feebleness and at longer distance to continue that flight I would want that magnificent explorer revived to see no pigmy hand unlocking the "secrets of the straits." I would want him to see the Titanic hand of this great Republic opening this waterway to the nations of the earth—not the hand of the Maritime Canal Company. And, sir, I would desire him to hear ocean call to ocean and deep to deep through this narrow channel, and with myriad voice blessing the mighty hand that opened the secrets of the straits as adding another link to the chain of commerce that binds the peoples of the earth in bonds of peace and prosperity.

The Currency—Volume Controls Price and Prices Control Profits, Prosperity, and the Equity of all Time Payments—Who, then, should Control Volume?

The most elemental and firmly established truth in monetary science is that volume controls price.
"Let principles be once firmly established and particulars will adjust themselves."—Margarette Fuller.

**SPEECH
OF**

**HON. HENRY A. COFFEEN,
OF WYOMING,**

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 8, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. COFFEEN of Wyoming said:

Mr. CHAIRMAN: The great financial controversy between the money power and the people hinges upon the simple question: Who shall control the issuance and the volume of money in circulation?

The advocates of bank issues, coming forward with the claim that the currency must be "reformed," ask Congress to deprive the Government of the right to issue paper currency for general circulation and empower the banks to both issue currency and expand or contract the volume in circulation at their own option and as their interests might suggest. On the other hand, representing, as we believe, the interests of the people, we demand the suppression of all bank issues and the future issuance of all forms of money, whether coin or paper, by the Federal Government, making all issues full legal tender, and controlling and regulating the volume in strict accord with the interests of industry and the maintenance of equity.

WHAT IS THE USE OR FUNCTION OF MONEY?

The functions of money are three in number—to furnish, first, the common medium of exchange; second, a common measure or unit of account by which the comparative values of other things are estimated; third, a standard by which future payments and obligations are determined and enforced.

If the standard, the value of money in exchange, is changed by contraction or expansion of volume, then equity in payment is defeated and one of the parties in the contract suffers injustice.

If a farmer has a certain number of dollars to pay in taxes, on a note, or in any other obligation, the amount being fixed when

the general range of prices showed the dollar worth one bushel of wheat, it will double the burden of debt and rob him of his wheat to change the dollar, the unit of account, so that it is worth two bushels of wheat, and does the farmer the same injustice as it would to double the size of the bushel measure or any other standard of measure and settlement.

So with the products of the factory, field, shop, mine, or store. So with all, rich or poor, who have to obtain dollars in exchange for property, products, or labor. The dollar is not a unit of value when its purchasing power is changed, but a unit of account.

Mr. St. John, president of the New York Mercantile National Bank, and, in my judgment, the most competent and patriotic bank president that appeared before the Banking and Currency Committee at its recent hearings, pointed out (page 828) that money is domestic—that it is a matter of national legislation and national concern. About 95 per cent of our trading is done within our own jurisdiction, and besides the international trade of any one country always requires translating both the money and the measures of other countries into its own.

Money is the creature of law. Money is all domestic. Our ten-dollar gold piece is accounted 233 grains of nine-tenths fine gold when beyond the jurisdiction of the United States.

Money and the yardstick have nothing in common. The yardstick is an exact, unvarying measure of length. Money is an uncertain, variable measure of varying values. The yardstick is not bartered for commodities. Money is the means of acquisition and momentarily the measure of value of the things required. The yardstick is a unit of length. The dollar as a "unit of value" is preposterous. Our Hamilton-Jefferson statute, founding the mint, provided a dollar as our "unit of account." That dollar of 1792 and the dollar of 1894 contain identically 371.25 grains of silver.

AGGREGATE OF MONEY DETERMINES PRICES.

The aggregate of all money afloat and in bank in the United States is our true measure of normal value of commodities here. The aggregate of money of all nations trading internationally is the measure of normal value of all commodities consumed by all. Therefore, to enlarge the aggregate of money in the trading world is to raise normal prices of commodities everywhere. To enlarge the aggregate of money in the United States is to raise normal prices for home and internationally-consumed commodities here. Per contra, to diminish the aggregate of money in the United States is to lower all normal prices here, and to diminish the world's aggregate of money is to lower all normal prices of internationally-moving commodities in all the trading world.

In reference to the coinage question, so ably discussed by my friend who has just taken his seat [Mr. BLAND], I desire to say that I indorse in the main what he has said. And yet I wish to call attention to another phase of the currency bill before us that is of paramount importance to a realization of the fact that this question is not so much as to what shall be the material of money or the money of ultimate redemption, whether it shall be silver coin or gold coin or uncovered legal tender-paper. No man who is competent to grasp the entire currency question will fail to realize that it is the volume of money that regulates prices, and therefore regulates profits and prosperity. I have upheld the free coinage of silver, as you all know, from first to last. I believe today it is a practical step to take, not so much that it is the only means that would relieve the depression, but because it is prominently before the country, and in due deference to the deep-seated desire on the part of the people in many parts of the country, and for the purpose of keeping the Democratic pledges to the people it should be carried forward until silver coinage is restored.

Mr. Chairman, the American Banking Association and its allied interests, including the European moneyed interests as well as the American, as far as they work in general concert of purposes, I wish to designate under the general terms money power or money dealers or bank syndicate, for general convenience, and not for the purposes of offense or abuse of persons engaged in the business of banking.

I have no blame to cast upon those engaged in the business of banking under the laws as they exist or as they may exist.

Every man has a right to engage in banking under such laws as are made. I have had some little experience in banking, and my banking investments have been profitable.

It is the system of banking and the character of financial legislation and the unsound arguments and vicious methods that I would attack and expose.

In my judgment the money power and their advocates have in times past and even now on this floor are seeking to avoid the main issue and conceal from the general public their main purposes in all the proposed legislation before us.

The main question and the most important issue is who shall control the quantity or volume of currency in general circulation.

Their main purpose is to secure to themselves as a general class of money dealers the power to expand or contract the volume of currency suddenly and entirely at their own option, so to control the value of money and credits in their relation to property and prices.

BANKS SEEK THE CONTROL OF THE VOLUME IN CIRCULATION.

Whoever controls the general volume of currency in circulation controls the general range of prices, and prices control property values, wages, profits, and the opportunities for general prosperity, and these things involve the welfare of mankind.

Believing these things, Mr. Chairman, and even knowing them as

certainly as anything can be known in any of the ordinary sciences, how can I sit silent and unconcerned in this Hall, and in the midst of these debates, and see any proposition carried to turn this all-important control over the money volume and a new lease and extension of power into the hands of banking corporations? This places control out of the reach of the people and the Government, which is in duty bound to protect the people.

Sir Robert Peel said, when he brought forward in Parliament his bill for the reform of the currency, in 1844, in describing the importance of the question to all interests and people:

There is no contract, public or private—no engagement, national or individual, which is unaffected by it. The enterprises of commerce, the profits of trade, the arrangements made in all the domestic relations of society, the wages of labor, pecuniary transactions of the highest amounts and of the lowest, the payment of the national debt, the provision for the national expenditure, the command which the coin of the smallest denomination has over the necessities of life, are all affected by the decision to which we may come on that great question which I am about to submit to the consideration of the committee.

Every man, woman, and child in this country is vitally interested in this question, and so long as I represent them even the poorest and humblest citizens in the State of Wyoming shall have the satisfaction of knowing that their interests are neither forgotten nor bartered away and surrendered to the money power.

THE QUANTITY OF CURRENCY IN CIRCULATION REGULATES PRICES.

The philosophy of this question is in this fact, that it is the total volume of money in circulation, whatever its form and without regard to its material, that controls the value of every dollar as far as its monetary use is concerned. I see there are a few in my presence who are inclined to question this proposition, especially some of my colleagues on the Coinage Committee, but I say to you that all competent authorities almost without exception are agreed upon that fact. There are no leading authorities in the universities of any land or continent, or any noted authorities, I believe, except one or two, but what have finally acknowledged the point that it is the aggregate, the entire quantity of money or number of units in circulation, that regulates the value of every unit or dollar for the time being. Therefore, the free coinage of silver, great question as it is, bringing up the great injustice that has been done the people by its demonetization, all of which I admit and claim, still is an incidental question to the currency question. Then, what is the issue before us to-day? The issue in which the people are most vitally interested is practically who shall control the volume in circulation?

I will submit authorities to you in extended remarks to show you that it is the aggregate volume, without particular reference to the material of which the units are composed, that regulates the value.

Mr. MONEY. Will the gentleman allow me to ask him a question?

Mr. COFFEEN of Wyoming. Yes.

Mr. MONEY. I want to understand the matter. Do you contend that it is the volume of currency circulating in this country that regulates prices here?

Mr. COFFEEN of Wyoming. Yes.

Mr. MONEY. Or that it is the volume of currency in the world that regulates the prices of articles of universal consumption?

Mr. COFFEEN of Wyoming. I intended to treat of that later, but I will take that up now. The prices in every nation are regulated on the basis of the money of that nation, and we should not forget that monetary systems are of national and local concern, and not international, as some suppose. There is no "money of the world."

Exports and imports are regulated purely and entirely in the exchange of merchandise for merchandise, and they are always translated into the local monetary system of the country dealt with. Therefore, in answer to the gentleman, who has put a very pertinent and proper question, I will say, without fear of successful contradiction, that the prices in this country, named in the circulating money of this country, will depend on the aggregate number of units in circulation in this country, as they will depend and be named in every other country upon their respective monetary systems.

Mr. MONEY. Now, I do not want to interrupt you—

Mr. COFFEEN of Wyoming. This is no interruption. I think this is profitable.

Mr. MONEY. Then, if that is true, would the increase of the volume of circulation in this country raise the price of cotton and wheat in this country, without regard to the universal volume of currency in the world and the demand for those two articles?

Mr. COFFEEN of Wyoming. That is a proper question, and we ought to be able to answer such questions as that. Those products that are produced in this country beyond the capacities of this country to consume, and which depend, therefore, on export for their market, will, without regard to prices named in our money, be at least partially influenced in price named in the foreign money by the foreign market.

But, going on now from where we left the question, who shall control the volume of money in circulation?

From the very nature of the case, as I shall undertake to show a little further on, the volume or quantity of money in general circulation controls and regulates the general range of prices on commodities.

As money appreciates property and price depreciate. As the volume of money increases prices of all commodities increase generally in the same ratio; but increasing the volume of money cheapens the value of the dollars or units of account, which is the cause of the increase of general prices.

So again, to contract or diminish the volume of money increases the value or purchasing power of the dollars or units, which lowers the price of commodities.

Hence we state the general proposition, that to increase or decrease the value or purchasing power of money has directly opposite effect on the value or price of all commodities and properties exchanged for money. It is folly, then, for the money power to claim that they want good, high-priced money and plenty of it. To make money plenty cheapens it, and while cheaper money is both good and honest money, if kept in due proportion to the needs of the country, honest and helpful to all who have aught to sell or pay, yet the money dealers want high purchasing power money, and they know, or ought to know, that scarcity produces it. There is no such thing possible as high-priced money and "plenty of it."

To prove this elemental truth of monetary science, that volume of currency in circulation controls the general range of prices, I submit the following authorities; but in general let me say that all competent authorities in both Europe and America are nearly unanimous in their recognition of this principle.

John Stuart Mill says:

That an increase of the quantity of money raises prices, and a diminution lowers them, is the most elementary proposition in the theory of currency.

The authorities on this quantitative theory of money have been so thoroughly collated by Senator JOHN P. JONES, and given in his great speech on the question of repeal of the silver-purchase law in October, 1893, that I shall quote a number of them as given by him, and in connection shall quote a part of what the Senator himself had to say on this topic. I regard the great Senator himself as even a greater authority on almost every phase of the money question than many of the noted writers from whom he makes quotations:

I shall now proceed to speak of the quantitative theory of money. I wish to say, preliminarily, that I have heard no Senator deny the scientific correctness of that theory; yet if it be correct, the so-called standard of gold is a standard of gross injustice.

But there is one principle of monetary science that, if held steadfastly in view, will constitute an unerring guide through what would otherwise be a path of inextricable difficulty.

That principle is that the value of the unit of money in any country is determined by the number of units in circulation. In other words the value of every dollar depends on the number of dollars out.

The greater the number of dollars out, other things being equal, the less will be the value of each dollar; the fewer the number out, other things remaining the same, the greater the value of each—and this without any regard whatever to the material of which the dollars are composed. This is the key to the financial situation in the United States. Much more; it is the key to the financial situation in every land. Without this key it is in vain that the student attempts to unlock the door leading to the Arcanum of monetary knowledge. Unlike many of the locks made by man, the lock on that door is unpickable. The household of science is one that thieves can not break through and steal. He who would enter must first find the key. With this key in hand the most secret recesses may be explored with confidence. Without it the student travels in a circle—returning, after much labor, to the point from which he started upon his journey. Like one in a maze, when most confidently expecting to find his way out, he but sees himself coming up against impassable barriers.

To the possessor of this theory and of an impartial mind, that is to say, a mind in search of truth for truth's sake, there is no phenomenon of industry, of commerce, or of finance that is not accounted for. With it, all facts in the monetary world harmonize. All the teachings of history illustrate its force. It has therefore for support both reason and experience. It resolves all doubts, unriddles all enigmas, makes clear that which, without it, would be an insoluble problem of political economy. But, in order to receive all the benefits of truth, men must not approach the investigation with a predetermination to prove some special theory. The truth is always its own justification.

No Senator will rise in his place and deny that, other things being equal, the value of each unit of money in a country depends on the total number of units forming the monetary circulation of that country. No Senator will attempt to deny that, all other things remaining the same, the prices of property and commodities in a country are regulated by the number of units constituting the monetary circulation of the country; and by the "number of units" I mean, of course, for this country the number of dollars, for France the number of francs, for Great Britain the number of pounds sterling, etc. The quantitative theory, Mr. President, is not new. In the third century of the Christian era the Roman juriconsult Paulus gave a description of money, which indicates the acceptance at that early period of the principle of quantity as that to which the money unit owed its value. I invite special attention to this clear-cut statement:

"The origin of buying and selling"—

Says Paulus—"goes back to barter. Primatively, there was no money. One thing was not called 'merchandise' and the other 'price,' but everyone, according to his needs and according to his circumstances, bartered things useless to him for those which would be useful to him, for it often happens that what one has too much of another lacks. But as it would not always or easily happen that you had what I should have wished for, and that, conversely, I had what you wished to obtain, choice was made of a material which, being declared forever legal value, would obviate the difficulties of barter by means of a quantitative equation. And this material, stamped in the corner by the State, circulates with a power which it derives not from the substance but from the quantity. Since that time, of the things thus exchanged one is called merchandise and the other is called price."

This description was deemed worthy to be incorporated in the *Pandects of Justinian*, compiled and promulgated in the sixth century, thus demonstrating that the lapse of three hundred years had not rendered it obsolete. It is as sound to-day as it was when first written.

John Locke, in his *Considerations*, relating to the value of money, said:

"Money, while the same quantity of it is passing up and down the kingdom in trade, is really a standing measure of the falling and rising value of other things in reference to one another, and the alteration in price is truly in them only. But if you increase or lessen the quantity of money current in traffic in any place, then the alteration of value is in the money."

Locke further said:

"The value of money in any one country is the present quantity of the current money in that country in proportion to the present trade."

David Hume, the historian, says:

"It is not difficult to perceive that it is the total quantity of the money in circulation in any country which determines what portion of that quantity shall exchange for a certain portion of the goods or commodities of that country. It is the proportion between the circulating money and the commodities in the market which determines the price."

Pitche says:

"If the quantity of purchasable articles increases, while the quantity of money remains the same, the value of the money increases in the same ratio; if the quantity of money increases, while the quantity of purchasable articles remains the same, the value of the money decreases in the same ratio."

James Mill, in his *treatise on Political Economy*, says:

"And again, in whatever degree, therefore, the quantity of money is increased or diminished, other things remaining the same, in that same proportion the value of the whole and of every part is reciprocally diminished or increased."

John Stuart Mill (*Political Economy*) says:

"The value of money, other things being the same, varies inversely as its quantity; every increase of quantity lowering the value, and every diminution raising it in a ratio exactly equivalent."

And again, as I have already quoted in connection with my remarks on cost of production, Mr. Mill says:

"Alterations in the cost of the production of the precious metals do not act upon the value of money, except just in proportion as they increase or diminish its quantity."

Ricardo (Reply to Bosanquet) says:

"The value of money in any country is determined by the amount existing. That commodities would rise or fall in price in proportion to the increase or diminution of money I assume as a fact that is incontrovertible."

Ricardo further says:

"There can exist no depreciation in money but from excess; however debased a coinage may become, it will preserve its mint value; that is to say, it will pass in circulation for the (so-called) intrinsic value of the bullion which it ought to contain, provided it be not in too great abundance."

John Stuart Mill again says:

"We have seen, however, that even in the case of metallic currency the immediate agency in determining its value is its quantity.—*Principles of Political Economy*, volume II, page 89."

William Huskisson (*The Depreciation of the Currency*, 1810) says:

"If the quantity of gold in a country whose currency consists of gold should be increased in any given proportion, the quantity of other articles and the demand for them remaining the same, the value of any given commodity measured in the coin of that country would be increased in the same proportion."

Sir James Graham says:

"The value of money is in the inverse ratio of its quantity; the supply of commodities remaining the same."

Torrens, in his work on *Political Economy*, says:

"If the value of all other commodities, in relation to gold, rises and falls as their quantities diminish or increase, the value of gold in relation to commodities must rise and fall as its quantity is diminished or increased."

Professor De Colange, in the *American Cyclopaedia of Commerce*, article "Money," says:

"The rate at which money exchanges for other things is determined by its quantity. . . . Supposing the amount of trade and mode of circulation to remain stationary, if the quantity of money be increased its value will fall and the price of other commodities will proportionately rise, as the latter will then exchange against a greater amount of money; if, on the other hand, the quantity of money be reduced, its value will be raised, and prices in corresponding degree diminished, as commodities will then have to be exchanged for a less amount of money. . . . In whatever degree, therefore, the quantity of money is increased or diminished, other things remaining the same, in that same proportion the value of the whole and of every part is reciprocally diminished or increased."

Says Professor Sidgwick, of Cambridge University:

"The exchange value of any particular coin will vary in exactly inverse ratio to the variations in quantity of the aggregate.—*Principles of Political Economy*, page 251."

DOES THE MATERIAL IN MONEY CONTROL ITS VALUE?

Now, having established the fact beyond any danger of successful contradiction that the value of money is controlled by the number of units in circulation, and since a few—mostly novices in the study of monetary questions, or special pleaders for special interests—still hold and advocate that it is in whole or in part the value of the material of which money is composed that regulates its value, I wish to take up this feature of the question and we will find that it is equally clear that without regard to the material of which convenient forms of money are composed, still the volume in circulation regulates the value for monetary purposes.

This rule applies even to the circulation of uncovered paper money, whether issued by the banks or by the Government, as long as it is kept in general circulation, and so the values of gold dollars and silver dollars themselves, by adding paper money to the volume, are affected, and diminished or increased according as the quantity of paper money is increased or decreased. On a former occasion, when the repeal of State-bank tax was before us, I tried to make this clear to all.

This fact and a true recognition of the effect of expanding or contracting the amount of paper currency in circulation is essential in any proper discussion of the question of empowering banks to issue what they call an elastic currency or of issuing any currency whatever, or withdrawing any from circulation.

Senator JONES gives valuable testimony again. He says:

So absolutely clear are the leading writers that the value of the money unit is, in every case, other things being equal, determined by the number of

units out, and does not depend on the material of which the money may be composed, that they have not the slightest hesitation in asserting that the rule applies even to uncovered paper money, so that the value of every dollar of gold and silver in circulation is diminished or increased, according as the quantity of paper money is increased or diminished; and reciprocally as to all of these, the increase in the number of dollars of either kind diminishing the value of each dollar of the others, while the decrease in the number of either increases the value of each of the others, without the slightest regard whatever to the material of which either of the dollars is composed.

If this be so, if the value of the unit of money depends not on the material of the dollars but on their quantity, what becomes of the gold standard? If this be so, inasmuch as silver has been utilized as money since the dawn of creation, why abandon it now, unless Senators are prepared to abandon the automatic system altogether? If we must, by legislation, compel a change in the value of money (for that is what this measure means), why legislate so that it can change in one direction only, and that the direction which is always favorable to the classes that lend money and live idly on their incomes—the direction most injurious to society, most fatal to industry, most narcotizing to energy?

Prof. Stanley Jevons, in his work on *Money and Mechanism of Exchange*, says:

"There is plenty of evidence to prove that an inconvertible paper money, if carefully limited in quantity, can retain its full value. Such was the case with the Bank of England notes for several years after the suspension of specie payments in 1797, and such is the case with the present notes of the Bank of France."

In his proposal for an economic and secure currency, the great authority, Ricardo, himself a most acute dealer in money, says:

"A well-regulated paper currency is so great an improvement in commerce that I should greatly regret if prejudice should induce us to return to a system of less utility. The introduction of the precious metals for the purposes of money may with truth be considered as one of the most important steps toward the improvement of commerce and the arts of the civilized life; but it is no less true, that with the advancement of knowledge and science, we discover that it would be another improvement to banish them again from the employment to which, during a less enlightened period, they had been so advantageously applied."

The distinguished economist and editor, Mr. J. R. McCulloch, in commenting on the principles of money laid down by Ricardo, says:

"He examined the circumstances which determine the value of money . . . and he showed that . . . its value will depend on the extent to which it may be issued compared with the demand. This is a principle of great importance, for it shows that intrinsic worth is not necessary to a currency, and that, provided the supply of paper notes declared to be a legal tender be sufficiently limited, their value may be maintained on a par with the value of gold, or raised to any higher level. If, therefore, it were practicable to devise a plan for preserving the value of paper on a level with that of gold, without making it convertible into coin at the pleasure of the holder, the heavy expense of a metallic currency would be saved."

It appears, therefore, that if there were security that the power of issuing paper money would not be abused; that is, if there were perfect security for its being issued in such quantities as to preserve its value relatively to the mass of circulating commodities nearly equal, the precious metals might be entirely dispensed with, not only as a circulating medium, but also as a standard to which to refer the value of paper."

Lord Overstone also admits that irredeemable paper money can, by a proper limitation of its issues, be kept at par with gold.

"In adopting a paper circulation—"

He says—

"We must unavoidably depend for a maintenance of its due value upon the adoption of a strict and judicious rule for the regulation of its amount."

Supporting this view we find also that Alexander Paring, in his evidence before the secret committee of the House of Lords in 1819, said:

"The reduction of paper would produce all those effects which arise from the reduction in the amount of the money in any country."

An early and distinguished authority in our own country, Mr. Gallatin, said:

"If in a country which wants and possesses a metallic currency of \$70,000,000 a paper currency to the same amount should be substituted, the seventy millions in gold and silver, being no longer wanted for that purpose, will be exported, and the returns may be converted into a productive capital and add an equal amount to the wealth of the country."

When we know that these are views of the leading writers—all uniting in the assertion that that which determines the value of money is the quantity, not the material—it must excite our special wonder that Senators propose to destroy silver as money of final payment, or to repeal a law which by its slight addition to the quantity of money has at least tended to maintain, in some degree, among us the equities of time contracts and deferred payments.

When the Senators know that all great projects in this country on which the employment of labor depends, are based upon the prices of commodities, and that when those prices are constantly falling workmen must be relegated to idleness, that every debt must be paid in a dollar of increasing value, to the ruin of merchants and of the projectors of industrial enterprises in which labor should be employed, it is incomprehensible how they can advocate the establishment in this country of a gold standard, or of any standard, except such as will furnish a sufficient volume of money for the business of the people.

With reference to Ricardo it is to be borne in mind that his profession was that of stockbroker. Hence we must make allowance for his desire to maintain the gold standard, knowing, as he very well knew, that the gold standard meant a certain level of prices for commodities—that is to say, that it did not mean the possession of gold, but the ability of money lenders, creditors, and the idle aristocracy and income classes of Great Britain to obtain all the comforts and luxuries of life at a level of prices getting constantly lower.

In a paragraph of the twenty-seventh chapter of his work on *Political Economy*, Ricardo makes the broad statement that a nation may be on the gold standard without having a solitary dollar of gold within its entire territory, provided only that, whatever may be the form of its money, the number of the units of that money shall not exceed the number of gold units which, if the country used gold money, would be its distributive portion of the gold of the world. That proportion is, of course, fixed by the general range of prices. Ricardo's statement is:

"A currency is in its most perfect state when it consists wholly of paper money, but of paper money of an equal value with the gold which it professes to represent. The use of paper instead of gold—"

He continues—

"substitutes the cheapest in place of the most expensive medium, and enables the country, without loss to any individual, to exchange all the gold, which before it used for this purpose for raw materials, utensils, and food—by the use of which both its wealth and its enjoyments are increased."

It will be remembered that on Saturday I demonstrated, by citations from the leading writers that money has no value whatever except value in exchange—purchasing power—and that when the term "value of money" is used, it means only purchasing power and not any value, which, for commodity purposes, might attach to the material of which it is composed.

"By limiting its quantity."
 Ricardo says—
 "its value in exchange."
 "Which, as I have said, is the only value that money has—
 "is as great as an equal denomination of coin, or of bullion in that coin."
 And he very properly adds:
 "There is no point more important in issuing paper money than to be fully
 impressed with the effects which follow from the principle of limitation of
 quantity."

Of course there is no point more important than that. The principle of
 limitation of quantity is of the very essence of the value of money, of what-
 ever material it may be composed.

If money were unlimited in quantity it would have no value whatever.
 Nothing has value that is unlimited in quantity. If, instead of sand, the
 ocean beach were strewn with gold dust, it would have no value whatever
 as a commodity; yet if that gold dust were taken up and coined into pieces
 of money, the number of such pieces being limited, they would have value
 precisely as gold pieces have value to-day. And, on the other hand, as Adam
 Smith says, if gold should reach a certain degree of scarcity, the slightest
 bit of it might become as valuable as a diamond.

Ricardo, leaving no form of the statement untouched, recurs to the sub-
 ject by making the following remark:

"On these principles it will be seen that it is not necessary that paper money
 should be payable in specie to secure its value; it is only necessary that its
 quantity should be regulated according to the value of the metal which is
 declared to be the standard."

If it is not necessary for paper money, in order to be of equal value with
 gold money, to be payable or "redeemable" in gold, how can it be asserted
 that silver money, in order to maintain its value in relation to gold, should
 be redeemable in that metal?

Professor Fawcett, in his work on Political Economy, says:
 "In discussing the laws of price, the principle was established that general
 prices depend upon the quantity of money in circulation compared with the
 wealth which is bought and sold with money, and also upon the frequency
 with which this wealth is bought and sold before it is consumed. If more
 wealth is produced and an increased quantity of wealth is bought and sold
 for money, general prices must decline unless a larger quantity of money is
 brought into circulation."

When Professor Fawcett says that "general prices must decline unless a
 larger quantity of money is brought into circulation," he is but stating in
 another form of phrase that the value of money increases as its quantity
 diminishes. This is the quantitative theory. Professor Fawcett further
 says:

"The amount of money required to be kept in circulation depends upon the
 amount of wealth which is exchanged for money. Hence, *ceteris paribus*,
 the amount of money ought to increase as the population and wealth of a coun-
 try advance.—Political Economy, page 371."

If the amount should be increased, surely the increase must be an increase
 of the quantity.

Mr. N. A. Nicholson, of Oxford, in his Science of Exchange, says:
 "Whatever substance may be used as currency, an excessive quantity of it
 (more than is required by the wants of the community) necessarily causes a
 diminution of its purchasing power."

To show that even gold is subject to the same law of quantity, Mr. Nichol-
 son asks:

"Could a currency, then, consisting entirely of the best gold coin only, be
 depreciated?"

To which he replies:

"Certainly, provided that the exportation of gold could be altogether pre-
 vented, the amount in use would soon become greater than what was re-
 quired by the wants of the community, and its purchasing power would
 diminish in the same proportion."

What Mr. Nicholson means by the "wants of the community" is the
 amount of money necessary to sustain prices at the international level.

Earl Grey, writing to Mr. Grenfell, one of the governors of the Bank of
 England, and referring to Ricardo, says:

"I would remind you (though it is hardly necessary to do so) that in his
 admirable pamphlet on this subject, he (Ricardo) has shown the value of
 paper money issued by the authority of the state to depend upon its amount
 as compared to the wants of the state in which it circulates. No one, I be-
 lieve, now doubts this to be true, and experience has proved that inconvert-
 ible paper money will circulate not only without depreciation, but even at a
 premium if the issues are sufficiently limited."—[Letter from Earl Grey,
 dated May 31, 1861. Quoted in The Bimetallic Controversy, by Gibbs &
 Grenfell, page 100.]

Prof. Shield Nicholson, of Edinburgh, in an article in the Nineteenth Cen-
 tury for December, 1869, states that every economist of repute since Ricardo's
 time has been an advocate of the quantitative theory of money.

Even a so-called debased coinage—that is, a coinage, each piece of which
 contains a smaller quantity of metal than the law prescribes—will maintain
 itself at par provided the total number of coins put in circulation be not too
 large. On this point, as I have shown, Ricardo says, that in circulation such
 coins will pass for the quantity of metal they ought to contain, provided they
 be "not in too great abundance."

With reference to this relation of quantity, and to the absolute necessity
 of an increase of money *par passu* with the demands for it, Professor Perry,
 of Williams College, says:

"When, however, enterprises are multiplying and exchanges are being
 permanently increased in number and variety, then there must be a larger
 volume of money."—Principles of Political Economy, page 400.

With regard to the irredeemable paper notes of the Bank of England, issued
 on the suspension of specie payments in 1797, Professor Perry says:

"Cautiously issued at first, bank paper continued at par for several years
 after the suspension, which proves that when Government possess the mono-
 poly of issuing paper money, and carefully limits its quantity, and both
 receives and pays it out at par, it may keep an inconvertible paper at par, or
 even by sufficiently limiting its quantity carry it above par."

How do gold-standard Senators, who talk of a sixty-cent dollar, explain the
 fact of a one-cent paper pound-sterling being at par with gold, or even at a
 premium over gold, without a penny's worth of gold existing in the entire
 kingdom? I suppose they will say the notes were sustained by the "credit
 of the Government." Then, why did the credit of the Government allow the
 notes later on, when they were issued in larger quantities, to depreciate in
 value?

All these great authorities agree, as I have shown, that the quantitative
 theory of money is correct, and that, instead of applying merely to gold, it
 applies to all money without discrimination or distinction of material.

VALUABLE TESTIMONY OF DELMAR.

Alexander Delmar, whose very philosophical work on Money
 and Civilization I have examined and which is not so often quoted
 as this author deserves, says on pages 11, 12, and 13 of his intro-
 duction:

At long and adventitious intervals, like those great tidal waves which in-
 crease the disturbance of an always disturbed ocean, occurred those open-

ings of placid countries—Spain, Gaul, Africa, Spanish America, Brazil, Cali-
 fornia, Australia—each of which caused a prodigious rise of prices and threw
 society into new forms.

Then, as if he would guard carefully against the frequent mis-
 take of regarding the volume of coin and precious metals as be-
 ing the only element to consider in the volume of money and regu-
 lation of value, he says:

Of all money now (1866) in circulation in Europe and America one-half con-
 sists of paper notes. If these notes were suddenly demonetized or destroyed
 it is evident that, in consequence of the increased work which each coin would
 have to perform, its value or purchasing power would be greatly enhanced
 and prices would fall. On the other hand, to the extent paper notes are
 added to the circulation prices will rise. * * * The purchasing power of the
 precious metals is susceptible of being depressed below the cost of pro-
 ducing them, by any circumstance that tends suddenly or greatly to aug-
 ment the volume of money whenever the same is composed wholly or partly
 of such metals.

He has brought out here the essential point in determining value
 of coin to be the consideration of the total volume of both coin
 and paper money in circulation, and this should be understood
 better than it is by both mine owners and those engaged in other
 pursuits.

Delmar claims that in his Science of Money he has—

Shown by numerous arguments and references to history that money did
 not and could not consist of any less number of coins or notes than the whole
 number, their nature being such that they could not be used, nor could their
 value be fixed without reference to one another; in other words, that the unit
 of money (for consideration of its value) was all money, and, therefore, that
 its value depended upon its volume; * * * that, therefore, money was related
 to equity or the maintenance of equitable relations between capitalists and
 laborers; that, like other measures, the most necessary and essential charac-
 teristic of money was specific limitation (of mass or volume); in other words,
 that to measure with precision and with justice the whole sum of money
 must be fixed at some more or less constant ratio to the volume of exchange.

But while quoting from Delmar I wish also to enforce the point
 I so strongly urge, that to protect property interests of the labor-
 ing world and the rights of mankind and to simplify the whole sub-
 ject of money as a standard of equity among the people the State or
 Government must hold and use the power to regulate the volume
 of money, all kinds of money, in circulation, and to this end can
 not leave the coinage and issuance of either paper or metal money
 to the whims and interests of private corporations.

If either should be let out to corporations it would be better to
 let out to them the coinage of the precious metals, for the very
 limitations on their production will keep the banks within ap-
 proximate bounds.

In speaking of the legislation of about two centuries ago by
 which the leading States of Europe gave over their control of vol-
 ume to the exigencies of mining operations and coinage on pri-
 vate account and option Delmar says, pages 13 and 14:

Previous to the act of 1696 in England and 1679 in France, which gave free
 coinage to both gold and silver and allowed the volume of money to depend
 upon the exigencies of individuals to add to or subtract from the volume of
 coin at their will, the State no longer keeping control of volume, as it should
 (see pages 227-230), money was a comparatively simple subject, readily un-
 derstood and as readily susceptible of regulation.

This helps us to understand that even the question of free coin-
 age of either gold or silver must be considered in relation to the
 effect of such coinage on the total volume.

We must never forget, if we would simplify and grasp the money
 question, that it is the volume or total number of units or dollars
 in circulation that controls and regulates the value of the units
 and regulates the general range of prices on all exchangeable forms
 of wealth on which the welfare of mankind depends.

Mr. HAINER of Nebraska. Will the gentleman yield for a
 question?

Mr. COFFEEN of Wyoming. I can with pleasure for the gen-
 tleman from Nebraska.

Mr. HAINER of Nebraska. The gentleman has stated that the
 prices are governed by the volume of currency in a country.
 Now, for instance, the average circulation of currency in this
 country is about \$25 per capita. In China it is about \$2 per capita.
 Are we to understand that prices in this country will be twelve
 times what they are in China?

Mr. COFFEEN of Wyoming. No; I am not speaking of per
 capita circulation, but of the effect of increasing or decreasing the
 volume in circulation, and I will not take China as suitable for
 illustration, as its weights, measures, and coins are so very differ-
 ent from ours that I would not be able to make the comparison
 without reference to text-books and tables, even if I were talking
 of per capita. Although silver dollars, both American and Mexi-
 can, are current there, they are not coined officially. The only
 official coinage is the copper cash, which is worth as far as its metal
 is concerned less than one-tenth (one-eleventh) of an American cent,
 or 1,100 to the dollar. So if there is even the metal worth of one dollar
 per capita in circulation to China's 400,000,000 people it will give us
 over four hundred thousand millions of these coins in China. But
 their money value may be very different from their value as mer-
 chandise, which is taken as a basis for per capita circulation tables
 probably. Let us then take a nation a little nearer home, and
 whose terms and coins and weights are better understood.

We should remember, too, and especially with reference to China,
 that it is the volume of currency in circulation in relation to the
 volume of business and work for money to perform.

And again, let us remember that the prices in one country must be translated into a different money system in another for comparison.

Mr. HAINER of Nebraska. Will you compare this country with France with its \$36 per capita circulation, England with its \$18, or Germany with about the same?

Mr. COFFEEN of Wyoming. In England the price of wheat is about 20 shillings per quarter. That will be a good product for a basis, since wheat has been already mentioned. It is probable that if we by issuing legal tenders double our volume of money and leave silver demonetized, it will very slightly affect the 20 shillings per quarter, raising the price for wheat in England; but while that may be true, you must not forget that it will double the price of wheat in this country, measured in our own dollar. But if we open our mints to free coinage of silver at \$1 for every 412½ grains of it nine-tenths fine, it will about double the price of silver instantly throughout the markets of the world. This would compel England to pay double for the silver she exchanges for wheat in India, and so she would pay double the present cost of wheat at Liverpool, and that means "dollar wheat" in our country. Wheat price in India rests on price of silver. Then the next question ought to be, "Will not the value of the dollar in our country by expansion of volume be on a grade or slide downward in its purchasing power?" And I answer without hesitation that it will, for dollars have valuation only in exchange for products, and you can not measure them by any other standard; so the raising of prices means the falling in value or purchasing power of the dollar.

Mr. HAINER of Nebraska. But the per capita circulation in this country is greater than the per capita circulation in England.

Mr. COFFEEN of Wyoming. Is it the per capita question you want to get at, or the difference in prices? The per capita circulation or ratio of money to population is not so important as the ratio of money volume to volume of business and exchange, and it is safe also to say that 90 per cent of our business is domestic, and not foreign.

Mr. HAINER of Nebraska. I am speaking now of the circulation as relating to the price. The circulation in this country is greater per capita than in England, and yet the price of wheat is greater in England than it is in the United States.

Mr. COFFEEN of Wyoming. The per capita may be more or less, but the increase or decrease of volume in relation to the amount of exchanges or business is the question. The prices can be but very little different there than in this country, just enough to encourage export; and owing to our surplus wheat the prices in this country are affected by the demand at Liverpool to some degree. International trade is carried on upon the basis of exchanging goods for other goods without much regard to the different systems of money existing or difference in local prices.

Mr. HAINER of Nebraska. Do you dispute the fact as to the price in England being greater than it is in the United States?

Mr. COFFEEN of Wyoming. No; but a little difference in price proves nothing in this case. The world's international trade is carried on without much regard to the different systems of money in which prices are named in the different countries, but always with due regard to the opportunities of getting other goods in exchange to advantage.

For illustration, suppose by doubling the volume of currency in this country it would double the general range of prices in this country, as I hold, and as is clearly taught by the leading authorities I have quoted, will that affect our trade with Europe seriously? Not at all.

Trade will go on much as before, for if the importers can get twice as much for European goods in our higher prices they can take our goods also at prices twice as high as before in exchange and come out in the end of the transaction the same as before. They have neither gained nor lost in the change of the general range of prices in this country. Trade goes right on, and our goods at higher prices will exchange for their goods at higher prices in our own currency and markets, although there may be no serious change of prices in Europe on either the exports or imports. The demand in international trade is not for money, but for goods.

Gold exports may be seriously affected, however, but if so it goes as bullion or merchandise and not as money. Bills of exchange will take care of themselves. Yet let me say in passing that gold, unless there be for other reasons an unusual demand for it elsewhere, will not go out of this country until its place is more than supplied with other money, for there can be no rise in prices here until more money is added in some way than is subtracted by export.

The very principles we have stated require that prices will go down instead of up if more money is exported than is added to our volume.

THE CHANGE OF VOLUME OF MONEY IN ITS RATIO TO VOLUME OF BUSINESS.

But my friend from Nebraska must remember that to test our proposition we must start with the already adjusted prices, and we will find that every great increase of volume in any country

raises the prices in that country. Every great contraction lowers prices. All history and experience and reason teach this principle.

When nations are on a metallic basis of money, as on a silver basis, like India has been until within a year or so and like China has been, in part at least, silver being cheap and abundant for them to use as money and add to their volume, prices in silver are maintained.

This has been precisely the effect in India and China. There has been no general decline of prices in either India or China in their silver money. Index number tables on leading commodities will show this—while in our country demonetizing silver and pushing by contraction toward the gold standard our prices on all leading products have, as a consequence, fallen about 50 per cent.

OUR COMPETITION WITH INDIA IN EUROPEAN MARKETS.

But my friend from Nebraska [Mr. HAINER] shall have a little information regarding prices of a few articles in China that I can give him, and that will greatly interest his people in central Nebraska.

At the end of twenty years after the demonitization of silver in our country and Germany, under which influence silver has been rendered more abundant for China, India, and others of the Oriental countries, while gold, by the greatly increased demand for it, has almost doubled in value in the mad scramble for a gold standard in our Occidental countries, we find wheat 43 per cent higher in China than it was in 1873, rice 19 per cent higher, beans 13 per cent higher, in their silver money. (Appendix to Coinage Laws, page 463.) In India, wheat was 18 per cent higher in Bombay and 3 per cent higher in Calcutta, while rice, that comes in competition with one of our Southern products, was over 60 per cent higher in these places at the close of 1892 than they were in 1873, when we demonetized silver. (Coinage Laws, page 789.)

But are wheat and rice and other food products that we produce higher in this country than they were then? In other words, while their prices have been well maintained in their silver currency, what has occurred to our prices in our foolish and criminal following of the Anglo-American gold and bond conspiracy?

Our prices, as every intelligent citizen in Nebraska and throughout the West knows, has gradually gone the other direction and is still going down, and the bottom for wheat prices resting on the ups and downs of money in circulation, may yet go to 20 cents per bushel in Nebraska if the money power can sufficiently control and contract the money volume.

WHO GETS THE BENEFITS OF THIS GOLD STANDARD?

Who gets the benefits among the nations we have mentioned in the attack upon and demonitization of our own silver?

Every nation except America. We get the losses, while England, using gold, and India and China, using silver, get the gains, and the mill still grinds and the bank and bond and gold advocates from Washington to Wall street tell us that we must hold on to the gold standard, issue bonds, and turn over the issuance of paper money to the tender mercies and financial erudition of the banks.

How does it work? This way. An importer of wheat into England can say: "Here, I will give you Americans 65 cents per ounce for your demonetized silver." Before we demonetized our silver it cost him \$1.20 per ounce. He takes it over to India, where silver has been the standard currency, and can get about as much wheat for the one ounce as he did twenty years before, although the silver to buy it with cost him only half as much. This keeps up prices in India and China in their currencies, but cheapens cost to Europe, and our wheat sold not on silver but on gold prices have fallen one-half, and our exports are retarded while Oriental exports have been greatly encouraged. Statistics will show that in wheat, cotton, and some other articles that come in competition with our productions the exports of India have increased during the last twenty years to a marvelous extent.

Europe, that produces no silver, and the Orient, which absorbs silver, both get the benefit, while our country loses by the same operation, by reason of the gold standard and appreciated dollars, about \$300,000,000 per year on wheat alone and from one to two thousand millions of dollars per year on our entire production of goods and grains and metals. This is bank and gold-standard financiering. Do you not think it is time for the workers of this country to do a little financiering on the property side of this question, and raise prices on what they deal in by the restoration of silver to our people by free coinage?

You say this will cheapen money.

Yes, to raise prices is to cheapen money in exchange for products, and to say the same thing in another way, to cheapen money by making it more abundant is to raise the general range of prices.

This is the invariable and scientific law of money in every country and in all history. No competent student of the money question, here or elsewhere, will deny this.

Other things being equal, an increasing volume of the money in any nation in proportion to the trade and work for money to perform will, in all cases, raise prices.

Then let us reduce the dishonestly high and scarce money of

America by remonetizing silver or issuing legal-tender Government notes, or both, until we revive prices, profits, and industry and secure more honest dollars in relation to the products, property, and debts of our own people.

Finally, I will say that prices of goods in China or England or France or elsewhere is only an indication of the ratio between the volume of money and the mass of exchangeable wealth in the one country, and can not therefore test the status of prices in other countries.

There is no exact ground to test the effect of per capita circulation and prices in countries widely different in their habits of trade and quantity of business, but the test comes by noting change of prices in each country when the volume is changed in that country.

There is according to estimates of a reliable authority which I have recently examined (speech of Senator JOHN P. JONES on repeal bill, page 298, in pamphlet form) about \$98,000,000,000 worth of production and commerce in the United States annually. This is an enormous amount and probably six to ten times as great as the production and trade of China. I have no means of knowing precisely as to this. Now, \$3 per capita, which my friend has mentioned as the circulation in China, would give us at least \$800,000,000 of circulation for China, which is very close to one-half of our circulation, although the total of her trade may not even be one-sixth or one-tenth as great as ours. So in proportion to her trade and need for money she may have far greater circulation than our country.

Now, having mentioned the question of export of gold in connection with currency and prices, I desire to take up this clamor about raids or withdrawals of gold from the gold reserve in our Treasury.

WHO IS RESPONSIBLE FOR CONTINUANCE OF THE RAID.

I am convinced that the raids on the gold reserve are continued only by the option and consent of the Administration and these are my reasons:

1. Greenbacks and Treasury notes, of which there are nearly \$500,000,000 in existence, are used by the raiders to take the gold out of the Treasury.

2. These are all payable in silver as well as gold; are all payable in coin. All obligations of the Government are coin or bimetallic obligations, practically, except gold certificates.

3. There is abundance of silver in the Treasury that ought to be paid on these bimetallic or coin obligations, and if not a sufficiency coined to pay all coin obligations that may be presented the Secretary of the Treasury can, under the laws existing, coin more at his discretion.

4. The announcement by the Secretary that he should from this hour forward use the right and option of the Government of paying all coin obligations in silver coin at any time when the amount of the gold reserve in the Treasury was below, say \$100,000,000, would instantly stop the presentation of any excessive amount of such coin obligations and protect the gold reserve.

The honorable Secretary of the Treasury is not using the legal right and option of paying coin obligations favorably to the Government and in the interest of preserving the gold reserve in the Treasury when he fails or refuses to pay out silver while it is more abundant than gold in the Treasury.

The option of payment is always and wholly the right of the debtor—the one who pays—and by no fair construction can become the option of the creditor.

France and other nations, with their more or less complete control of the central bank, exercise their option for the side of the Government, and not for the disadvantage of Government, when given by law or contract to the Government as debtor.

Our own Treasury is the only place among the civilized nations of the earth where the legal right and option is not used favorably to the Government. But here the gold speculators of the world may raid freely for gold with bimetallic or coin obligations.

The last paragraph of section 2 of the Sherman silver-purchase law of 1890, in declaring for a policy to maintain silver and gold metals at a parity, does not destroy the right or option of the Government to pay the coin of either metal on all coin obligations.

THE STANLEY MATTHEWS RESOLUTION.

The Stanley Matthews resolution, carried by a strong majority in both Houses of Congress early in 1878, is still in force, as declaring the intent of Congress, and ought to be obeyed.

Let the Secretary do his plain duty and exercise for us our legal and reserved right and option to pay in silver and the raid on the gold reserve is ended.

I will quote the resolution from the speech of Senator JONES, together with the comments that he made thereon during the debate on the repeal bill:

Whereas by an act entitled "An act to strengthen the public credit," approved March 18, 1869, it was provided and declared that the faith of the United States was thereby solemnly pledged to the payment in coin or its equivalent of all the interest-bearing obligations of the United States, except in cases where the law authorizes the issue of such obligations had previously provided that the same might be paid in lawful money or other currency than gold or silver; and

Whereas all the bonds of the United States authorized to be issued by the act entitled "An act to authorize the refunding of the national debt," approved July 14, 1870, by the terms of said act were declared to be redeemable in coin of the then present standard value, bearing interest payable semiannually in such coin; and

Whereas all bonds of the United States authorized to be issued under an act entitled "An act to provide for the resumption of specie payments," approved January 14, 1875, are required to be of the description of bonds of the United States described in the said act of Congress approved July 14, 1870, entitled an "Act to authorize the refunding of the national debt;" and

Whereas at the date of the passage of the said act of Congress last aforesaid, to wit, the 14th day of July, 1870, the coin of the United States of standard value of that date included silver dollars of the weight of 412½ grains each, declared by the act approved January 18, 1837, entitled "An act supplementary to the act entitled 'An act establishing a mint and regulating the coins of the United States,'" to be legal tender of payment, according to their nominal value for any sums whatever: Therefore,

Be it resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued or authorized to be issued under the said acts of Congress hereinbefore recited are payable, principal and interest, at the option of the Government of the United States, in silver dollars of the coinage of the United States, containing 412½ grains each of standard silver, and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith nor in derogation of the rights of the public creditor.

The able Senator then proceeds to comment on these resolutions as follows:

A motion to refer that resolution to the Committee on Finance of the Senate was voted down. A very influential member of the Senate, the then Senator from Vermont, Mr. Edmunds, moved to strike out such phraseology of the resolution as declared silver to be legal tender in payment of the bonds and to insert instead phraseology which would make the bonds "payable in gold or its equivalent." But, not satisfied with these words, the distinguished Senator from Vermont in addition moved to incorporate in the resolution the following declaration:

"And that any other payment—"

That is to say, any other than "gold or its equivalent"—

"without the consent of the creditor would be in violation of the public faith and in derogation of his rights."

This proposed amendment brought sharply before the attention of the Senate the very point in issue. What was the decision of the Senate upon that point?

The amendment of the Senator from Vermont was voted down; the vote standing—yeas 18, nays 48. This means that nine years after the passage of the act to strengthen the public credit which guaranteed to the creditors payment of the principal and interest of their bonds in coin, and seven and one-half years after the standard of the coin was named 48 out of 66 Senators of the United States repelled the assertion or implication that the bonds were payable in gold alone.

This resolution passed the Senate on January 16, 1878, by a vote of 43 yeas to 22 nays, and passed the House on the 29th of same month by 189 yeas to only 79 nays, and this ought to be a sufficient guide as to the intent of Congress regarding the payment of the public debt, including even the refunded bonds, and it repels the assumptions of the money power that coin obligations must be paid in gold alone.

It is strange how pure and refined some men on this floor have become when they, in the face of such strong declarations and in the face of the plain provisions for coin payment recited in the acts of Congress on which the bonds have all been issued, even these last ones of doubtful authorization, for which the specie-resumption law of 1875 is quoted as sufficient warrant, and knowing how closely bondholders scrutinize the terms of payment—I say it is strange that men here or anywhere will claim that the Treasury gold must be kept open to the raid for it on all kinds of coin obligations, while the reserved right and option of our people to pay in silver coin as their interests may require is so completely retained although ignored by our administrations.

DID SILVER COINAGE UNDER THE BLAND ACT DRIVE OUT GOLD?

On February 28, 1878, the so-called Bland Act, providing for the coinage of not less than \$2,000,000 per month of silver dollars, also restored their full legal tender without limit.

The Wall street press raised a howl, as usual, and started to scatter throughout the country their usual false prophecies of panics and danger which failed to materialize for the occasion.

About three weeks after the passage of the Bland law of 1878, a conference regarding silver and the resumption of specie payments with the now Senator John Sherman, of demonetization fame, who was then Secretary of the Treasury under President Hayes, was held by the Senate Finance Committee.

The Secretary, Mr. Sherman, for the time, gave evidence bearing on silver that will prove how surely silver was held to be the proper payment on all coin obligations of the Government. The chairman of the committee asked Mr. Sherman, "What effect has the silver bill had, or is likely to have, upon the resumption of specie payments?"

Remember that the Bland law was now in operation.

After saying "I shall have to confess that I have been mistaken myself," and after stating some adverse effects that he believed the new law would have, he goes on to state the advantages.

JOHN SHERMAN'S TESTIMONY AS SECRETARY OF THE TREASURY.

On the other hand I will give the favorable effects. In the first place, the silver bill satisfied a strong public demand for bimetallic money, and that demand is, no doubt, largely sectional. No doubt there is a difference of opinion between the West and South and the East on this subject, but the desire for remonetization of silver was almost universal. In a government like ours it is always good to obey the popular current, and that has been done, I think, by the passage of the silver bill. Resumption can be maintained more easily upon a double standard than upon a single standard. The bulky character of silver would prevent payments in it, while gold, being more portable,

would be more freely demanded, and I think resumption can be maintained with a less amount of silver than of gold alone.

Senator BAYARD. You are speaking of resumption upon the basis of silver, or of silver and gold?

Secretary SHERMAN. Yes, sir; I think it can be maintained better upon a bimetallic, or alternative standard, than upon a single one, and with less accumulation of gold. In this way remonetization of silver would rather aid resumption. The bonds that have been returned from Europe have been readily absorbed—remarkably so. The recent returns in New York show the amount of bonds absorbed in this country is at least a million and a quarter a day. We have sold scarcely any from the Treasury since that time. This shows the confidence of the people in our securities, and their rapid absorption will tend to check the European scare.

Senator VOORHEES. That shows, Mr. Secretary, that this cry of alarm in New York was unfounded. Then this capital seeks our bonds when this bimetallic basis is declared?

Secretary SHERMAN. Yes; many circumstances favor this. The demand for bonds extends to the West and to the banks.

Senator JONES. Then, in its effect upon the return of the vast amount of bonds you refer to, would there not be an element of strength added in favor of resumption, in that the interest on these bonds returned would not be a constant drain upon the country?

Secretary SHERMAN. Undoubtedly.

Senator JONES. Would the fact that they come back enable us to maintain resumption much easier?

Secretary SHERMAN. Undoubtedly.

Senator BAYARD. You speak of resumption upon a bimetallic basis being easier. Do you make that proposition irrespective of the readjustment of the relative values of the two metals as we have declared them?

Secretary SHERMAN. I think so. Our mere right to pay in silver would deter a great many people from presenting notes for redemption who would readily do so if they could get the lighter and more portable coin in exchange. Besides, gold coin can be exported, while silver coin could not be exported, because its market value is less than its coin value.

Senator BAYARD. I understand that it works practically very well. So long as the silver is less in value than the paper you will have no trouble in redeeming your paper. When a paper dollar is worth 98 cents nobody is going to take it to the Treasury and get 92 cents in silver; but what are you to do as your silver coin is minted? By the 1st of July next or the 1st of January next you have eighteen or twenty millions of silver dollars which are in circulation and payable for duties, and how long do you suppose this short supply of silver and your control of it by your coinage will keep it equivalent to gold—when one is worth 10 cents less than the other?

Secretary SHERMAN. Just so long as it can be used for anything that gold is used for. It will be worth in this country the par of gold until it becomes so abundant and bulky that people will become tired of carrying it about; but in our country that can be avoided by depositing it for coin certificates.

But possibly one may say that the recent Treasury notes of 1890 were issued under a law pledging parity. Yes, possibly, but not such a parity as keeping silver in subordination to gold. That is not parity, but imparity, as we may say, or inequality.

Besides, as we have at another time stated, this incidental injection or stump-speech clause about parity that has become the scapegoat on whose head were laid the crimes of Wall street and her allies—laid by the high priesthood of the Aaronical golden-calf worshippers can not blot out or override the express statement of the act in the mandatory part of the same law that these Treasury notes should be redeemed "in coin."

Section 2 of the law of July 14, 1890, is plain enough on this point, but section 3 provides that there shall be coined of silver, "under the provisions of this act, as much as may be necessary to provide for the redemption of the Treasury notes herein provided for."

Where is the stump-speech, double-construction, parity-policy clause against such positive specific provisions to redeem in silver coin as well as gold?

Notwithstanding the intent and plain provisions of the law, from tables I shall give you a little later in my remarks you will find that while the scheme of the money power was on hand to drive Congress to repeal the silver part of that law, Secretary Foster, and the present Secretary following in the same line, made heavy payments in gold, instead of silver, as the interest of the Government demanded, in redemption of these same silver-purchase Treasury notes—ranging from one to eight million dollars in gold per month for the raiders.

Referring to this parity scapegoat clause, as I have termed it, I will call attention to the reply of Senator JONES of Nevada to Senator VILAS in his speech on the repeal bill:

Mr. VILAS. I do not suppose that the Senator can make the answer he is making now without knowing that the reason why the silver dollars have been held at par is because the Government has done it by force of its pledge of parity, and by the practice of the Treasury in maintaining it.

Mr. JONES of Nevada. I can say to the Senator that I was on the conference committee which made what he calls a "pledge of parity," and there was no "pledge of parity" given. There is not, in my judgment, a lawyer in this body who will tell me that under any rule for the interpretation of statutes a stray expression, such as the Senator calls a "pledge of parity," without any provision for its enforcement, is more binding than a provision distinctly and expressly mandatory, specifying with precision what, under certain circumstances, the executive officers should do.

There was never any promise made that the silver dollars should be exchanged for gold. And, as every man knows, during the very period in which the gold-standard press was stating that the people of this country feared the silver dollars would go to a discount those very dollars were going to a premium over gold. There was never a more impertinent declaration put before a people than that the recent panic was occasioned by any fear on the part of the people of this country that their silver money might not retain all its value. What better proof can be cited of this than that silver dollars went to a premium of 3 per cent over gold?

During all the period of the panic I never heard of a man taking any portion of the money of the United States, whether a silver dollar, a greenback dollar, a Treasury note, or note of any other kind, to the Treasury to be exchanged for gold. In all the "runs" that were made upon the banks and all the money that was taken out of the Treasury no effort was made by our people to get gold. The fear entertained by the people was not of the kind of

money in which they would be paid. What they feared—and subsequent events proved their fears to be well founded—was that the banks did not have any form of money in which to pay.

RETIRING GREENBACKS TO SECURE THE ISSUE OF BONDS.

Just at present the money powers are trying to secure the destruction of the United States notes or greenbacks and secure the issuance of bonds instead, and the advocates of the pending bill are seeking to turn over the issuance of all paper currency to both State and Federal banks.

So how the raid is by use of greenbacks instead of Treasury notes, and this will answer for them the double purpose of discrediting the greenback and preparing an excuse for the Secretary to sell more bonds to the raiders to get the looted gold back again.

It has been shown many times that the teaching and prophecy of our Wall street financiers are nearly always wrong whenever they put forward their efforts to influence financial legislation.

Under the plea of standing for "honest money" they have stood for an appreciating money by contraction and demonetization until they have broken down prices, ruined the investors in property and productive enterprises, and have given us the most dishonest money the world has ever seen.

Under the plea of desiring to maintain silver at a "parity" with gold they have done everything in their power to prevent the possibility of parity, closing the mints and keeping silver out of use as far as possible, and then pretending they do not know why price of silver bullion has gone down.

They talk against the greenbacks and legal-tender notes of the Government as being "founded on nothing," meaning on Government credit, and yet make their own notes redeemable in greenbacks and founded on Government bonds, both of which rest purely on Government credit.

They assured us of "relief from the financial stringency" and the raiders on the gold reserves if the purchasing clause of the Sherman law of 1890 was repealed.

By these assurances and various other means the law was repealed November 1, 1893.

Instead of relief and prosperity following, the lowest prices ever known have overtaken all products, and as to the raiding of the gold reserve by presentation of greenbacks, it has suffered greater depletion during this last year, 1894, than in all the fifteen years preceding.

DID REPEAL OF THE PURCHASE CLAUSE OF THE SHERMAN LAW STOP THE GOLD RAID?

That none may question the statistics I have given on the gold redemption of the United States notes since 1879 in comparison with the raids of the last year, I will insert the following tables and a brief letter from the honorable Treasurer of the United States, bringing the computations by months down to the beginning of this month, and from current reports the raid on our gold this month still continues:

TREASURY DEPARTMENT, OFFICE OF THE TREASURER,

Washington, D. C., January 10, 1895.

Hon. H. A. COFFEE, House of Representatives:

SIR: In compliance with the request made in your memorandum of this date, I have the honor to say that the redemptions of United States notes and Treasury notes in gold during the months of October, November, and December, 1894, were as follows:

Month.	United States notes.	Treasury notes.	Total.
October.....	\$2,542,719	\$665,171	\$3,207,890
November.....	7,085,133	714,614	7,799,747
December.....	20,819,622	1,086,416	21,906,038
Total.....	40,447,474	2,366,201	42,753,675

I inclose herewith a statement showing the redemptions, by calendar years, since January 1, 1879.

Respectfully, yours,

D. N. MORGAN,
Treasurer United States.

United States notes and Treasury notes redeemed in gold, by calendar years.

Year.	United States notes.	Treasury notes.	Total.
1879.....	\$11,456,536	\$11,456,536
1880.....	543,800	543,800
1881.....	28,750	28,750
1882.....	115,930	115,930
1883.....	830,000
1884.....	2,027,400	2,027,400
1885.....	9,349,507	9,349,507
1886.....	1,330,945	1,330,945
1887.....	475,181	475,181
1888.....	959,548	959,548
1889.....	339,273	339,273
1890.....	9,016,727	886,870	9,703,597
1891.....	15,963,813	20,296,747	36,260,560
1892.....	44,463,512	82,062,778	76,526,290
1893.....	123,941,059	17,802,944	141,744,003
1894.....
Total.....	221,760,451	70,849,339	292,609,790

OFFICE OF THE TREASURER UNITED STATES.

January 3, 1895.

Remember that the gross exports of gold give no indication of the net exports.

Much of the gold that was drawn on Treasury notes and others while the scare was being worked up against Treasury notes and to secure the repeal of the silver-purchase clause was shipped back again from Europe in the same kegs that contained the gold when exported.

Now, having stopped the issue of legal-tender Treasury notes, the scare and clamor is worked up against the United States notes, or greenbacks; so they are being used, as you see from the tables, instead of the Treasury notes of 1890.

Will the people be caught again by the tricks of the bank and bond and gold conspiracy and allow the complete destruction of their legal-tender greenbacks and the issuance of interest-bearing gold bonds—not coin but gold bonds—instead?

Not by my vote shall the conspiracy win as long as I shall represent the interests of Wyoming on this floor. Let us stand by the greenbacks and silver as a permanent part of our currency.

HOW THE BANKS SAVE THE COUNTRY.

The redemption of greenbacks in gold began January 1, 1879, under the law known as the specie resumption act, and from that time to January 1, 1894, a period of fifteen years, the amount of gold paid out on United States notes, or greenbacks as commonly called, was less than \$98,000,000 for the entire period, being an average of less than \$7,000,000 (\$6,521,266) per year.

This brings us to the year 1894, just closed, the first calendar year since the repeal of the silver-purchase clause, pushed through Congress by the gold and bank power to "save the country and stop the raids on the Treasury gold." Did this stop it? Did it even reduce the payment of gold on greenbacks below the average of \$6,521,266 per year?

Oh, no; here, as in nearly all other claims and prophecies, they have again failed.

The payment of gold to the raiders in 1894 under this repeal measure, entirely cutting off the coinage of silver, has been over \$123,000,000—a sum far greater than all paid out during the fifteen years preceeding, including silver coinage under the Bland Act for over eleven years and the purchase of silver for the remainder of the period up to the time of the "great unconditional."

It would at the preceding average rate take over nineteen years to deplete the Treasury of as much gold as has been looted from the Treasury by the gold and bank combine within the last twelve months on greenbacks alone, leaving out of the account the manipulation of Treasury notes also. And during this last month of December nearly one-third as much gold has been taken out by these vicious processes of the false prophets as in fifteen years before.

WHY ARE THE PEOPLE NOT PROTECTED AT THE TREASURY?

Who can rely upon such sources of teaching? Why should Congress longer listen to them? On what important financial proposition have they ever taken position since the gold conspiracy began but what has been directly or indirectly dangerous and detrimental to the people, who ought to have a circulation of currency independent of bank manipulation and who ought to have a Government and a Congress that would give the people such a currency?

Why is it not done?

Why are the people not protected?

Because the people have too long been following the false teaching and the false prophecy of the money power.

And because, too, I fear, that we have not had an Administration and Secretary of the Treasury since the days of Lincoln and Johnson but what has allowed the money power the benefit of every possible construction, and sometimes bold misconstruction, of the laws, and as far as possible cut off the people from their highest and best legal rights and options to pay all coin obligations in silver as well as other lawful money for payment.

To-day, in one hour of bold, patriotic action, the raid on gold would be stopped forever if our Administration and the Secretary would pay out silver in all coin redemptions properly.

I know not what others may think of the actions of some of our highest officials during this twenty-five years' struggle with the money power, but as for me, "I would rather be a dog and bay the moon than such a Roman."

LET CONGRESS RESIST EXECUTIVE INTERFERENCE ON LEGISLATIVE MATTERS.

I can not attack motives. I must, however, be allowed to attack ignorance and error in method.

I must be permitted to appeal to this House—a parliament than which none should be found on the face of the earth more honorable and intelligent and true to the people—so if possible to arouse them to break loose and throw off the hypnotic spell that the glare of wealth and power has thrown over this legislative body.

In our sphere as Representatives in the legislative branch of this Government there is no power greater than ours.

Our commissions are from the highest sources—the sovereign people themselves.

We do not derive our authority on legislative questions from

the Chief Executive, and we ought to withstand encroachments upon our prerogatives from that source as we would those of the most insidious enemy that could undertake the subversion or subjugation of our country.

We must prove ourselves men and patriots and true to the trust the people have placed in our hands.

Is this a hard thing to do?

From what I have witnessed in the brief period I have been trying to serve as Representative on this floor, I must conclude that it is exceedingly difficult for many, but I also must conclude that it arises from either ignorance or cowardice.

No others will surrender to this money power in this great crisis. Stand, then, for your people and the right. (Applause).

WHO CONTROLS THE VOLUME OF MONEY CONTROLS THE WEALTH OF A COUNTRY.

The Government alone can be trusted with control of the money volume, and the Constitution makes it the explicit duty of Congress to regulate the value of money, which can not be done otherwise than by regulating the volume of dollars in circulation. Well, you say, what shall that volume be? I will answer, first, in coin, in gold, for those who prefer it in circulation; second, in silver, freely coined, for those who prefer silver, and I would have it coined at the old ratios of 16 to 1; and thirdly, paper money, Treasury notes of full legal tender, shall be supplementary to the coin, and issued in volume sufficient to answer the demands of business and sufficient to bring prices up to an equitable basis with the prices existing when the greater debts of our people were contracted.

Contracting the volume of money, which process by the unerring law of monetary science results in contracting and lowering prices of all products and property, while debts are pending is robbery of debtors, and our nation should guard our people against such robbery as faithfully as they would guard us against the invasions of a foreign foe.

HOW TO DETERMINE THE PROPER VOLUME.

Now, I will take up the question, What will answer the demands of business, and what will answer the demands of equity? While on the one hand there is an unlimited demand for money, since money will exchange for or buy all things offered to supply man's necessities, on the other hand the demands of equity must be considered and the supply or volume be limited. I will answer the question, What, then, shall the quantity or volume be? in this way. Our business, our prices, our enterprise, our industries are prostrated to-day by panic and contraction. These are financial troubles, not tariff troubles. We have heard, perhaps, too much from some quarters on this floor in the attempts to throw the blame for the depression of prices upon tariff legislation. The question of prices is a financial question, not a question of exports and imports. It is a question of money. It is a question chiefly of local concern. You can not understand money without understanding its effect on prices, because money by its volume controls prices, and there is no other way to maintain prices properly.

Now, a word or two further. If, then, we acknowledge, as we should and do, and as all civilized nations practically do acknowledge, that we must have paper money in addition to coin, and if we also take the position, as I do, that the Government alone can safely be intrusted with this vast power over all these industries, over profits, over property, over enterprise, over prices, and that there must, for convenience and sufficiency, be supplemental paper money, you may ask me very pertinently, what is to be the volume? What are the demands of business? What amount will be proper? Let us see if I can answer that question. I would say, begin at once by issuing full legal-tender Treasury notes for the most immediate relief pending time necessary to coin silver, and let silver be freely coined up to the capacity of the mints.

There is a loud outcry to-day for the locking up and the cancellation of the legal-tender notes. That seems to be a clamorous demand from Wall street and financial communities, but do you know in whose interest that outcry is made? Who is it that is demanding the return and cancellation of the legal-tender paper money issued by the Government? The people generally do not demand the destruction of the greenback money in circulation. The demand comes from those who, either intentionally or unintentionally, are favoring the banks of issue and would increase the opportunities of those banks to supply the currency of the country in place of the greenbacks withheld or destroyed.

It does not come from the people. It never has come from the people. The people did not demand the demonetization of silver. They have no hatred toward either silver or legal-tender greenback currency. They will in future rebuke this demand for the cancellation of the greenbacks. They do not demand the withdrawal of the notes called Treasury notes issued under the law of 1890 for the purpose of displacing them with bonds or with non-legal-tender bank notes.

RESTORATION OF PRICES AND PROSPERITY INDICATES THE REQUISITE VOLUME.

Now, taking the prostrate condition of the country into account, equity demands, the interests of business and prosperity

demand, the rights of the people to life, liberty, and the pursuit of happiness, and the opportunity to obtain happiness and wealth, all demand that you should expand the body of money to a degree sufficient to restore prices, profits, and prosperity. If the free coinage of silver and issue of a certain quantity of legal-tender paper does not give us a sufficiently expanded currency to bring up prices to a profitable range for business prosperity and for the employment of labor, then still expand with Treasury notes until business prosperity is reached and then stop, but not till that comes. These notes should be full legal tender, because no other kind of money ought to circulate among the people. The paper money in the pockets and hands of the people ought to have the legal power to cancel debts of all kinds by presentation in payment. The people should not be compelled for their general circulating medium to depend on bank-note issue that you can not compel creditors to accept when tendered in payment.

Mr. PICKLER. How much capital would you provide?

Mr. COFFEEN of Wyoming. Let me finish this question of volume, as that will answer your question, I presume. I say expand, if you find it necessary, even beyond the free coinage of silver, until you have reached a point where your enterprise and your industry—the productive and laboring energies of your people—are utilized to the best advantage, and there stop except to keep the volume increasing as wealth and population and business increase. If that amounts to \$40 per capita issue that much, and stop at \$40. If it is \$50, stop at \$50. But go on until the productive energies of your people are utilized to the best advantage.

Any Congressman who sits on this floor, I care not from what State he hails, who will stop short of that which is necessary to the utilization to the best advantage of the energies of the people of this country, is not the statesman who ought to represent his people here. [Applause.] Therefore I say go on with the expansion and you will not need to go very far to attain the desired result. The very announcement of this policy will be hailed with delight by three-fourths of the people. Perhaps the unlimited coinage of silver with right to deposit the silver coin against legal-tender notes may accomplish the proper rise in prices. With silver freely coined and legal-tender paper as far as necessary as supplementary to coin go on by proper gradations until you have utilized the energies of the nation to the best advantage. This is not difficult to understand, and the point to which expansion should be carried and where expansion should stop are matters as easily determined as any other matter upon which we legislate. As you expand the volume of your currency prices will rise in equal ratio. As prices rise profits will accrue, for profits in all kinds of business depend on the rise or at least the maintenance of prices, and as profits accrue labor will be fully employed.

INCREASING VOLUME GIVES EMPLOYMENT TO LABORERS.

Your 3,000,000 tramps in this country forced out of employment by the bankers' panic of 1893, the object lesson to illustrate the gold standard ideas of money, will be needed, every one of them; and they will all be invited, at good fair wages, into employment and activity. This will surely come about by the efforts of employers of labor to get the benefit of the profits accruing by the rise in prices and the expansion of the volume of money. Realizing that the rise in prices means increase of profit, and that increase of profit means the employment of the labor and energies of the nation, when you find you have reached that point, then in view of equity to the creditor class, I would stop expanding the currency beyond the proper ratio to business, but would continue it at a ratio which would always maintain reasonable prices. To stop short of that is contraction, and I care not what your currency system may be, it is unjust to the people to have a volume of currency that does not expand with expansion of business.

Money does not serve to exchange commodities only, but must also be a standard of equitable payment and the support of prices that will yield just reward to labor and enterprise. A contracting or diminishing volume of money can not maintain equity nor support prosperity. Neither can a stationary volume answer in a growing country or increasing population or expanding business. Expanding the mass of wealth demands for equity the expansion of the volume of money in circulation.

Banks already have enough power over prices without giving them power to issue or contract the volume elastically at their pleasure.

Mr. WARNER. Allow me to ask my friend how he would secure the putting out of this money in order that it should be properly distributed?

Mr. COFFEEN of Wyoming. I will answer my friend from New York. It is an old question. We have had it asked for twenty years—if the Government issues money how will you get it out among the people? By paying it out for services, salaries, supplies, and so on, as all paper money issued and reissued is now paid out and distributed.

Mr. WARNER. Among the right people.

Mr. COFFEEN of Wyoming. Yes; among the right people. It circulates and goes out in a thousand channels to the end of the country.

Mr. WARNER. We do not want it congested at a few points. Mr. COFFEEN of Wyoming. No; when contraction comes and prices fall as they do, following any great and sudden contraction of the currency, money, always flows to the money centers. Congestion of money itself is a sign that money has been contracted and enterprise retarded and prices have fallen. When gentlemen are discussing this question before the farming community they say, "How are you going to get your share of this money unless you have something to sell or exchange for it?" I say that if prices rise as they will in proportion to the expansion of money, the farmer will not only be able to get something for what he sells, but will command a better price, which all of us agree he should justly have, for we all know he does not get justice under the present range of prices. If the people of the interior and West and South had been able to get prices that should have been maintained on their produce and manufactures they would have that much more money and wealth to command money among themselves, and money would have been out among the right people instead of being congested at New York.

Gentlemen say there is a deficit in the Treasury; but this is not altogether on account of the tariff question; it is very slightly owing to the tariff question. It is because of a paralysis of the industries and activities of the country, a destruction of the ability of the people to obtain prices and money sufficient on what they do sell, and shrinking of prices also as well as quantity on imports that cut short Government revenues. When people get good prices they readily consume more of home products and more of imports as well, and thus the revenues of the Government are more abundant. A shrinking volume of money is destructive of revenues and resources of the laboring people, and for the same reason of the Government also. All suffer that the money dealer may appreciate his money and get advantages of the debtor classes.

Hear Mr. St. John, president of the Mercantile National Bank, of New York, in his evidence before the Currency Committee, page 352 of the hearings:

Mr. ST. JOHN. Primarily and underlying the whole thing is the fact that the aggregate sum of money in the United States is not sufficient. If there were a general business revival in the United States we would have a painfully stringent money market within ninety days. That is one answer to the question.

Mr. JOHNSON of Indiana. Is it not a fact that at the very time that these people in the agricultural sections are complaining about the scarcity of money there are large quantities of money lying idle and congested in the money centers?

Mr. ST. JOHN. Undoubtedly so, as I thought I had explained.

Mr. JOHNSON of Indiana. Then would you say that the reason why this complaint exists is that there is not sufficient money for the purpose of moving the crops?

Mr. ST. JOHN. I would, undoubtedly. When I find an accumulation in every bank of Europe greater this year than for years past, I know there is a reason for it. The increase of the aggregate money of the world is stopped, except as one can provide 408 pounds of gold when he wants to add a thousand dollars to it. Distrust is the concomitant and distress, the achievement.

Mr. JOHNSON of Indiana. Is the reason why money can not be had in agricultural districts in sufficient quantities to enable the crops to be moved because of the fear among lenders that there is no security for the money?

Mr. ST. JOHN. It is one and a sufficient reason for bank caution. The people who are making these complaints, and justly too, I think, are not prosperous. They are mortgaged to death to their factory and stores and country merchants. What they mortgage their homes and crops for is dollars. If their product will not yield dollars they can not pay their debts. Cheap overcoats do not concern the planter and farmer unless dollars are the outcome of their crops.

I have said that the aggregate of all our money is our measure of all values. It follows that the aggregate of money must increase with the aggregate of the commodity considered if the price of that commodity is to remain unchanged. Large volume of wheat, low price for it; large volume of dollars, low value of dollars. I do not mean interest value of dollars. I mean relative value of wheat and dollars. High prices for flour and high rates of interest are found together. We see this conjunction in mining districts. To be brief, it is the fact that the world's growing abundance of the necessities and luxuries is surpassing the world's sufficiency of money. The prime sufferer is the producer of the abundance. Reflectively and painfully all elements suffer on account of him.

Mr. COBB of Alabama. Is it not a fact that it is because of this vast accumulation of money in New York, and a number of other cities, that the country is not generally prosperous?

Mr. ST. JOHN. These accumulations are not the cause; they are one evidence of the lack of prosperity.

Mr. COBB of Alabama. Have you any opinion as to what causes this want of general prosperity, whether it is from natural conditions, or from the result of operations of law, or what is your idea?

Mr. ST. JOHN. My opinion is that the aggregate sum of money in the United States is insufficient to establish confidence in its ability to meet the demands upon it under ordinary prosperity. Also, our money has a scarcity value proportionate to our abundance of the commodities which it values. "Prices," or dollar valuation of commodities, is ruinous to those who provide prosperity (by labor and production) when we have any.

Mr. COBB of Alabama. What remedy can you suggest?

Mr. ST. JOHN. Enlarging the primary money of the United States.

Mr. COBB of Alabama. How?

Mr. ST. JOHN. Abandon experiment and go back to eighty years of our own experience and the world's experience in money.

Mr. COBB of Alabama. In your opinion, would that give us a more general dissemination of the volume of money in the country?

Mr. ST. JOHN. It would decidedly. May I read my answer to that inquiry on another occasion? I assume that I may.

"At this present moment a dollar, as the means of acquisition and measure of value, is more efficient than in any other period of recent years, prices of staple commodities being ruinously low. And yet at this same time money seeking wages, entitled interest, seeks employment vainly, or at rates that barely pay. Under these conditions fixed capital suffers in the failure of investments, the banker suffers as a lender, the merchant in the restricted distribution of commodities, the manufacturer and other producer in the current low prices, and labor in want of employment starves. In the mutual relations between these elements of the people, accumulated wealth loses in the reduction of its income, but regains a portion in the increased efficiency of the remainder as related to the commodities which he consumes. No other one of these elements, as such other, has profited at all. Labor has lost everything in losing its employment. The enduring fact, therefore, if these functions in money were the only ones to be preserved, would be 'the rich made relatively richer at the expense of the poor made poorer,' as one achievement of statute law."

HOW TO GET GOVERNMENT LEGAL TENDERS INTO CIRCULATION.

But to answer more explicitly and fully, how can the Government get its issues of paper money into circulation? This is easily answered. The yearly expenses of the Government, current expenses, are nearly \$500,000,000, about \$40,000,000 per month, nearly \$10,000,000 per week, far above \$1,000,000 per day.

Let the Government pay out and distribute the legal-tender notes that should be issued in the current expenses. Will not this be practicable and convenient and safe? Certainly so.

And would it not distribute it with sufficient rapidity? Yes, far too much so. If one-half of the current expenses of the Government were paid by issues of legal-tender notes, it would be abundantly rapid to cure present stagnation in three to six months' time. It would be at the rate of \$20,000,000 per month, and this would immediately revive business, with the promise of better prices, profits, and success in all kinds of manufacturing and productive enterprise.

This would, at the same time, very quickly cure the deficiency in the Treasury and help out the Government as well as the people. But would it go to the right people? Very quickly, for through the salaries of Government officials and in payment of supplies and other expenses it would go to all parts of the country and render money more abundant everywhere.

DIFFERENT PLANS FOR BANK CURRENCY PROPOSED.

We are all agreed that our present mongrel system of currency is wrong, dangerous to prosperity, full of confusion, and full of injustice to all the laboring and debtor and property-holding classes.

It is, by its variations, contractions, and manipulations, used constantly to break the equities of all time contracts, lower general range of prices, and rob debtors of their rights and products.

We are all agreed that a remedy for these evils and relief from confusion should be applied.

What remedies are proposed?

PLANS TO AMEND PRESENT SYSTEM.

One is to give more power to the banks by issuing to them a greater amount of currency without compensation—that is, by issuing to them not only 90 per cent on their deposits of United States bonds at a charge of 1 per cent per year, but to furnish them 100 per cent or possibly 114 per cent while the Government bonds stand at 14 per cent premium and release them also from paying even 1 per cent tax or interest on this currency furnished thus to the banks, and, as in all of these bank plans, it provides for the issuance of more bonds payable in gold.

OTHER BONDS FOR SECURITY.

Another is to allow banks to deposit other than United States bonds for security, and yet make the Government liable for ultimate redemption of all the bank notes and issue gold bonds in place of the greenbacks.

BALTIMORE PLAN.

Another plan is to allow banks to have a national form of currency printed for them that may be issued and loaned out as notes of the banks based nominally on bank assets, but the Government to guarantee ultimate redemption. This is the Baltimore or bankers' own plan.

CARLISLE PLAN.

Another is to practically turn the entire responsibility of supplying currency over to both State and national banks under a sort of supervisory provision upon deposit of a 5 per cent and 30 per cent fund in legal tenders; but relieving the Government entirely from all responsibility of final redemption of circulating bank notes.

ECCLIES PLAN.

Another is to take 50 per cent of assets of the bank on which to determine amount of note issues allowed to the banks, and an additional amount may be allowed them under heavy Government charge or taxation as an emergency currency.

WHAT THESE AND OTHER BANK PLANS INVOLVE.

All of these plans involve the following:

1. The banks to control the volume of currency.
2. The banks to secure all the profits on currency.
3. The banks to be allowed to exercise the principle called elasticity, another name for sudden contraction or expansion, as their own profits may dictate without public notice and without regard to the rights or needs of the people generally.

4. The banks to protect one another as note holders (for they are the principal holders of bank notes under the deposit system of our country), while depositors are left completely unprotected.

5. The banks to have to themselves and all creditor classes all the benefits of a highly appreciated gold-standard money, possessing double the purchasing power that money should have in exchange for all other property, while the burden of maintaining the gold redemption for a time and the dishonor of an ultimate and a certain breakdown will fall on the Government.

6. The banks to have all and unrestricted opportunity for pooling their interests and to have all limitations that are disagreeable to them removed under the pretense of removing obstructions to elasticity.

7. The banks and money dealers to have the most absolute and fully legalized control over the prices and values of all property, all profits, all industries, all equities of contract, and through these channels they will have the most complete control over all political power and governmental administration that the world has ever seen in any age or clime.

8. If there is anything else in sight that Congress can give them they will, as humble conservators of financial integrity and wisdom and as saviors of the country in its time of need, accept that also.

WILL THE PEOPLE BOW DOWN?

Will the people of America bow down to worship in abject servitude this golden image of the modern Babylon and the money syndicates of the empire of wealth? Will Congressmen bow down?

It might possibly have some effect on the cowardly Congressmen who have so far forgotten their constituencies to have the Chaplain of the House start up the Sunday-school song of "Dare to be a Daniel." Imagine the cuckoos and followers of Senator JOHN SHERMAN singing that song.

There are times and crises among all peoples who seek to maintain liberty and justice that try the courage of discerning minds.

Such a trial is now impending over you who sit here to either protect or betray the rights and liberties of 70,000,000 people.

What will you do?

Has the fad of elasticity become epidemic? Has the disease attacked your backbone? If so, have the manliness to resign and go home to your people and you will, by freely mingling with them and avoiding the blandishments of wealth, soon regain stamina and a clearer vision of the rights of mankind in its great contest with the combinations of wealth and iniquity. Byron said, in his Song of the Greek Poet, in trying to arouse the Greeks to regain their lost liberty—

Must we but weep o'er days more bless'd?
Must we but blush?—Our fathers bled.
Earth! render back from out thy breast
A remnant of our Spartan dead!
Of the three hundred grant but three,
To make a new Thermopylae!

STAND AGAINST ALL EVIL SYSTEMS OF LEGISLATION.

But, Mr. Chairman, they tell us we must choose between the evils of the present system and the imperfections of the Carlisle plan of currency reform.

I have no hesitancy in saying that if such were the only alternatives I would prefer the plan of the Secretary, which will give temporary relief and break for a time at least the intolerable monopoly of the money power and the international gold conspiracy manifest in Wall street as well as in Europe.

But, sir, our case is not so desperate as they would have us believe. There is another alternative—that of opposing all schemes of the gold and bank and bond forces, and standing and fighting to the end for a true and simple plan of Government issue and Government control of the volume of money in circulation against all theories of bank issues and bank control.

Mr. Chairman, there is still another way out of the difficulty. When our revolutionary sires were told that they must submit to the new demands of the British King and Parliament or suffer fines, penalties, and imprisonment, they responded that they would not submit to either, but would choose a pathway and course of action of their own, and from one end of the country to the other camp fires were kindled and the humble but brave colonists formed in lines of battle.

The King found out that the American Colonies would not submit, but were determined to choose alternatives of their own. So, now, we choose neither your bill nor the present banking law, but go to the country on appeal from both.

Who controls the volume of currency in circulation controls the welfare of the people, for the most fundamental and universally admitted truth in monetary science is that volume controls price. To control price is to control profits, to control property, to control all branches of industry, and to control the happiness and prosperity of the people and the safety of our Republic.

Therefore we must never surrender this control to the banks or to any other one class of citizens whatsoever.

The Government must hold against all combinations of private

capital the right to issue and coin all money for general circulation and control its volume in the interest of industry and equity.

This is the main question—this is the vantage ground over which the battle is raging. Who shall control the aggregate volume of currency in circulation thus to regulate value of money for purchase, exchange, and payment, and thus to protect property and prices for all producers and maintain the equity of all time payments.

There are other incidental questions.

To maintain compulsory redemption of all currency in gold is to cramp and limit the people to the conditions of the dark ages, and subject the welfare of mankind to the tricks of those who have their clutches upon and practical control of all the gold available in the world.

GOLD MONOMETALLISM WILL END IN COLLAPSE

The gold standard or gold monometallism is a failure, and it can not be otherwise.

There is great gain and power and wealth in it for those who control and manipulate the supply of gold, but for the people and the nations there is no wisdom or equity in it—no progress, no chance even to maintain the present status of civilization. It hangs like a pall over the commercial world.

It is the most stupendous and unjustifiable experiment ever forced upon mankind, and is followed by a long train of injustice and extortion. It is transferring the wealth and property of the industrial and debt and tax paying millions to the money dealers, until here, at the close of a century of wealth production exceeding perhaps that of any three centuries preceding, the net results of this marvelous wealth production is passing out of the possession of the producer into the possession and control of the money power.

This I have, as I believe, clearly shown by a strong array of facts and monetary statistics on a former occasion in my speech on Money, Banks and the Debts of the World.

I have also shown that civilization must break down or the gold standard be abandoned.

Mankind and the universal product of all his toil and invention are greater than the one little yellow product called gold; so, even if the gold standard must be abandoned, man and liberty must survive. Gold must again be conquered and made a servant instead of a master by the sovereignty of law.

When I think of the cruelty of the gold power and how easily the prolonged suffering of our impoverished workers might be relieved by abandoning the gold standard and securing a sufficient supply of money through the sovereign power of government I think of the poet's song:

'Tis for this they are dying where the golden corn is growing,
'Tis for this they are dying where the crowded herds are lowing,
'Tis for this they are dying where the streams of life are flowing,
And they perish of the plague where the breeze of health is blowing.

The remonetization of silver, although a great question and under present conditions so important to the welfare of this nation, is yet an incidental matter and a subordinate question to this greater question of the control of the total volume of money in circulation.

Silver remonetization will double the metallic base of coin redemption money and successfully break the present control of the European gold power over the welfare of America.

But neither silver nor gold alone nor both in conjunction can in themselves furnish an adequate volume of money for the present stage of civilization.

Paper money is necessary to supplement the supply of gold and silver, and this is generally admitted by all competent authority. So we come again to the question, Who shall issue the paper money and who control its volume?

We answer again, unhesitatingly, that the Government must coin and issue all money, for there is no other way in which it can control the aggregate volume. Coming to a more direct consideration of the pending currency bill, which has been prepared by the honorable Secretary of the Treasury himself, and is so generally known as the Carlisle plan, I am astonished to find him taking such an interest in upholding banking institutions to-day for the issuance of money, independent of the United States bonds, for the marketing of which the national banks were created, as shown by Mr. Carlisle himself. His plan divorces all new banks of issue from the deposit of Government bonds.

Perhaps no man in America has more strongly contended, in these very halls, that the only sufficient excuse for the creation of national banks and conceding to them the privilege of issuing paper money was to provide a market for the bonds.

He even contended that except for this purpose of making the banks to a degree agencies of the Government to facilitate the placing and marketing of bonds the Federal Government would not have been competent under the Constitution to create such corporations.

Hear what he said on March 1, 1881, found in Appendix to the

RECORD for the third session of the Forty-sixth Congress, page 247:

What was the primary purpose of the Government in establishing this system in the first instance? If any gentleman entertains a doubt upon this subject let him read the reports in which Mr. Chase, then Secretary of the Treasury, suggested and recommended the passage of the original national bank act, and he will be convinced that the principal purpose of that eminent financier was to create a certain demand and reliable market for Government securities. Considered with reference to that purpose, it was unquestionably a wise stroke of financial policy, and it justly won for its author the highest encomiums from ministers of finance in all parts of the world. In fact, the constitutional power of Congress to create these corporations can not be maintained except upon the ground that they were to constitute, when organized, agencies of the Government for certain public purposes.

He then quotes Chief Justice Marshall to establish his position, and later takes up the evils of contraction and elasticity in bank issues. I will quote further what Mr. Carlisle has said of allowing banks to contract and expand when I come to show that banks should be deprived of all privilege of issuance.

So we find now that instead of supporting the national banks as an agency of the Government, requiring them to deposit bonds and thus aid the Government in placing and marketing bonds, he proposes to perpetuate the banks for their own profit simply (which he has shown could not constitutionally be done), and allow them issue privileges in increased degree and he would stop any further use of bonds to secure circulation.

The rights of the people, safety against contraction of currency, and even the Constitution itself as it once appeared to him are now thrown overboard.

He still sells bonds, but weakens the market.

He points out how the bankers and exporters raid the Treasury for gold on coin obligations, yet refuses to pay them silver coin and protect the rights of the Government.

He claims that silver ought to be kept at a parity, yet keeps it in subjection and disgrace.

The very Treasury notes paid out for silver he insists must be paid in gold instead of silver, if exporters and speculators demand it.

To me it seems clear, as I have said, that the way to stop the drainage of gold is to stop it.

He has the legal power unquestionably.

It is just to the people that silver should be paid when gold is in short supply.

He should do the proper thing and stop the drainage. [Applause.]

OUR SECRETARY YOKED TO REPUBLICAN DOCTRINE.

Like all former Secretaries of the Treasury for the last twenty-five years he has yoked himself to the bank and bond and gold scheme, and so upon the most doubtful authority sells bonds under the pretense of maintaining coin redemption for greenbacks and Treasury notes, while the vaults are filled with hundreds of millions of full legal-tender silver coin and with tons of bullion out of which more should be coined if needed.

You have heard of the man in the old settlements who had one fine yearling steer that he thought best to subdue and train up in a good, proper manner; so he yoked himself up with the steer to break him. All went well for a little time, until the steer, becoming disgusted with the situation, started with the man down the lane furiously. When the neighbors called out to the man, asking where they were going, the very proper reply of the man was, "I don't know—ask the steer." And he loudly called on all to stop them, if they could, for he believed they were "running away."

So this Administration has yoked itself to the Anglo-American gold and bond scheme, and unless stopped soon it may land in the arms of the Republican party in this financial runaway.

"The way to resume," said Greeley, "is to resume." Were he alive to-day he would say the way to stop doing the impractical thing and stop paying out gold voluntarily is to stop it.

The fact was clearly brought out a few days ago by the gentleman from New York [Mr. HENDRIX] that France, the greatest gold and silver holding nation in the world, through the Bank of France and for the protection of the Government, refuses to pay out over 5 per cent of gold on demand when raids are made for export, and pays out instead 95 per cent in silver. Will any one say that France is therefore and thereby thrown on a silver basis?

Will anyone say France thereby endangers her credit?

Does it not in fact give confidence in a government to see it use its options in all financial matters in the interest of its own people and their treasury instead of the gold-mongers?

Nearly all Treasury obligations are payable by explicit terms in coin, and it is optional with the Secretary to pay in silver coin, and he should do so.

CARLISLE AS A PATRIOT VERSUS CARLISLE IN THE PRESIDENT'S CABINET.

In taking up the Carlisle plan in the bill pending I wish to use Mr. Carlisle's own testimony against the principles retained in this bill, uttered by him in ringing and patriotic words in his speech of March 1, 1881, before he had been seduced into supporting bank and bond issues and the gold conspiracy that he once so strongly condemned.

He says:

But, Mr. Speaker, by far the most dangerous feature yet introduced into the national banking system is contained in that part of the fourth section of the act of June 20, 1874, which authorizes the banks at any time, and for any reason which they may choose to consider sufficient, to deposit lawful money with the Treasurer, contract the currency to that extent, and withdraw their bonds; and, sir, it is not going too far to say that until this feature is wholly eliminated or materially modified there can be no assurance of safety to any legitimate investment or business enterprise in this country. If there was ever a doubt as to the dangerous character of the power which this part of the law gives to the banks over the business and property of the people, the arbitrary and unjustifiable proceedings of the last week ought to dispel it forever. The power was conferred in the first instance, as I have said, for a special and temporary purpose, the equalization of the national bank circulation, but when the resumption act of January 14, 1875, was passed, which removed all restrictions as to the amount of such currency and made the system entirely free, there was no longer any necessity for this clause, and it should have been instantly repealed. It is a standing menace against the prosperity of the country. Armed with this destructive weapon the banks may at any time, without a moment's notice or a shadow of provocation, strike down every industry and every commercial enterprise of the people.

He speaks of the power given to the banks to withdraw bonds for speculation and contract the currency by depositing lawful money with the Treasurer as "the most dangerous feature yet introduced into the national banking system."

To-day he advocates releasing them from deposit of bonds, as in the substitute bill, and the deposit of these legal tenders.

It may be held by advocates of the Carlisle plan that the deposit of 30 per cent of circulation in greenbacks will not contract the currency, but the points I would make in reply are—

First. That it is optional with banks to contract or expand, and Mr. Carlisle points out how they pervert and abuse the power conferred.

Second. That the deposit of lawful money will contract the amount of legal tenders in circulation just to the extent that they are deposited, and the people must put up with nonlegal tenders instead.

Mr. Carlisle then goes on to say:

The banks, or some of them at least, first began to pervert this section of the statute from its original purpose and abuse the power which it conferred upon them by depositing lawful money and withdrawing their bonds from time to time, in order to speculate upon them in the market. They thus withdrew large amounts of their circulation and contracted the currency, not because the reduced demands of business made the outstanding volume of circulation unnecessary or unprofitable, but simply because they wanted to realize the high premiums on their bonds and speculate in the securities upon which the Government had already delivered to them 90 per cent in notes. These notes would be left outstanding for the time being, but an equal amount of Treasury notes would, of course, be withdrawn from circulation and held at the Department to redeem the bank notes as they might come in. The Treasurer, in his last annual report, describes this process by reference to actual transactions in his office; and as his statement on this subject can not be condensed without impairing its force, I give it in his own words. He says:

"Under the construction placed upon the law banks which have thus reduced their circulation have been permitted to increase it again as often and as largely as they chose, whether their legal-tender deposits were exhausted or not. An example will better illustrate these operations. In January and February, 1875, a certain bank reduced its circulation from \$308,400 to \$45,000 by deposits of legal-tender notes. Between September 26, 1876, and May 26, 1877, and before that deposit was exhausted, it increased its circulation to \$450,000. Between August 14 and September 10, 1877, it again reduced its circulation to \$45,000. On September 10, 1877, nine days after completing the deposits for this reduction, it again began to take out additional circulation, although \$42,550 of prior deposits remained in the Treasury, and by the 26th of that month its circulation had again been increased to \$450,000. July 22, 1878, it, for the third time, reduced its circulation to \$45,000, and in August and September, 1879, again increased it to \$450,000, at which it now remains, the balance of its former legal-tender deposit then in the Treasury being \$112,615."

This was elasticity for you. It would seem that the then Treasurer of the United States and the now Secretary of the Treasury looked with suspicion upon so much elasticity as the banks then possessed and even now possess.

It seems that in 1881, as at other times, the associated banks could and did produce panics at will—contracting the circulation, as Mr. Carlisle says further along, to the extent of over \$18,000,000 in thirteen days—and let me remark here in passing that the then Secretary of the Treasury, to rescue business from their intended ruin, at once went into the market at New York and bought bonds, which threw that many more dollars at once into circulation, to counteract the contraction of the bankers, but here recently, in 1893, when the national banks contracted their circulation to the extent of about \$40,000,000 and shortened their loans to produce another panic, our present Secretary, in line with the preceding Administration, left the people at their mercy, held back silver, and instead of buying bonds uselessly assisted the raiders on the gold reserve and sold bonds in exchange for the very gold extracted.

But let us quote further from Mr. Carlisle.

He then was fighting the powers he now upholds.

Through all that long and fearful night
The prayer of Ajax was for light.

ELASTICITY, SO DANGEROUS THEN, SO CHARMING NOW.

He says, continuing and commenting upon the bobbing up and down elasticity of the banks as shown by his quotation from the Treasurer's report:

No one will contend that this was a legitimate and proper method of conducting business under the national banking system, and yet it can be resorted

to every day by every bank in the United States as long as the fourth section of the act of June 20, 1874, remains unrepealed. It disturbs values, affects the money market, and subjects the Government to unnecessary expense merely to gratify a spirit of speculation and gain on the part of the managers of the bank, and it ought to be peremptorily forbidden in the future.

Under this section the banks have it in their power to contract the currency and produce financial distress, involving every interest in the country and embarrassing the operations of the Government itself, whenever they may think it will promote their special interests to do so. If they do not like proposed legislation in Congress or elsewhere; if they are opposed to the success of a particular political party; if they conclude that they ought to be exempt from all taxation, State and Federal; if they want additional privileges conferred upon them in respect to any matter connected with their business; in short, if their opinions and interests are not consulted in all cases whatsoever, they can resort at once to this tremendous power over the fortunes of the people and thus bring the timid to terms and ruin all who refuse to accede to their demands. A plausible pretext can always be found or invented for the exercise of such a power as this, and powerful influences can always be brought to justify and sustain it.

In confirmation of the threats of the bank power many years ago through the New York press, that they were getting the machinery in order by which, on a few hours notice, they could act so strongly that no act of Congress could withstand them (which showed to my mind that treason was lurking close to the star chamber consultations of Wall street), and in confirmation with Jefferson's warning concerning such bank powers, that they were more dangerous than standing armies, and in general accord with what has long been pointed out by those of us who are Democratic enough to want bank issues suppressed and the circulation restored to the Government where it belongs, let us quote the arraignment that Mr. Carlisle makes against the national banks.

Continuing from sentences quoted above, he says:

The two Houses of Congress, representing the aggregate interests of fifty millions of people, have, after mature deliberation, passed a bill which the banks have chosen to consider obnoxious to them, and forthwith—within thirteen days—they have contracted the currency to the extent of \$18,722,340 and precipitated a crisis which would have been disastrous to the country had it not been met by measures which they had no power to prevent. The prompt action of the Secretary of the Treasury in purchasing a large amount of bonds at the city of New York, and the course of the Canadian banks in throwing seven or eight million dollars of their loanable capital on the market, alone prevented a catastrophe from the effects of which we might not have entirely recovered for many years.

When Secretary McCulloch, several years since, in pursuance of his contraction policy, began to retire and cancel legal-tender notes at the rate of \$1,000,000 per month, it produced such consternation in business circles that Congress was forced to intervene at once and arrest the process by the passage of a joint resolution; but now we have seen nearly \$10,000,000 of circulation withdrawn in less than half a month, not by the Government, but by institutions in the management of which the Government has no voice, and still gentlemen here insist that the power under which this has been done, and under which it may at any time be repeated, shall not be taken away. Why, sir, the whole contraction of legal-tender Treasury notes under the provisions of the resumption act, from January 14, 1875, to May 31, 1878, when it was prohibited by law, was only \$94,816,904, not twice as much in more than three years as the bank contraction has been in less than two weeks.

This experience warns us that we can not safely permit this great power to remain in the hands of these institutions unchecked by legal restrictions. It is an engine of destruction standing in the very narrowest part of the way to permanent industrial and commercial prosperity in this country; for there can be no such prosperity anywhere in the midst of sudden and enormous contractions of the currency; nor will prudent and experienced business men embark in large and expensive enterprises when the power to make such contractions is held by private and interested parties who acknowledge no restraints except public sentiment and their own views of the public welfare.

By law the volume of legal-tender notes is limited to \$346,000,000, while under the policy of the Government nearly \$150,000,000 in gold and silver coin are permanently withheld from circulation and hoarded in the Treasury. Of the \$54,000,000 gold coin in the country the Government and the banks held, on the 1st day of November last, \$234,000,000, and the people only \$200,000,000. The circulation of State banks is taxed out of existence; the coinage of silver is limited by statute to \$4,000,000 per month; and so it appears that by statute or public policy every form of currency which the people can use in the transaction of their business is restricted, except national bank notes. They alone are perfectly free from all restrictions, legal or otherwise, and upon them the people are compelled to rely under existing circumstances for the additional facilities of exchange necessary to enable them to carry on their growing industries and conduct their rapidly increasing commercial enterprises.

On another occasion it will be remembered how strongly Mr. Carlisle has insisted that there has been a conspiracy between American and European money powers to force the gold standard on this country and how he compares the evils of their contraction policy to those produced by war, pestilence, and famine combined.

NO DEMOCRACY IN THIS NATIONAL-BANK SCHEME.

Do not let anyone recklessly say that I am attacking the honorable Secretary's Democracy. I am upholding that which he strongly upheld some dozen years ago, and would uphold true Democracy everywhere, but I deplore and would oppose his Republicanism as shown in his recent upholding of Republican policies and practically a Republican bank system, and I call attention to his own abandonment of Democratic doctrine and his own former teaching on these questions.

This present pending currency bill has so little of Democracy in it that no Democratic Congress should accept its bank-issuing features.

It appears to my humble judgment that the present executive administration has, on the money question, abandoned all true Democracy, the platform and all, as I understand Democratic teaching on the money question, and this will go far toward ex-

plaining the efforts of the people everywhere to reprove the President and Democratic party at the late general elections.

This bill will not even please the Republicans, chiefly because they have long been the champions of the national banks and do not want to lose their "occupation." And if the people want national banks and bonds and gold-standard money prices they know what party has a long-standing record in favor of these things.

It will not in that case be the Democratic party. Either this triple-headed scheme of bank issues and bond issues and gold-standard money must perish or the Democratic party will perish.

For myself, in these days of halting I would still cry out, "De-la-da-est Carthago" to the gold conspiracy. And if I mistake not, the pending bill is already beaten. Democracy shall yet move out of this confusion into a clear field, where it can regain its bearings.

The English people cut off the head of Charles I because of what they believed to be his tyranny, and they tried Cromwell. All went well until the second Cromwell began again the exercise of tyranny, from which they had sought to escape, when the people rose up again and restored the royal line in Charles II, saying, "If we must have a tyrant, let us have a legitimate one."

This did not mean that the people loved tyranny, however.

So the people are likely to say to the Democracy in this country if they adopt the Republican tyrannies of turning over the country to the bank and bond and gold conspirators, "We would rather have the legitimate tyrant in power, if we must submit to these tyrannies," and so they would restore the Republican party to power again.

Here is a clipping from Henry Clews's Financial Review of January 5, 1895, in which we can see the purpose of the money power to use the Democratic party for the banks, bonds, and gold mongers during this short session, if possible, and then cast it aside as illegitimate and useless:

All that is really desirable for the present short session to do is to pass the railroad pooling bill and to pass a bill to amend the law which authorizes the issue of 5 per cent. United States bonds by reducing the rate of interest to 3 per cent. and, in consideration for making that low rate, the bonds to be payable, both principal and interest, in gold coin. If this is done it would meet the present emergency, and would beyond doubt stop the export of gold and the present drain upon the Treasury in consequence. Europe would take an unlimited number of such bonds and pay a handsome premium for them, and would prefer them to our gold. This I do not hesitate to assert, as I know whereof I speak. With this legislation, together with the appointment of a commission by President Cleveland, to be comprised of the newly elected members of Congress, half Republicans and half Democrats, to formulate a currency plan to report to the next Congress, the business situation would materially change for the better, and confidence and courage would revive and thereby immensely stimulate business enterprise, now so much needed in all sections of the country.

SPECIFIC PROVISIONS IN THE CARLISLE BILL.

The Carlisle plan provides no limit to the expansion and provides no safeguards against contraction of currency.

It provides that banks may issue notes up to 75 per cent of their paid-up capital under so-called safeguards for the ultimate payment of their notes. There is, however, no safety against frauds in permitting banks to issue money on a deposit of less than the amount circulated.

There is no limit to the number of banks that may be organized or the capital that may enter into the banking business. Nor is there any provision compelling any banks to issue any certain amount of currency or to keep it in circulation when issued.

In other words, it is entirely optional with banks what the volume of currency shall be or how far expansion or contraction of the currency may be carried.

It provides no means of current Government redemption, nor compulsory current redemption of the issued notes by the banks themselves in any specified kind of coin or money. This leaves it optional with the banks to redeem in any legal-tender money.

And this again makes it of interest to banks, while gold is both scarce and dangerous to hold (see Hearings, page 46), to retain in their possession abundance of greenbacks and Treasury notes preventing, thus far, both their circulation and their cancellation, and yet keeping them as a menace to the Treasury gold reserve as "coin" redemption is now construed.

It weakens the securities for depositors in note-issuing banks, by holding all assets of banks and liabilities of stockholders under first lien to secure the ultimate redemption of the notes issued.

It contemplates redemption by the banks of all bank notes in either gold, silver, or legal-tender paper of the United States, with an opportunity to expand the volume of bank paper to a dangerous degree, while the volume of legal-tender notes may be retired, paid by surplus revenue, which thus lessens the means of redemption.

It provides for a possible inflation limited only by the capacity to transform wealth of this country into bank capital. In this it advocates even some of the Populists they profess to condemn.

It discards all responsibility as to keeping the paper currency within due bounds or ratio to the coin that shall be available for coin redemption.

SOME PERTINENT QUESTIONS FOR THE GOLDITES.

It may be said by the advocates of this bill that the banks are not compelled to redeem in gold, but are perfectly free to redeem all their volume of notes, whether inflated or contracted, in silver or in greenbacks.

Then answer me—

First. Would we be on a silver basis or a greenback basis, or both, or neither?

Second. If the Government is by this system relieved from the redemption of the bank notes and permits their perfect and constant redemption in silver and Government legal tenders, what has become of the gold standard?

Third. Will not all of Europe and foreign holders of American securities become, according to your former teaching, alarmed and withdraw gold and force us upon that dreaded silver basis?

Fourth. Worse yet, are we not recognizing that dreadful "fiat" greenback as a money of ultimate redemption?

Fifth. Or, if we are still to be held upon a gold basis, does not the responsibility clearly rest upon the Government to keep up constant and current gold redemption and payments at the Treasury and be held to the ultimate redemption in gold of an uncontrolled volume of money?

Sixth. Is not this more greatly endangering the public and Government credit than any school of cranks and inflationists ever proposed before?

It appears to me, therefore, clear that the adoption of this bill and plan of currency issues would at once place everybody on a silver and greenback basis but the Government, and leaves that still helpless to defend itself against the continued raids upon the gold supply.

This leaves the Government to hold the bag, or, in other equally common phrase, perform the part of cat's-paw to relieve the banks from any responsibility for gold redemption, while yet the banks would get away with all the profit in the scheme.

If the Government is to be completely and forever kept in subjugation to the money power this scheme is as good as any—far better than some—but if the Government is to serve the people and provide an adequate volume of coin and its own legal-tender Treasury notes, which are always good for the people, and by this scheme, itself acknowledged to be a safe and perfect redeemer for all bank issues, then let us defeat this bill, suppress all bank circulation, as the founders of the Democratic party insisted upon, and then utilize the advancing thought and progress of financial legislation by issuing full legal-tender Treasury notes in safe and adequate volume, paying out the same by safe and reasonable gradations in the current and ordinary expenses of the Government.

THEN WHAT WILL THE BANKERS DO?

I answer, let them depart in peace to their homes and stay for a time behind their counters and do a proper and legitimate banking business in exchanges, deposits, and loans, the proper functions of banking, and forever hereafter let them keep their hands off from the issue of currency.

It is the nation's place and duty to provide the proper volume of money for the people, and thus regulate its value and protect prices, profits, and prosperity in the industrial avenues of life.

It is the banker's business to deal in money after it is issued or coined, and so serve the people in the business of exchange, deposits, and discounts.

Many of the leading financiers and bankers of both Europe and America have recognized the true sphere of banking and protested against banks issuing paper currency. They know there can be no safe and scientific system of money if competing banks are allowed its issue.

Let me quote you authorities, for I would have you understand that in this, as in every other position I have taken on the money question, I am supported by important historic facts and as great authorities as can be found on other propositions.

In the British commission of 1857 for parliamentary investigation into banking and currency questions there were as great men on that commission and before it to give testimony as the world then knew among financiers.

Gen. A. J. Warner, president of the American Bimetallic League, before the Committee on Banking and Currency, gave such a strong presentation of authorities on this point that I shall quote them from his testimony, on pages 243 and 244 of Report of Hearings, together with his own introductory remarks:

STATEMENT OF MR. A. J. WARNER, OF OHIO, BEFORE THE HOUSE COMMITTEE ON BANKING AND CURRENCY.

Mr. Warner said:

Mr. Chairman and gentlemen of the committee: I can not begin what I have to say in any better way than to read a single sentence from the speech of Sir Robert Peel, when he brought before Parliament the act of 1844. He said: "There is no contract, public or private—no engagement, national or individual, which is unaffected by it. The enterprises of commerce, the profits of trade, the arrangements made in all domestic relations of society, the wages of labor, pecuniary transactions of the highest amounts and of the lowest, the payment of the national debt, the provision for the national expenditure, the command which the coin of the smallest denomination has over the necessities of life, are all affected by the decision to which we may come

on that great question which I am about to submit to the consideration of the committee."

The act which Sir Robert Peel at that time presented to the Parliament of Great Britain was the celebrated act of 1844, the purpose of which was to separate the issue and regulation of currency from the business of banking and to place the control over currency under one single department, to be regulated in accordance with established principles and subject in every particular to strict regulations of law.

Every phase of the question was discussed over and over again. Parliamentary commission after commission was established to consider every proposition presented. First came the celebrated bullion report of 1810, then the report of the secret commission of 1819, then the commission of 1836, that of 1840, and finally of 1857, in which was summed up, in my judgment, the wisdom of the entire discussion, and to the discussion which then took place, so far as I know, nothing really has been added since that time. I believe that the general conclusions then reached have been accepted by all writers of distinction from that day down to this. Of course, they differ somewhat as to the proper methods of regulating the currency, but as to the principles then established I know of no disagreement among competent authorities, either on this side or on the other side of the ocean.

In fact, the principles of currency regulation laid down in the report of 1840 have since been adopted in the main by every civilized nation on the earth, the United States being the only country now, as far as I know, among nations claiming to be enlightened that proposes to reverse the conclusion then arrived at, principles as well established in currency as the law of gravity in physics, and to return to a principle of regulation of currency that has been condemned by every writer of distinction for fifty years, as well as by the experience of every country that has tried it. The principle of regulation, as laid down by Sir Robert Peel on the recommendation of Lord Overstone, was that the currency, in order to maintain its value, must be made to vary, both as to time and amount, as a purely metallic currency would vary; that in no other way could it be kept at the same value as the standard.

In 1874 Germany adopted substantially the same principle with a modification which I think was a very great improvement. Under the act of 1875 of the Reichstag, the Imperial Bank of Germany was established and a unification of the currency undertaken by withdrawing the currency of the several states of the federation and substituting for it the currency of the Empire. By this law the Imperial Bank of Germany is permitted to issue a certain fixed amount of uncovered paper, just as the Bank of England was permitted to continue in circulation a certain fixed amount of notes without security, and so are the country banks, but that amount can not be increased as to the country banks, and only by the Bank of England by absorbing a part of the currency surrendered by the country banks.

The Bank of England is permitted to issue additional currency only upon the deposit in the issue department of coin or bullion for all the notes issued. That is the distinction between notes covered and notes uncovered. The Imperial Bank of Germany may issue notes in time of stress or panic in excess of the uncovered notes, upon condition of paying 5 per cent interest to the State. The purpose of that is to force the retirement of notes as soon as the exigency that called them out is over. For all notes issued beyond a fixed amount specified in the act coin or bullion must be deposited. That principle in the main governs all the countries of Europe.

The Bank of France, it is true, is governed somewhat differently, but it is a state institution with officers appointed by the Government, as is the Bank of Berlin, the chancellor of the exchequer being president of the bank. So that the issue and regulation of currency in all the countries of Europe is now made in accordance with certain fixed principles.

The primary object of the act of 1844, I say, was to separate the banking business from the duty of issuing and regulating currency, creating money, and on that question, after a discussion of fifty years, there was almost no division of opinion in England. The concurrent judgment of nearly everybody was that the business of banking is necessarily distinct and separate from that of currency creation, and that the two can not be blended without doing mischief. On that point I beg to quote from a few of the authorities of that day, and I will not take up much time in doing so, but I am sure it will not be without interest.

"The one great question before the commission of 1857 was whether the right to issue circulating notes should be kept under the control of the Government, or whether the banks or the Bank of England should be permitted to issue notes to circulate as money."

On page 328 of this report Lord Overstone, who, as Samuel Jones Loyd, was one of the most distinguished and successful bankers and writers on the currency question, and, in fact, the real author of the act of 1844, was asked:

"Do you consider the separation of the issue and the banking departments of the Bank of England to be founded upon the principle that the business of issue and the business of banking are in their nature distinct?"

"A. Undoubtedly; it is impossible to entertain any other view of the matter." Further on in his testimony he says: "I certainly think it quite essential that the issue of paper money should be kept entirely separate and distinct from everything connected with the banking business."

Again, on page 328: "The supply of the current coin—that is, the money of the realm—ought to be entirely separated from the banking business, which is simply trading in money, borrowing at a lower rate and lending at a higher rate. * * * Notes and certificates ought to be issued as the money, whether copper, silver, or gold is coined, under strict provisions of law, and by an authority, such as the mint, established by law and subject to strict regulations laid down in that law."

And again: "The sole privilege of coining money, whether copper, silver, gold, or paper, ought to be vested in one institution, established for that exclusive purpose and subject to strict regulations of law; no share of such privilege ought to be conceded in any form to banks or to private individuals." And again, on page 329, he says:

"Perfect freedom of competition should be established in the business of banking, correctly understood, and effectually distinguished from the functions of coinage or from that of issuing paper tokens or representatives of coin—that is, bank notes, which, in fact, is coining under a form peculiarly susceptible of abuse—because the undue issue of paper notes is not restricted by that intrinsic value which effectually regulates the issue of metallic money." Lord Overstone then quotes from Daniel Webster, I think from his subtreasury speech of 1838, as follows: "The circulation of paper tends to displace coin; it may banish it altogether. At this very moment it has banished it." Asking the committee to mark well that fact, he says: "A distinct statement by so great an authority of that as Webster, that the coin of the United States has been banished entirely by paper money, by currency payable to the bearer on demand and issued in obedience to what was deemed to be the wants of the public."

He continues then his quotation from Webster, as follows:

"If others may drive out the coin and fill the country with paper which does not represent coin, of what use is that exclusive power over coins and coinage which is given to Congress by the Constitution? Whatever paper is to circulate as subsidiary coin, or as performing in a greater or less degree the functions of coin, its regulation naturally belongs to the hands which hold the power over coinage. This is an admitted maxim by all writers; it

has been admitted and acted upon on all necessary occasions by our own Government throughout its whole history."

He then quotes Took as saying:

"The privilege of issuing paper money is a delegation of that which is universally considered as a privilege residing in the State."

Mr. George Ward Norman, so long connected with the Bank of England, referring in his testimony before the commission of 1857 to the bank act of 1844, said:

"I conceive the ground of the act to have been that the issue of paper money is a perfectly distinct operation from the ordinary business of banking, and that you can not mix up together the issue of paper money and ordinary banking business without doing mischief."

Again, on the same page, 273, he says:

"I consider bank notes as money, and I think that you do mischief when you place the issue of money in the hands of persons who carry on ordinary banking business. * * * I consider that the issue of money should be regulated by the State, and when the money is issued then that bankers should be allowed to deal with it as they pleased, * * * the principle of competition can not be introduced into the issue of paper money without doing mischief."

Again, on page 276, he says:

"A bank has to deal with the money of the country which exists, but it has properly nothing to do with the issue of money."

Alexander Hamilton said, referring to the old State banks:

"There is now no check to the creation of these money mints; anybody and everybody, with or without character, has a right to enter the field of competition. * * * The superintendence of a power of such immense and vital consequence to the integrity, stability, and permanent interests of the public as that of money making ought not, in the very nature of its operation, to be legislatively lodged in the hands of individuals."

Mr. Henderson. Do you know when he said that?

Mr. WAXSEN. I think in 1830. It was immediately after the panic of 1837.

The value of no man's property, much less that of a community, should be placed at the capricious will of private cupidity and speculation.

I quote again from one of Webster's subtreasury speeches, in which he says:

"Whenever paper is to circulate as subsidiary to coin or as performing in a greater or less degree the functions of coin, its regulation naturally belongs to the hands that held the power over the coinage."

SOME OBJECTIONS TO THE CARLISLE BILL.

Section 1 of the substitute bill which the committee favors carefully leaves the present national-bank acts in force except so much as requires the deposit of United States bonds.

Section 2 states the conditions on which national banks may issue currency under this bill.

Amount to each bank is limited to 75 per cent of its capital. Thirty per cent of amount of circulation must be deposited with the United States Treasurer in United States notes or Treasury notes, thus locking up as against the people, but not as against the banks, the legal-tender paper currency.

Banks that so desire can have their notes on a gold basis by having their notes made payable in gold coin.

Thirty per cent deposit on the 75 per cent for circulation makes the guaranty fund equal to 23½ per cent on the entire capital. So by putting down 23½ per cent the bankers can take up 75 per cent, a gain of 51½ per cent added to their working capital for which they have paid nothing to either the Government or the people.

This is "richness" as a scheme for getting rich.

Worse than this—it is a temptation to the fraud of organizing dummy banks on dummy capital, as the gentleman from Ohio [Mr. JOHNSON] has this day so ably pointed out in his challenge to the advocates of the bill to show why it may not be done.

I not only indorse the position of my friend from Ohio, but would point out to him and to this House that all schemes for issuing bank notes on assets or property of any kind deposited as security in less amount than 100 per cent of the circulation allowed the banks is vicious in principle and permits fraud to the degree of the difference between the deposit and circulation. If, therefore, any plan is proposed that requires a deposit of less than the total amount of the bank notes issued for circulation, then his argument of opportunity for fraud under this bill will apply to all such plans as well as to this one.

But if the deposit of 100 per cent is required for protection against the possibility of fraud, then the banker will not favor such plan, for he may as well loan out the money he deposits, as the amount is the same.

But if the bank syndicate would deposit 100 per cent in Government legal-tender paper money instead of 30 per cent only, as this bill requires, although this would remedy the opportunity for fraud, yet a new question arises.

What reason can be returned to the people who have given us commissions to represent them on this floor if we favor any scheme of banking which simply locks up one kind of paper money, or destroys it, so that an inferior nonlegal-tender paper money may issue in place of the better kind? Can you find in all history of finance a more foolish legislative provision than that?

We can readily see that if you give the banks a chance to put down \$30 in paper money and take up and walk away with \$75 in other paper money that they may use for an indefinite length of time it will help the bankers, but it is not so clear to others than bankers just where the people come in for any benefits. They lose from circulation the better kind of paper money and get the elasticity game worked upon them besides.

It is also well to point out, that owing to the limited amount of the two kinds of paper money to be deposited and the very large amount that may come forward as banking capital to get the ben-

efit of the 80 to 75 per cent exchange, there is very great probability of the older banks and those in the money centers getting a corner on the greenback and Treasury note supply necessary for deposit of organizing banks, and forcing these notes to a premium.

In the bond-deposit system, as at present existing, the banks pay 1 per cent tax or interest and receive 90 per cent in circulating notes.

In this Carlisle bill, on a tax of only one-half per cent per year, they receive back 300 per cent on their deposit investment.

Even this one-half per cent tax per year is not for the benefit of the Government, but it goes into a fund to pay off the debts or notes of failed banks, and it will take 10 years' time in which to accumulate 5 per cent.

NOT FAIR TOWARD THE DEPOSITORS.

Depositors under this and all similar plans are left out in the cold, to say so, in case of failed banks, for both assets and the liabilities of stockholders are practically mortgaged to the note holders, and are not likely to bring the depositor any relief, even though his own deposits may have been used a few days before failure in a scheme to get out circulating notes for loan to some accomplice who, by this trick, can come in ahead of the depositor.

In estimating security for the people we must keep in mind that all of these bank plans provide only for the safety of note holders.

This protects the banks who have the notes and circulation on deposit.

But no security is offered for depositors. The banks offer no safety plan whatever for the people who deposit money with them.

Carlisle says (and correctly) that the deposit of money with a bank is purely a voluntary and private transaction.

I say that the issuance of a nonlegal-tender bank note and the taking of it by any man is also a voluntary matter, the note not being legal tender. But it should not at the whim of a banker be allowed to circulate as money. The Government alone should control the issuance of money and control its volume.

It has been well pointed out by Mr. George Mayer, who has given much attention to this question of the rights of depositors to better security, that from the very lack of security for depositors more banks fail by runs upon them by the unsecured depositors, and more money is kept hoarded away and held out of circulation—

Since 90 per cent of all current business transactions are said to be transacted through banks by means of deposits, we should give more attention to the safety of the depositors. This, by bulk, as well as for other reasons, is five to ten times as important as security for bank notes.

In section 5 of the substitute bill the provision is made for 6 per cent interest on all notes of failed banks not redeemed on presentation to the Treasurer or assistant until thirty days after notice has been given of readiness to pay them, and such notes are a first lien on the safety fund.

As our Western men would say, this is a "pay streak." The rate of interest being so much better than United States 3 per cent or 4 per cent bonds, it will entitle such notes to a good premium over the notes of all other banks.

Section 6 puts the Government into the business of making investments of the safety fund, not for the benefit of the Treasury, but all for the banks. There is nothing in this bill anywhere that gives any benefits or compensation to the Government or the people. It is all for the banks.

Section 10 and forward provides, under certain conditions being complied with, that the State banks may also take out circulation in same proportions to assets and deposits as in the case of the national banks.

Here, then, we have concurrent jurisdiction by the State and the General Government over some points regarding State-bank paper money and separate jurisdiction over other features.

This will give us also two kinds of bank paper at least, and probabilities of complications between State and Federal jurisdiction.

The national-bank circulation to be issued remains apparently legal tender for payment of all taxes to the Federal Government except duties on imports, this provision of the present law remaining as at present. This will make them, by their receivability by the Government for such extensive revenues, so secure that they will have great advantages over all State issues. In same section provision is made for the Secretary to give a sort of certificate of good character to State banks, which may lead the public to be satisfied with State issues.

THE CARLISLE PLAN BETTER THAN THE PRESENT LAW.

I would not feel that I had done complete justice in my treatment of the Carlisle plan of currency legislation after pointing out its many faults if I did not also point out what I believe are its advantages over the present national banking law and the proposed Baltimore plan, which is fairly representative of the preferences of the associated national banks.

To me they are all wrong in principle, as any system must be that permits the issuance of circulating notes and control or inter-

ference of the aggregate volume of money to pass into the hands of banking corporations.

They are all of them more or less founded on the idea that our Government must in all financial legislation keep constantly in view the regulation and issuance of currency in the interest of those who use currency for profit making on loans.

Instead of viewing money principally as an investment or form of property to hire out and loan to our 70,000,000 people for the profit of those who are in general the wealthy classes, the dominant idea ought to be the issuance and regulation of currency in the interest of investors and for the exchanging of all other forms of property so as to render the manufacturing and productive work of our people profitable.

WE SHOULD CREATE MONEY TO MAKE INVESTMENTS PROFITABLE RATHER THAN FOR LOANABLE PURPOSES.

Money for profitable investment in other forms of property rather than money for loans should be uppermost in the mind of Congress.

Money as an instrument for the profitable exercise of the productive energies of our people and the maintenance of equity in settlement of all time contracts is the proper idea, so that money shall be subservient as a means of exchange and payment to the needs of our people engaged in all the varied industries of this advanced and progressive age and country rather than issue and regulate money for the sole profit of money dealers and money loaning.

Money for investment, exchange, and equitable payments means money as a servant, but money issued by and regulated in the sole interest of money dealers means money as master and all other forms of property in subjection.

That party is the party of the people and truly democratic that will take the people's side of this question and issue and control all of our money in the interest of property and the general industries.

If, however, the people must be subject to bank control and bank issuance of the circulating medium, then that system which prevents centralization and monopoly in control of currency is best.

It is precisely in this matter that the Carlisle plan is superior to and better for the people than all the other plans for bank issues. It starts out in an effort to make the centralized power of the present associated banks compromise or yield a part of the profits and control of currency volume to the States and State banking institutions. It introduces a new and strong competitor in the field of banking and note issuance, and one that will, to some degree, permit the people of every State jurisdiction to protect themselves against money contractions in the interests of and by the national bank association. It therefore threatens to break the intolerable monopoly of Wall street in financial matters.

Not only this, it permits people of smaller means to enter the business of issuing their credit notes to circulate as money and become participants of the showers of financial blessings sent forth by the Government for the profit of the banking fraternity, for the restrictions of \$50,000 as the minimum for State banks and the ownership or use of United States bonds for deposit as security for all banks are both left out of the Carlisle plan. So much for the antimoney and free-banking features of the Carlisle plan. But for these reasons the strong and wealthy bankers of Wall street and other allied money centers will sooner or later, as I have believed, sound a note of warning to their cuckoos and "make themselves heard in tones of imperative urgency" against the adoption of the Carlisle plan.

WALL STREET'S IMPERATIVE DEMANDS.

Again, the Carlisle plan does not sufficiently insure the retirement and destruction of all the Government legal-tender money and the issuance of bonds to please the centralized money power.

Hear them through one of their favorite spokesmen, Henry Clews, in the Financial Review of December 22, 1894. In speaking of the Carlisle bill he says:

Among the clauses deemed objectionable is the requirement that the banks of issue shall deposit legal tenders at the Treasury to the amount of 80 per cent of their circulation; which would largely restrict the net earnings from the notes, and so far lessen the inducement for the banks to avail themselves of their privilege of issuing; besides which it might keep a very large amount of legal tenders in existence after the remainder had been retired. * * *

The great and universal objection, however, is that Mr. Carlisle fails to make—

any adequate provision for carrying out the main feature of his plan, the retirement of the five hundred millions of legal-tender notes. He asks for authority to use for that purpose any money in the Treasury not otherwise appropriated, but does not mention authorization to borrow money for these vast liquidations. * * * The men of intelligence and the organizations representing our great commercial and financial interests must make themselves heard in tones of imperative urgency.

So, now, ye Republican jumping jacks operated by a Wall street string, and ye Democratic cuckoos, ever anxious to call out the plausible sophistries of the money power, take warning in time. If you mean still to serve the money lords you would

better begin now to hedge against this bill. If you resist you may hear those "tones of imperative urgency."

Retirement and destruction of all Government legal tender and the authorized issuance of United States bonds are imperatively demanded by Wall street and a lessening of the 30 per cent deposit requisite as a condition for the issuance of notes is very urgently requested, for it "restricts the net earnings from the notes," and remember always that the banks, in the language of a character in the Hoosier Schoolmaster, desire "while they're gittin' to git a plenty," and it ought to be clear to all of their Congressional servants that if they are required to put down actually of their own money \$30 on deposit for every time they loan \$100 in their own circulating notes, they can not make as much off the people as if they were only required to put down \$5 or \$10 for every \$100 taken up and used in loaning.

If now the national-bank interests can secure large additional bond issues and overcome the present premium on bonds, and can obtain 100 per cent on their deposit instead of 90 per cent, as now, and secure repeal of the 1 per cent tax on their circulation they can make more profit, getting interest on capital invested in bonds and at the same time getting interest on same capital loaned out in notes to the people, as anyone can easily see, but we, in behalf of the people, must remember that all the additional profits they thus secure, as compared to the Carlisle plan, are just so much to the disadvantage of the people.

Every dollar of profit to banking corporations on issuance of circulating notes must come out of the people who use that money, and it is that much of a burden on productive industry.

HOLDING TOO MUCH OUTSIDE "RESERVES" IN NEW YORK.

There is one feature of the present banking system that is generally overlooked, and yet of more importance than gentlemen usually suppose. I refer to the provisions of the law favoring reserve cities, and especially New York. Banks in other cities are allowed to keep part of their reserves in New York on deposit, subject to check, and yet count it in their legal reserves. This results in vast accumulations of outside money in New York, and tempts the banks in that city to loan a large part of it at any rate of interest they can get. This increasing of the supply in New York tending at the same time to decrease it elsewhere makes it impossible to obtain money in other places at such low rates as in New York.

On the evidence of more than one banker before the Committee on Banking and Currency recently it was shown that interest for the last year on call loans and short notice loans has been from 1 to 1½ per cent per annum.

How can business men and industries in other parts of the country, where they must pay from four to eight times as much for money, compete successfully with business in New York?

This special favoritism for New York in the law ought, in fair play, to be repealed. It would result in a wider and better diffusion of whatever volume of currency may exist.

BANKING IS SUFFICIENTLY PROFITABLE WITHOUT ISSUE PRIVILEGES.

Mr. Chairman, remembering what great advantages the associate banks in the money centers have already, and how little they have in common with banking in the interior and on the frontier, I hold that we can not, for these reasons, follow their ideas and advice on financial matters, even if their desire for selfish advantage were not to be considered.

And I would say, too, that the business of banking independent of issuing notes for circulation is already sufficiently profitable, and especially in New York, from which city so much financial wisdom has been poured out upon Congress from time to time for many years.

Let me introduce the testimony of Mr. George G. Williams, president of the Chemical National Bank, New York, one of the greatest banks in the country (page 308 and 309 of Hearings, Dec. 15, 1894):

Mr. WARNER. So that the capital of your bank now represents how many millions of dollars?

Mr. WILLIAMS. Our capital is \$300,000 and our surplus is about \$7,000,000.

Mr. WARNER. Your stock is worth about \$1,300 a share?

Mr. WILLIAMS. Yes, sir; it sells for that. It sells for more than it is worth.

Mr. WARNER. Forty-three times as much as its par. What is the amount of your bond deposit?

Mr. WILLIAMS. The Chemical Bank has never taken out any circulation whatever. Our bond deposit is \$50,000; but we have never circulated any notes.

Mr. WARNER. What is the reason, may I ask, that you have not taken out circulation?

Mr. WILLIAMS. We were under the State-bank system, and issued circulating notes up to the breaking out of the war, and at that time we had about \$300,000 of notes in circulation, and we redeemed every one of them in gold—and we did not care, as a matter of pride, and a little profit in it, too; but we did not care, as a matter of pride, to issue notes which could not be redeemed in gold.

The CHAIRMAN. Mr. Williams, some members of the committee desire to understand exactly the condition of your bank. What did you state the capital was?

Mr. WILLIAMS. Three hundred thousand dollars.

The CHAIRMAN. And the surplus?

Mr. WILLIAMS. The surplus and undivided profits are about \$7,000,000. The surplus is \$6,000,000 and the undivided profits a little over a million dollars, making a little over \$7,000,000 of surplus and undivided profits.

The CHAIRMAN. And how much deposits?

Mr. WILLIAMS. Thirty million dollars.

The CHAIRMAN. What dividend do you pay per annum on your stock?

Mr. WILLIAMS. We pay now 150 per cent per annum.

The CHAIRMAN. You stated the dividend last year was 150 per cent.

Mr. WILLIAMS. Yes, sir.

The CHAIRMAN. What were the undivided profits of that year?

Mr. WILLIAMS. Well, I have not it in mind; but owing to the panic our profits last year were not as large as usual. Usually we expect to add to our surplus 100 per cent besides the dividend we pay of 150 per cent.

The CHAIRMAN. That is \$300,000 a year?

Mr. WILLIAMS. Yes, sir.

The CHAIRMAN. And a dividend of 150 per cent besides?

Mr. WILLIAMS. Yes, sir.

We see, then, that without circulation banking is sufficiently profitable. Here a great bank of New York is testifying that its stock is selling at 4,200 per cent above par, and we see that in a few years, on a capital of \$300,000, besides paying enormous amounts in dividends, it has accumulated a surplus of about twenty-four times its capital. And this bank does not take out circulating notes. How long will it take 4,000 to 6,000 banks like this to eat up the wealth of America?

BRIEF INVENTORY OF CARLISLE PLAN.

We have seen how fast even the present system of banks is devouring the substance of the people. Let us make no further concessions of any kind.

The measure before us, however, together with the substitute that the committee propose to offer, are already practically dead.

SIBLEY's appeal, TOM JOHNSON's thrusts, and BLAND's exposé—the work of these honorable gentlemen to-day has been too much for the survival of the bill under discussion.

Let us, however, make a brief inventory:

Democratic doctrine is not in it.

The people's interests are endangered by it.

Equity of payment is endangered by it.

Party exigencies are against it.

Drainage of gold is not stopped by it.

Cancellation of greenbacks (the desire of banks) is not compulsory in it.

Locking up of greenbacks is made certain by it.

Rights of depositors are endangered by it.

The needful supply of legal tenders is taken from the people by it.

Government receivability of national-bank notes is retained in it.

This receivability of State-bank notes is not in it.

Double jurisdiction over note issues is found in it.

Two kinds of money are added to our present complexity by it. Power of banks over prices, profits, and prosperity is in it. It threatens first undue expansion; then final collapse. It makes no provision for free coinage or true currency reform.

Let us hope that it is dead, and that all other plans for the extension of power over our currency shall die with it.

THE COINAGE COMMITTEE QUORUM BROKEN BY THE GOLD POWER.

Although our Committee on Coinage was organized with so small a margin and majority in favor of free coinage, only 1 majority, and that 1 doubtful, and the money power has been able thereby to prevent the free-coinage men on our committee from securing a quorum with which to present a free-coinage measure to this House, yet we believe the country is with us for free coinage, and even a majority of this House, if we can get the bank and gold schemes out of the way. The money power do not hesitate to hold their portion of our committee absent to prevent silver legislation. We claim the country ought to know this fact.

MONEY AND PRICE—AS ONE GOES UP THE OTHER COMES DOWN.

The plainest possible terms would seem most necessary to simplify the money question, although in using some of them in application to money I will meet prejudices and be misunderstood by some and misconstrued by others. I refer especially to the word cheapness when applied to money and the dollars or units of money.

It is difficult owing to long-standing prejudices, fostered purposely by the self-ordained priesthood of the money dealers, for people to understand that money derives its value through its power and rate of exchange for other goods, and so its value is in its exchangeability for other things on the same general principle that wheat, shoes, cloth, or anything else has value, and so money value is relative to its supply and may be cheap or dear in the same sense that other things are cheap or dear, and so again it measures all other property on the same general principle that the general range of prices on other things measures the value of money.

There is this peculiarity, however, regarding money, that it is a universal solvent for all other things, and is, therefore, in universal demand, while other things are only partially so, hence we

find the value of money is almost wholly regulated by its supply, for its demand is universal, while other things are regulated or modified in value by both supply and demand. Hence again we find that the volume or supply is the chiefest element in regulating value of money since the demand is universal, while both supply and demand must be equally and constantly considered in estimating the value of other single kinds of property, and owing to the variations in supply or demand for special kinds or lines of goods we must take the general range of prices on the staples or more generally used articles for a basis on which to test and discover the value of monetary units such as dollars.

The value of dollars or monetary units will be found remaining constant or uniform, therefore, if we find the general range of prices are constant; that is, prices neither going up or down. This should be the condition to maintain—by Congress if we would maintain equity—uniformity of general prices which shows with unerring certainty uniformity or constancy in the value of money.

If, however, money becomes dear or high, then the general range of prices becomes lower or cheaper, but if money becomes plentiful and cheap, then prices, moving always in the opposite direction, become higher. So, then, we must conclude from the very nature of the case that the general range of prices of commodities measures the value of money as certainly and on the same principle that money measures the values or prices of commodities. One is the standard of the other, and the movement of one is always in exact but reverse movement of the other, so that as one goes up the other always goes down.

MONEY AND PROPERTY PRICES ACT AS A LEVER.

To illustrate this reverse action of depreciating or appreciating money on prices I have called into play the action of a lever as an illustration with money on one end, property to be priced or valued in money on the other, and the fulcrum between representing constancy and stability.

There ought to be maintained a level or equilibrium between money on one end of the lever and price on the other.

One thing is certain, however, that if one end, say the money end, of the lever goes up the property end or price must go down, and vice versa.

If there is variation, however, in either end you can certainly know that the other end is moving in the opposite direction.

As dollars go up—are appreciated—their purchasing power increased—property goes down, prices go down, and profits are lost.

On the other hand, if money comes down, depreciates, becomes cheaper, it is equally certain that the general range of prices on property appreciates, increases, becomes higher.

So money and property are pitted against each other. Money on one end of the lever, and price, or valuation of property, on the other.

It is the work and duty of the people to produce property, but of the Government to produce or furnish money in proper and sufficient volume to maintain prices for the people, to keep their property at a true level. Bankers want to appreciate their end of the lever—that is, the money end.

The people must remember that as they are the workers and producers and holders of property they are all on the property and price end of the lever, and their interests suffer, their prices go down, and values shrink, and profits to them are destroyed if they allow the money dealers to manipulate the Government and secure a lifting of their end of the lever, increasing the purchasing power of money.

INTERESTS AND METHODS OF MONEY DEALERS ANTAGONISTIC TO PRODUCTIVE ENTERPRISE.

From this clear and exact illustration of the relation of money to price we desire also to expose another fallacy and false phrase of the monetary syndicate.

They are forever prating about their interests being identical with the industrial interests. They are not, but are exactly opposite to the interests of the producing classes when they appreciate money, for to appreciate or raise the purchasing power of money is to depreciate all other property by lowering prices, and this destroys also the profits that equitably belong to the producing classes. They thus pit themselves against the people.

Another assumption of theirs equally false is that they represent the business interests of the country. They do not. The property and producing side of the lever is the side of business and industry, and the Government alone should regulate the other end of the lever, and that in the direction of supplying money for circulation and keeping volume, and therefore prices, both at a proper level and protect the business and the debtor classes against ruinous appreciation of money.

To turn over to bankers the privilege of supplying the money of circulation and controlling to any degree its volume, the privilege of changing up or down, as may suit their interests, the money end of the lever, and so holding power over the prices, profits, property, and prosperity of all the people, is to give them the power that belongs to sovereign government alone.

With this power to supply the currency and control its volume they can devour the surplus and encroach rapidly upon the wealth already held by the people, as they have been so rapidly doing for twenty-five years.

They prate about elasticity of bank currency; but it is contraction and expansion, sudden and without warning, and in the interests of the banks, who work the india-rubber scheme, and always to the disadvantage of the rest of the people, and to the ruin of one generation of debtors after another.

They talk about maintaining public confidence; but instead of playing a fair game they demand as a condition that they shall hold all the trump cards and thus keep the people on the other side entirely at their mercy.

They talk about honest and best dollars; by which they mean the highest purchasing-power dollars, which kind is a cheat and a robbery of all who labor or sell anything at the ruinously low prices necessary to obtain the high gold-standard dollars. They are thus blocking the wheels of industry and forcing debtors to bankruptcy or crime. What chance have the people if banks control the volume of money?

THE PRODUCING CLASSES HAVE LOST \$10,000,000,000 OR MORE BY THE APPRECIATION OF MONEY.

It is safe to say that if the same tact and energy had been used during the last twenty-five years by Congress to appreciate property and the prices, that is to say, the general range of prices thereon, that has been used to appreciate money and advance the interests and profits of the money dealers, the producing classes in this country would have been worth at least ten thousand million dollars more than they are to-day. A truer estimate would be that their wealth and holdings would be twenty thousand millions more than it is to-day. The agricultural classes alone would hold ten thousand million dollars more wealth than now.

But this would have required an appreciation or at least the maintenance of price and property values and a protection of profits instead of an appreciation of money and legislation constantly in the direction of securing greater advantages and profits to the creditor classes.

This at least would have required a protection against depreciation of prices.

For, let it never be forgotten, that the appreciation of either prices or money is the depreciation of the other—as money goes up prices come down, and as prices go up money comes down. The law is invariable, and the appreciation or depreciation of either prices or dollars is dependent on the relative volume of currency in circulation.

THE DISHONEST DOLLAR.

Let us be plain about the matter and say what all competent judges know, but what few dare to say, that to have better prices we must have cheaper money, cheaper dollars, dollars of less purchasing power.

But is not a cheaper dollar a dishonest dollar?

No, not necessarily.

There is no dishonesty in keeping the country well supplied with reasonably cheap dollars.

The very fact that there will be a good supply of dollars in circulation is a guaranty that they will be reasonably cheap and that prices consequently will be reasonably good.

Dollars that are not reasonably cheap, making prices reasonably good, are dishonest or unfair dollars, unfair and unjust to nineteen-twentieths of our people who are dependent upon exchanging products, property or labor, for dollars, and the whole question of honesty is involved in the question of rates or prices at which they must exchange what they have to obtain dollars.

High value or appreciated dollars produce low and depreciated prices on all other forms of property and labor, and this robs producers, and especially robs those who have debts and fixed amounts and taxes to pay.

Dollars, then, have been dishonest ever since they began to appreciate under the policies of the money dealers, who have controlled financial legislation for twenty-five years.

The honesty of dollars, therefore, must be determined by looking at the general range of prices.

Are prices too low? Then money is too high and dishonest.

Are prices good and running at a fair level and profitable to producers? Then the dollars in circulation are honest and reasonably cheap in relation to prices or exchange for property. When prices are honest and fair to the debtors and producers, then money is honest and fair.

Are prices abnormally high so that you, in the old phrase, get a hat full of dollars for a pair of boots, or barrel of pork, or a few bushels of wheat, then money or dollars must be unreasonably cheap, and therefore dishonest again and unfair toward the creditor.

The whole question of the honesty of the dollars in general circulation is dependent upon the question of general prices, for one is always a true index of the other.

To look at the material of which the dollars are composed with

the idea that the value of the material in the dollar as a commodity is the essential basis upon which to measure the value or honesty of the dollar for monetary uses is a childish delusion and results from ignorance of the nature and function of money, which is an instrument of exchange and should be a constant support of prices and measure of values in the payment of debt.

THE MAINTENANCE OF HONEST PRICES SHOWS HONEST DOLLARS.

Look to prices, then, to estimate the value and honesty of dollars.

Is the farmer getting \$1.25 per bushel for his wheat and 16 cents per pound for his cotton as examples of the general range of prices necessarily consequent upon the volume of currency circulating and regulating the prices and payment of debts as the nation came out the great struggle for the maintenance of its existence?

Then these are honest prices brought about, not by selfish schemes of farmers, manufacturers, and producers generally, but by the patriotic action and highest and best motives of the truest friends of the people and their Government. Remember that the whole country had adjusted its business, both its debits and credits and its varied industries and commercial conduct, to the volume of currency and range of prices then existing.

This, the established volume of currency and range of prices following the war, was honest money and honest prices. These two always go together.

Equity demanded the maintenance of these prices, and maintenance of prices demanded the maintenance of a proper volume of currency.

This currency, to maintain these general post bellum prices, as from 1865 to 1893, should have expanded in volume to correspond with the expansion and extension of the volume of business and population. If this had been done prices would have been upheld and the equities of contract between debtors and creditors would have been maintained. This maintenance of equity and protection of the interests and prices of the producing and true business world should have been vigilantly and thoroughly done by the Government. This is the true province of government.

But contraction and demonetization policies have been followed instead, and so now the farmer to pay a hundred-dollar debt or a hundred dollars in taxes, must produce and sell 200 bushels of wheat to pay the debt instead of 80 or 100 bushels. This more than doubles the burden of payment upon him. The same great loss comes upon all producers in their efforts to obtain dollars in the general fall of prices consequent upon the raise in the purchasing power of the dollars.

But the creditor gains what the producer loses. He gets 200 bushels or the value of it where the value of 80 bushels only was due him.

The general fall of prices, which means the appreciation of money, has caused a loss of about one-half on price and a doubling of the value of money to the very great advantage of the creditor classes.

This wrong upon the people is greater than generally supposed.

That it has not been forced upon them all at once but has been by gradual process of depreciating the money scattering the losses and disturbances over a period of twenty-five years has not in any manner lessened the injustice of it, but it has been borne by the people with a degree of patience and submission that could not have been otherwise obtained.

I am not sure but this generation would be better off if the change had come all at once instead of by slow gradations.

The boy who undertook to shorten his dog's tail by cutting off an inch at a time may have secured one point by getting his dog hardened to the process; but I am not sure but what the dog would have been as well off if the tail had been all cut off at once.

LOSSES ON NATIONAL DEBT BY APPRECIATION OF MONEY.

The great losses to the people on their general business for the last twenty-five years can be perhaps illustrated by noticing the losses to the Government on the national debt by the same processes; but we must remember that the national debt only represents about one-eighth to one-tenth the entire volume of the people's indebtedness upon which their losses have occurred.

Remembering that the people in general produce and sell commodities as a means to obtain the money necessary to pay debts, I call your attention to the following ascertained facts which, for present use, I derive chiefly from the speech of Senator JONES, in the United States Senate, October 23, 1893, page 267 of his published speeches:

United States bonds sold, 1862-1868, nominal value, \$2,049,975,700. The Government received for these only \$1,400,000,000. The average rate received was 67 per cent of par value. These were payable when due in lawful money, interest in coin. The Government has paid back on principal \$1,756,000,000; there has been paid in interest on them \$2,538,000,000; paid in premiums on bonds bought \$38,000,000; total amount paid (three times the amount received) \$4,332,000,000.

The value of money is its purchasing power, and this to maintain equity ought to maintain uniform prices.

The purchasing power received from bondholders in wheat was 1,007,000,000 bushels. If equity had been maintained we ought to be able to pay the debt principal with the price of same

amount of wheat, but by appreciation or increase of the purchasing power of the dollar lowering the prices of commodities we find we have paid on principal 1,986,000,000 bushels; an interest, 2,974,000,000 bushels; in premiums, 62,000,000 bushels; total paid, 5,022,000,000 bushels.

This is paying five times as much in equity as originally received. If estimated in cotton we would have paid 94,690,000 bales, whereas we received on the then cotton prices 14,184,000 bales, or less than one-sixth as much as has been paid back to them, and yet to pay the remainder to-day will require as much wheat or cotton as would have paid off the entire net amount received of them at the close of the war.

It is no sufficient reply to say that those were "war prices," for they were also "war values" of dollars, and both dollars and prices were the same to all, whether bondholders or bond payers.

Now, figured in the general range of prices on commodities, the results are substantially the same, as illustrated in the two great staples of wheat and cotton.

How much, then, have been the losses already accrued by increasing the value of dollars and lowering prices? Estimating that the interest paid doubles the amount of principal on payments so far made, the people have lost not less than \$3,000,000,000 on the national debt, and they have lost not less than five times as much, or \$15,000,000,000, on all other kinds of debts. No other age or nation ever suffered such robbery. Shall we, then, vote to allow these extortions to continue?

Shall we, in presence of this grievous wrong,
In this supremest moment of all time,
Stand trembling, cowering, when with one bold stroke
These groaning millions might be ever free?—
And that one stroke so just, so greatly good,
So level with the happiness of man
That all the angels will applaud the deed.

Mr. HAINER of Nebraska. If the gentleman will pardon a further interruption, I desire to submit for his consideration, conceding his argument to be sound, that with an increased circulation we have a consequent and proportionately higher price; with higher prices a consequent and proportionately greater prosperity, and that the Government has the power to increase this circulation by an issue of paper money in such quantities as Congress desires or deems conducive to the prosperity of the people; then why place a limit on such issue? Why not have unlimited issues of paper money and thus usher in a millennium of prosperity?

As I know my friend would not seriously propose a Utopian scheme, but wishes to be practical, will he not admit that paper money is simply and in the last analysis the obligation—debt—of the Government, which must at some time be either paid or repudiated, and when we authorize the issue of paper money we thereby mortgage the future revenues of the Government? The seeming prosperity attending the issue of even a limited amount is that of the mortgagor who has just made a loan, is spending the proceeds, and has not yet been called upon to pay.

Mr. COFFEEN of Wyoming. I am pleased to find such interest in my discussion of the currency question and do not object to the interruption of my friend from Nebraska.

The question submitted, briefly stated, is:

First. Why not have unlimited issue of currency if expansion brings prosperity?

Second. Is not paper money issued by the Government in the form of debt which must be paid or repudiated?

Third. Is not the prosperity secured by better prices if occasioned by Government issue of currency notes like the prosperity of one spending borrowed money, which prosperity will be reversed when pay day comes?

These are questions arising sometimes out of the failure to comprehend the true nature of money and the Government's relation to it.

As to the first, why not issue an unlimited amount of Government paper if more money brings more prosperity?

A short yet incomplete answer would be by contrasting the Government's condition with that of a hungry or sick man and to say, If a man is hungry and needs more food, why not stuff him with an unlimited amount of food? The case is similar.

If a man is weak and emaciated for want of blood in sufficient quantity to revive him, why not furnish him an unlimited quantity of blood?

A proper amount of food is useful and a proper amount of blood to circulate through the body is necessary to health and prosperity.

If prices are too low and people unable to pay their debts and make any profit on their labor and produce and workers are idle for want of employment and more money will cure the evil and raise prices and employ labor, then, some say why not issue too much money and give the patient an overdose of the remedy?

MONEY IS THE LIFE-BLOOD OF THE NATION.

The need of a proper supply of money to circulate through the body politic, or the organized nation, is like the need of food or blood for the human body.

Money is an instrumentality to facilitate exchange among the

people so necessary to their existence in civilized life, and also to maintain prices at an equitable standard so as to enable all the industrial interests and people of the nation a fair opportunity to calculate safely on the values or prices of their future crops, products, and manufactures in relation to all kinds of obligations, debts, profits, and employment of themselves and others, as well as the employment of their acquired property resources.

If prices are properly sustained, and this depends, as my friend, at least for the present, has admitted, on the proper amount of money in circulation, then prosperity can and will ensue in all commercial and manufacturing affairs. Not only can all debtors get dollars in exchange at fair prices for their labor and products with which to pay debts and interests and taxes, but also all men, in whatever productive or manufacturing enterprises they may engage, can safely count on the profits that ought to obtain in the future if prices are maintained.

If prices and the money which sustain prices remain at a fair and equitable standard their investments in property and labor in general will be profitable.

But while there are debtors there are creditors. While there are sellers of goods there are buyers. While there are calculations for a reasonable profit there are calculations and a reliance against unreasonable profits and prices on the part of those whose forms of wealth and resource are fixed and, so to say, not productive of anything that would get a compensating benefit from higher prices.

Now, if I have made this sufficiently plain, my friend will at once see and agree with me that money value, and price or property value, which represent the two ends of a swinging lever, ought to be kept at a fair level, so that neither end of the lever goes so high as to sink the other into ruin and injustice.

The question of money volume is a question of justice, but so, too, is the question of prices. I have already shown how property values swing against money values as on a lever.

The prosperity that we want is one where justice prevails and equity between the money dealers and property producers, or wealth producers, is maintained.

In the face of this idea of prosperity for the whole and all classes, founded upon justice to all, how can my friend insist that an unlimited issue of money would, by raising prices constantly higher when counted in that overissue, be conducive to prosperity?

The true function of money is to maintain equity as well as to facilitate exchange of commodities, and equity protests against too great expansion on the one hand as against too great contraction on the other.

MONEY TO MAINTAIN EQUITY AS WELL AS TO EXCHANGE COMMODITIES.

We can destroy equity and the proper function of money, let my friend remember, as easily by contraction as by expansion. It is as great a wrong for prices to fall too low as it is to raise them too high; and, indeed, when you consider how many are interested on the property side and their needs in contrast with the few and the rich on the money side of the lever, if we depart from a proper level at all it ought to be by expanding the volume of money and raising the value of property and products instead of contracting the money and lowering the prices of all products and property.

Do you ask me what is the proper volume and the proper level between money and price? I have already gone over that subject, but will say in passing that the \$30,000,000,000 of debts of our people, that on present low prices of property requires twice as much labor and products of labor to pay as it required in the period and conditions out of which these debts and renewals have arisen—that is, the period following the civil war, in which money was abundant—demands of us, in the interest of equity and fair play, that we again double our money volume by fair yet sure gradations, so that prices shall again be restored to the old level from which they have been cast down by the schemes of contraction and demonetization. By breaking down equity we have broken down prosperity.

If the volume of business transactions and exchanges requiring the use of and counting in money is fourfold what it was at the close of the war, and I believe it is fully that, then we need not two times but four times the volume of money we had in general circulation.

CURRENCY IS ESSENTIALLY TRANSFERABLE DEBT

On the second question—is not the paper money issued by the Government in the form of a debt?—let me answer yes.

All currency is debt or in the nature of a certificate of indebtedness, and is carried or circulated or held by us as representing something sold or services rendered when it was received, for which property or service compensation is not yet made, but remains in suspense until we pass the currency or money to some other person for property or service that we receive from them.

When we buy some other person's property or service or pay it out to others for value received then we get pay for the services

or property we parted with when we first received that money. From the time we receive the money until we part with it we carry it as an evidence of property sold or service rendered, and it is therefore and in this sense in the form and nature of a debt. When it passes to another in exchange for his service or property the debt is transferred to him and is evidence in the case of money or currency that the society or the Government owes him so many dollars. When he passes it or transfers it to the next one the debt is again transferred. So we may say currency, money, all money is in the nature of transferable debt. *Money is transferable debt*, and do not be startled if you find that all money, whether coin or papers is transferable debt. The only exception is that when one takes a coin and uses the material in it as a commodity as in making something useful out of it besides money, then in that case he has accepted the material as pay for the debt, and the coin in consequence ceases to be money.

So teaches MacLeod, the great English economist, in his *Economic Philosophy*, and so teach many other profound writers as to this question.

On page 188 of volume 1 he says:

We may therefore lay down as our fundamental conception that currency and transferable debt are convertible terms; whatever represents transferable debt of any sort is currency; and whatever material the currency may consist of it represents transferable debt and nothing else.

In volume 2, page 365, MacLeod again says:

We shall find that by starting from our fundamental definition of currency as transferable debt and that the value of the currency depends upon the quantity of the transferable debt which it represents, the fallacy of this theory (that of issuing on "good bills") can be demonstrated with great ease.

In his attack on what he calls Lawism, after quoting from John Law, MacLeod says, page 346, volume 2:

In this sentence is concentrated the whole essence of that eternal delusion which we designate Lawism. It is, indeed, nothing but the stupendous fallacy that money represents commodities. * * * No man who does not thoroughly understand the great fundamental doctrine established by Turgot and others, that money does not represent commodities, can ever have sound ideas on this subject. Money does not represent commodities at all, but only debt or services due which have not yet received their equivalent in commodities.

So Aristotle taught in ancient days (*Economic Phil.*, volume 1, page 191):

But with regard to a future exchange (if we want nothing at present, that it may take place when we do want something), money is our security.

So Adam Smith, in *Wealth of Nations*, says:

A guinea may be considered as a bill for a certain quantity of necessities and conveniences upon all the tradesmen in the neighborhood.

Baudeau, the economist, is quoted by MacLeod as saying, page 191, volume 1:

This coined money in circulation is nothing, as I have said elsewhere, but effective titles on the general mass of useful and agreeable enjoyments.

Mr. Henry Thornton says:

Money of every kind is an order for goods.

Again MacLeod says, after quoting other authorities to show that money represents debt, page 195, volume 1:

So that when a person receives an obligation expressed in metallic currency, he is able to command the services, not only of the original debtor, but also those of the whole industrial community. There is clearly, then, no difference in principle between a metallic and a paper currency.

HOW DOES THE GOVERNMENT PAY ITS NOTES?

On the third question, when the Government issues even a limited amount of its own notes, will it not be like a mortgagor who borrows money to spend that must afterwards be paid?

Yes, in some slight degree. But the repayment by the Government is chiefly in receiving the notes circulating back again in taxes, customs, excises, and so on, in exchange for what the Government has done and is doing in behalf of its own people.

There is no mortgage about it, but there is an exchange of services, with the notes of the Government circulating in the intervening time, the Government redeeming its currency notes by receiving them back.

And still more, the note is being redeemed every day, when it passes among the people, being a legal tender and competent unit of account in all monetary transactions among the people.

But it is the duty of the Government to both issue an adequate supply of currency and by reissuing and making all of it legal tender keep it out in circulation.

The people need this currency, and, since they are in an organized form the Government also, it is practically the people providing themselves with a proper currency and agreeing that they will circulate it also among themselves.

VALUE IS NOT INTRINSIC IN ANYTHING.

Many, especially many advocates of bank interests, still cling to the idea that the money of ultimate redemption, as they call it, must have and does have intrinsic value. This arises from a misunderstanding of the nature of value. For anything to have value it must be exchangeable for something else of value with which it is compared.

If you say to me that any certain thing has value, you are giving me but one side of the comparison or equation. I will reply

by asking value in what or what value, and your answer will complete the equation or comparison.

Thus, if you say this horse is value, I ask value in what? You may say in cattle, and equal to three cattle, or you may say in dollars, and is equal to or valued at \$100.

To say that a thing has value in itself or *per se* is an error, and it is as useless as to say that a number is equal or has equality without giving us the other term of the comparison.

If you say 15 is equal to 3 times 5 we understand it.

If you say a certain house is distant one mile, you should also give us the term of comparison by saying, for instance, one mile from the bridge.

So value of anything always implies comparison with something else outside of itself, and so value is by comparison or extrinsic.

Value is not intrinsic.

Qualities or properties of things are intrinsic, as brittleness for glass, malleability for gold, and so on, but value is not intrinsic. It is founded on exchangeability for other things and on demand and supply, and is measured by its power in exchange for other things.

On this definition of value, which we shall find applies to dollars and all other denominations of money as well as to all that money can buy, we have thus tried to comprehend the truth or statement that value is extrinsic and not intrinsic in anything.

Now, for authorities, for some attach more value to authorities than they do to the reasonableness of any proposition; and again, quoting authorities is a convenient way of showing even the reasonableness of our propositions in other ways of stating them.

Professor Jevons says in his work on Political Economy:

Value in exchange expresses nothing but a ratio, and the term should not be used in any other sense. To speak simply of the value of an ounce of gold is as absurd as to speak of the ratio of the number 17. What is the ratio of the number 17? The question admits no answer, for there must be another number named in order to make a ratio.—*The Theory of Political Economy*, page 83.

John Stuart Mill, in defining "value," says, touching question of exchange:

The word "value," when used without adjunct, always means, in political economy, value in exchange.—*Political Economy*, Book 3, chapter 1.

And so, too, Prof. Francis A. Walker says:

Value is not a property of anything. It arises wholly out of relations which exist between things.—*Money in its Relations to Trade and Industry*, page 32.

Prof. A. L. Perry, in his work on Political Economy, speaking of value, says:

Value, then, is not a quality of single things, belonging to them as if by nature, as hardness is a quality of a rock or gravity is an attribute of gold; because all physical qualities in physical things, all that which makes or helps to make anything such as it is, may be learned by a study of the things themselves, by themselves. The questioning of the senses, however minute, the test of the laboratory, however delicate, can never determine how much anything is worth, because that always implies a comparison between two things or more strictly a comparison between two renderings in exchange. Value is not an attribute of single things; not even if the things be physical and tangible.—*Principles of Political Economy*, page 34.

Senator JOHN P. JONES says:

Numberless citations could be made from writers of the first rank to prove that value is not a property residing in any object, and that therefore it can not by any possibility be "intrinsic."

A correct definition of value I conceive to be: Human estimation placed upon desirable objects whose quantity is limited.

If value were intrinsic, if it resided in the article, it could not be taken from it, and it could not be changed by changes in the number of the objects of which value is asserted, or with modifications in the desire of men to become possessed of such articles. Qualities that are inherent do not vary with the shifting degrees of estimation in which they may be held by mankind.

DEFINITION OF VALUE.

Aristotle said: Now the term "value" is used in reference to external goods. (*Ethics IV, C 3, Nicomachs*):

The value of a thing is what it can be sold for.

MacLeod says (volume 1, page 185):

We have, then, this definition: The value of any economic quantity is any other economic quantity for which it can be exchanged.

If we are told that an object is distant, or equal, we immediately ask, distant from what or equal to what? So it is equally clear that a single object can not have value. If we hear of an object having value we must always inquire, value in what? And it is clear that as it is absurd to speak of a single object having absolute or intrinsic distance or being an absolute or intrinsic equality, so it is equally absurd to speak of absolute or intrinsic value. And as no single body can be a standard of distance or equality, so no single object can possibly be a standard of value.

Value necessarily requires the concurrence of two minds.

There is no such thing as absolute value or universal value.

Let me quote further from those whose opinions carry great weight. In MacLeod's *Elements of Economics*, on page 231 of first volume, we find:

This unhappy phrase "intrinsic value" meets us at every turn in economics; and yet the slightest reflection will show that to define value to be something external to a thing, and then to be constantly speaking of intrinsic value, are self-contradictory and inconsistent ideas. And it came to be held that labor is necessary to and is the cause of all value.

On page 232 the following occurs:

The expression "intrinsic value" is so common that persons are apt to overlook its incongruity of ideas; it is, however, a plain contradiction in terms, and if we use words of similar import whose meaning has not been so corrupted, its absurdity will be apparent at once. Thus, who ever heard of intrinsic distance, or of an intrinsic ratio? The absurdity of these expressions is apparent at once, but they are in no way more absurd than intrinsic value. If we speak of the intrinsic value of money, we may just as well speak of the intrinsic distance of St. Paul's, or the intrinsic ratio of five. To say that money has intrinsic value because it is material and the produce of labor, and that a bank note or bill of exchange is only the representative of value, is just as absurd as to say that a wooden yard measure is intrinsic distance, and that the space between two points a yard apart is the representative of distance.

On page 235 of the same book we find the following:

That unfortunate confusion of ideas between the value of a commodity being the quantity of another commodity it will purchase, and the quantity of labor embodied, as it were, in the commodity itself, which is chiefly owing to Smith and adopted by Ricardo, has not only led to that mischievous expression "intrinsic value," the source of endless confusion in economics, but also to the search for something which very slight reflection would have shown to be impossible, namely, an invariable standard of value.

And also from pages 230 and 231 of the same, the following:

There is nothing which troubles this controversy more than for want of distinguishing between value and virtue.

Value is only the price of things, and that can never be certain, because it must be there at all times and in all places of the same value; therefore nothing can have intrinsic value.

But things have an intrinsic virtue in themselves, which in all places have the same virtue—the loadstone to attract iron, and the several qualities that belong to herbs and drugs, some purgative, some diuretic, etc. But these things, though they may have great virtue, may be of small value or no price, according to the place where they are plenty or scarce; as the red nettle, though it be of excellent virtue to stop bleeding, yet here it is a weed of no value from its plenty. And so are spices and drugs in their own native soil of no value but as common shrubs and weeds, but with us of great value, and yet in both places of the same excellent intrinsic virtue.

Senator JONES, in addition to what I have already quoted from him, says of this "intrinsic-value" fallacy:

Like the pillars which were believed to support the earth, this intrinsic value, whether of gold or silver, is purely imaginary. Notwithstanding the rejection of the theory by all well-informed economists, it continues to be a refuge for ignorance and sciolism.

In the whole history of time there has been no error in any department of thought that, in the degree of contribution to the martyrdom of man, can compare with this notion of "intrinsic value." Fully refuted and rejected by science, the theory had well nigh disappeared from economic literature until the discovery was made that the hold which, like a blighting superstition, it had obtained on the ignorance of men could be utilized to discredit silver and to plume the single gold standard. Immediately the teachings of science are set at naught, and "intrinsic value" is declared to be the determinative factor in the discussion.

I wholly deny the existence of intrinsic value, whether in gold or any other object.

Professor Jevons, in his work *The Mechanism of Exchange*, says:

Value, like utility, is no intrinsic quality of a thing; it is an extrinsic accident or relation.

The same author, in his work upon *Political Economy*, says:

Value implies, in fact, a relation; but if so, it can not possibly be some other thing. A student of economy has no hope of ever being clear and correct in his ideas of the science if he thinks of value as at all a thing or object, or even as anything which lies in a thing or object.—*The Theory of Political Economy*, page 82.

In his essay on *Value of Gold* this same noted political economist says:

There is no such thing as intrinsic value.

Senator JONES quotes John Stuart Mill, as follows:

There can not, in short, be intrinsically a more insignificant thing in the economy of society than money.—*Principles of Political Economy*, Volume II, page 23.

And then says:

Professor Perry, while a most ardent champion of the gold standard, is compelled to admit the absurdity of the expression "intrinsic value," and to deny such value to gold as well as to everything else. In reviewing the statements of another writer on the subject of money, who had used that term, Professor Perry says:

"This author is led astray by the worse than useless adjective 'intrinsic,' having never yet learned that there is only one kind of value in economics, namely, purchasing power."—*Principles of Political Economy*, page 341.

Mr. MacLeod, in his elaborate treatise upon the Theory and Practice of Banking, speaking of the expression "intrinsic value," says:

"Moreover, we see on considering the term value that it is nonsense to speak of the representative of value. Value is a ratio—an external relation. What can be the representative of a ratio, or of an external relation? To say that money, because it is material and the produce of labor, has intrinsic value, and that a bank note is only the representative of value, is just as absurd as to say that a wooden yard measure is intrinsic distance, and that the space of 36 inches between two points is representative distance. It is of the first importance to economic science to exterminate this unhappy phrase 'intrinsic value,' which is clearly shown to be a contradiction in terms."—*MacLeod, Theory and Practice of Banking*, 1, 50.

Ricardo (than whom no financial authority stands higher) lays down the principle that even paper money, having not a shred of what the gold-standard advocates call "intrinsic value," will have real value equal to that of gold money, provided the number of the notes be sufficiently limited in quantity.

Speaking of uncovered paper money, he says:

"By limiting its quantity its value in exchange is as great as an equal denomination of coin, or of bullion in that coin."—*Political Economy and Taxation*, chapter 21.

After further discussion of the subject, he continues:

"On these principles it will be seen that it is not necessary that paper money should be payable in specie to secure its value; it is only necessary

that its quantity be regulated according to the value of the metal which is declared to be the standard." (Same work and chapter.)

In other words, Ricardo's statement here is, that if the amount of irredeemable paper money in a country were just equal to the amount of gold which would form that country's distributive share of the gold money of the world, the paper money would have precisely the same value, dollar for dollar, as would an equal amount of gold in that country.

All these writers and many others declare that the value of money—other things being equal—depends on its quantity and not on its material. It is therefore absurd to claim that silver has ceased to be adaptable for the money use because it is said to have lost some supposed attribute that neither silver nor gold nor anything else ever possessed, namely, intrinsic value.

So, too, the value of the units or dollars of our current money is not intrinsic value, since value can not be intrinsic in anything but the value of a dollar, or the unit of any system of money is in its exchangeability, and measured by its purchasing or exchangeable power in commodities, and is constantly related to the quantity, whole number, volume, or aggregate supply of units or dollars in circulation. Its purchasing power or value may be great or small—great if the volume or supply of them is small, and of small value if the volume is great relatively to the quantity of exchangeable things—commodities—to be exchanged for them.

Money or the units of money have no intrinsic value but relative value only.

Money is not a natural thing nor the natural property or quality of anything, but is constituted or decreed by custom, convention, or law.

All money is the creation of law.

If it existed otherwise than by law it could not be demonetized by law. Those who talk about money existing otherwise than by force of law in any legalized and civilized nation are either knaves or they are ignorant of what constitutes money.

While on this work of exposing the fallacy in the theory of the money power that gold and silver money is money because of intrinsic value, on the testimony of Ricardo, as quoted by Senator JONES, and so ably commented upon by him, I wish to call attention to the point that has such an important bearing on the question of paper money to be issued elastically by the banks if this bill shall pass.

He points out clearly that uncovered paper money such as our bankers spit at with such terms as "irredeemable trash," "money founded on nothing," etc., will have "value as great by limiting its quantity as an equal denomination of coin or of bullion in that coin."

Ricardo does not stop with this statement. He says:

On these principles it will be seen that it is not necessary that paper money should be payable in specie to secure its value.

He is demolishing, it would seem, all the pet sophisms of "intrinsic value money" and "coin redemption money" of the Wall street advocates at once and emphasizing what I have tried heretofore on this floor to point out to my fellow-members, that quantity of currency in circulation regulates and controls the value of money without regard to the material of which the money is composed, and also that redemption of one kind of a legal-tender dollar in coin or any other kind of a dollar is not necessary to maintain the value of money. Note how Ricardo goes on to say that "it is only necessary that its (uncovered paper money) quantity be regulated according to the value of the metal which is declared to be the standard."

It must be an annoyance to the advocates of bank issues and gold standard and intrinsic value money theories to find that fundamental principles, historic examples, and the best authorities are constantly furnishing evidence against them.

GOVERNMENT PAPER MONEY THE HIGHEST ACHIEVEMENT OF WISDOM.

My position is that the regulation and control of the quantity of currency in circulation is of supreme importance, and that therefore it must not be turned over to banking corporations or any other private interests.

The Government alone must retain and constantly exercise control over the volume of all kinds of money permitted to circulate as money among the people so to maintain general prices and the equity of payment on all future obligations.

Since the coinage, if unlimited, either for one or both metals, is slightly automatic as to quantity and may vary with the production, the export, the import, and the consumption of these metals in the arts, and therefore the quantity may vary, to the ruin of prices and bankruptcy of debtors without some compensating balance, therefore I see in paper money the highest achievement of wisdom; for by issuing it through the authority of Government, the aggregate volume of money in circulation can both be controlled and rendered adequate for the progressive march of industry and civilization.

The remonetization of silver has its chiefest benefits in breaking the monopoly of the Anglo-American gold conspiracy by increasing to some degree the volume of money so as to relieve price depression and the ruin of debtors. We can thus double the volume of coin redemption money so as to better secure our redemption system of money from collapse so long as the Jewish trick and scheme of "coin redemption" shall be followed foolishly by man-

kind. We thus render ourselves, by free coinage of silver, more independent of gold exports and appreciations during the mad scramble of the nations in efforts to maintain the gold standard.

That it would cheapen money is possibly its first effect, and this would be curative or remedial, and would save the industrial world from further extortion and ruin at the hands of the money power that for many years has been appreciating money and rendering it so dear that ruin has been greater among all western nations than could have been wrought by invasion either of armed forces or Asiatic cholera.

A PROPER AMERICAN SYSTEM OF MONEY NECESSARY.

As to the effect of our legislation regarding silver on the other nations, let me say that we should keep in mind the effect of money legislation on our own country. We must legislate for America, not Europe. Senator JONES of Nevada has well said:

It is one of the inalienable rights of a free people to provide themselves with a sufficient and properly regulated money system, regardless of the systems prevailing in countries of less enlightenment, or in which the rights and interests of the people are subordinated to the cupidity of money lenders and privileged classes.

But, to say a brief word on effect of free coinage of silver by our nation upon other nations, I will state that it will cheapen gold and raise silver all over the world, and that almost instantly.

Relieving the undue strain that now exists on gold by injecting silver as fast as our mints could coin it into the metallic money of our country would at once show to Europe that we would no longer pursue a blind competition with them for gold. It would at once make a new valuation of gold in relation to silver and all other commodities throughout Europe, and even in China and India.

If silver displaced gold in our coinage so much as to permit the flow of a single hundred millions of gold to Europe it would so far enlarge their supply and raise prices all through the countries where we now have to sell on prices ruinously low. Silver, on the other hand, would rise to our mint price, \$1.29 per ounce, in every market of Europe and the Orient. I quote the Senator from Nevada again—page 395, speech of October, 1893:

I must here repeat that there is no ground whatever for supposing that in case of the remonetization of silver in this country all the silver of the world would be sent here.

As quickly as the telegraph could convey the news that the United States had fully remonetized silver, that metal would command \$1.29 an ounce in every market in the world. As I have said, there is no silver bullion in the markets of the world to exceed 25,000,000 ounces, if so much. Such silver as may exist in any market would not need to come to the United States, because when men knew they could get \$1.29 for it by sending it here they would not part with it for less.

We have a demonstration of this in the fact that when in 1890 there was some expectation that a free-coinage bill might become a law in this country, and silver rose in consequence to \$1.20 an ounce, it rose to that price not in the American market alone, but in every market of the world that had any silver bullion for sale.

When it is said that the hoards of silver in India would come here to be exchanged for gold there is not the slightest foundation in reason for such a supposition. Gold is not the money of the 280,000,000 people of India, and it is impossible to conceive that it ever can be. The remonetization of silver simply means that with silver freely admitted to the mints gold would fall in relation to silver.

Yet let me say that silver coinage alone is not sufficient for the protection of our people. Metals are always subject, more or less, to go and come by export and import.

Paper money must be also issued and added to give adequate volume and steadiness of value to our currency, and its highest utility will be found when issued by the Government to supplement the volume of specie and used to maintain adequacy and uniformity of circulating volume. If metallic money becomes relatively scarce by export or otherwise, let the deficiency be supplied by Government issues to prevent contraction of the aggregate volume of coin and paper in circulation and to keep up an increase of money to accord with the increase of population and business.

If by balances of trade or from other sources there should come too great an addition of coin to our currency so as to raise prices too high and do injustice to the creditor class of our people, then let the Government withdraw and cancel enough paper money or notes to keep the aggregate volume at a proper equilibrium.

This would be wisdom in financial legislation.

This would secure justice regarding debts.

This would maintain prices and profits.

This would insure prosperity.

This would protect the people.

But to secure these results we must recognize the right of the Government to issue Treasury notes and to make them full money or legal tender.

We must insist on the value of money always dependent on volume, being regulated by Congress and Congress must represent the highest good of the people.

Congress shall have power to coin money and regulate the value thereof.

This is our constitutional power and duty, and we know that there is no way to regulate the value of money except by regulat-

ing the quantity or volume. To give the power, "elasticity," of controlling the volume over to banking corporations is to betray our people.

DO BANKING CORPORATIONS STAND HIGHER THAN SOVEREIGN GOVERNMENT?

From what sources have banks received a higher power or right of issue than is held by the Government itself?

It is in vain for the bank syndicate to cry out against Government issues of paper money on the theory that the Government has insufficient power to issue and legalize paper money while banks have power to do it or can obtain the power to do it by law.

What arrogance for them to assume that the Government can by law bestow upon the banks a right to issue money while not itself possessing the right!

What stupidity for them to teach that they are greater than the Government!

What ignorance or deception for them to insist that paper money issued by the Government is any more fiat money than what they would issue by fiat of law supplemented by the fiat of the banks!

We say again, there is no money in nature. Money is an artifice of man and the creation of law.

Any money issued without the authority or decree or fiat of the sovereign Government is counterfeit and fraudulent, and the issuers of such money, whether of paper or coin, should be apprehended, and, if found guilty, should be punished accordingly.

In my speech on Money, Banks, and Debts of the World while the bill for the repeal of the tax on State-bank issues was pending I endeavored to make this the legal basis of money clear. But to what I then said I shall add additional authorities on this occasion so as to clear away all doubts on the matter.

MONEY EXISTS BY LAW AND NOT BY NATURE.

Henry Cernuschi was perhaps the ablest scholar that appeared before the monetary commission of our own country in 1877.

He defines money and speaks of it as follows:

I will give you my definition of money: Money is a value created by law to be a scale of valuation and a valid tender for payments.

Certainly everyone understands that, as regards paper money, the value is created by law; but it is, perhaps, not easy for everyone to admit that, with regard to metallic money also, the value is created by law. It is, however, the fact. If you suppose that gold is not money, is not legal tender—if you suppose that silver is not money, is not legal tender—the value of gold and the value of silver is lost.

This fact that money is a value created by law is one of great importance, and I can cite you the highest authorities in proof that what I say is true.

When this question was put to the witness—

Q. Supposing the gold and silver metals to have no other use than as money, would they then maintain the same value that they now maintain as money?

He answered—

A. There would be a diminution of their purchasing power, because the purchasing power of money is in direct proportion to the volume of money existing. If all gold and silver are used solely as money, all the ornaments and all the jewelry will be melted and coined, and the volume of money will be increased. It will be exactly as if a new mine of money had been opened. And the volume of circulating money being made larger than before, there will be a corresponding diminution in the purchasing power of every metallic dollar.

Again he says:

Mr. Chairman, the doctrine that money is a value created by law was promulgated twenty-two centuries ago. It was advanced by Aristotle, the great philosopher—is practical and so positive that I would dare call him an American philosopher. I quote from his writings:

"Money (nomisma in Greek) by itself is but a frivolity, a trifle, and has value only by law (nomos in Greek), and not by nature, so that a change of convention between those who use it is sufficient to deprive it of all its value and power to satisfy all our wants. (Politica.)"

In virtue of a voluntary convention, money (nomisma) has become the medium of exchange. We say "nomisma," because it is not so by nature, but by law "nomos," and because it is in our power to change it and to render it useless. (Ethica.)

There is great weight attached to what that great economic writer Henry Dunning MacLeod may say, and rightfully so, when he is not a special pleader, as in his recent article against silver.

In his Principles of Economic Philosophy, volume 2, page 346, I find that, after approving some things John Law has said, he quotes this from Law: "Any goods that have the qualities necessary in money (by which he means the commodity value of the thing) may be made money equal to their value."

"In this sentence," MacLeod goes on to say, as I have quoted him already while speaking on the nature of money, "is concentrated the whole essence of that eternal delusion * * * which we designate Lawism. It is indeed nothing but the stupendous fallacy that money represents commodities. No man who does not thoroughly understand the great fundamental principle established by Turgot and others, that money does not represent commodities, can ever have sound ideas on this subject. Money does not represent commodities at all, but only debt or services due which have not yet received their equivalent in commodities."

SOVEREIGN GOVERNMENTS, NOT BANKS, SHOULD ISSUE ALL MONEY.

On the general proposition of permitting banking corporations to issue currency and expand and contract volume and the prices

of all things that money measures or prices or values at their own option, I desire to support my general arguments against it by referring to some great names and authorities under the general heading

SHOULD BANKS BE ALLOWED TO ISSUE CURRENCY?

The money power are doing their utmost to establish the claim by constant assertion, for they have no argument in the case that the Government should, as they call it, "go out of the business of banking." In this they are begging the question by a misuse of terms, for issuance of circulating notes is no proper function or duty of banks any more than coining money is the duty of banks instead of the National Government.

The legitimate business of banking is to deal in exchange, loans, and deposits.

The Government should indeed keep out of this, but the legitimate and constitutional duty of the National Government under our Constitution is to coin and issue all money needed for circulation and regulate its value by the only method possible, which is to regulate and control its volume.

Daniel Webster, who has been so greatly eulogized within the last few days in this House, on the occasion of unveiling his statue, said of paper-money circulation:

Its regulation naturally belongs to the hands which hold the power over coinage. This is an admitted maxim by all writers.

The plea of the advocates of bank issues instead of Government issues of paper money rests largely upon these points, which they say are essential in a sound currency and can be furnished by the banks—

First. Security of final redemption.

Second. Convertibility.

Third. Elasticity.

On this third point I have already shown that elasticity such as they mean, which disturbs the volume, disturbs prices and profits and these must not be under private control.

The first two rest on the delusion that it is in money matters safer to have representatives of money in circulation—credit substitutes, as they call them—than to have legal-tender money itself in circulation.

Of course the idea that substitutes for legal-tender money are better than the money itself is a snare and a delusion.

The whole theory of compulsory coin redemption of money is wrong to those who will take the trouble to investigate.

The old economists did not have the benefit of full light and liberty on a question of a properly discovered system of legal-tender paper money issued and controlled by the Government, independent of the coming or going of gold, nor did all the fathers of our own Republic prior to the issuance of the greenback properly discern the idea that money is wholly a creature of law. But they had no doubt as to the effect of volume on prices, and therefore generally took ground against bank issuance.

But General Warner, from whom I have already quoted, in his testimony and statements before the committee says, on page 245:

Acting upon this principle, the business of banking and the creation of money are so distinct and separate in their nature that they can not be safely blended.

I say that all enlightened nations have abandoned the practice of turning over the issue and regulation of currency to an indefinite number of banks. It was stated yesterday before the committee that the three things necessary to a sound currency were, first, security; second, convertibility as a means of regulation, and third, elasticity. Now, I wish to refer to these three principles briefly in their order. First, security. One of the earliest Secretaries of the Treasury, Crawford, I think, and I have not had time to look that up, said that the security of final payment of notes was no such regulation of quantity as would secure stability in the value of the currency. That saying was quite extensively quoted in the British discussions on that question as being a clear statement of a perfectly sound doctrine.

Mr. COBB of Alabama. Please state that over again.

Mr. WARNER. That the security of final payment of notes, or their redemption, is no such regulation of the quantity of money as will insure stability of value, and the reason for that is very apparent. The United States might now issue \$500,000,000 of 5 per cent bonds, and if it would allow banks to take these bonds at par, is there any doubt but that the national banks would issue \$500,000,000 of currency, or as much as they are allowed by law to issue? The ultimate payment of the notes would be amply secured—there would be no question about that, none whatever—but the quantity of the currency would be so increased that its value would become immediately depreciated.

At first the depreciation would extend not only to the paper part but to the coin as well, involving the entire currency of the country as compared with the currency of other countries; hence the principle of ultimate security was abandoned sixty years ago as a principle upon which the regulation of the currency could be safely founded. If security of note circulation is a safe principle, then security by a pledge of land ought to be as good as a pledge of bonds. John Law said: "Any goods that have the qualities necessary in money may be made money equal to their value."

Mirabeau said of the French assignats: "They represent real property, the most secure of all possessions, the land on which we tread." The fundamental error in this principle lies in the attempt to hold a thing as property and at the same time to coin it into money. At bottom the principle of basing the currency on bonds is just as vicious as basing it on land. There is no limit to the amount of bonds that may be issued any more than for the land that may be pledged, nor as much; but the principle itself is wrong for the reason that security of final payment affords no proper regulation of quantity upon which the value of each unit depends.

Ricardo, in his evidence before the secret committee of the House of Commons in 1819, says:

"Plans for an improved system of currency are frequently laid before the

public which rest entirely upon this fallacy. The exclusive object of these systems is to obtain for the paper currency to be issued under them a greater degree of security than that which is supposed to attach at present to the notes of the Bank of England. This end the authors of these schemes generally propose to accomplish by contrivances which they deem to be extremely ingenious, but which always resolve themselves into the simple plan of making property of some kind or other the basis of the circulation. Sometimes the plan suggested proposes to issue a paper currency against the security of land, sometimes against the security of the public debt, and sometimes against merchandise in the docks; but, having provided for the security of the notes, the plan generally terminates at this point: the projector apparently conceiving that he has satisfied all the desiderata of a good paper currency, although he has introduced no specific measure for regulating the amount of that currency and maintaining its value relatively to the currencies of the other countries of the world."

The second principle, as a means of regulation, is convertibility. In the bullion report of 1810 the doctrine seemed to be conceded that if a currency was convertible—although the report stoutly contended against the doctrine that ultimate security was a safe principle at all times—that then it never could fall below the value of metallic money, or of the metallic standard; and that doctrine was held and acted upon, almost without dissent, I believe, until 1833. But the experience in England, after resumption in 1819, up to 1826, was such as to lead to a very careful reexamination of that principle, and, although the directors of the Bank of England had prior to that time acted upon that principle and considered it perfectly safe, they were obliged, as Mr. Norman admitted, to abandon that principle.

It was during this period, from 1819 to 1826 and on to 1844, that the question underwent such a thorough discussion, when everything was thoroughly thrashed out and every suggestion and every claim was ground to powder and all errors sifted out and the truth finally established, and one of the conclusions reached was that even convertibility could not be relied upon as a safe principle for the regulation of the amount of currency.

There were those even before 1836 who had opposed the doctrine that either security or convertibility could alone be relied upon to properly regulate the currency. Mr. Horner, in the Bullion Report of 1810, says:

"An increase in the quantity of the local currency of a particular country will raise prices in that country exactly in the same manner as an increase in the general supply of precious metals raises prices all over the world."

Ricardo says (see High Price of Bullion):

"It would be readily admitted that whilst there is any great portion of coin circulation, every increase of bank notes, though it will for a short time lower the value of the whole currency, paper as well as gold, yet that such depression will not be permanent, because the redundant and cheap currency will lower the exchange and will occasion the exportation of a portion of the coin, which will cease as soon as the remainder of the currency shall have regained its value and restored the exchange to par."

Webster said, in his speech on the subtreasury bill, March, 1838:

"I contend even that convertibility, though itself indispensable, is not a certain and unfailing ground of reliance. There is a liability to excessive issues of paper, even while paper is convertible at will; of this there can be no doubt. Where, then, shall a regulator be found? What principle of prevention may we rely upon?"

J. R. McCulloch says:

"When the currency of any particular country, as of England, consists partly of the precious metals and partly of paper converted into them . . . the excess of paper is not indicated by depreciation or fall in the value of paper, as compared with gold, but by a depreciation of value in the whole currency, gold as well as paper, as compared with other States."

Lord Overstone said, in his testimony before the commission of 1875, page 409:

"Convertible notes may be issued, continually depreciating the currency, until the metallic portion of the currency has been entirely banished from the country."

On the following page he says:

"The changes in the amount and value of the paper currency of the United States have been greater than in any other country, and it has produced an unprecedented amount of bankruptcy and ruin."

And again, page 41, he says:

"It is undoubtedly true that convertibility is an ultimate security against a permanent excess of the currency, and fixes a limit beyond which such irregularity in its management can not be carried. But this principle only comes into operation through the medium of prices. If the currency be in excess, prices of all articles are affected in a corresponding degree; hence the balance of trade is disturbed, the exchanges are consequently affected, and a tendency is produced to export gold. . . . Convertibility will not by itself prove a sufficient protection against excess in a paper currency."

And in his pamphlet on the management of the circulation previous to 1839, he says:

"It is not sufficient merely to ordain, as Peel's bill did, the convertibility of the notes; it is further necessary to see that effectual means are provided for that end. It is now discovered that there is a liability to excessive issues of paper, even while that paper is convertible at will."

The next principle is that of elasticity. They say we must have an elastic currency. The Secretary of the Treasury says:

"A sound and elastic currency, capable of adjusting its volume easily and rapidly to the actual demands of legitimate business, is what the common interest of all our people requires."

I say to the Secretary of the Treasury that perpetual motion is a great deal easier to obtain than that kind of elasticity. It never did exist in the world and it never can. There is absolutely no such relation between the supply of paper money and the uses for money as admit of automatic regulation, and for a single reason. If paper money was issued only to meet the demands of business arising out of an increased number of transactions—that is, increased purchases and sales of goods—then such a principle might be possible; but the fact is the effect of an excessive currency is immediately to raise prices, and as prices rise the demand for money increases pari passu with the rise of prices, and when prices are doubled the demand for \$3 in every transaction is just as great as the demand for \$1 was before.

Mr. HALL. Does that principle apply to bank currency?

Mr. WARNER. Certainly, to bank currency as well as to any other, as I will show you a little further on; it applies to any currency that is issued in excess, I care not what kind of currency it is. It would apply to the precious metals if there was, at any time, such a production of the precious metals as would greatly increase the proportion of metallic money to commodities to be bought and sold or to be circulated by money, then the rise of prices that would follow would create an enlarged demand for money. Rising prices never take up and give back. They take up and hold. The experience of the whole world is against the idea that business takes up money and gives it back automatically.

Our experience under the old bank-note system is enough to set that at rest. One single fact is enough. Between 1830 and 1837 the notes of the banks of this country increased from \$61,000,000 to \$149,000,000, and then they went down until, in 1843 there were only \$53,000,000 of them. That was the way an elastic currency worked then, and it is the way it always worked. It is the

way it worked in England when they had much more rigid restrictions than we ever had in this country.

An elastic currency! It is a delusion. By what principle are banks governed, or will they be governed, if we turn over to them the issue and regulation of the currency? I ask that question. Banks are institutions organized for private gains. They are controlled by one principle alone—their own interest. If they can derive a profit by putting out more currency, they will put it out. There is no limit to the quantity of money they would put out or that the country would take.

On this question of elasticity let me read from the Bullion Report.

Mr. HALL. What bullion report?

Mr. WARNER. Of 1810, the Horner report, the famous bullion report.

As far back as the Bullion Report of 1810, Mr. Whitmore, then late governor of the Bank of England, stated the rule of the bank then to be "to govern its issues by the amounts of good paper offered for discount, on the principle that the public will never call for more than is absolutely necessary for their wants." This is what the Secretary of the Treasury seems now to think a safe principle—that is, business will not call for any more money than it wants, and banks will not put out any more than business calls for. But, referring to this principle, the Bullion Report says:

"That this doctrine is a very fallacious one, your committee can not entertain a doubt. The fallacy upon which it is founded lies in not distinguishing between an advance of capital to merchants and an additional supply of currency to the general mass of circulating medium." (Bullion Report, page 55.) Lord Overstone, in his testimony before the commission of 1875, says, page 384, "the public will call for and take money to any extent"—there is no fear of that; and again, on page 395:

"I have no hesitation in saying that the Bank of England can put out any quantity of its notes that it thinks proper; that the effects of that will be to drive gold out of the country; that the notes will take the place of gold in the circulation, and that will go on until the whole of the gold has been driven out of the country."

Sir Charles Wood said, discussing the act of 1844:

"It was held in the bank parlor, as it is by many even now, that to issue paper on good commercial security was all that was necessary to insure the proper amount of paper being in circulation."

That idea, however, long ago was abandoned in England, but it seems still to hold a place in this country.

Mr. WARNER. As Mr. Weguelin said, the wealth of the world is offered against money. A distinction must be drawn between borrowing money and buying money. Money on the one hand stands offered against everything, and everything on the other hand stands offered against money. Money will go out and continue to go out as prices rise, and as prices rise and confidence increases the demand for money increases, and there is no principle of elasticity which operates until the point of explosion is reached. This is reached when gold begins to go out, or so much of it goes that confidence is destroyed; then panic follows and there must be a contraction all along the line. It is a contraction, however, after the explosion, and that is the way such a currency is regulated and always has been.

The experience of every country, I think, has been the same; that is, first an expansion, then a sudden, violent, and ruinous contraction. That is the necessary consequence of a currency the issue of which is left to the discretion of those issuing it or to their interest. It was shown in report of 1857 of the commission that even the 205 country banks of England could not be trusted with the responsibility of issuing circulating notes. Sir Robert Peel said on that point:

"It appears to me that we have, from reasoning, from experience, from the admissions made by the issuers of paper money, abundant ground for the conclusion that under a system of unlimited competition, although it be controlled by convertibility into coin, there is not an adequate security against the excessive issue of promissory notes."

Now, take the 10,000 banks in the United States, and delegate the power to all of them to issue notes, and entrust to them the duty of regulating the currency of the country. What will be the result? When will they begin contracting? Not until the issue of money ceases to be profitable to themselves. The drain of gold will fall first, of course, upon the banks of the seaboard, the great cities. They may check their issues, but the country banks will pay no attention to that. Inflation will go on long after the gold begins to leave the country. Why, the idea of maintaining a gold standard under a system of currency of that kind is so at variance not only with the experience of every nation in the world but of reason, that I am astonished that such a proposition as this should be brought forward at all.

Compare this with the restriction system of England, Germany, and other European countries. What other country would even for a moment entertain a proposition to turn over the issue and regulation of currency to 10,000 banks? Indeed, it is a proposition too monstrous for anybody to consider and maintain mental equanimity. If the author of this scheme had ever read the discussion on the subject of the regulation of currency which took place from 1810 to 1837 in England, or if he had ever read the Report of the Parliamentary Commission of 1867 he would never have connected his name with a scheme that can be compared with no other ever proposed, except that once undertaken by John Law.

Any proposition that turns over the regulation of currency to institutions organized for private gain is at bottom wrong. Unless it is to their interest to furnish the business world with money they will not do it, and the business world must suffer the consequences. There is the fatal defect in this proposition, and which in my judgment is enough to condemn it utterly.

Mr. Chairman, I will not take up the time of the committee any longer, but will simply say I am very much obliged to you, and that I would like to add to my statement a few quotations which I have not had time to read.

Mr. COBB of Alabama. Can you give us something as a substitute? You have been tearing down, but you are not building up anything.

Mr. WARNER. I would do this. I would do exactly as is recommended in the report of 1857. There is but one way by which the currency can be automatically regulated. The world has never found but one, and that is through the production of the metals. Subject the supply of money to the same laws that govern the supply of everything else. Then if the production of metallic money should be unduly increased, it would, of course, become depreciated, as would be made manifest by rise in prices; but the point would very soon be reached where it would be easier to obtain a dollar, or where a dollar could be obtained with less labor and energy by producing something else to exchange for it than digging it from the ground; then the production of the metals would in that way be checked. I say that is the only automatic way the world has ever devised or ever known for regulating money.

In addition to that, all money that supplements the metals should be rightly limited to some proportion between population and business, the one purpose being to maintain stability—the greatest possible stability. Again, another objection to the kind of currency proposed in this bill is that it is not a legal tender. All money ought to be a legal tender. If it pretends to be money, it should be money when you pay it out as well as when it is paid to you. Nothing should be allowed to circulate as money that is not money.

I wish to acknowledge the clearness and great value found in the statement of General Warner as against banks of issue, but I

desire to say that I do not agree with him that the automatic theory of regulation of volume founded on the mining product of gold and silver is either a safe regulation at all times or a basis of sufficient supply, and there is no assurance as to the quantity of the future supply or adequacy for the present needs of civilization.

In the last sentences I have quoted from him he himself practically gives up the automatic theory of metallic limitation when he says that—

all money that supplements the metals should be rigidly limited to some proportion between population and business, the one purpose being to maintain stability.

This is correct and defensible as a basis of limitation.

THE "SCARE WORD" OF "FIAT MONEY."

From what source have banks ever, in this country, derived the privilege of issuing notes to circulate as currency?

Always and only by the grant or law of the colony, State, or nation in which such banks exist.

Will anyone, then, state on this floor that foolish and indefensible doctrine that a government can grant a power to banking corporations that it can not maintain and exercise itself?

To state the question plainly is to expose the fallacy of our opponents; for Congress can not authorize any corporation or agent to do what it can not properly and constitutionally do for itself.

It is now generally seen and conceded, and no member on this floor will deny, that money can not be coined or issued or otherwise sufficiently certified for general circulation without the authority of law, and the right and force of money as such, whatever it may be, are legal rights—not natural.

In short, money is the creature of law.

All genuine money, whether coin or paper, is in this sense fiat money.

The term "fiat money" is another scare word or "bogey man" with which the cunning bank syndicate would scare people out of the right to exercise their own authority to issue legal-tender notes. Bank notes can not and do not circulate in this country except by the fiat of law. They are the joint creation or fiat of the banks and the Government.

BANKS VERSUS GREENBACKS.

In my speech before this House on money, banks, and debts of the world, when the question of repeal of the tax on State-bank circulation was before Congress, I gave a strong list of noted authorities to establish the quantitative theory of money value—I need not repeat the quotations here—but a few words on the application of this elemental and universally accepted monetary truth to the question now before us.

All the propositions coming from this Committee on Banking and Currency and all advocated by those anxious to befriend the money and bank power in this country, as far as I know, and especially the Carlisle plan, and the Baltimore plan, provide for banks to have control over the issuance of notes to circulate as money and thus to control the volume of money in circulation.

To give this power to the banks is to turn over to them the power over prices and the prosperity of the people.

Why should Congress abdicate its rights and turn away from its responsibilities to protect the people from the ruinous aggressions of the money power?

Has Shylock in these modern days become a saint, that he should receive greater power and service than ever before?

Have gentlemen on this floor lost view of the great injustice and irreparable damage they do to the people who sent them here when they propose to turn over to the banks the control of all prices, profits, and through these ultimately all property and wealth of our unsuspecting population?

Surely no Congressman can be ignorant at this stage of the discussion that all of these propositions look to the denial to the Government of the right to provide and maintain in circulation an adequate supply of money "and regulate the value thereof." Shall we surrender the constitutional duty and power of Congress to banking corporations by vote of the Democracy?

In the corrupted currents of this world
Offense's gilded hand may shove by justice;
And oft 'tis seen the wicked prize itself
Buys out the law.

But Congress must see to it that Shakespeare's cutting analysis of the corruptions of the courts have no fitting application in an American Congress.

I can not imagine a more dangerous surrender of power than this would be that could ever come in times of peace to the Congress of the United States—

When all the blandishments of life are gone,
The coward sneaks to death, the brave live on.

Mr. Chairman, I could never believe that the freely chosen representatives of 70,000,000 Americans could be induced to so far betray their people, if I had not on a former occasion witnessed the confusion and cowardice of so many Representatives who yielded to the threats and clamors and blandishments of the gold and

bond conspiracy when the people stood for, and still ask for, the restoration of silver as a standard money.

THE PARITY FRANK AND THE GREENBACK.

The so-called Sherman silver-purchase bill, enacted as a compromise measure in the act of July 14, 1890, between the free-silver and gold-standard opponents, had in it a more vicious, far more vicious, measure than simply the purchase of four and one-half million ounces of silver bullion per month.

I refer to that clause and provision of the law, which is the cunning statement of a doctrine or the catch phrase of a campaign speech rather than the enactment of a law, declaring it to be—

The established policy of the United States to maintain the two metals (gold and silver) on a parity with each other upon the present legal ratio (16 to 1) or such ratio as may be provided by law.

The free-silver men were permitted to believe that this admitted the doctrine that silver should henceforth have equal right before the governmental authorities with gold at the standard ratio of 16 to 1 until some other ratio should be established by law; but Senator JOHN SHERMAN, who was as deep in this scheme to subordinate silver to the gold standard in 1890, and is still in 1895, as he was in the demonetization scheme of 1873, seemed to have known just what interpretation the Harrison Administration would put upon that phrase, and so keeping "the two metals at a parity with each other upon the present legal ratio" has from that time to this been construed to require not an equality or parity between them on the 16-to-1 ratio, but a constant and determined subordination of one of the metals—silver—to the other—gold—on the theory that all other money, silver as well as paper, must be redeemable on demand instantly in gold; as if gold alone was the only money of ultimate redemption.

Surely the eminent services that the eminent demonetizer has rendered the European gold mongers ought to entitle his portrait to a place in the innermost temples of the gold worshippers of Europe.

Surely the shylock, schuckling over the successful game and trick of gold redemption of all other money which they are playing upon the leading nations of the commercial world, while they play the elasticity scheme of contracting and clutching the gold always when most needed by the debtor world, can find abundant reasons for lauding the financial qualities of their greatest advocates in America.

Parity! As played upon our people it is worse than the plague of fiery serpents upon ancient Israel in the wilderness. And the lifting up of silver before the people, coined without limit, into good, bright, and honest dollars will have as great an effect instantaneously and psychologically to cure the gold plague of our day as did the lifting up of the brazen serpent to cure the plague of the ancient times.

But I have already sufficiently discussed the question of misconstruing the word parity.

Does anyone believe, after a careful and fair-minded investigation of that "parity" clause, that the two metals—not coins, but metals—gold and silver, are kept at a parity or on an equality on the old ratio by such a subordination and noncoinage of silver? Does such conduct tend to keep up the price or value of silver? Does it not, on the other hand, cast silver down and greatly depreciate its use and value and destroy the very parity that they profess they desire to uphold?

And to-day listen to the ominous sounds that come up to these halls from the tamed and untamed beasts (the bulls and bears) of Wall street declaring that the public credit is endangered; that the gold in the Treasury is about to be carried away and the Government to be left without gold resources with which to keep up the redemption of United States notes and Treasury notes—aye, that even European money speculators are afraid we will, by this drainage of gold, be driven upon a silver basis.

Is there any member of this House who needs to be told that the policy and decision of our Treasury officials to keep silver in subordination to gold are the very means that subject our Treasury to a constant drainage of its gold reserves?

Does not every member who is in any degree competent to legislate on this question know that if our Treasury officials would at once exercise, as our present laws allow, the option that European governmental officials, notably in France, constantly exercise of paying all coin obligations in silver coin, and to such extent as best agrees with the needs and supplies of the Treasury, that this would at once protect the gold reserve and stop all runs upon our Treasury to obtain gold?

THE PURPOSE OF THE MONEY POWER REGARDING TREASURY GOLD.

What, then, is the meaning of this clamor from Wall street and the bond markets?

It means that they wish to keep up the very condition of a gold redemption of greenbacks or some other form of money easily accessible to them, that permits the drainage of gold, at their option, from the Treasury. But at the same time by trying to

alarm the country generally they hope to secure financial legislation that secures to them these two points:

First. To get United States bonds issued in quantities sufficient to provide them investments for idle money, money that declines to take any part in the risks and contingencies of our industries and property, which suffer in falling prices necessarily while the country is being driven upon the narrow and contracted gold standard. And these bonds, they insist, must be exempt from taxation, with interest semiannually or quarterly and payable in gold.

Second. To get the noninterest-bearing legal-tender notes of the Government, so highly valuable to the people, retired, canceled, or locked up out of circulation, so as to provide more room for them to issue and loan their bank notes to the people, and so also to better control the volume of money in circulation for expansion or contraction at their option, thus making it elastic for them, and as their interests and profits may require. Never yet have they proposed a currency elastic for the relief of any other class than themselves.

GREENBACKS NOT THE CAUSE OF FINANCIAL STRINGENCY.

I challenge any member on this floor or any man elsewhere to find any instance among intelligent business men and laborers anywhere in the country where they have ever shown lack of confidence in the monetary qualities and debt-paying power of the greenbacks.

The people everywhere know they are as reliable as the foundations of the Government itself. They are the best money ever coined and issued to the people.

Then away with this sham cry against the legal-tender Government money.

It is because Government money is the best money that the bank syndicate clamors so boisterously for its retirement.

They want the best and full legal-tender money out of the way, so that from sheer necessity the people will have to use their inferior bobtail nonlegal-tender bank issues.

They are trying to play the old fox game on the Government and people to persuade them that it is far better for them to cut off their own legal-tender currency.

REMEMBER AÆSOP'S FABLE.

By his own avariciousness an old fox had lost his tail in a trap and feared he would, owing to this shortage, become the laughing stock of all the other foxes in the country. So he resolved to try to induce them to have their tails cut off also. At the next assembly of the foxes he made a speech on the unprofitableness of tails in general, on the greater advantages of promissory substitutes for tails, and the inconvenience of foxes' tails in particular, since they so greatly exhausted the resources of the central body while in circulation, and were often switched around so as to disturb the gold reserves.

WHY DESTROY THE GREENBACK CURRENCY?

Again we ask, Why this sudden and impulsive haste to get rid of United States legal-tender notes? Whence arises the banker's animosity to them.

Have the common people, manufacturers or merchants, ever demanded their retirement? Have they ever failed to pay debts or to circulate at par for debt-paying purposes and exchange for commodities?

Has anyone ever questioned their reliability to perform all the functions of money given to them by law?

But we need not go far to find the reasons why the associated banks are against them.

First. They are better money than any the banks can issue in competition with them.

Second. They supply near \$500,000,000 of money for circulation (\$346,000,000 greenbacks and \$152,000,000 of Treasury notes) to the people without interest cost, and the bankers can make no profit on their issue.

Third. Their volume is beyond the option and power of the banks to contract and expand at their pleasure. So to that extent illustrate a currency which, if issued in proper volume, would destroy the power of the banks to manipulate prices, profits, and progress of industry.

They rest on the law and credit of the Government without the mediation of a priesthood of Jewish bankers. They are pure and perfect money to the extent of their volume and legal-tender qualities. They are the noninterest-bearing form of national debt, and if issued in proper volume would destroy the burdens of bonded debt.

Mr. St. John, before the Committee on Banking and Currency, well said "that the underlying demand of the gentlemen who have been here to testify in behalf of any of these bills is that the greenbacks shall be retired. That is basal in their demands. Profit to the issuing banks is the first requisite of any creation of bank notes."

It may not be improper here to suggest that every one of these reasons why the bank-issuing fraternity dislike the greenback currency is also a strong reason why the people of our country

should hold to them and resist the selfish demands of the banks regarding them.

Why should banks decry the credit of the little noninterest-bearing bonds in shape of greenbacks, which the people need even in greater volume in circulation, resting, as they do, on the law and decree of the Government, while at the same time they have used larger and interest-bearing bonds, resting on the same law and fiat of the Government, as an all-sufficient basis of security for their own national-bank issues?

Why do they still decry greenback form of money, while they still use it with universal approval among themselves as bank reserves and perfect redemption of their own note issues?

That want of parity does not interfere with international trade, and that paper legal-tender money will stay at home better than metallic money, and yet be no interference to our foreign trade, while maintaining prices at home, I quote again Senator JONES, and through him Professor Cairnes and John Stuart Mill:

With a national money—a money which would not be sent out of the country—there would be no great rise or fall of prices, and no great changes in the volume of money. All the money would remain in the country, for the use of our own people, and all differences in exchange would then be settled (as they should be settled) by commodities.

It would then be as profitable to meet balances of trade with commodities as with money, because our money would in foreign countries be mere merchandise, which, I assert, is as it should be. The money supply of our country should not be continually oscillating between a feast and a famine, alternately raising hopes and dashing them to the ground.

WANT OF PARITY NO OBSTACLE TO FOREIGN TRADE.

The absence of a parity between the moneys of nations does not affect their foreign trade, as some would have us believe. I challenge any gold-standard Senator to point to an authority of repute on political economy who anywhere pretends to assert that any nation having money other than gold is, or can be, injuriously affected in its business or other relations by any variance in what is called the parity of moneys. The money of this country, whether gold, silver, or paper, will always command—will always purchase—upon equitable terms, the money of any other country with which we have commercial relations, whether those relations be directly with itself or through other countries.

One of the most eminent of economists, Prof. J. E. Cairnes, of the University College, London, though an eminent advocate of the gold standard, in his *Leading Principles of Political Economy*, says:

"It appears to me that the influence attributed by many able writers in the United States to the depreciation of the paper currency, as regards its effects on the foreign trade of the country, is, in a great degree, purely imaginary. An advance in the scale of prices, measured in gold, in a country, if not shared by other countries, will at once affect its foreign trade, giving an impulse to importations, and checking the exportations of all commodities other than gold."

"A similar effect is very generally attributed by American writers to the action on prices of the greenback inconvertible currency. But it may be easily shown that this is a complete illusion. Foreigners do not send their products to the United States to take greenbacks in exchange. The return which they look for is either gold or the commodities of the country; and if these have risen in price in proportion as the paper money has been depreciated, how should the advance in prices constitute an inducement for them to send their goods thither? The nominal gain in greenbacks on the importation is exactly balanced by the nominal loss when those greenbacks come to be converted into gold or commodities. The gain may, in particular cases, exceed the loss, but, if it does, the loss will also, in other cases, exceed the gain. On the whole, and on an average, they can not but be the equivalents of each other."

I find this point touched upon also by an American writer whom I regard as one of the ablest contributors to the literature of political economy to be found in this or any other country. I allude to Mr. John P. Young, the managing editor of the *San Francisco Chronicle*. In a luminous article on bimetalism, in the issue of that journal for August 3 last, Mr. Young says:

"But the suggestion that this country might have a sole silver currency is the bogie that frightens many who know little or nothing of the subject. 'To have a sole silver currency' in their eyes means unparalleled disaster. Such people completely ignore the fact that during the period that we had a sole gold currency no one thought that the country was threatened with ruin because the dearer silver was not coined. Such as gave the subject a thought at all and had any real knowledge of the difficulty desired that the mistake of undervaluing silver might be corrected, but they would have judged a man a fit candidate for the lunatic asylum had he asserted that disaster would certainly follow the free coinage of gold because it was cheaper than silver."

* * * If a nation has resources and a people capable of developing them it will increase its wealth, no matter what sort of money it employs to circulate values, provided the standard of values is not tampered with.

"Between 1860 and 1890 the precious metals, silver and gold, were not used to circulate values in the United States. Our only currency was the greenback—except in California. There was no demand for gold except that artificially created by promising to pay the interest on bonds in money of that metal, yet during the period in question, in spite of a devastating war, during which production was interrupted and vast quantities of property destroyed, the wealth of the United States increased from \$16,160,000,000 to \$43,042,000,000, or nearly threefold in twenty years. If the theory of those who make a fetish of gold were sound this could never have happened. Nor while we were increasing our wealth at home did our foreign trade suffer. That went on precisely as described by John Stuart Mill in his chapter 'On the Foreign Exchanges.' After supplying an illustration, Mill remarked:

"It thus appears that a depreciation of the currency does not affect the foreign trade of the country. This is carried on precisely as if the currency maintained its value. * * * If the currency is depreciated 10, 15, or 20 per cent, then in whatever way the real exchange arising from the variation of international debts and credits may differ the quoted exchange will always vary 10, 15, or 20 per cent from it. However high this nominal premium may be, it has no tendency to send gold out of the country for the purpose of drawing a bill against it and profiting by the premium, because the gold so sent must be procured, not from the banks at par, as in the case of a convertible currency, but in the market at an advance of price equal to this premium."

A currency issued by the Government, in adequate volume and made full legal tender, circulating among a people, is the best possible form in which a people can fund its debt, for these three principal reasons:

First. It is an absolutely inexpensive form in which the people of a nation can carry their nation's indebtedness.

Second. It provides a more convenient form of currency than coin and independent of the international scramble for accumulations of precious metals.

Third. It provides a perfect safeguard, when issued in adequate volume, against contraction and expansion of volume in the interest of money dealers and protects prices of all other property and preserves the equities of time contracts.

WHY THEN COIN METALS INTO MONEY?

Then would you have the precious metals coined at all? asks an opponent. Yes; not that a Government paper currency can not, when wisely provided and its volume wisely regulated, prove the best currency independent of coins that a nation may have when competent to reach the highest ideals in practical realization, but because the traditional or race thought of our people demands an adherence to the coinage of metals, I would have the Government freely coin into dollars for all who desire it all the bullion that they choose to bring to the mints.

And again, as long as the banking forces can keep up the conviction among the people that money made of paper must rest on the basis of instant and compulsory redemption at the demand of the holder in coin, instead of resting on the decree of law and receivability of the issuing government, which principles keep up the monetary value of coins themselves, so long must we have the broadest possible basis of coin to furnish a sufficient and available supply of coin to support said redemption.

This requires a bimetallic basis, for all competent authorities are settling down to the conviction that gold alone can not furnish an adequate supply of coin for a sure maintenance of coin redemption. But, Mr. Chairman, why give away the interests of the public, the interests of all classes—the laboring, developing, and progressive classes—the truly American interests in a laboring and debtor nation, on this banking and currency question?

Why divert the bankers by temptations so strong to depart from the true, safe, and legitimate business of handling loans, discounts, deposits, and exchange which at all times and in every country is understood to be the proper sphere of true banking, and induce them to go into the business of issuing currency notes to supply the money that the Government itself should supply for the cure of the money famine now existing?

A THREE-CARD-MONTE GAME.

Why by law authorize bankers, in a sort of three-card-monte game with the public, to take up \$100 for every \$30 (30 per cent) that they put down, and to have the free use of the \$100 taken up for an indefinite length of time—to such time as they choose to lay it down again and take up the \$30?

Why allow this extraordinary privilege to the present bankers, with their thousand-million-dollars capital, and all other bankers who choose to bring other millions of capital into the bankers' side of the game? Have such privileges been offered to any other class of our citizens?

Coupling these privileges with the provisions looking to the retirement and destruction of the Government legal-tender notes so that the money issuers will have complete control of the circulating medium of the people, is there anything in sight left for the industrial interests of the country?

Is there anything to keep the money dealers from manipulating prices in their own interests and taking ultimate possession of as much property as they may desire?

Since they will have complete control of volume, who can prevent their control of price, for the most fundamental truth in monetary science is that the volume in circulation will and does control the price of all other forms of property?

Remember, too, that prices control profits and profits control the employment of labor and the prosperity and welfare of the people.

OUR ATTACK IS ON BAD MEASURES, NOT MEN.

Let no man on this floor jump too hastily to a false conclusion or assertion concerning my views or relations to the business of banking, nor let any man assert that I have any animosity toward bankers. I have no such views or feelings. I do not so much condemn the bankers who are urging legislation in their special interests as I condemn you who, on this floor by the confidence of your people and the sacred duty upon you of protecting their interests, seek by vote and speech to turn your people over to the control of the money power.

NEEDLESS FEAR OF FREE COINAGE OF SILVER.

There is a sort of terrorism on this silver question in New York City and a strong effort to suppress facts as bearing on the benefits of free coinage. I will quote what Mr. St. John, president of the New York Mercantile National Bank, said before our Currency Committee:

Public opinion is under a newspaper terrorism in New York. Men who agree with me fully, and I know many of them of considerable wealth, prefer to keep silent for the present. Any nobody who will write at length a lot of nothingness adverse to silver money will be accorded certain newspaper's

space and be dignified into great authorities. Rejoinder, if complete, and the more complete the more certainly is denied even a limited space. Again, other men believe that until a change of administration here approaches it will merely cost them influence to speak their conclusions favorable to silver money. Then, too, certain newspapers shield their readers against intelligence and cow them out of any timid convictions they might indulge.

As an instance, Mr. Horace White's *Evening Post* a few weeks ago quoted at length from the *London Economist* one Rawlinson's criticism of Manchester's complaint of England's gold monometallism as relating Manchester to India. The complete rejoinder two weeks later in the *Economist*, a compilation of facts that refuted Rawlinson totally, has never even been mentioned by the *Evening Post*.

But conditions current here and elsewhere are forcing the truth upon general attention, and a rebellion against this tyranny and concealment of facts will manifest itself ere long in New York as elsewhere.

I have no doubt that a very great number of persons honestly fear that free coinage of silver at this time would have disastrous results—and so they would thus sacrifice the sure relief and great benefits it would bring to us.

They fear that we would at once be thrown upon what they would call a silver basis, or, in other words, that gold would go to a premium over silver and our other ordinary forms of currency.

Let me observe to quiet needless fears on these points—

First. That for export purposes there would be no more demand for gold than now exists, so we would lose nothing in that regard.

Second. That there would be no inducement for hoarding gold for the reason that its monetary use in coins is its principal use, and it could pay no more debts legally than the same amount of silver dollars could pay.

Third. That if Europe became afraid to sell us goods and take their pay—as some imagine—in silver, the result would be that they would have to pay for our products—of which they must continue to consume large amounts—in money instead of goods, and that would bring gold into the country instead of taking it out.

Fourth. They have no stock of silver, outside of their own silver coins, that they could use to pay us or to "dump" upon us, as some express it; and besides this condition existing their own coinage of silver is on a basis of 15½ to 1 of gold, so they would lose one-half ounce of silver out of every 16 ounces sent us, as our ratio is 16 to 1. So silver will not come.

Fifth. There would as a first impulse probably be a tendency to send their holdings of United States bonds in Europe back to this country. The result of that would be that interest payments thereon would stay in this country instead of being as now a constant drain upon us and a present means of withdrawing gold from us at their option. These returning securities would require a portion of our gold supply unless in their need of our wheat, cotton, and other staples they preferred to leave the gold with us and take our staple products which at any rate they must have.

Sixth. The mint price of silver under free coinage becomes \$1.29 per fine ounce instead of a present market price of 65 cents per ounce. With our use for all of it at home Europe would still have to get supplies of silver for their Asiatic trade and would have to give also \$1.29 per ounce for it, as I have already shown.

Seventh. But lessening the demand on gold by bringing silver into fuller use for money would tend to cheapen gold throughout the world as well as here. So, as silver went up to mint price, gold would tend to come down or be less valuable than before.

Eighth. The more thoroughly silver under free coinage would stay at home, as some hold, and accumulate in our circulation and vaults the further we would be removed from panic and failure on account of coin redemption of all coin obligations.

The history of gold movements under the adoption of the Bland-Allison silver law of 1878 will verify these claims. (See testimony of St. John on this.)

DOES SILVER COINAGE INCREASE EXPORT OF GOLD?

In addition to evidence already quoted let us add that from the excellent tables prepared by Maurice L. Muhleman, cashier of the United States subtreasury at New York, we find the following facts, showing that the increase of our stock and coinage of silver, instead of driving gold out of the country, as the goldites then prophesied and still do, the effect is exactly the opposite.

The figures are given by the author in round numbers the more readily to indicate the general fact.

Our entire stock of gold in this country at the end of fiscal year 1877 was \$145,000,000. Restoring silver to coinage under the Bland-Allison act of February 28, 1878, was followed by acquisition and coinage of \$16,000,000 of silver the first year. Instead of loss in the stock of gold there was an actual gain of \$68,000,000 in gold.

The prophecy of the goldites was wrong and that of the friends of silver was right.

During the next year there was a gain in silver of \$25,000,000. Did it drive out gold?

On the contrary, there was a gain of \$33,000,000 in gold. And going on increasing our stock of silver the following year \$23,000,000, there was also an increase of \$106,000,000 in gold, and while our stock and coinage of silver kept on upward there was another addition to our stock of gold of \$126,000,000 the next year.

The same tendency for gold and silver stock to accumulate together in a country is noticeable in the total general results. While our stock of silver has increased to a total of \$538,000,000 at end of fiscal year in 1893, our stock of gold also was \$592,000,000.

SILVER LESSONS FROM OTHER NATIONS.

The most recent available statistics showing money systems and aggregate stocks of the various countries of the world, on page 180 of the Coinage Laws and Statistics, prepared by the present Senate Finance Committee, show the following: The two countries having the greatest stock of silver in the world, except India, are France and the United States, and these two countries instead of losing their gold have accumulated and hold the greatest stocks of gold also.

Enlarging the use and coinage of silver then does not drive out gold but seems to have in a general way the exact opposite effect. The philosophy of this is that whatever conditions of finance and trade enables a country to best utilize its productive energies and accumulate either of the precious metals enables it to accumulate and to hold both.

Dismiss, then, your fears, Oh, ye timid, that by unlimited coinage of silver you will drive gold from us or throw us for any length of time upon a silver basis.

With the bitter irony that students of monetary science in Europe ought to appreciate the gold standard British bankers themselves at the time of the Barings failure had to go to France for help and for gold—to France, where not only a very large volume of silver money exists, but where the Bank of France insists on using silver as a money of redemption at her own option, and not the option of others, as is the case at our Treasury.

THE ENTIRE MASS OF MONEY MEASURES THE ENTIRE MASS OF WEALTH.

Again recalling the illustration of the lever, with money and the banks on one end of it and property and the people on the other, I wish to spend a little time in speaking to you of the entire mass of money on one side and its divisions, and of the entire mass of wealth or property and its divisions and price or valuation and measurement of its divisions on the other side.

When we speak of the value of money what is generally understood is that we are referring to each unit or dollar measured in prices of other things.

By proper subtraction of all money now held in bank reserves, in secret hiding, in hoarding to await revival, and in the congestion of money in the deposit banks of reserve cities, we shall find there is not over \$500,000,000 in actual circulation against \$50,000,000,000 of wealth.

Before this late "bankers' panic"—the panic of 1893—the valuation of the wealth was at least \$50,000,000,000, but we must allow at least 15 per cent for shrinkage in the wealth.

So there is to-day one dollar in money, approximately, for every hundred dollars of wealth or property, or about 1 per cent, and if we do not make the subtractions for congestion of currency in banks it may amount to 2½ per cent.

Senator Plumb, in 1890, in June, said:

If I was deciding this case [the actual number of dollars in circulation] upon what I consider the best evidence, I would be bound to say that I believe the money in actual circulation did not much, if at all, exceed \$500,000,000.

Now, Mr. Chairman, having such high justification of the reasonableness of my estimate of the number of dollars in actual circulation as the case stands under present conditions of money stringency and record-breaking decline of prices resulting therefrom, let me go on with my elucidation of relations between the units of money and their entire mass on one side and the entire mass of property on the other side, subject to exchange for money.

Our entire mass of actually circulating money is then divided we will say into five hundred million parts, which we call dollars or units of valuation in our monetary system.

Let us compare these units now with some specific part of exchangeable wealth to see where prices are ranging.

Our illustration will be true whether you regard five hundred million or fifteen hundred million parts or dollars as the present circulation.

Each of the parts now equals in value two bushels of wheat, which gives us 50-cent wheat, or two bushels to the dollar.

If, now, we would divide the entire mass of money in circulation into double as many parts or dollars, making money twice as abundant, then it would take two parts or dollars to equal the two bushels of wheat.

This must be clear to all and would give us dollar wheat instead of 50-cent wheat.

As we divide the mass of money into greater numbers of parts we multiply or increase the price in same proportion.

Now, suppose we divide the mass into fewer parts than the present status, then each part will be larger or of greater value or purchasing power. If we divide the entire mass into only one-half as many as now exist, then we have exactly doubled the value of each part or monetary unit—and so our one dollar for

two bushels changes its ratio into one dollar for four bushels, which gives us 25-cent wheat.

And if the gold standard contractionists shall continue their processes to produce by contraction what they call the "highest and best dollars" we will yet see 25-cent wheat in Chicago, and cotton 3 cents, and all other things reduced in proportion.

It is idle to talk about reaching bottom in prices or to claim that the industrial world can not see prices go lower.

There is no bottom, except that which stands on the number of dollars in circulation, and if Congress perpetuates the present banking system, with unlimited bond issues, or enacts this present so-called Carlisle bill, which, to an equal, if not greater degree, puts the power to control the aggregate circulation into the hands of banking corporations, then as certainly as the law of gravitation regulates the general movements in planetary systems so sure will these corporations control and regulate price to add to their own gains and those of their favorites at the loss and expense of the laboring and producing world.

They will, as far as they are able to act in concert, contract circulation and price when they desire a period of liquidation and settlement, and then expand the circulation and boom prices when they wish to sell back to the people the harvestings of their periods of panic and liquidation.

This is the elasticity they want, the india-rubber game they have been playing for twenty-five years, and the game they still will play if they can get bonds enough on the one hand or the Carlisle bill on the other.

It is like the great wickedness of the Israelites of old in changing standards between the periods of buying and selling, against which iniquity and robbery the prophet Amos hurled his vehement utterances:

Hear this, O ye that swallow up the needy, even to make the poor of the land to fail.

Saying, When will the new moon be gone, that we may sell corn? and the Sabbath, that we may set forth wheat, making the ephah small, and the shekel great, and falsifying the balances by deceit?—Amos, viii 4, 5.

The modern method is much more subtle and unobserved by many of the producers of the land, but far more effectual and far reaching than any scheme the Jews had ever invented until within the last two centuries. Their game now is not to change weights and measures between the periods of buying and selling, but to change prices, so as to take in wealth at depressed and panic prices and then reverse the processes, expanding so as to sell back again at high prices on gold contracts until the next period of contraction, panic, and liquidation.

Yes—"elasticity of the currency" is a catchy phrase for the game.

Loading the dice and packing the cards are such dishonorable methods that few gambling houses can maintain their reputation by such tricks; but they are comparatively harmless beside the game the money power seeks continuously to play, by their tricks of gold redemption and bank issuance in which all the people are involved.

When the bankers of Wall street started in the spring of 1893 to give us an object lesson, aided by those who sit in high position, and aided further by the fine hand of the European gold conspirators in the sudden demonetization of silver for the subjugated people of India, did they not successfully teach us the lesson of contraction?

They not only suddenly contracted bank circulation thirty to forty millions of dollars in a few months, but they pushed all the associated and corresponding banks into shortening up their loans and credits at the same time. They followed this after October, 1893, with such an expansion as suited their purposes. This is the elasticity game well exhibited. Then since that they have secured an issue of \$100,000,000 in bonds under the claim of maintaining the supposed gold redemption basis, paying for the bonds largely out of gold that they loot from the Treasury under the pretense of helping the Government maintain parity and its gold reserve. Although these bonds are of very doubtful if not absolutely illegal issue, yet doubtless they intend using them largely as basis on which to expand the currency.

Is not this object lesson enough to show what elasticity for the banks means to the people?

Is it not sufficiently evident, Mr. Chairman, that the banks ought to be deprived forever from having anything to do with the issue of currency, and, as Jefferson taught, that bank issues should be suppressed, and the circulation be restored to the Government, where it properly belongs?

If we can not learn from these lessons, and from the threats of their insolent power, often given, and, on the other hand, from the teachings of the fathers of true Democracy, from the teachings of eminent authorities and the testimonies of able financiers in every country, and from the lessons of history and the ruin of our industries and our people, then when can we learn the curse of submission to the bank and bond and gold conspiracy?

Our enemies are united in both Europe and America and throughout the world.

The invisible empire of wealth is not bounded by the shores

of wide salt seas nor by the snow-capped mountain ranges that have through long centuries bounded and limited the usual aggressions of national power.

Its conquests are the wealth of the all-trading nations; its victims, the helpless people of all climes; its demands, the patient toil and slavery of all races; its instrument, gold redemption bank money.

If there is one thing above others that it has hated and feared, it is that America and her legal-tender greenbacks might live and teach mankind to provide their own money independent of the banks.

When we see the insolence with which the gold conspirators seek to plant themselves in power, may we not say of them as Cicero against Cataline said:

How long, O Cataline, wilt thou abuse our patience? Art thou not daunted by the nightly watch posted to secure the Palatium? Thy wretched conspiracy is laid bare to every man's knowledge here in the Senate. We are well aware of thy proceedings last night. Alas the times! Alas the public moralist! The senate understands all this. The consul see it. Yet the traitor lives! Ay, truly, and confronts us here in council; takes part in our deliberations; and with his measuring eye marks out each man of us for slaughter.

And may we not say as he again said against the rich and strong tyrant praetor Verres, in which Cicero so strongly pleaded for action on the higher motives:

O liberty! O sound once more, once more delightful to every Roman ear!

Once sacred—now trampled on! Is it come to this? Shall nothing restrain the merciless monster who, in the confidence of his riches, strikes at the very root of liberty, and sets mankind at defiance? And shall this man escape? Fathers, it must not be! It must not be unless you would certainly undermine the very foundation of social safety, strange justice, and call down anarchy, massacre, and ruin on the commonwealth.

SHOULD WE INCREASE THE VOLUME IN CIRCULATION?

I have already referred to the volume of circulation.

It is not the absolute volume of currency in circulation that endangers prosperity so much as the variations occurring in the volume after business is established.

It is by the change of the money end of the lever up or down that carried the property and people's side of the lever up or down in opposite directions. The general range of prices when money was abundant at the close of the civil war marks a proper level. Shrinkage from those prices was what destroyed the equity of time payments.

The changing of circulation disturbed price and valuation of all these things, and so broke the demands of equity.

It is impossible to maintain prices and secure an equitable share of profits to producers on a shrinking volume of currency.

In speaking on this subject, and having reference to the contraction and expansion of the currency indulged in by the banks of issue during his day, Mr. Webster said:

It is hardly necessary to dwell upon the evils of a suddenly diminished circulation. It arrests business; puts an end to it, and overwhelms all debtors by the depression and downfall of prices; and even if we reduce circulation not suddenly, but still reduce it further than is necessary to keep within just and reasonable limits, it would produce many mischiefs; it would augment the necessity of foreign loans; would contract business, discourage enterprises, slacken the activity of capital, and restrain the commercial spirit of the country.

To keep up the increase of currency with the increase and development of business and population is no relief, for that simply prevents an actual relative shrinkage.

I know of no method to exactly measure the volume of business and exchange in our country, buying, selling, and paying debts. We can approximate to it by taking the population of a country as a basis and stating circulation as being so much per capita.

This, all points considered, is perhaps the best term to use.

But when it comes to determining what number of dollars per capita should be in circulation I do say that we have an infallible index of a departure from the proper circulating volume when we see a general decline or fall in prices.

When that is detected, the true method to be used by Congress, if it seeks the welfare of the whole people and the maintenance of equity on all time contracts, is to begin at once to increase the volume of currency to cure the evils of falling prices.

Expand the currency until the general average of prices is restored and all the productive energies of the nation are utilized to the best advantage. When this point is reached the circulation is right and the volume is proper.

THOSE WHO PLEAD FOR EQUITY MUST DO EQUITY.

The creditor portion of the community have no right to complain of expansion, for they have had the benefit of twenty-five years of contraction. "He who demands justice must administer justice," is a good old German maxim.

Starting to correct wrongs as we find them, however, and not undertaking to reverse the contraction methods of the money power and creditor world any further than necessary to provide for the present and future protection of the people from the financial wrongs they have suffered, we should not expand the circulating currency volume only to that point where prices are restored,

profits accrue to legitimate industrial effort, and labor is fully employed at remunerative wages.

These good, price-restoring results of expansion of the currency may be reached at \$40 per capita. If so, stop at that and keep the volume substantially uniform in relation to business at that ratio. If the full and profitable employment of our productive forces are not secured at \$40 per capita, as I have said, issue more, for we should never stop short of issuing and coining together the requisite amount to secure the results of restored prices and activity.

The best and most productive and prosperous times we have ever had in this country was at the close of the war or soon thereafter, when the circulation was slightly above \$50 per capita, and no men nor class of men were suffering any injustice by reason of the good times secured.

CURRENCY CONTRACTION FOLLOWED THE CLOSE OF THE CIVIL WAR.

I will submit the table published in the Chicago Inter Ocean, which circulates largely in the West, and is high authority among Republicans there:

The volume of currency was for—	The volume of currency was for—
1860.....\$50.70	1872.....\$17.00
1867.....36.63	1873.....17.43
1868.....22.06	1874.....17.89
1869.....19.80	1875.....17.35
1870.....19.39	1876.....15.89
1871.....19.47	1877.....14.40

This table shows gradual contraction down to the year 1877.

In the same connection, the Inter Ocean makes this remark in regard to the circulation of the 7.30 notes, of which at one time there were over \$800,000,000 out:

The 7.30 three-year notes, whose circulation as currency is most scouted, were outstanding on the 1st of September, 1895, to the amount of \$800,000,000, every dollar of which was legal tender for its face value under the terms of the law "to the same extent as United States notes."

Gen. John A. Logan in 1874 (from page 139, CONGRESSIONAL RECORD of that year), in a speech he made in this body, said that there had been at that time a contraction of over one thousand million dollars (\$1,018,167,784).

He once was high and honorable authority in the West.

General Grant said in his message of 1873:

In view of the great actual contraction that has taken place in the currency, and the comparative contraction continuously going on, due to the increase of population, increase of manufactures, and all the industries, I do not believe there is too much of it now for the duldest period of the year.

Speaking of the volume of money—

During the last four years the currency has been contracted directly by the withdrawal of 3 per cent certificates—compound-interest notes and 7.30 bonds—outstanding on the 4th March, 1890 (all of which took the place of legal tenders in the bank reserves), to the extent of \$33,000,000.

During the same period there has been a much larger comparative contraction of the currency. The population of the country has largely increased.

As the annual increase of population is 3½ per cent, to even keep pace with it, if we did nothing else, would require over \$50,000,000 additional currency per year. We should issue more in addition to this annual demand to secure any increase and relief.

In a full discussion of this question of circulation we should take into account the marvelous increase of business through all the various new appliances and rapid development of our country. To keep up with this alone would require great additions to our currency. But when banks desire the appreciation of money and the consequent depreciation of prices, what care they for the ruin of industry and property prices?

If we compare our money circulation to the wealth of the country as generally estimated, it is 2½ per cent. We ought to have more nearly 5 per cent circulation.

That of France is 4 per cent; Belgium, 3.2 per cent; Italy, 3.1 per cent; Portugal, 4.6 per cent.

With our greater expanse and variety of business and our people scattered across an entire continent we ought to have more than any of these.

CHEAPER MONEY IS NECESSARY FOR RELIEF AND EQUITY.

The same question is pertinent as to silver coin and money coined from silver in possession of the Government.

How can the Government get this silver money into circulation if it does coin it?

We answer, by paying it out in current expenses and on all coin obligations. But our opponents will say that by issuing paper money or silver money and putting it into circulation, in addition to the money now out, will so increase the supply or volume of money in circulation that money will become too cheap.

This is the plea against free coinage of silver and is also against the issue of legal-tender notes by the Government. It makes money too plentiful and too cheap, say our opponents.

Too plentiful and cheap for whom?

I know that increasing the volume by adding any kind of money to the circulation will make money cheaper; and so will withdrawing money from circulation make money scarce and dear and high in its purchasing power.

But who is harmed by making money more plentiful and cheap?

Surely not those who have been suffering from falling prices for the last twenty-five years by money having been made too dear.

I have never uttered a word favorable to a careless and unlimited expansion of the currency.

I have protested against making money too abundant on the one hand, and against making it too scarce and dishonestly dear on the other.

But the coinage of all silver offered, or the issue of a certain amount of Government legal tender strictly limited to reasonable bounds, as I have suggested, will not make money too cheap for all who own or produce other properties than money, bonds, and mortgages. It tends to bring the value of our dollars in circulation back again to that ratio to property and price that formerly obtained.

MORE MONEY MEANS MORE INVESTMENTS IN OTHER PROPERTY.

And then it will pay to invest money in lands and products of field, farm, and factory, for profit will then follow these industries.

Even bankers would, many of them, seek to invest money in the various forms of property, produce, and manufacture.

Hear what Mr. George A. Butler, bank president, had to say of the advantages accruing to property if silver were even paid out freely on our coin obligations by the Secretary of the Treasury.

I quote his testimony before the Banking and Currency Committee of this House on December 12, page 153 of the hearings:

Mr. BLACK. I will ask you even a broader question than that. I should like to get your opinion as to the effect of the Government establishing the policy, as to redeeming this paper currency, of exercising its own option whether it would pay in silver or gold, rather than to let the holder decide that question for himself.

Mr. BUTLER. I can not answer that any better than to say this: The very hour that I am convinced that the Government will do it I will sell every dollar's worth of personal property I have on earth and invest it in real estate.

Mr. ELLIS. Why?

Mr. BUTLER. Because that brings the country to a silver basis and eliminates more than half the value of personal property in the form of stocks, bonds, mortgages, and everything of that sort.

Mr. HALL. Would it not affect real estate in the same way as personal property would be affected?

Mr. BUTLER. No; because in the case of real estate you can put up the rents in proportion. Before the last election I was intending to do this, and, indeed, commenced, but then the election occurred, which was not so favorable to the silver men, and I thought better of it and stopped.

Remember that the personal property to which he refers, as he explains, is such as he owns—"stocks, bonds, mortgages, and everything of that sort." Personal property, the product of factory or field, goes on the other side.

A very intelligent friend of mine, another bank president, took the same position with me in conversation on the silver question. If money becomes abundant enough to raise prices and make products and property profitable, then even the bankers will invest in property. They will invest on the side of property if it once gets out from under the domination of high and scarce money.

They see as clearly, it would seem, as anybody, that with an increasing volume of money the property side of this controversy with the banks will become profitable by reason of improved prices.

EFFORTS OF CHEVALIER AND THE INCOME CLASSES OF EUROPE TO DEMONETIZE GOLD FORTY YEARS AGO—GOLD DESPISED IN 1893.

Mr. St. John, president of the Mercantile National Bank, New York, said before the committee:

Our "goldites" would dismiss all this on the ground of an overabundance of silver. Had the most influential doctrinaires in money in Europe been as influential with lawmakers in 1893 as our aforesaid tutor was influential with law dictators in 1893, France would have closed her mints to gold. Silver monometallism would have been the coinage system of the world. Chevalier threatened France with an abundance of gold as cheap and overwhelming as iron. Silver is the overabundant prediction of our influential doctrinaires. Note, however, that \$5,000,000 worth of silver bullion is at this moment an overestimate for the world's distributing markets' supplies of silver.

Senator JOHN P. JONES in the following marks the parallel between Chevalier and the French bondholders of that day and the same class of to-day:

THE EXAMPLE OF FRANCE IN DEALING WITH BONDHOLDERS.

The attempt of the American bondholder to get the word "coin" erased from his contract, and to get written into its place some word which would describe a coin that was always getting dearer, is not the first attempt of the kind in history. A similar attempt was made on behalf of the French bondholders after the discoveries of California and Australia. Gold was then the metal that was becoming cheap money, and the French bondholders took ready alarm at the prospect of the purchasing power of their incomes being reduced by the inflow of the new money. They found, as all bondholders find everywhere, ready and pliant agents and advocates in the literary guilds.

Chevalier and those in accord with him made a demand for the payment of the bonds of the French Government in silver. Their cry was for honest money. It is the same cry that we hear now, and have heard for more than twenty years. It was a demand for a payment of the money that was becoming dearer. For it appears that when money is becoming dearer it is honest money, while if wheat and cotton become dear, which means that money is becoming cheap, the wheat and cotton are dishonest and fraudulent.

Chevalier demanded the payment of the bonds in silver. In order that the people might suppose that he had some ground in reason for his demand he maintained that silver had always been the money of France, and that when people bought the bonds of the Government they supposed they were buying bonds payable in silver—very much the same sort of argument that has been used in the United States, except that in this country the demand was for bonds payable in gold.

This ruse did not work, however. The officers of the Government refused compliance with the demand. They declined to transfer to the creditor the option which the people of France had reserved to themselves. That they were right no man but a bondholder could have the hardihood to deny.

Our modern Chevaliers have been more successful. * * * He (Chevalier) was arguing that gold would probably depreciate one-half in purchasing power. It was for the national creditor that his sympathies were aroused, and it is for the national creditor that the sympathies of the bankers are now aroused.

"All commodities—"

He continued—excepting gold (the money that was growing cheap) and every kind of property excepting that of which the incomes, from the present, fixed, as is the case with Government funds ought, from the moment that the monetary crisis is terminated, to have attained in a gold currency double the price which they are at present worth."

His opinion then was that the price of commodities and of property, except Government funds, would "double in price." How was it with wages—the reward of the workmen? Were they to continue low as before while prices were rising? Chevalier says:

"It will be the same eventually with the wages of labor [that is to say, wages would double], and with all personal services, whether rendered in the factory or on the farm or from the liberal professions." * * *

"It is another class of persons," he says, "whom we have previously defined in a general way (the national creditors) who have to submit to a sacrifice in the proportion to the fall in the precious metal."

WILL HIGHER PRICES DRIVE GOLD TO EUROPE?

My friend from New York [Mr. TRACEY], my colleague on the Coinage Committee, now kindly honoring me with his attention, is, however, fearful that the rise of prices will drive gold out of the country.

There are a few points that I wish to make on this question in addition to what I have already said.

First. Gold in export goes as a commodity at its commodity value in exchange for other commodities.

Whatever nation bids highest for gold in such exchange—that is, gives greatest quantity of other goods for gold—will get the gold, on the same principle that they would get wheat or any other product for gold in international trade as a commodity, to be bought as such.

When prices are so low on other things that nations can better afford to take them instead of gold, they will go to settle balances of trade, and gold will stay.

When, however, prices rise on other articles above the commodity or mercantile value of gold, then gold will go out in export.

It flows then toward countries of low prices on other articles. High prices, however, can not obtain on other articles without money volume is ample. So we can be sure gold will not leave us until other money is in circulation to more than take its place—enough more to raise prices of other property.

Even the matter of distrust regarding our bonds and securities abroad so often mentioned do not entirely set aside these economic forces, as some suppose.

Suppose a hundred millions in bonds should be, so to say, sent back to us from England suddenly.

The payment is not necessarily in gold; it is in wheat and cotton if they can take them to better advantages in exchange for our bonds, and that depends entirely on the price of wheat, cotton, etc.

Gold will not go, then, unless other money is so abundant that prices are up or rising, and in that case, mark you, we can easily spare the gold.

We can get along without it while other money is sufficient to keep up prices.

If, however, we have bar money dependent upon gold redemption, bankers must hold gold, or must contract their paper currency at the same time gold is being reduced by export, then the contraction resultant quickly forces prices down so low that our other products will be taken instead of gold.

Let Government issue our paper money as far as necessary and silver be freely coined, then the outflow of gold should excite no alarm, for our money is sure, founded on the law of the Government.

Gold going abroad under these conditions would be profitable to our people in many ways:

First. Having other good money to take its place, we would get for it value in other things more than it would be worth to us for money uses.

Second. It would swell the prices in Europe by increasing money volume there so we would get higher prices on all of our exports to those countries.

Third. And by silver being accepted at our mints freely at \$1.29 per ounce, Europe could not longer buy wheat in India with silver at 65 cents per ounce, but wheat would at once rise to meet the new price on silver.

VALUABLE MONETARY FACTS—MOVEMENT OF GOLD.

From valuable tables by Maurice L. Muhleman, cashier of the United States subtreasury at New York, found in his Money of the United States, we derive the following:

Table showing gold and silver movement 1873-1893, page 60.

From 1873 to 1877 exports of gold were against us \$127,000,000 in a period of silver demonetization complete, neither one of the five years securing us any gold by international trade.

From 1878 to 1883, the first period of coinage of silver under the

Bland Act, we gained an excess of import over export of gold every year amounting in six years to \$187,000,000.

Coinage of silver did not drive out gold, therefore, as our monometallists claim, but had the direct opposite effect of increasing our gold by trade with foreign nations, and at the same time our product of gold mines was increased from \$184,000,000 during the first five-year period preceding the coinage of silver under the Bland Act, to \$200,000,000 during the next five years.

After the passage of the Sherman silver-purchase act which we were told would drive out gold, the reverse was true again, for we saved all our product and gained in three years, July 1, 1890, to July 1, 1893, \$156,000,000 by international trade, gaining \$68,000,000 of this the first year after said act.

Now, since the repeal of all laws favorable to silver we are losing gold by international trade at an alarming rate, and that, too, while Europe could get our products instead of gold at lower rates than ever before.

These great facts and experiences are all against the claims of the advocates of silver demonetization.

On silver we have exported more than we imported every year from 1873 to 1893, as shown by the tables, so again the evidence is that by reason of the European and Oriental demand for silver for their own coinage there is no danger of silver becoming too abundant by free coinage in America.

In studying questions of banking, it will be well to notice the growth of the deposit feature of banks in this country.

GROWTH OF DEPOSITS IN BANKS.

We give the following on the authority of Muhleman, page 59. The period from 1873 to 1893 is the period we have taken:

National bank deposits start at \$673,000,000 in 1873—silver demonetization act. They continue nearly same for six years to \$677,000,000, in 1878—ending demonetization period.

They grow next six years to \$1,099,000,000, in 1884—during Bland Act period. They grow next six years to \$1,759,000,000, in 1890—during Bland Act period. They grow next two years to \$2,022,000,000, in 1892—silver purchase period.

So the growth of deposits is threefold during the fourteen years of partial silver coinage, and practically nothing during six years preceding, and they drop again in 1893 to 1,575,000,000, being year of purchase-clause repeal. Again during and succeeding panics deposits fall short. Notice the shrinkage in 1877 and 1878, 1884 and 1893, panic years. State-bank deposits increase nearly fivefold, being \$111,000,000 in 1873, and increasing, except during panic years, to \$648,000,000 in 1892. Savings-bank deposits increase to more than double, \$802,000,000, in 1873, growing, except during panic years, to \$1,712,000,000 in 1892.

People seem to distrust banks, especially national and State banks, during years of panic or financial disturbances; but banks also seem to distrust the people, for, as Muhleman points out, "the only two years" wherein cash reserves equaled 20 per cent of deposits were 1874 and 1885, "years succeeding panics."

These accumulations of cash in banks following panics are often claimed to be evidences of abundance of money, but they are in fact evidences of the flow of money out of active channels of trade and away from investments into the money centers owing to the preceding contractions and withdrawals of credit, which, breaking down prices, render all business and property investments unprofitable.

If we take New York City and large cities alone we will find, as to-day, excessive congestion of idle money in the money centers.

A GLEAM OF LIGHT ON THE MONEY QUESTION FROM BOSTON.

We have found most excellent treatment of some of the essential elements of monetary science in the brief monthly letters of Cox, Bickford & Co., bankers and brokers, of Boston.

In their circular letter of March 1, 1894, they say, in defining money and quoting J. S. Mill:

We stated in our February letter that money is a function or relation, not a commodity; that its value can not be intrinsic under any circumstances, not due to its first cost of production, as is the case in the general range of commodities, but is clearly expressed in what it exchanges for; i. e., the general range of commodity price.

"The value of money is to appearance an expression as precise, as free from possibility of misunderstanding, as any in science. The value of a thing is what it will exchange for, the value of money is what money will exchange for—the purchasing power of money. If prices are low, money will buy much of other things and is of high value; if prices are high, it will buy little of other things and is of low value. The value of money is inversely as general prices, falling as they rise and rising as they fall."—James Stuart Mill.

Before such an authority as the above, and such a plain statement of the value of money, what becomes of the term "the intrinsic value of money," so often repeated as to have become a popular by-word, a plausible falsehood, generally credited without a particle of proof and only bearing conviction to its hearers through constant reiteration.

The value of money is not, and can not, in the very nature of its function, be intrinsic.

"The value of money is inversely as general prices, falling as they rise and rising as they fall," and therefore dear money is expressed in a low range of prices, while cheap money attends a high plane of general prices.

Contraction is the compression of prices to a low level, always attended by dear money, while inflation is the expansion of prices to a high level, finding expression in the term cheap money.

Falling prices is the sure index of a rising value in money, while rising prices is the exact reverse, or an indication of the decreasing value of money.

The stability of money is the all-essential of an honest standard of value and is of inestimable worth in maintaining the equilibrium of civilized effort and the equitable distribution of the wealth of production.

Unstable money, one that is either appreciating or depreciating in value, is thoroughly dishonest.

These are such clear-cut statements from practical bankers that I am pleased to quote them as indorsing so forcibly what I have claimed on these points:

1. That there is no intrinsic value in money.
2. That volume controls and regulates value of money.
3. That the unstable money of either unduly contracted or expanded money is dishonest money.
4. That the value of money, like other things, is what it will exchange for and is so measured by the general range of prices.
5. That money is a function and not a commodity.

BOTH EQUITY AND PROSPERITY DESTROYED BY FALLING PRICES.

Unstable money, caused by change of volume, and especially appreciating money, caused by contraction, is not only dishonest toward people who have invested money in property and productive enterprises, but when seen in its action on those who have contracts to pay in dollars, it is a crime that even ignorance ought not to excuse.

Look to the range of prices if you would determine the extent and grade of variations in money.

Tables of prices covering the average prices of a certain period on leading commodities have been prepared by many able statisticians to determine the relative value of money. Such averages over quite a large number of staple articles are called index numbers.

Mr. Augustus Sauerbeck, a gold monometalist as far as his interests are concerned, made a most thorough set of price averages or index numbers that has been published by the Royal Statistical Society of England.

To obtain a base line, or starting valuation, with which to compare the range of prices, he takes prices in gold for ten years, five of which precede and five succeed the year in which silver was demonetized, 1873, and calls this average 100.

This will show the value of gold rising in nineteen years, given in table, to nearly double its purchasing power as it stood in 1873, prices falling about one-half from 1873 to 1891. I quote his tables from the Boston circular mentioned, in which the various prices of commodities are averaged in groups of different lines of staples. I have also added from another source Sauerbeck's table of average prices of silver bullion for period 1874 to 1892 so as to show how silver and commodities compare.

Wholesale gold prices of commodities in England.

	Vegetable food, wheat, etc.	Animal food, meat, etc.	Sugar, coffee, and tea.	Total food.	Minerals.	Textiles.	Sundry materials.	Total materials.	Grand totals.	Index number of silver, 1874-1892.
1873	106	109	106	107	141	103	106	114	111	100
1874	105	103	105	104	116	92	96	100	102	95.3

1892										65.4

Mr. Robert Giffen, statistician of the London Board of Trade, in speaking on this subject, says:

We can say positively that the recent change from a high to a low level of prices is due to a change in money of the nature or in the direction of absolute contraction.

WHO ARE THE INFLATIONISTS OF THIS DAY?

I have hinted at the probabilities of inflation. I do not know of any Democrat who, contending for the value, safety, and perfect convenience of Treasury-note legal tenders, has ever yet on this floor proposed such a loose, gigantic, and uncontrolled and possible inflation of the paper money of the country as do the advocates of the present and pending plans of issuing currency.

I have no doubt but that the first effect of the adoption of the Carlisle plan would be an inflation of the currency.

Neither do I doubt that the first effect of this inflation would be a rise in prices and a temporary relief for the people generally.

It would be a convenient time in which people could get out of debt on the rising prices, great profits, and general prosperity.

The remonetization of silver possibly could not appreciate prices or cheapen the relative value of money, which is the same thing

as raising general range of prices, so rapidly, nor even to so great a degree, as could be done under the inflation of currency likely to ensue under the passage of the so-called currency-reform bill now pending. It would, for a time at least, set the people free from the intolerable monopoly of Wall street.

The aggregate volume of banking capital could and under the temptations for multiplied profits I believe would be increased to double the present volume, which is estimated, in round numbers, to be \$1,000,000,000, and indeed it might easily be swollen to three times the present amount as rapidly as men of wealth perceived that they could safely to themselves have the free and unrestricted use of \$100 for every \$30 they chose to deposit with the Government in Treasury notes.

It is useless for anyone to attempt to answer me on this point by saying that they would be restricted to the \$498,000,000 of legal tenders and Treasury notes now existing, for let it be remembered that all currency of the present national banks now issued on bond security can remain out under the proposed amendments and provisions of the substitute bill offered and supported by the committee.

The \$498,000,000 of existing Treasury notes as a 30 per cent safety fund deposit provides for an actual inflation of the currency on top of existing bank issues, which are permitted to remain in circulation, of \$1,600,000,000. From this should be subtracted the 30 per cent reserve to find the extent of inflation, which would leave over \$1,200,000,000.

Does any Populist on this floor at this time desire to distinguish himself by proposing a greater inflation than this by one single act of legislation?

The famous Coxey public-road bill, which bill I have never indorsed, although favoring a proper discussion of it, only proposed an issue of \$500,000,000, and even this he did not propose to make redeemable in coin on demand so to favor gold mongers.

No, Mr. Chairman and gentlemen, the inflationists of to-day are those who advocate plans for bank issues of currency. I have long seen that this great cry of the money power against inflation meant only that they were in favor of contracting Government legal-tender issues that have for so long a time furnished a safe, popular, and convenient legal-tender currency to the people, but they were all of the time in favor of allowing inflation of bank issues when it suits their private interests to do so.

They have cried out against fiat money, but they have been all of the time favorable to alternate expansions and contractions of currency under the fiat of the bankers. Many common laboring people can not see why the fiat of a bank is better than the fiat of a sovereign Government.

WHO WANT MONEY TURNED OUT BY PRINTING MACHINES.

They have cried out against running the printing machines of the Government to print greenbacks to pay out to the people for service or supplies, but they have all along been in favor of running these same printing machines to turn off millions of bank notes that they might loan to the people at high rates of interest. And under the present banking system they have insisted that they shall draw another stream of interest on their capital deposited in the form of United States bonds.

Surely the national bank forces understand that it makes a great difference to them "whose ox is gored."

I believe there are gentlemen on the floor of this Chamber who would split their throats, even, if they did not endanger the solidity of the cerulean skylights above them, in their efforts to decry any proposition to issue circulating notes to farmers, merchants, manufacturers, or any other class of citizens to any extent whatever upon their deposit of 30, 40, 50, or even 100 per cent of their capital, or property, or titles to property.

Yet these same Congressmen will vote and work for the passage of this bill, which proposes to issue millions upon millions of notes to the banks with unrestricted opportunity for them to put the same into circulation upon their deposit of 30 per cent of the amount of their circulation in that same despised fiat paper that they have sought so long to discredit.

To my mind, the jewels of consistency do not shine abundantly on the shirt fronts of such fellows.

THE PROPOSED COIN REDEMPTION BY THE BANKS.

But the Democratic advocates of this measure, if the term were permissible, tell us that they propose to relieve the Government of the responsibility of coin redemption of all of this volume of bank currency and throw that burden on the banks and off the shoulders of the Government.

How?

This bill fails to make any such provision. As long as any Treasury legal tenders are out, and practically also as long as coin certificates are out, they can redeem them in these.

If they shall struggle to accumulate gold in which to redeem these notes, notice the condition of competition for gold in which they place the Government. Does any one believe that if any sincere effort of the banks to accumulate gold coin in quantities sufficient to redeem any adequate supply of paper currency were made that there would be any chance for the Government to main-

tain gold payments of all of its maturing coin obligations and its current expenses? Hear Mr. St. John again regarding ability of banks to redeem in gold (Hearings, page 345):

Mr. JOHNSON of Indiana. What is your opinion of section 10 of the Carlisle bill?

Mr. ST. JOHN. My opinion of that is just what I said when I came here, that it is absolutely impossible for the banks of the United States to redeem a liberal issue of bank notes in gold. The possibility does not exist.

The Government now, without any serious competition from the banks, is unable to keep up a supply of gold on its present methods.

What, then, when 4,000 to 10,000 banks enter the field against the Government for the gold supply, to say nothing of the strained conditions that this situation would produce in Europe as well?

The retirement as a safety deposit of \$225,000,000 of legal tenders by the committee speak of as the probable result of the proposed act does not prevent the withdrawal of gold from the Treasury by any holders of other coin obligations, as well as holders of the remaining legal tenders. So there is practically no relief on the Treasury holdings of gold on this theory.

But if there were, still the annual expenditures of the Government must, on the vicious "parity" idea, be payable on demand in gold. So, after all, the burden of maintaining the gold standard still rests on the Government.

A PERMANENT AND REASONABLE EXPANSION IS DESIRABLE.

Let no man conclude that I am opposing an expansion of the currency either by silver coinage or by the issue of full legal-tender notes by the Government because they find me opposing the power of the banks to expand the currency under the Carlisle bill.

Expansion by the banks means also contraction by the banks as soon as they may desire it and are able to associate for it—which power of combination is, however, doubtful under this Carlisle bill; "hence these tears." Either this or it means a collapse more ruinous and more widely extended than any the world has yet seen by the gold redemption trick that promises yet never fulfills.

It is the dangerous elasticity quality of bank issues that I oppose, rendered still more dangerous by destroying legal tenders.

It is the perfectly safe and efficient expansion of currency, both of coin and legal-tender Treasury notes by the National Government, in proper form and quantity that I uphold, well knowing that this will prevent the manipulation of currency volume and property prices by the banks, and that equity can be easily maintained when the Government, recognizing that the money question is also and essentially the property question, shall turn its attention to rendering property and industry safe, prices secure, and equity to the debtors safe by constancy of circulation.

CAN THE BANKS MAINTAIN THE GOLD STANDARD?

But let us suppose for the moment that the legal tenders were all retired by the 30 per cent safety fund, and that by surplus revenues enough could be secured in gold (although no one, so far, has been able to precisely explain how) to pay off maturing bonds and interest on the public debt; and suppose enough of the present national bank issues are kept in circulation according to provisions of the amended substitute bill to permit the Government to receive them and pay them out except on import duties and public interest as now provided by law in current expenses; and suppose that the Secretaries of the Treasury continue the policy of keeping silver coins and coinage in complete subordination to gold under the anomalous pretense of keeping it equal ("at a parity") with gold, yet continue to receive silver in customs dues as now?

And suppose, however difficult it may seem to some suspicious mortals, that all of the banking corporations are honest and earnest in efforts to keep a full supply of gold coin on hand, both in their own vaults and at the redemption agencies designated for them, so that they can also maintain the gold standard of payment and note redemption, and thus maintain their honor and dignity, and at least consistency in turning out gold, "the money of the world," instead of the despised fifty-cent silver dollars that they say is such a cheat and swindle for creditors when forced upon them. Suppose all of these in accordance with the arguments and claims of our opponents, then what will be the financial condition and the probabilities of the banks maintaining coin redemption?

Here is the showing:

Circulation on \$498,000,000 deposited.....	\$1,660,000,000
Present bank notes retained.....	200,000,000
Due on deposits, all banks, estimated.....	3,728,418,819

Total bank debt payable in gold	5,588,418,819
Gold (probable) accumulations in banks	350,000,000

Uncovered paper and obligations	5,238,418,819
---------------------------------------	---------------

We here have less than \$1 in gold with which the banks can redeem about \$15, or in actual test \$350,000,000 resting honestly and certainly on gold basis, and \$5,238,418,819 resting on the pale blue air of confidence.

Does anyone believe that gold redemption could be maintained against the first ripple of suspicion that would come against the

banks? To maintain public confidence the people have a right to demand an intelligent basis for that confidence. Why prate about wanting to establish public confidence, and constantly abuse that confidence? The basis here when examined shows that there is no just ground for confidence, and the whole superstructure would collapse on first disturbance.

But this is not all. The total stock of gold coin, by last annual report of the Secretary of the Treasury, in reserve and in circulation November 1 was \$564,733,578. Of this the national banks held only small amount, their entire holdings of specie (gold and silver both) on October 2, 1894, was \$237,250,654. In the above estimates, however, I have allowed that the banks might possibly accumulate \$350,000,000 in gold, leaving, say, only \$50,000,000 in Treasury and \$164,000,000 in circulation among the people in gold.

While considering the vast superstructure of bank obligations, resting on gold basis of less than one-tenth the promises of the banks, let us also notice that the total debt of all kinds in the United States is \$30,000,000,000, and all of this is resting on a pivot of \$564,000,000 gold, which is less than 3 cents in gold on the dollar of debt.

The impossibility of maintaining gold redemption by the banks is clear to every conservative mind that will study the facts.

Even with unlimited coinage of silver the redemption of such a superstructure of credit in both gold and silver is still exceedingly doubtful.

If anyone believes I have estimated the issues of bank paper too high, let him remember that if the whole body of legal tender is not deposited in the 90 per cent safety fund which would give the \$1,660,000,000 circulation, as in my estimate, then whatever is not so used remains in circulation and can be used to pump gold out of the Treasury, as now, being used over and over again. It would leave the Government still responsible for the redemption in gold and throw it in sharper competition with the banks in the general scramble for gold.

What is the remedy?

First. Bimetallic basis by free coinage of silver so to enlarge the money of specie redemption.

Second. Pay out silver as well as gold at the option of the Government, and as its own interests might appear.

Third. Suppress bank circulation and issue legal-tender Treasury notes instead, and increase the volume to equalize against any or all exports of either metal.

THE BLAND FREE COINAGE SUBSTITUTE BILL.

To this end, and as the nearest approach possible at present time to a complete remedy and safe American system of money, for the protection of all against the schemes of the European gold power and all of its Tory allies in this country, I shall favor and vote for the Bland free-coinage substitute.

It provides first for the unlimited coinage of silver at the old ratio, to the end that silver coinage may be restored to the American people from whom it was taken away by the cunning and treachery of the Anglo-American gold and bond conspiracy.

Bimetallicism and the equal coinage of both gold and silver into standard money without discrimination against either, and without any entangling foreign alliances or agreements, is the best possible salvation for the maintenance of property values and prices and redemption of debtors in this country.

Persistency in the appreciation of money in the mad career after a gold standard will yet bring wheat and cotton and the general range of prices still lower, and this means the ruin of a majority of business men in all the ordinary lines of business.

Why further enslave our people to the money dealers and income classes?

The people must and will ultimately destroy every political party that upholds the gold conspiracy, or their ability to maintain freedom and equity is gone forever.

The second section of the Bland substitute bill provides for the issuance of coin notes for all depositors of gold or silver who prefer paper money to coin for currency, and these notes shall be full legal tender.

It is safe to say that nineteen-twentieths of our people prefer legal-tender paper money to either gold or silver for general use, and so any satisfactory system of money issues must provide for a legal-tender paper money.

The third section provides for the redemption of these coin notes in either gold or silver at the option of the Government, and proposes to enact into law the declaration of our last National Democratic Convention that there shall be no discrimination against either gold or silver coin in redeeming either coin notes or other Treasury notes now in circulation.

It provides also for the retirement of gold and silver certificates, and issuance of legal-tender coin notes in lieu thereof.

The fourth section provides for depositing gold or silver coins and receiving coin notes in exchange at any subtreasury of the United States.

The aggregate volume of coin notes put in circulation must not exceed the coin and bullion in the possession of the Government except in emergencies caused by panic or stringency in the money

market. The Secretary of the Treasury may at his discretion issue coin notes against United States bonds deposited with the Government, but the interest on such bonds while deposited shall accrue to the Government.

The limit of issue in emergencies is such that the coin and bullion shall not fall at any time below 60 per cent of the aggregate volume of coin notes outstanding.

Section 5 provides that the coin notes may be reissued.

EXCELLENT FEATURES OF THE BLAND PROPOSITION.

First. In the provisions of this bill it will be observed that all money coined or issued under it is Government money and legal tender.

Second. That the volume is automatically controlled in relation to the aggregate amount of coins and bullion in possession of the Government by present stock, by exchange, or by deposit.

Third. That ready expansion of the volume of coin notes is provided for to meet panic and emergencies to all persons or associations in exchange for deposited interest-bearing bonds.

Fourth. The interest on deposited bonds is retained by the Government while on deposit instead of being paid out to the persons or associations depositing them. This is right. Why should the Government furnish emergency currency to anybody and pay them interest on its own bonds at the same time?

Fifth. This is an elasticity where banking associations have no monopoly of control as to contractions and expansions, and gives all classes equal chance to obtain emergency circulation.

Sixth. It leaves the national-bank system intact, but destroys their ability to control volume and force a panic or stringency to the ruin of all others.

Seventh. It provides for a perfectly safe and immediate expansion of the volume of money in circulation.

Eighth. It at once relieves the Treasury from any further dangerous drainage of its gold supply and establishes an immediate and sure parity between gold and silver by admitting both metals at a parity to the mints and in payment of all coin obligations, and thus secures their full utilization at the old standard ratio as standard money metals.

I can not see on what grounds any sincere and patriotic Representative can oppose this bill with so much of relief and safety in it, and at a time when both of these things are needed. It will be notice to the world, and especially to the gold conspiracy, that America is yet to be maintained and governed in the interest of Americans.

We have already spoken of the questions of elasticity, convertibility into coin, and so-called security of note holders. We wish now to briefly refer to that subject again.

ELASTICITY AT OPTION OF THE BANKS IS DANGEROUS.

The advocates of bank issues seem to believe that elasticity, convertibility, and ultimate security are the great and necessary elements for the regulation of the currency.

On the question of elasticity we have shown that it is equivalent to sudden contraction and expansion at the option of the issuing banks; that is intended by them.

This is one point of the greatest possible danger of any scheme of bank issues, for it allows the appreciation and depreciation of the purchasing power of money to be constantly manipulated in the interest of the associated banks and to the detriment and frequent ruin of all others.

The appreciation of dollars means the certain depreciation of everything that the dollar measures, and so the interests of the people, the property holders and producers, are in this respect directly opposite that of the money dealers. This simple fact seems forever to be overlooked by those who favor allowing the banks to manipulate the volume.

Elasticity at the option of the banks, and without regard to the interests of the people, is therefore to be avoided.

Adequate supply of money in circulation independent of bank control is the sure safeguard to maintain prices and the equities of contract, and prevent panics and monetary stringency.

CONVERTIBILITY DOES NOT CONTROL VOLUME.

Neither will convertibility into coin furnish any safe regulation of the banks in the issuance of notes to circulate as currency.

All bank notes are issued, and will be issued under any of these systems, upon the theory that there is a dollar in coin, or as now in United States legal-tender Treasury notes, held in reserve with which to redeem, if called upon to do so, every dollar issued. But we know, and the people know, that in the practical workings of the banks this is not true. If banks were compelled to keep in reserve \$1 in Government coin or Treasury notes for every dollar they issue, they would not issue such notes.

They could just as well put out or loan out the coin and Government notes themselves as to hold them against circulating notes dollar for dollar in amount.

The only inducement to the banks for issuing their own notes for currency is in the privilege or opportunity to promise to pay more dollars than they hold in reserve against those promises.

Their profits on circulation arise wholly upon the practice of increasing the circulation above the reserve, and the more they

are permitted to owe the people on their circulation the greater their profits. They draw interest on what they owe, which encourages them to put out larger quantities of their promissory notes.

Sir Robert Peel was quoted before the Currency and Banking Committee of this House, page 249, and his words should be heeded:

It appears to me that we have, from reasoning, from experience, from the admissions made by the issuers of paper money, abundant ground for the conclusion that under a system of unlimited competition, although it be controlled by convertibility into coin, there is not an adequate security against the excessive issue of promissory notes.

Thus we have his own clear statement that from reason, taking hold of the nature of the case, from experience, the lesson of history, and from admissions of the bankers themselves, the control of the volume of note issues, even with convertibility into coin as a requirement, could not safely be left to the banks, although there were probably not more than the twentieth part as many banks then to regulate as in our country.

Notice also that convertibility into coin was a greater limitation than convertibility into any form of legal tender, as well as coin contemplated by these banking schemes.

One will ask me if I would deny to the banks the privilege of loaning their capital to merchants and business men when needed.

Certainly not; let them loan all the capital they choose and all the spare money they have on hand, as any other business firm could do, but never permit them to make their promissory notes a permanent part of the currency in circulation.

SECURITY TO NOTEHOLDERS DOES NOT CONTROL VOLUME.

The ultimate payment of their notes may be as secure as the payment promised in the notes and obligations of other branches of business, although banks are not in the habit of giving any-

thing near such strong security to the holders of their notes as they require from others. Yet let me say that all plans of security based upon assets and liens and double liability and partial reserves will still fail to prevent the manipulation of the volume of notes in circulation to the constant advantage or supposed advantage of the banks.

The theory of ultimate redemption and strong security for the notes they issue when they are allowed to draw interest instead of being compelled to pay interest on their notes, does not prevent even bankers (sacred as their calling seems to be in the minds of many Congressmen) from giving way to the strong temptations before them.

The burdens of interest on other lines of business on what debts they owe, tend strongly to keep up their efforts to lessen their indebtedness, while profits on notes issued for circulation by bankers lead to efforts to increase their note issues, and as far as possible keep the debt out perpetually.

Even United States bonds as security afford us no protection as to volume of bank issues and expansion and contraction by the banks, unless we have a limit on bond issues, and that seems difficult to enforce on recent Administrations. I have long felt that if our money system could be so simplified as to have only three kinds in circulation it would be far better for the people, and besides they could better understand the subject in all financial discussions. I would have gold and silver freely coined at 16 to 1 for all who bring them to the mint, and in addition United States Treasury notes, and all of these made full legal tender; and all other kinds of money funded or changed into these three kinds as fast as possible.

I have, however, prepared a table showing the status of all of our different kinds of money, as far as can conveniently be done, as they stand at this date.

Legal status and qualities of money in the United States, January 1, 1895.

	Gold coin 23.22 pure or 23.8 standard gold ($\frac{9}{10}$ fine) to the dollar.	Gold certificates.	Silver dollars 371 pure or 412 standard silver ($\frac{9}{10}$ fine) to the dollar.	Silver certificates.	United States notes, commonly called greenbacks.	Currency certificates.	Treasury notes of 1890 issued in purchase of silver at market price.	National-bank notes.
Limit of issue	Unlimited and free coinage.	Amount gold deposited. Issue suspended when free gold in Treasury falls below \$100,000,000.	As necessary for redemption of Treasury notes; coinage practically suspended.	Amount of silver dollars deposited.	Contracted to and fixed at \$346,681,016 minus amt of bills lost or destroyed.	The amount of United States notes deposited therefor.	\$150,823,731 out Jan. 1, 1895. Issue was stopped Nov. 1, 1893, by repeal purchase clause. \$155,931,002 aggregate.	90 per cent of the volume of United States bonds.
To what extent legal tender.	Unlimited	Not legal tender but counted in legal reserves of national banks.	Unlimited unless otherwise specified in the contract.	Not legal tender but may count in bank reserves.	Unlimited except for duties on imports and interest on public debt.	Not legal tender but count in national bank reserves, and are used in clearance-house balances.	Unlimited legal tender unless otherwise specified in contract.	Legal for payment of (1) debts to national banks; (2) dues to U. S., except import duties; (3) payments by U. S., except interest on public debt and currency redemption.
To what extent by the Government receivable.	For all dues.....	For all public dues and when so received may be reissued.	For all dues.....	For all dues.....	For all dues except duties on imports and this by regulation.	Not receivable.	For all dues.....	For all dues except duties on imports.
To what extent exchangeable.	For gold certificates when free gold in U. S. Treasury exceeds \$100,000,000.	For gold coin and in practice for other moneys.	For silver certificates or other smaller silver coin.	For silver dollars or other smaller coin.	For all kinds of moneys except gold and silver certificates.	For U. S. notes.	For all kinds of moneys except gold certificates.	For silver and minor coins.
How redeemable.....		In gold coin.....		In silver dollars.	In coin in sums of \$50 at sub-treasuries in New York and San Francisco only.	In United States notes at sub-treasury where issued.	In coin at Treasury or any sub-treasury and by regulation in sums of \$50.	In lawful money at the issuing bank and at the Treasury.
Denominations.....	\$24—dollars. 5—dollars. 10—eagles. 30—double eagles.	\$20 50 100 500 1,000 5,000 10,000	\$1	Same as United States notes; \$1 up to \$1,000.	\$1 5 10 20 50 100 500 1,000	\$5,000 10,000 The smaller is not often issued now.	Same as United States notes; \$1 up to \$1,000.	Same as United States notes except the smaller; \$1 and \$2 are now not issued.

Subsidiary coins are issued up to the needs of the country, coined of standard or nine-tenths fine silver, on basis of 385.8 grains to the dollar; into 10-cent (or dimes), 25-cent, and 50-cent denominations. They are legal tender in sums not exceeding \$10, exchangeable for minor coins, and redeemable in "lawful money" at the United States Treasury in sums of \$30 or any multiple thereof.

Minor coins are the 5-cent piece, made 77.16 grains, being three-fourths copper and one-fourth nickel, and the 1-cent piece of 48 grains, 95 per cent copper and 5 per cent tin and zinc. They are issued up to the needs of the country, legal tender not to exceed 25 cents, and redeemable at Treasury in sums of \$30 or more.

APPEAL.

I have endeavored to present to you the greater facts and more fundamental principles of the money question. Will you heed

them and forever remember that, other things being equal, the volume, that is, the number of units in circulation in a nation, controls the general range of prices of commodities that the people

must produce and exchange to pay the various monetary obligations of modern civilization and supply themselves with the necessities of civilized life. The money question is a question of property and prices.

Prices regulate profits in all industries.

Profits are necessary to equitable employment of labor.

Money, prices, profits, employment, equity of payments, all of these are necessary to prosperity and freedom.

In the face of these all-important principles, will you betray all of them into the further control of the banks and the Anglo-American gold conspiracy?

Will you betray the people of your country, 70,000,000 of them, with upturned faces looking out of discouragements and unjust sufferings to you who sit here in the high places of legislative power, praying for relief and deliverance from the gold power?

Have you neither sense of justice nor sense of official obligation, nor a heart for the suffering of the trustful, yea, the too trustful people, who have sent you to this Chamber to legislate for them? If not, yet humanity must exist, despite the betrayal of those lifted into political power. And when once aroused and indignant at injustices long suffered, the people mount to the chariot and ride on and over the entrenchments of selfishness and error with a vengeance and unsparing cruelty that remind us of God's greater forces in wind and storm that show no respect of persons.

There's a cry among the needy, there's a wrong on every side;
For the bankers take the harvest and the reaper is denied.
Now the king mounts to his chariot, whose warning was defied.

For the rising sons of freedom shall soon come marching on.

In the old Plutonian temple there's an image made of gold,
Where his worshippers assemble in their revels as of old.

But a Samson now is feeling for its pillars, we are told.

Then arouse the sleeping people, and forward, men, march on.

But a greater poet said also:

But life shall on and upward go;
The eternal step of progress beats
To that great anthem, calm and slow,
Which God repeats.

So sang Whittier for the reformers of his day, when the arrogance of the slave power threatened the overthrow of the nation. It was not long after that he sang of the victory, saying, with true poetic fire:

Loud and long
Lift the old exulting song.

BEHOLD A CLOUD OF WITNESSES FOR JUSTICE.

I am a firm believer in the ultimate victory of America over monetary conspiracies. We have all things about us in this glorious country to encourage us to persist in the line of justice and patriotism.

Our plains are fertile, covered over with waving fields of abundant and nutritious grain.

Our mountains are beautiful, often majestic, and always beckoning to highest thought and bravest action.

The statues of our heroes and statesmen range themselves in ever-increasing numbers along the aisles and corridors of our public buildings to inspire to noble action.

Our homes for the people, whether cabin or palace, show the efforts and aspirations of the Americans for beauty and comfort, and justice and peace.

Our schoolhouses, colleges, universities, bedeck our hills with greater strength and promise for the maintenance of the state than the rock-built embattlements and turreted castles of the foreign and ancestral lands across the sea.

Religion, reaching out in the direction of equity and fraternity, unopinioned by dogmatism, leads our people toward a common brotherhood for all mankind. Art, culture, wealth, and independence. What more can be needed to stimulate patriotic action? If these great surroundings and your own ambition to be worthy of citizenship in this age, surpassing the dreams of the Magi, and this country, opening a new epoch for freedom and progress, will not enable you to brave the threats and clamorings of the mercenary agents and venal influences of the greedy money mongers, then surely anything I may say will be in vain.

I have indeed been hopeful, yet in the midst of misgivings, that the members of this great legislative assembly might prove themselves worthy of the land and the people and the high order of citizenship and responsibility that they represent in this Congress.

To make it so and bring justice and prosperity back to a long-betrayed people we must withstand in this great crisis the insidious and merciless encroachments and legislative advantages that the gold and bond conspirators now seek to fasten upon our beloved country.

I pray you, gentlemen, stand up erect, gird for the battle, and move forward like men worthy of the confidence and love of mankind. But if you will not, still mankind is of greater value and power than money and all of its treacherous methods. Still, whether you go with it or no, shall humanity move forward toward the dawn of a new and better day. [Applause.]

Eulogy on the Late Hon. J. Logan Chipman.

REMARKS

OF

HON. BENTON McMILLIN,

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 15, 1893.

The House having under consideration a resolution announcing the death of the late Hon. J. Logan Chipman—

Mr. McMILLIN said:

Mr. SPEAKER: I feel ill prepared for the duty assigned me to-day. One of the best friends of my life, one of the noblest men of earth, is gone. The sad duty devolved on me, as upon my colleague who has just spoken [Mr. CARUTH], of attending a funeral, the most marked in its proportions, the most sorrowful in its characteristics, that I have ever seen in the case of any man. He who is mourned to-day had reached that fullness of years and of experience, had reached that confidence in his fellow-men, which, if years, experience, and confidence could ever make a man ready to die, should have made him ready.

If there ever was a funeral procession which, if it could be known in advance, would make a man satisfied with the part he had taken in this life's affairs, that of J. Logan Chipman was such. Surrounding his home, filling the magnificent church in which the funeral exercises were held, lining every street that lay between there and the beautiful cemetery where he rests, a distance of 3½ miles, there was a solid wall of his weeping fellow-citizens. He had exhibited no pomp in this life. He had acquired no wealth to make men love him or honor him for any other cause than for his own generous, noble, distinguished personality. I heard at his funeral the sad song which was the result of his own genius, and I saw the tearful eyes and heard the sobbing souls that responded in unison to those beautiful lines, which will live as long as song and poesy are appreciated in our language.

There are many things in the life of the distinguished legislator who has gone that are worthy of comment to-day and of commendation hereafter. He had begun early to store his mind with useful knowledge, and he could boast being a ripe scholar. His friends could boast that he was not only a scholar, but a legislator of high order, a jurist of profound learning, a poet of distinguished ability, an editor who had won distinction as such, and a legislator who, from the day he entered this Hall, which tries men so sorely, was recognized as a leader among men and worthy of all imitation. I have seen many trying places and scenes, even in the life that has been allotted to me, but I think the most difficult place on this earth to succeed is the House of Representatives of the United States, where J. Logan Chipman did succeed.

He knew no fear. He was too manly ever to oppress the poor; he was too bold to cower before the rich. With equal scale, as a judge, he held up and meted out the laws of his country. It was a subject of comment in the city, both before and after his death, that as an editor he was never known to court public sentiment, but was always found trying to instruct it. You who have heard his voice in this Hall will bear witness with me that for splendid diction, for zeal for the cause that he ever honored and adorned by his advocacy, for readiness to engage in debate whenever he thought the interests of his constituency or his country demanded it, there was no superior to J. Logan Chipman, either during the days that he was amongst us or during the memory of any man who has served here.

He was reelected to Congress over obstacles that made many of his friends fear and tremble during the campaign. It is not mine to speak of the politics of that conflict, but he had the great heart of that beautiful city of nearly a third of a million people behind him, and they gave him a majority which, under all the circumstances, should be most gratifying to any man. I kept inquiring concerning him, knowing he was sick, and on the day on which this Congress met I received a message requesting that I should select a seat for him. The permission was asked. The House was always exceedingly devoted to him. The courtesy was kindly granted, and a seat was chosen that it is the misfortune of his country that he was never able to fill.

He was stricken down at his home in the midst of preparation for coming here. While he had been very unwell for days, no one thought that there was danger of death. He had his trunk packed, he had his books arranged, he had put his affairs in order, and when his wife suggested the evening before he was to start that perhaps he had better not attempt it, he said, "I must go; the time has come when it is possible that I can serve these people that have honored me so long, and I am anxious to be engaged in those conflicts in which I consider that either the weal or the woe of my country is to be determined."

She persuaded him not, but consented that he should start the next day; and in the language of that beautiful song of which he was the author, and which was sung at his funeral, he was "Watching and waiting" for an opportunity to return to the scene of his duties. But he waited and watched in vain. He was taken to the hospital, and even there, when the doctors said that death had marked him, but dare not tell him lest it should be hastened by the announcement, he got up day after day and hour after hour, walked around, looked out of the window, and eastward toward this, his post of duty, and asked at what time he would be permitted to start? Alas! beneath this Dome he was no more to walk; in this Hall he was no more to triumph! But when the inevitable came his greatest triumph came. Evincing that faith which is more honor than man can otherwise achieve here or anywhere else in this life, and taking the hand of his faithful companion in his, he said: "Wife, repent with me the Lord's prayer." And with the last words of that wondrous prayer, "For Thine is the kingdom, and the power, and the glory, forever," his life went out, and this House and this country lost one of the most faithful and useful Representatives it ever had.

Dying with such faith—

O death, where is thy sting? O grave, where is thy victory?

Money Has Been Defined as the Wheels of Commerce. We Have Taken away One-Half the Wheels, and are Engaged in Guessing why Commerce Moves so Slowly.

We have read in the lore of long ago
That a symbol of our life below
Is a boat, with pale men to row
And a blind man at the rudder.

SPEECH
OF
HON. JOSEPH C. SIBLEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, January 8, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. SIBLEY said:

Mr. CHAIRMAN: As I recall a little couplet from the Hosea Bigelow Papers, it runs about this way:

Concernin' the Government, there's no use of denyin',
We're all out of money and most out of lyin'.

Inasmuch, therefore, as the Government reserves in both money and veracity are seriously depleted, it seems that one may be justified in plain speech, and, regardless of musty precedents or mighty magnates, proclaim conditions as they are, and discuss events, policies, and persons in the cold actuality of existent facts. As a farmer my fields sometimes become unproductive, dry and hard on top, and yielding only weeds and briars; and then with a subsoil plow I turn deep furrows, and, letting in the elements of the air and the sunshine, find that the deep plowing into the barren soil has so changed it that it produces rich treasures for the garner. So, to-day, I shall endeavor to stir up the political soil in the hope of richer fruitage in the field hereafter.

The skill of a diagnostician is not required to declare that there is something wrong to-day in the body social, the body financial, and the body industrial and economical. What the disease may be and what remedy it may be necessary to apply it is the province of this House to determine, unawed by any influence, no matter from what quarter it may be manifested. A year ago last August we were in the throes of a financial panic, and I heard gentlemen on the other side of this House supporting with the utmost loyalty and zeal the mandates of a Democratic President. You told us, my Republican brethren, that the whole trouble came from the purchase of silver under the Sherman law. You said that what was needed was to sink our partyism and exalt our patriotism, and roll back this dark cloud of silver which was hanging like a pall over the industries of the nation, putting out the furnace fires and stopping the hum of the spindles. You told us that the nation was in the throes of a panic because of the Sherman law, which put \$4,500,000 of money into circulation each month. You stood with the Democratic party as represented by its executive head, as closely as I ever saw anyone stand with another. You were shoulder to shoulder with it.

Why, Mr. Chairman, the first time I was ever in a penitentiary

I saw men who looked so much alike that I could hardly distinguish one from another—

A MEMBER. That was the first time you were in a penitentiary?

Mr. SIBLEY. Yes; and I may as well tell you what I was there for. I was looking to see if the walls were large enough and the cells numerous enough for the confinement of the people who deserved to be put there for crimes they had committed against the country and its prosperity. I saw those men all dressed alike; I could hardly distinguish one from another; they marched in lock-step, and the only way I could tell one from another was by numbers that were attached to their suits. So in the extra session of August, 1893, the only way we could tell an Administration Democrat from a Republican was by looking at the tag which he wore on his garments, or by reference to the Congressional Directory.

You told us to roll back this cloud, this pall hanging over the industries of the country, and let the golden sunshine of prosperity roll in. Was not that, with few exceptions, your plea? You did the commands of the Administration and your part in effecting that repeal. And then later those same Republicans—not very much later, only last fall—went out upon the platforms of the country and told the people that the thing that was putting out fires in the furnaces, that was stopping the hum of the spindles, was the tariff. You deceived the people upon one of those issues, possibly you deceived them on both.

Oh, what a tangled web we weave
When first we practice to deceive!

Mr. Chairman, I do not know that it is necessary to talk very much about the bill before this House at the present time. I think I will avail myself of the privilege of talking to the amendment, notice of which has been given by the gentleman from Missouri [Mr. BLAND]. I do not wish to talk an hour and then be obliged to admit, as the distinguished gentleman from New York did the other day, that he did not know what bill he was talking about. I do not think there is much use in discussing the measure that is before the House. Anything that is so dead as that is entitled to a speedy interment.

The chairman of the Committee on Banking and Currency, full of elasticity and buoyancy, came into this House with his bill. He told the newspapers and the people that that bill was to be passed before the holidays; and the Committee on Rules was importuned to put the gag upon that bill (if current newspaper comments were correct) and to force its passage as speedily as you forced the passage of the repeal of the Sherman Act. And I am proud that the Speaker of this House refused to lend his sanction to any such measure, because it did not require more than four days' debate to show that it would precipitate this country into another financial panic.

My friends, we all appreciate the abilities, the distinguished character, and services of the gentleman from Illinois; but when it comes to dealing with the question of finance I think he has got into pretty deep water. I do not think he understands this subject much better than a constituent of my friend KIRKBS understood his watch. He came from the lumber woods of Pennsylvania with an old bull's-eye watch to a jeweler, and said, "I want you to fix my watch." The jeweler asked, "What is the matter with your watch?" "Well," replied the man, "I have been looking into it, and I can't tell exactly; but as near as I can make out I guess the trouble with it is that the hair is all worn off the hair-spring." [Laughter.] And, my friends, I think that is the trouble with Mr. SPRINGER's bill. He has not quite comprehended what is the difficulty with the intricate piece of mechanism we are called upon to put right at this time. I do not want to waste much time upon a measure which has been pronounced by every financier of the country to be fraught with danger from the very day it becomes a law or when it is announced in positive terms that it will be a law.

Mr. Chairman, I read in the Evening Star of January 4 how Mr. SPRINGER was ascertaining the strength of his bill:

His plan of canvass is to have one man of each delegation sound the sentiment of his colleagues. If this canvass is not satisfactory, he will probably still further postpone a caucus, so as to give an opportunity for Administration influence to be brought to bear upon those members who are ascertained to be not set in their purposes as to the measure.

I read substantially the same statement in this morning's paper and every morning's paper. It is well known that the large majority of this body is against this bill, and yet it is asserted that through Administration influence it is to become a law. Mr. Chairman, if I have read the Constitution of the United States correctly, it defines the position and duties of the Chief Executive and the powers and duties of the membership of this House; and I tell you if ever a rebuke was needed to one who has trampled down the prerogatives of the people, it is needed to-day to that man who has used his influence, or attempted to use it, to create himself the sole governing power of this nation. [Applause on the Democratic side.] It has come to a time when to be the Government of this people requires something more than a combination of brains, belly, and brass. [Renewed applause.] The members of this House have

duties to perform, rights to be respected, and are answerable to their own consciences, to their own people, and not to the President, and in the discharge of those duties are not to be awed into a violation of duty by an exercise of executive powers outside his constitutional prerogatives.

I want to read you what the English House of Commons did on a similar occasion. I take it from Fiske's Critical Period of American History. When the India bill came up in the House of Lords, George III, then the King, caused it to be announced by Lord Temple that any peer who voted in favor of the bill would be considered an enemy of the King. The feeling was hostile to the bill, but such an attempt at coercion could not be allowed to go unnoticed; and within four days, by a vote of 153 to 80, it was resolved by the House of Commons that—

to report any opinion or pretended opinion of His Majesty upon any bill or proceeding pending in either House of Parliament, with a view of influencing the votes of members, was a high crime and misdemeanor, derogatory to the honor of the Crown, a breach of the fundamental principles of Parliament, and subversive to the constitution of the country.

That is the answer that Englishmen made to their King. And yet, in a so-called democratic form of government, are we to tamely submit to dictation for fear of the Executive's displeasure? Have Americans become so spiritless that they have no rebuke for the imperiousness of a would-be autocrat? No answer to the attempted usurpation of legislative rights? Do men tell me that the power of the Administration was not used to force the repeal of the Sherman bill? Why, Mr. Chairman, there are members of this House who told me with their own lips that they were against the repeal of this bill, and four days afterwards they came forward and voted for it, and when a few months afterwards I asked them why, they told me that their banks asked it and that they had been promised positions for constituents if they supported the repeal! Are the offices, are the positions of trust of the country to be bestowed upon those persons, and those persons only, who support the will of the Chief Magistrate?

Mr. COOMBS. The gentleman from Pennsylvania makes a broad assertion against the Administration. Now, is he willing to give the names of any members in relation to that statement?

Mr. SIBLEY. I will say to the gentleman from New York that I went two or three days ago and asked a member for the privilege of making the statement to which I have just referred when the matter came up for consideration in the House, and he said, "Mr. SIBLEY, it would place me in a very bad position with my constituents, and I am unwilling to do it."

A MEMBER. I should think it would.

Mr. COOMBS. I ask you if you think it fair to make so broad a charge against the Administration of helping to bribe a member of the House, without being willing to give the name? In all fairness it is only right, as you have made the statement, to give the name of the party.

Mr. SIBLEY. Mr. Chairman, on the question of fairness and honor I shall leave each man to be the judge for himself. The gentleman from New York must permit me to exercise that privilege. I am attempting to express my own opinion and endeavoring to show the influences which have prompted certain action in this House, and I have no hesitancy in saying that if you take the golden padlock off the lips of the members of this body, two out of three men in this House, I believe, would corroborate my statement, at least as to the justice of it—

Mr. COOMBS. But the gentleman makes a statement which gives a right to every member on this floor to ask that he shall name the man.

Mr. SIBLEY (continuing). That Executive influence shall not be used. Mr. Chairman, I am going to "talk out" this time. I am not going to be silent any longer. I have had a padlock on my lips as long as I propose to wear it. Why, you remember when old Dionysius—

Mr. OUTHWAITE. What was it put the padlock on your lips? [Laughter.]

Mr. SIBLEY. Because, sir, I did not want to rebuke an Administration that I hoped, before the close of the year 1894, would see the error of its ways and keep with the American people the pledges which had been made by the Democratic party. [Applause.]

Mr. OUTHWAITE. But what was it put the padlock on your lips?

Mr. SIBLEY. When Dionysius, the tyrant of Syracuse—

Mr. OUTHWAITE. Was it Dionysius that put the padlock on your lips?

Mr. SIBLEY. Mr. Chairman, if I had an hour's time with my friend from Ohio I would like to have it out with him. I want to tell him that I am not talking here for the benefit of men who would rather ride to hell in a handcart than to walk to heaven supported by the staff of honest industry, as it has been said. [Laughter.] I am not talking for the benefit of those people who place more value upon a bobtail flush than they do upon a contrite heart. [Laughter.]

If you will give me the time that I want to finish discussing this measure, I will answer any questions that any man desires to put to me. I do not remember that I have ever dodged interrogations. But I was met at the very outset of my remarks with notice that my time would not be extended. I will start again to tell about Dionysius now, if my friend from Ohio [Mr. OUTHWAITE] will allow me to do so.

Mr. OUTHWAITE. I only wanted to know whether Dionysius gave you that information?

Mr. SIBLEY. Dionysius gave a banquet, and at that banquet he desired to obtain an expression of opinion from the guests as to the merits of some poetry he had composed. So, one after the other, the guests at the banquet began to laud and praise the poetry; but there was one, Philoxenus, who said nothing. Dionysius asked him what he thought of the poetry, and he told him that it was miserable stuff. Dionysius thereupon sentenced him to hard labor in the mines. Later on friends of Philoxenus secured his pardon, and being again invited to a banquet of Dionysius to hear some poetry read which the tyrant had composed, all the other guests expressed their very favorable opinion of the poetry, but Philoxenus remained silent. When Dionysius noted that he said nothing, he addressed him and said: "And what saith Philoxenus?" Philoxenus replied: "Carry me back to the mines." [Laughter.]

I have been in the mines for two years. [Laughter.] They can send me back at their will. I wish to speak plainly about the merits of this measure and some of the others that have been suggested. I find that there is a very general agreement among my friends of the East as to the necessity of the retirement of the greenbacks and Treasury notes, amounting to about \$500,000,000. The great cry of 1893 was, "Destroy the silver; it creates panics!" The cry of 1894 was, "The tariff—high or low—it brings stagnation!" The cry of 1895 is, "Destroy the greenbacks and Treasury notes; they produce panics, stagnation, and ruin!" Gentlemen, this seems to be a progressive game. God alone knows what the cry will be in 1896, but I am convinced that it will be an expression of the concentration of human greed and selfishness, as demanded by those whose avarice knows no bounds, whose rapacity has no limit.

Men advocate the retirement of the greenbacks and the Treasury notes, and for whose benefit? For the benefit of the banks who want the \$15,000,000 of interest on those bonds which are proposed to be issued to replace the outstanding greenbacks and Treasury notes—five hundred millions of Government notes to be destroyed and five hundred millions of bonds to be added to the load of debt already bowing down the backs of the people. Destroy five hundred millions of Government money, pay interest on a like amount of bonds, and let the bankers issue this amount of money and loan it to the producers at 6 per cent or higher. Six per cent on \$500,000,000 is thirty millions.

Mr. Chairman, the greenbacks and Treasury notes were issued to the people without interest. They were scattered throughout the nation for internal improvements, for building up a navy, improvement of harbors, payment of pensions and salaries, in the multitudinous objects, costing this nation \$550,000,000 annually for maintenance of Government. This measure proposes that hereafter not one dollar shall go to the people except as individual or associated bankers may filter it out to the public, and that every dollar which may be in circulation from one end of the nation to the other shall pay tribute to the bankers. The proposition is to destroy money which in its issuance calls for no interest, and create money that demands interest from the day it comes into the channels of activity. The bankers' ideal circulating medium is that which is to be issued only by themselves and upon which they are entitled to levy a tax in interest charges. In place of a free currency it is proposed that not one dollar except an interest-bearing dollar shall be in the hands of the American people, and this is what you people dare denominate an honest dollar and this what you term an elastic currency! To pay the interest on the one hundred million bonds that this Administration has already placed upon the producers of wealth would require 125,000,000 pounds of cotton from the planters' fields, if that interest had to be paid in cotton at present value. If you add the five hundred millions you propose in order to destroy the greenback and Treasury note the cotton growers would be required to give 500,000,000 pounds of cotton each year to simply pay interest on unnecessary bonds.

Mr. Chairman, how long will the people consent to such financial schemes, or how much longer tolerate the schemers?

The gentleman from Connecticut [Mr. SPERRY], in his speech of December 20, 1894, on page 489 of the RECORD, said:

Now, my idea is that there is no relief except that relief which comes from the funding of the demand notes in a national bond, and when that funding is made it should be made in a bond payable in gold. I understand that this position is not to the taste of those men who want to go onto a silver basis. It is not in harmony with the views of those men who hold that 50 cents worth of silver, stamped in coin, is equal to a hundred cents worth in gold. But it is in accordance with the views of the whole investing world. I will

not say merely that it is in accordance with the views of the investing people in this country, because it is in accordance with the views of all investors everywhere throughout the world.

Let us put side by side with this utterance the views of Thomas Jefferson, as set forth to John Taylor:

I sincerely believe with you that banking establishments are more dangerous than standing armies, and that the principle of spending money to be paid by posterity, under the name of funding, is but swindling futurity on a larger scale.

The idea of the people favoring the bond issue and the single gold standard seems to be to increase the happiness of the people by taking away the wherewithal to pay their debts, and by doubling the mortgage upon their possessions. It is as if a farmer in debt has horses, cattle, hogs, and chickens, in value sufficient to pay every last dollar of his indebtedness. But some astute student of finance, who has recently graduated from the kindergarten, tells him that the easy way to get out of trouble is to destroy all his live stock, and place a sum equal to their value in the form of a mortgage on his farm; and then ask people to call him honest because he can pay in gold some 2 per cent of his indebtedness. That man's honesty is doubtful and his faculties of a low order in perception who would follow such advice and prate of his honesty. And yet this great Government is asked to destroy all its abilities for payment, and seems almost willing to do so to secure the praise of a school of leeches that are sucking out her lifeblood.

Then there is the Canadian plan, and my judgment is that it will ultimately be adopted. Thirty-nine banks in Canada have run along quite successfully for some years. They had a little panic over in Newfoundland the other day, and the banks all failed, and the Government, as usual, came to their rescue. They have introduced a bill to redeem the bank notes in which the poor depositors are interested, at 20 cents on the dollar, and those in which the rich merchants are interested at 80 cents on the dollar. They have riots there over their bank failures. The banks of Canada have never been tested, and, except for the Government standing as guarantor, pledging its faith to those private bills, it would be the most dangerous, as it is one of the most wicked, financial schemes ever invented. It is quite the fashion nowadays to go to England and English systems to get all our legislation, industrial, financial, or social.

But what is provided by the Canadian bank plan, which is practically the Baltimore plan? Simply, that anyone with a capital of \$50,000 and upward can start a bank, and issue notes to the full extent of the capital, depositing 5 per cent with the Government for the redemption of the notes in case of any failed bank, and the Government guaranteeing all those notes. If you will figure that out, and if it is anything more or less than the sub-treasury plan proposed by the farmers of the West, I should like to have you tell me where the distinction is. All the distinction is, that one inures to the benefit of the money power of the country, and the other inures to the welfare of 44 per cent of the population, or at least they think it will inure to it.

Mr. Chairman, I have at no time laid obstacles in the pathway of American industries, but have sought to build up all legitimate enterprise upon this Continent rather than tear down and destroy any. My dreams of social equality are those which perceive its attainments to be accomplished by the uplifting of the universal brotherhood of man, rather than that equality which comes from tearing down any portion thereof. To carve steps whereby men may climb, rather than to dig pitfalls wherein a few may fall.

We have no contentions with the bankers; we wish them prosperity and the peaceful fruits of their sagacity and opportunities. But we protest when the house of Dives forms unholy alliance with government, to place in the pathway of multitudinous millions obstacles insurmountable by honest purpose, intelligent effort, and unceasing toil. We recognize the rights of capital; we also recognize the rights of human flesh and blood. As the member from Nebraska [Mr. BRYAN] has so truly stated, "The question to-day is not whether the Government shall go out of the banking business, but whether the banks shall go out of the governing business."

Mr. Chairman, I am opposed to this bill because it has not the first tinge of Democracy in it from beginning to end. What is your Democracy? Is it some latter-day-saint revelation, or is it founded upon the wisdom and maxims of the fathers of the Republic, and under which this country grew and prospered throughout all its decades? I want to read a word from the platform of your party.

At Baltimore, Md., in 1840, in national convention, the Democratic party adopted the following plank as a part of its platform.

Resolved, That Congress has no power to charter a United States bank; that we believe such an institution to be one of deadly hostility to the best interests of the Government, dangerous to our republican institutions and the liberties of the people, and calculated to place the business of the country within the control of a concentrated money power and above the laws and the will of the people.

That was Democracy in 1840. This resolution was reaffirmed in 1844 at Baltimore. In 1853, at Baltimore, the Democratic platform contained the same statement, with this addition:

And that the results of Democratic legislation in this and all other finan-

cial measures, upon which issues have been made between the two political parties of the country, have demonstrated to candid and practical men of all parties their soundness, safety, and utility to all business pursuits.

Resolution 10 of the same platform:

That the separation of the money of the Government from banking institutions is indispensable for the safety of the funds of the Government and the rights of the people.

Then the Democratic platform of 1856, the last one that you ever won on down to 1884, reaffirms the same resolution.

Mr. DENSON. And stated further, "Democratic principles on the same subject never change."

Mr. SIBLEY. Yes, sir; I believe that is true. I notice in the proposed bill that there is one little clause that ought to be closely scrutinized, "Banks may have the power to issue gold notes." Now, banks in the great commercial cities like New York, Philadelphia, and Boston, those controlling the gold, will undoubtedly issue their gold notes; but when the people of the South and West issue their notes, and they do not call for gold redemption, they will find that these notes will be discounted, and you will have to have a detector to tell what the discount is. To prevent great discrimination each bank will be compelled eventually to issue gold notes, and then will come the hour when the gold trust will have, not alone the Government and the producers of wealth by the throat, but will have every little bank in the nation within its power.

Mr. HALL of Missouri. Will the gentleman allow me to ask him a question?

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from Missouri?

Mr. SIBLEY. I will tell you, there is not a man who spoke in the interest of the gold trust who was not allowed unlimited time to conclude his remarks. I have been served with notice at the beginning of my remarks that objection will be offered to any extension of my time, and therefore—

Mr. PENCE. Let us test it right now. Mr. Chairman, I ask unanimous consent that the gentleman from Pennsylvania be permitted to conclude his remarks. Let us test it.

The CHAIRMAN. The gentleman from Pennsylvania yields to the gentleman from Colorado to ask unanimous consent that the gentleman from Pennsylvania be allowed to conclude his remarks without interruption. Is there objection?

Mr. OUTHWAITE. To that I object. [Cries of "Ah!"]

Mr. SIBLEY. Then I must decline the interruption.

There is another important feature of this bill to which I think insufficient attention has been given, and one which alone ought to condemn it in the eyes of the business public. It is the provision which makes the Government a preferred creditor and gives it, in behalf of the note holders, a first lien upon all the assets of the bank. Will some gentleman tell me what justice there can be in a measure which, instead of making the bank capital provide for the proper security of the notes, forces the current depositors to become responsible for all the notes of issue? Why have not the merchants, the tradesmen, the mechanics, the school teachers, and seamstresses who have upon deposit all their little hoard of savings equal claim with the note holders, and upon what grounds of justice can it be demanded that their earnings shall go for the protection of the mass of note holders?

Mr. Chairman, with such a bill as this enacted, as a prudent business man I would never keep on deposit one dollar with any bank of issue. I am willing to meet my share of losses with other depositors in any failed bank, but I protest that these deposits should not be swept away by the demands of note holders.

My friends, they tell us that they want this system of banking in order to give elasticity to the currency. What kind of elasticity do you propose to give? Why, the elasticity that controls the consciences of men who make their living by usury, whose limits to greed are fixed by legal statutes, and who propose such degree of benevolence and humanity as will suffice to keep them out of the penitentiary; such elasticity as the throat of the anaconda has with its victim within its jaws; such elasticity as greed and selfishness have given to humanity in all decades and ages! You want an elasticity of currency.

The gentleman from Ohio [Mr. JOHNSON] and myself went through this House and talked with your leading financiers of the East, members of this House, when this country was in the throes of panic in 1893. We said, "Here is a proposition that we will stake our business reputations on that it will end the panic in twenty-four hours. Let us forthwith enact a law that any man holding Government bonds may deposit them with the sub-treasury, taking therefor Treasury notes." Currency was commanding a premium of 2, 3, even 7 per cent, and the first objection made by the distinguished financiers of the East was, "Oh, no; that will never do. That would be in the nature of fiat money." Willing that the prosperity of the country should be imperiled, that private fortunes should be swept away, rather than there should be any tinge of fiat!

Here is an elastic currency system, Mr. Chairman. Place this country upon the bimetallic basis under which for eighty years it grew and developed into a mighty nation, and then let the

holders of the bonds have the option, whenever money is worth more than the interest on those bonds, of depositing the bonds, losing their interest in the meantime, which is that much gain to the Government in the stoppage of interest, and that money will flow into the channels of commerce and business all over the nation; and when money is worth less in active enterprises than the interest on the bonds it will find its way back into the Treasury and take out the bonds. What more elastic system can any man propose than that if you want an elastic currency?

This interconvertible bond-scheme proposition was first proposed by Benjamin F. Butler on the floor of this House many years ago; and to this moment no financier has ever been able to demonstrate that it has a single element of weakness; that it will not be a great saving to the nation and furnish an elasticity commensurate at all times with any possible business conditions or complications. The only objection that has ever been urged against this proposition is that it is too elastic, and does not permit the few at all times absolutely to control the volume and value of money.

Mr. Chairman, in the introduction of the Carlisle currency bill the friends of silver are not deceived. It is brought in here as a rattlebox, a gilded bauble, to divert the public mind; an apple of discord thrown into our midst to disunite those who have long cried out against the crime of 1873 and have been wounded by the folly of 1893. Democracy, pledged as a party to protect silver, who was being assaulted by foreign robbers, was recreant to her trust. After a gallant defense by her loyal friends silver was slain, the last stab being given November 1, 1893. Her blood stains are on Democratic (?) fingers. And in this measure under consideration it is hoped to dig a grave so deep for the outraged form that even the trump of Gabriel may not waken her to confront you before the throne to answer to a just God for the miseries your acts have entailed.

Bury her deep as you may to-day, no man can place a stone so heavy upon the tomb of Truth that the immortality, the energy of the divine essence, shall not roll it away and give a glorious resurrection.

Mr. Chairman, I want to trace the history of financial legislation since 1892, when wheat was worth 80 cents a bushel and cotton worth from 8½ cents a pound upward. There are several things I profoundly regret, as probably some of my friends do my remarks.

Now, it is a fact that a gloomy day will darken the heart, that clouded skies will be reflected in the mind, and that, in short, man is largely the creature of his environments; that even the chameleon will take the hue of the log upon which he basks; and so it was with profound regret that we saw our distinguished Executive, immediately after the election of 1892, hie himself away for a season of recreation. To what spot on earth did he go? He went to the classic shores of Hog Island; and then, when we were in the throes of financial revolution and panic in this country in August, where did he go?

The Bible says that when men are set at liberty each man goes to his own place. The Chief Executive went to the inspiring borders of Buzzards Bay. And when this financial measure was introduced into this House and he sought recreation, where did he go to seek it? Down in the dirty waters of Muddy Bay. [Laughter.] Oh, I can imagine how different the condition of the country might have been if the Executive, when he wanted recreation, had made for the shores of Shelter Island, or sought it in Prosperity Harbor or Security Inlet.

Ah, Mr. Chairman, for two years the ship of state has been pounding against the rocky headlands of Buzzards Bay; bumping her nose into Hog Island, and stranding at intervals in the shallow, dirty waters of Muddy Bay—not a safe harbor of refuge on all their coast nor one fairly good trading port on all their shores—drifting in the breakers and the shallows, with the deep blue sea of safety, the favoring winds and the harbors of commerce but a league to the windward. [Applause.] The time has come to leave the tortuous, dangerous channels, the unexplored, unsounded and unknown waters, and to hold her course in a track whose channels and currents have all been marked; where beacon lights by night and monuments by day so plainly tell the way in which, sailing for eighty years, she has beaten on no rock, stranded on no bar, beset by no breakers on a lee shore, and touched the grandest ports on the coast of prosperity.

I want to trace the action of this Administration on this financial question. The first intimation we had of what was going to be its policy was when the distinguished embassy consisting of Mr. Henry Villard, Mr. Don M. Dickinson, and Mr. Josiah Quincy came to the Fifty-second Congress before its adjournment, expressing the command of the President that the purchasing clause of the Sherman law should be repealed by that Congress.

Mr. BOEN. You mean the command of the President-elect.

Mr. SIBLEY. Yes, of the President-elect. He began early to thirst for power and to assume dictation. The next step was the letter of Chairman Harbry, which in itself was entirely proper,

asking each newly elected member of Congress whether he would vote for the repeal of the purchasing clause of the Sherman law. The result of those inquiries was such as to show that that law could not be repealed on a fair vote, and therefore Congress was not called in extra session in March, 1893, as it doubtless would have been under other conditions. Then this gold trust commenced, through its newspapers, to work up public sentiment.

Mr. Chairman, to what extent the gold trust has control of the metropolitan press is best shown in the evidence given before the Committee on Banking and Currency by W. P. St. John, president of the Mercantile National Bank, which portion I shall quote herewith. I trust every member of this House has read that testimony entire, and I also hope that every American freeman in all this country will read it. His testimony from Wall street comes as the shadow of a rock in a weary way, bubbles up as a fountain of pure cold water in the heat of the sandy desert. This man looms up as a majestic mountain crowned with laurel and fir out of a barren plain productive only of sage brush and cactus. He says:

Mr. Chairman, you will remember that I declined your first invitation to be heard on the topic pending. My apology was, and I repeat as my explanation and excuse for what I shall say, that at this juncture, while our primary money is so undetermined, I deem any new creation of bank notes, State or national, perilous to the prosperity of the United States.

There is a very widespread unrest of opinion on this topic and the allied topic, called the "silver question," even in New York and New England. Public opinion is under a newspaper terrorism in New York. Men who agree with me fully, and I know many of them of considerable wealth, prefer to keep silent for the present. Anybody who will write at length a lot of nothingness adverse to silver money will be accorded certain newspapers' space and be dignified into great authorities. Rejoinder, if complete, and the more complete the more certainly, is denied even a limited space. Again, other men believe that until a change of Administration here approaches it will merely cost them influence to speak their conclusions favorable to silver money. Then, too, certain newspapers shield their readers against intelligence and cow them out of any timid convictions they might indulge.

As an instance, Mr. Horace White's Evening Post a few weeks ago quoted at length from the London Economist one Rawlinson's criticism of Manchester's complaint of England's gold monometallism as relating Manchester to India. The complete rejoinder of two weeks later in the Economist, a compilation of facts that refuted Rawlinson totally, has never even been mentioned by the Evening Post. The Evening Post spreads at length in several columns a reprint of a recent paper of Mr. McLeod, nine-tenths of which matter is as acceptable to myself, as an independent bimetalist, as to anybody else. The real truth which is so universally acceptable is a pad of dignity to the conclusions which they do not, in the slightest degree, warrant. And so it goes.

But conditions current here and elsewhere are forcing the truth upon general attention, and a rebellion against this tyranny and concealment of facts will manifest itself ere long in New York as elsewhere. I have recently been urged by commercial bodies of two important Eastern cities to address them at length upon my convictions. I declined on the ground that I have talked so much that I deem it unwise to be heard again on the topic until invited to speak by my immediate associates in the city of New York.

The paper that I now ask the privilege of reading was prepared for a monthly magazine of importance. I asked the space at first, but afterwards withdrew the request. The editor urged my carrying out my first intention. His private secretary heard the matter in the rough and urged me the more to complete it for his magazine. I learn this morning that more acceptable matter will crowd me out, which is only another evidence of what you gentlemen, aiming to serve your country, are entitled to complain of in the Eastern press.

I would like to explain in advance a term I use for the sake of brevity and without intending offense to anyone, namely, "goldites." The "goldites" are that infinitesimally small but prodigiously influential coterie in the United States who believe that no one nation, not only, but not all the commercial nations combined in a concert of laws, could provide unlimited coinage for gold and silver on one ratio, and attract thereby the gold and silver coins, or certificates for them, into concurrent circulation as money.

Mr. St. John then read the following paper:

GOLD MONOMETALLISM THE PERIL OF THE UNITED STATES—BIMETALLISM ATTEMPTED INDEPENDENTLY TO ACHIEVE BIMETALLISM IN EUROPE BY THE EQUIVALENT OF A CONCERT OF LAWS.

Under official dictation, tutored by the one most aggressive of all our handful of "goldites" in the United States, Congress fiddles with bank notes while the burning issue is our primary money.

Identically tutored, our Chief Executive has required his Secretary to abandon the option conferred by law upon the United States and grant to holders of the United States notes the right to exact gold always, silver never, as their redeeming coin. Had the option to redeem in silver dollars been exercised boldly at the time when only 3,000,000 silver dollars were owned by the United States, with an ownership of \$116,000,000 gold, any possible alarm could have been laughed to scorn. To attempt to seize upon and exercise the option now, or under immediately prospective conditions of our Treasury, would be to court all perils of disaster.

Identically tutored, the demand appears, "one step at a time," to substitute bank promises of money for \$907,000,000 of the primary and secondary money which they promise. Were the scheme adopted and successful, the result achieved would be \$907,000,000 of new bank promises, \$307,000,000 of existing bank promises, and \$1,700,000,000 of promises called deposits, an aggregate of \$2,854,000,000 of national-bank liabilities payable on demand, resting or wrangling on our available supplies of gold. The pretense of the tuition is that this is "sound finance."

Redundant bank notes have invariably banished gold and silver. They never were suspected of enticing either into money. And national banks can not hope for popular consent to their redeeming their circulating notes in officially discarded silver dollars.

LAW THE LIFE PRINCIPLE IN MONEY.

Money is the creature of law. Money is all domestic. Our \$10 gold piece is accounted 236 grains of nine-tenths fine gold when beyond the jurisdiction of the United States.

Money and the yardstick have nothing in common. The yardstick is an exact, unvarying measure of length. Money is an uncertain, variable measure of varying values. The yardstick is not bartered for commodities. Money is the means of acquisition and momentarily the measure of value of the thing acquired. The yardstick is a unit of length. The dollar as a "unit of value" is preposterous. Our Hamilton-Jefferson statute, founding the Mint, provided a dollar as our "unit of account." That dollar of 1793 and the dollar of 1894 contain identically 371.25 grains of silver.

AGGREGATE OF MONEY DETERMINES PRICES.

The aggregate of all money afloat and in bank in the United States is our true measure of normal value of commodities here. The aggregate of money of all nations trading internationally is the measure of normal value of all commodities consumed by all. Therefore to enlarge the aggregate of money in the trading world is to raise normal prices of commodities everywhere. To enlarge the aggregate of money in the United States is to raise normal prices for home and internationally consumed commodities here. Per contra, to diminish the aggregate of money in the United States is to lower all normal prices here; and to diminish the world's aggregate of money is to lower all normal prices of internationally moving commodities in all the trading world.

Mr. Chairman, under the leave to print I shall quote, in addition to my own remarks of to-day, the full text of Mr. St. John's remarks before the Committee on Banking and Currency, because no great newspaper of the nation dares to let the statements of a plain, practical solution of the whole monetary question reach the eyes of the voters, knowing full well that as starving men would rush for bread in sight so would the people seek the old paths of peace and plenty. As men from a burning building would flee for their lives, so would men tear down the flimsy barriers of party and punish those guilty of incendiarism.

Read what a man whose daily transactions are in handling millions has to say, what remedy, plain, simple, unbefogged by financial subtleties, what old-fashioned and sure method of escape for present and future financial evils, he has to offer. Other men invoke untried experiments, invite into mazy paths and labyrinthine ways. This man points the old pathway beaten by the feet of commerce for eighty years. Job says:

There is a path which no fowl knoweth, and which the vulture's eye hath not seen:

The lion's whelps have not trodden it, nor the fierce lion passed by it.

And this seems to be the path which the present Administration is endeavoring to make this nation seek out.

Mr. Chairman, I wish to charge that the Administration's policy has been from its inception a fixed and determined policy to degrade, debase, and lower the value of silver bullion. Reputed interviews with a member of the Cabinet were published through the columns of the papers, recommending that the silver in the Treasury be condemned as junk and sold for whatever it might bring as pig metal. With a law by its plain terms and provisions requiring the Secretary of the Treasury to purchase 4,500,000 ounces of silver each month, that law was set at naught, and wilfully and deliberately violated. When the highest officials of the Government may set at naught the laws of the land without rebuke, what wonder that those whose daily occupations have not been such as to afford them opportunity to become acquainted with legal forms and legal enactments, in protest against a grievous condition strike out blindly in the dark and become violators of law.

Many high authorities hold that in the refusal to conform to the provisions of the Sherman law, which, until its repeal, were mandatory upon the Secretary, he should have been impeached therefor. During the height of the panic, when money was not obtainable from the banks for the most ordinary purposes, when manufacturers could not obtain currency to pay the weekly stipends of their employees, when bills of small denominations could not be secured, and when both greenbacks and silver dollars commanded a premium from 2 to 7 per cent above gold, when gold was tendered to the Treasury in exchange for silver dollars, the silver was refused. There has been no time since the commencement of this Administration that the holder of Government notes could not obtain gold in exchange; but when the Treasury is depleted of gold, when it is ready to place bonds upon the nation, the chancellor of the exchequer refuses to pay out silver. On this question let me quote the Secretary's reply to a Senate resolution, which will be found on page 270 of The Coinage Laws of the United States:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 17, 1893.

*** In further response to the resolution I have to say, that recently gold coin has been presented to the office of this Department and silver dollars asked in exchange therefor, and that the exchange was not made for the reason that all the silver dollars in the Treasury at the time were required, under the provisions of the law relating to the currency, to be held in the Treasury to cover outstanding silver certificates and Treasury notes issued under the act of July 14, 1890. At present the Department would not and could not exchange silver dollars for gold coin if requested to do so by holders of gold, for the same reason. But if the condition of the funds of the Treasury were such as to afford a margin of silver dollars in excess of silver certificates and Treasury notes outstanding, such change would be made.

Respectfully, yours,

J. G. CARLISLE, Secretary.

Mr. Chairman, let me cite the opinion of one of the greatest thinkers of the present age, one who can think like an archangel and perform somewhat less nobly. On the floor of this House in 1878 John G. Carlisle, in the following language, predicted the evils which would torment the race with the destruction of the money of the common people:

I know that the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever be so. Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my views of the subject, the conspiracy which seems to have been formed here

and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world.

The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half the metallic money of the world.

Mr. Carlisle, your diagnosis was correct. Each symptom of the evils you then described appear with alarming import and irresistible certainty. Let me again quote Secretary Carlisle, who, standing on the floor of this House as a representative of the people at an hour before his eyes became dazzled with the golden glitter of Pluto's palace, at an hour prior to Rothschild fixing a golden halo above his head, portrayed, in language stronger than any I am capable of framing, the necessity for patriotism to gird itself for the resistance of powers financial and powers executive. It seems to me that this great mind has blazoned out a path of duty that in the present hour of danger we may follow with safety:

The struggle now going on can not cease, and ought not to cease, until all the industrial interests of the country are fully and finally emancipated from the heartless domination of syndicates, stock exchanges, and other great combinations of money grabbers in this country and in Europe. Let us, if we can do no better, pass bill after bill, embodying in each some substantial provision for relief, and send them to the Executive for his approval. If he withholds his signature, and we are unable to secure the necessary vote, here or elsewhere, to enact them into laws notwithstanding his veto, let us, as a last resort, suspend the rules and put them into the general appropriation bills, with the distinct understanding that if the people can get no relief the Government can get no money.

This language, uttered when he stood here as an apostle in the temple of humanity, may not agree with his utterance standing as a high priest in the temple of Mammon, but I prefer to follow the counsels of the plebeian rather than the patrician leader. Mr. Chairman, if my Democracy is to-day at fault, next to Thomas Jefferson and Andrew Jackson, Mr. Carlisle is responsible for such Democratic sentiments as are cherished by me. For years I listened to his utterances as those of the very oracle and expounder of Jeffersonian Democracy. The words of wisdom falling from his lips so verified each maxim of Jefferson, each declaration of Jackson, as served to ground me firm in the faith that this was a government designed for the welfare of all God's children, not for a limited portion. If I have uttered a word of bitterness concerning one who more than any living man was my commentator on the saints in the Democratic calendar, such bitterness is not in my heart. The good that he has done shall live and follow him long after his mistakes have been forgiven and forgotten, and we must view him as we would one of the grand sculptured warriors of the heroic age, which time and the elements have marred and defaced, leaving enough, however, to show the beauty and glory of the original. I do not know that I even have it in my heart to quote as applicable Browning's lines upon "The Lost Leader:"

We that had loved him so, follow'd him, honor'd him,
Lived in his mild and magnificent eye,
Learn'd his great language, caught his clear accents,
Made him our pattern to live and to die!

He alone breaks from the van and the freemen;
He alone sinks to the rear and the slaves.

We shall march prospering,—not thro' his presence;
Songs may inspirit us,—not from his lyre;
Deeds will be done,—while he boasts his quiescence,
Still bidding crouch whom the rest bade aspire.
Blot out his name, then,—record one lost soul more,
One task more declined, one more footpath untrod,
One more triumph for devils, and sorrow for angels,
One wrong more to man, one more insult to God!

The Administration has refused to coin the silver bullion in the vaults of the Treasury, making it possible for the redemption of silver notes, and the total amount of silver dollars coined during the year 1894 was in the neighborhood of \$100. This Congress passed a bill for the coinage of the seigniorage, the silver bullion lying in the Treasury, amounting to about fifty-five millions of dollars, and the President, in accordance with his plain rights and his own interpretation of duty, which I desire in no way to question, vetoed that bill. It is pertinent, however, to inquire if that idle money lying in the Treasury had been coined and put into circulation, would it not have been within the Secretary's power to accept gold for silver should it now or at any future time be tendered? Would it not have relieved him of the necessity for the issuance of fifty millions of dollars of bonds?

In pursuance of his plan to force a repeal of the Sherman Act, the Chief Executive of this nation said that the country must have an object lesson and the bankers promised that an object lesson would be given. Circulars were sent throughout the South and West, directing them to withdraw their lines of credit from their customers and to bring influence to bear upon their Congressmen.

If there remains a doubt in any mind that a conspiracy existed to force the destruction of silver in America in 1893, let me beg each doubter to read the History of the Panic in 1893, published by Mr. J. W. Schuckers, who during the war was private secre-

tary to Salmon P. Chase, Secretary of the Treasury. In his pamphlet Mr. Schuckers traces each step of what, under the law of the land, he terms a conspiracy having for its object not alone the destruction of silver, but the establishment of a system of finance similar to the one under present consideration.

The result of this organized movement was that the purchasing clause of the Sherman law, against the repeal of which the previous canvass of members showed, I believe, a majority of 10, was repealed here by a majority of more than 100. You struck down silver. The friends of silver on the floor of this House told you, when your cotton was selling at 8½ cents and your wheat averaging, for 1893, 80 cents per bushel, that so sure as you did strike down silver the farmer with his wheat and the planter with his cotton must pay the cost of the transaction. Did we tell you true? The day it was announced that compromise upon the repeal of the purchasing clause of the Sherman law had failed in the Senate cotton broke twenty points. I have the market reports in my pocket. Several gentlemen within reach of my arm cut out the market reports of the day after it was announced that unconditional repeal was going through, and also the reports of the days preceding. Cotton broke, and the break has never stopped from that day to this; so that now the cotton planters of the South are compelled to give nearly 2 pounds of cotton where they gave 1 before.

Silver is the only stable standard of values maintaining at all times its parity with every article of production except gold. The ounce of silver, degraded by infamous legislation from its normal mintage value of 1.2929 an ounce to about 60 cents, has kept its parity with the ton of pig iron, the pound of nails, and all the products of our iron mills. The ounce of silver has maintained its parity with the barrel of petroleum, with granite blocks, with kiln-burnt bricks. With lumber growing scarcer year by year it still keeps its parity. It is at parity with the ton of coal; with the mower, reaper, thrasher, the grain drill, the hoe, and the spade. Silver at 1.2929 and beef at 7 cents per pound in the farmer's fields has kept its parity, and the ounce of silver at 60 cents buys to-day beef at 2 cents per pound on foot. The pound of cotton and the ounce of silver have never lost their level. No surer has the sun indicated on the dial the hour of the day than has the ounce of silver shown the value of the pound of cotton. As surely as the moon has given high tide or low tide, just so surely has the ounce of silver given the high and low tide prices of wheat. The ounce of silver has maintained its parity with your railway dividends, with the earnings in your shops and factories, in all departments of effort.

If parity with gold is demanded, and the Secretary of the Treasury construes the law to mean whenever demanded to pay gold, then let us maintain the parity by reducing the number of grains in the gold dollar from 23.22 grains pure gold to 15 grains, or to such number of grains as will keep it at parity. While we may wrong by so doing the creditor class, through the increased value of the products of human industry, we must remember that for every one creditor there are a thousand debtors; and we should remember that the aim of the Government is the greatest good to the greatest number, and also the minimum amount of evil. But no such drastic measure is necessary. Parity may be maintained and every declaration of governmental policy fully met by accepting for all dues, public and private, including duties upon imports, silver and paper issues of the nation of every description whatsoever.

Let me warn you, gentlemen, that if through the appreciation in the value of gold the hardships upon the debtor become insufferable, they may resort to such measures as Bancroft describes in the first volume of his history of the United States, where he says:

In Virginia debts had been contracted to be paid in tobacco; and when the article rose in value in consequence of (English) laws restricting its culture, the legislature of Virginia did not scruple to provide a remedy by enacting that "No man need pay more than two-thirds of his debt during the stint," and that all creditors should take "forty pounds for a hundred."

And while this seems like repudiation by legislation and an avoidance of debts through legislation, yet it must be remembered that it was through legislation that these conditions were produced.

Mr. Chairman, in all the gold-standard nations destitution and misery prevail. With great standing armies in Europe outbreaks are not of frequent occurrence, and yet one rarely peruses his paper without reading of these outbreaks. Yesterday at Montreal, to-day at St. Johns, Newfoundland, in Italy, in Spain and Portugal, Sunday gatherings in Trafalgar Square, London, of the thousands of unemployed, where rioting is prevented only by keeping the crowds in motion. In Nebraska and Kansas, the land of wheat and corn, we read of starving households; even in Ohio appeals are sent out for the relief of thousands of starving miners, and yet men have the temerity to tell us that the evils arise from overproduction. When the great riots occurred in Chicago last July two newspapers in that city, commenting upon the causes of the dissatisfaction existing throughout the nation, failed to compare notes and make their stories harmonize. The Chicago Inter-

Ocean, in stating the difficulty which confronted the farmers, sized the situation up as follows:

The reason farm products are so low is because there is overproduction. There are too many people engaged in farming.

Then the Chicago Tribune, which, it is claimed, is owned almost entirely by English capitalists, tells us why times are so hard in the cities. Let me quote:

The reason times are hard in the cities is because too many people crowd in from the rural districts. More people should till the soil.

These men should deal with overproduction as they deal out wisdom concerning finance. They should establish a press bureau, where "boiler-plate" matter could be prepared which would bear some semblance of harmony. The articles on finance are more carefully prepared and the "boiler-plate" matter is more carefully distributed as to local conditions at place of consumption. In my speech upon the anti-cotton bill, delivered in the House last June, I attempted to show that the evil was not that of overproduction, and that the low price received for cotton was in spite of the fact that the world's production in 1893 was less than for a series of years. Let me give the figures again, that rest upon the authority of J. W. Labouisse, president of the New Orleans Cotton Exchange:

World's production—	Bales.	Export price.
		Cents.
1883	9,400,000	10.8
1887	9,079,000	9.5
1888	9,134,000	9.3
1889	9,574,000	9.9
1890	9,890,000	10.1
1891	10,896,000	10.0
1892	11,652,000	8.7
1893	9,008,000	8.5

The production of wheat, despite the misleading statements to the contrary, has not shown an increase such as should account for the depressed price of the product. The facts are that in 1879 and 1880 we produced in this country from fifty to one hundred millions of bushels more of wheat than in 1893.

But they talk about the great agricultural development of the world. In 1884 and 1885 the world's production of wheat was 2,263,000,000 bushels. In 1891 it was 2,185,000,000 bushels, a falling off of 78,000,000 bushels in the total crop, and yet the lowest price that the farmer has ever seen, known, or heard of was received for wheat in this country. In 1887 and 1888 the world's production of wheat was 2,267,000,000, or 82,000,000 bushels more than in 1891. I do not know how long gentlemen will stand on this floor and prate, through the columns of the public press, this story about overproduction in the face and light of the facts.

Ah, gentlemen, this question is not of overproduction, but of underconsumption. Here in Washington are multitudes subsisting on charity, and all over the world in the gold-standard countries are the starving millions of underconsumers.

Do you tell us that the evils confronting the nation result from overproduction? Succeeding the great Irish famine of 1840, writers speciously commenting upon that great disaster, in which thousands of lives were pinched out by hunger, held that Ireland was too densely populated; that people starved because of overproduction of men, women, and children. To-day thousands of men, women, and children are suffering the pangs of hunger, and yet we are told that this comes from overproduction. Is it from overproduction of wheat? People are freezing. Is it because of overproduction of coal? Multitudes are in rags and nakedness. Is it because of overproduction of cotton and wool? We were told that we could not hold bimetalism because of the overproduction of silver.

Men tell us that there is an overproduction of silver, and that its price had diminished in comparison with gold because of its great relative increase. Mr. Chairman, such statements are not only misleading, but absolutely false. Figures show that in 1600 we produced 27 tons of silver to 1 ton of gold; in 1700, 34 tons of silver to 1 ton of gold; in 1800, 32 tons of silver to 1 ton of gold; in 1848, 31 tons of silver to 1 ton of gold; while in 1890 the production of silver had declined until we produced 18 tons of silver to 1 ton of gold; and in 1890 but 18 tons of silver to 1 ton of gold; and that, instead of the ratio of coinage being increased above 16 to 1, if relative production of the two metals is to determine the ratio, then the ratios should have been diminished rather than increased, and confirms the fact that merely the denial of mintage upon terms of equality with gold is responsible for all depreciation in the value of silver bullion.

Why, all the silver in the world to-day can be put in a room 66 feet in each dimension, and all the gold can be melted into a cube of 18 or 20 feet. There are to-day less than twenty-five millions of bar silver in all Europe. Mr. St. John, the eminent banker of New York, stated to your committee that there was not over five millions of silver that could be made available to send to our mints. Begin to coin silver to the full capacity of our mints, and we would have to coin it for thirty years before giving to each

inhabitant a per capita circulation that France, the most prosperous nation in the world to-day, possesses.

Men tell me that money must have intrinsic value, forgetful of the fact that a paper bank was established in Venice in the eleventh century whose bills of emission at no time failed to command a premium over and above gold and silver. Historians inform us that the premium upon the paper over gold in commercial transactions rose as high as 32 per cent, until by law the Republic declared that it should be illegal to demand in excess of 20 per cent premium on the paper money over gold and silver coin of standard value. That bank was founded, stood the shock of arms, the mutations of time and governments, for five hundred years, and until the day that Napoleon marched his conquering legions into Venice. The faith and the property of the Venetian Republic stood as a sure foundation for issue.

Let some politician deny this proposition, but before he does so he had better step into the Congressional Library and call for Covill's History of Money, or any one of the multitudinous works published before this question became a burning issue in American political life. You demand intrinsic value in your money, and yet you propose to found and perpetuate in your present financial scheme money which has no value whatever outside the credit which we may ascribe to the value of individual obligations, except so far as the Government must stand under this money as its final guarantor.

You demand intrinsic value, and say you must have money which will stand the fire test and the hammer test. Will the paper currency you propose stand the fire test? Will the bonds which gentlemen propose to issue in place of the legal-tender money to the extent of \$500,000,000 defy the elements? You have a gold dollar and I a silver dollar. We each strike our dollar with the hammer, and you then tell me that your gold dollar is worth 100 cents, while mine is worth but 50. Why is it so? In company we go to the Director of the Mint, and you hand in your gold dollar and say: "Sir, I have met with an accident and mutilated my gold dollar and desire to have it recoined." "Certainly," replies the Director, "but you need not await the recoining process, here is another gold dollar in its stead." I state to him: "Sir, I have met an accident with my silver dollar, occurring at the same time that the gold dollar met with its accident. I am therefore impelled to ask you to recoin my silver dollar or to give me one from the pile that I see at your side." His reply is, "No, we can neither recoin your silver dollar nor give you another in its place." Is it great wonder that with the equal mintage privilege denied by legislation the one maintains its value and the other loses one-half its value? Does not the wonder lie in the fact that in spite of such discrimination it maintains its value as well as it does?

The struggle to-day is between the debtor and creditor classes. With one-half the world's money of final account destroyed, the creditor can demand twice as much of the products of your field, your shop, and your enterprise and labor for his dues. In this struggle between debtor and creditor the latter has taken undue advantage and by legislation doubled and trebled the volume of the debt. For example, suppose you had given a note to your neighbor promising to pay, one year after date, 1,500 bushels of wheat. You thresh the grain, measure it into the bin, and notify your creditor that the wheat is at his disposal. He goes to the granary, sacks the wheat, and then brings up your note and states, "I have taken 500 bushels, which I have indorsed on your note. I will call on you for the balance when next year's crop is harvested." You say, "Why did you not take all the wheat and let me make full payment?" The note holder answers, "I did take all the wheat, and there were only 500 bushels in the bin instead of 1,500."

You fail to understand how that can be possible. You know that you thrashed out and measured into that bin 1,500 bushels of wheat. You go to the granary and find that it is true. No wheat is there, but there appears to be an enormous lot of wheat upon those wagons for 500 bushels, and you ask the note holder, "Who measured this wheat? and let me see how you measured it." You see something in the form of a measure about as large as a washtub, and you ask him what that is. He tells you that is the half-bushel measure with which he measured your wheat; but you reply, "My dear sir, that holds more than half a bushel; that measure will hold 6 pecks." He answers, "Correct, it does hold 6 pecks, but it now takes 12 pecks to make a bushel, instead of 4 pecks. Together with other friends who had wheat coming to us we went before the Committee on Coinage, Weights, and Measures and secured the passage of a legislative enactment, that it should require 12 pecks instead of 4 pecks to make a bushel. We have secured this legislation for the proper protection of the holders of wheat obligations, for our own security, and for fear that we should become timid and lose confidence in your ability to pay unless we changed the standard of measure." But you reply, "Sir, we who have obligations maturing, contracts long outstanding, have never asked or consented to the enactment of such

legislation. Our representatives in Congress never permitted us to understand that any such legislation was pending." He replies, "Sir, you might have known it had you desired to do so, or had you kept yourself as well posted in legislative affairs as do the holders of obligations calling for products of the soil for payment. We have our representatives in Congress. We reward them for their fidelity to our interests; we punish them for fidelity to yours. You are not capable of comprehending problems of such intricate nature as are involved in the system of weights and measures. While you have been debating the tariff we have been students of the financial school taught by Rothschild and his American allies. You should not produce so much wheat, or should devote your attention to better tillage of the soil. You should be steadfast and loyal to our Congressman and to our party. Vote the straight ticket and beware of the evils of overproduction."

Mr. Chairman, this, in my judgment, is not a far-fetched illustration, but depicts the exact condition against which production to-day protests. The debtor's obligation, true, does not call for wheat in specific terms. It calls for dollars, but by legislation we have made the dollar three times as large in purchasing power or in measuring values as it was before. We talk about gold being the only money of intrinsic value, and attempt to beguile and mystify the masses by telling them that it has intrinsic value, when its value is merely the artificial product of legislation.

Enact a law, to be rigidly enforced, providing that no meat of any kind, whether "fish, flesh, or fowl," except mutton, shall be used for food. What will be the intrinsic value of your beef cattle, of your swine, your poultry, and your fish to-morrow? The mutton-headed monometallists would tell you that the great increase in the value of mutton was because of its intrinsic worth. Let this nation and the commercial nations of the globe enact a law to-morrow, that neither cotton, nor silk, nor fabric should be used for clothing or covering, forbid the factories of the world to spin or weave aught but wool, and what will be the intrinsic value of cotton or silk thereafter? Wool will be king; its value will be enhanced, but cotton, hemp, and silk will be as valueless as weeds or as gossamer webs.

With the mints open to free and unlimited coinage of both gold and silver there has never been a moment when silver has not maintained its parity with gold, and at a ratio of 16 to 1 commanded a premium of more than 3 per cent over gold. And if, by some fortunate discoveries to-morrow, gold should be found in great quantities sufficient to lessen the income of the annuitant, the bondholder, or the fixed-income class, there would arise a demand for the demonetization of gold and the establishment of the pearl, ruby, or diamond standard of values. Whatever standard can bring to grasping hands and greedy hearts the most of the toil, the sweat, and unrequited effort of his fellow-man, this standard will be demanded by the representatives of greed, and must be resisted by those who represent humanity and Christianity.

I do not know that I have ever talked with but one perfectly frank monometallist. Last summer, in conversation with a gentleman of large means and keen business acumen, he rebuked me for what he called my fanaticism in the matter of silver coinage and expressed astonishment that one for whose other qualities he professed a high regard should permit himself to be so misled upon a topic of such vital interest. As best I might I attempted to explain to him what must be the inevitable tendencies of the pursuance of a policy which for twenty years had sunk a nation from universal prosperity and happiness to the depths of misery prevalent in the nations of the Old World; that the decline of values coincident with the destruction of one-half the world's metallic money was establishing class distinctions, so that there would soon be but two great classes in the nation—a few extremely rich and the multitude extremely poor; that the great middle class, who, possessing neither riches nor poverty, were the truest friends of free institutions, were being annihilated; that the appreciation of gold had enforced hardships upon the debtor class that they could not well survive; that the continuous enhancement of gold was making the toiler pay three dollars for every one that was nominated in the bond.

He then answered, "That is why I am for the gold standard. I have my business affairs in such shape and my investments are of such a nature that each increase in the purchasing value of the dollar to that extent adds to my possessions." He informed me that he carried for his family a very large amount of life insurance, some of it payable at different future dates some years hence, and the other portion at his death. "Therefore," said he, "if the purchasing power of money doubles or trebles, I have thus doubled or trebled the fortune of myself and family." I ventured the inquiry as to what might become in the meantime of the debtor. His reply was that every man in this world had to look out for himself, and that if in any legitimate way he could increase the value of his property, that was his right, privilege, and duty. I ventured, as a parting suggestion to him, that it might be well to consider whether a man was not honestly paid when he was paid in accordance with the plain terms of the con-

tract, and that it might be well for him to debate in his mind whether those insurance companies which had invested in property which was continually shrinking in value might not only be unable to pay him in gold but to pay him again in any form the money which he had committed to them.

During this debate gentlemen have marched into the arena of discussion with the intrepid step of a Goliath challenging the hosts of Israel, and have made assertions that there has been no appreciation in the value of gold. If this position be correct, then every political economist and every great teacher of nonpolitical finance has been in error. That there has been an appreciation in gold is not denied even by the gold monometallists of Europe. The contention of the monometallists, whose mouthpiece is Mr. Giffen, the secretary of the Chamber of Commerce of London, is fairly stated from their testimony before commissions and through essays in financial publications. Gold has appreciated, they say, and ought to appreciate, as one of the great conservative forces of society, enabling the property interests to rule and in its tendencies checking the growing sentiment of democracy.

But we are not dependent upon the opinions of monometallist or bimetallic. There have been standards erected whereby men can unerringly determine whether values have appreciated or depreciated in comparison with gold. In 1845 the London Economist sought to ascertain the range of values which should determine any increase or decline thereof. They took the values of twenty-two leading articles of production and consumption in Great Britain, from 1845 to 1850, taking enough units to make 100, or one dollar. For instance, one unit of wheat, one dollar; ten units of cotton, one dollar; three units of wool, one dollar, and thus through twenty-two leading articles of production and consumption, with enough units of each of the given articles at the average range of values during the five years named to establish a standard. Therefore, the value of the twenty-two leading articles forming the basis of computation would add 2,200. If prices should vary so that one unit of wheat should be worth 1.25, ten units of cotton 1.10, three units of wool 90, the average rise and fall would be indicated by the total footings of the twenty-two leading articles thus forming the index number.

The results of these tables are astonishing. The average of values which from 1845 to 1850 had shown 2,200 as the index number, owing to the discoveries of the gold mines of California, adding to the volume of money of final account, steadily increased. The output of Australia commencing to come into the channels of commerce in 1853, added still more to the footings of the index columns. Year by year values increased, until in 1864 high-water mark was recorded, and the index number was then 3,780. From 1866 to 1873 prices declined, largely owing to the great contraction in the volume of American currency which tended to reduce the value of American products. But the real depreciation in the total footings did not set in until the United States, following the lead of Germany, demonetized silver. From that time to this the decline has been rapid.

Prior to 1873 but two nations, Great Britain and Portugal, were upon the gold basis. They had a population of 42,000,000 of people. To-day the same, or even a less amount of gold, is divided among the 320,000,000 of people who have adopted the gold standard. The result has been a continuous struggle for gold and a continuous shrinkage of values proportionate to the enhancement of gold. On the 1st day of January, 1893, the index number was 2,121, showing a range of values below those obtaining in 1845-1850. The 1st day of January, 1894, the index number was 2,082; and on the 1st of January, 1895, the index number is 1,923, or a decline of nearly 50 per cent in values below the year 1864, and a decline in values of about 12 per cent below those prevailing in the period embraced between the years 1845 and 1850.

Later, Mulhall took forty-five leading articles of production and consumption; Saurbeck, Soetbeer, and other statisticians, took one hundred articles of production and consumption, as an index showing decline of commodities measured by gold, and the results arrived at are practically the same. This decline in values has not been confined to the one hundred articles of the statisticians, but to all products of human effort, barring the one sovereign article, gold.

This decline must be checked, or we must return to the condition of the middle ages, to its miseries, to its woes, to a period when money was so valuable, during the reign of the Henrys, that seven cents measured as much of the products of the field, the plow, and the muscle as are measured by one dollar of the present day.

Gentlemen, you have plucked the deadly Upas tree from an alien soil and planted it in the free soil of this Union. What are its fruits? It has given the homesteads of thousands of toilers to the creditor. It has given one-third of our railway mileage to receivers. It has given reduced earnings to every one of the other two-thirds, and dividends upon stock and interest upon bonds to but few. It has given idleness to four millions of would-be toilers in shop and field. It has given productive capital no

scope for use and little or no return for risks assumed. It has given the silver miners ruin. It has given the farmer 40 cents for wheat and the cotton planter but little over 4 cents for his cotton. It has produced a Republican majority of about 150 in Congress. It has given nakedness, hunger, and cold to millions of men, women, and helpless children. It has produced a sea of tears, an avalanche of groans and prayers for succor. It has blighted hope and paralyzed aspiration in a million homes. It has produced a crop of defaulters and criminals until the jails and prisons overflow. It has produced mobs and riots and the calling for armed forces of the nation to check and control. It has produced \$100,000,000 more of Government bonds, which are so many financial fetters to shackle the feet of industry. It has produced the tenants of ten thousand graves filled by despairing suicides since your panic began, and for the first time in the history of English literature the pamphlets on the counters and the columns of the newspaper press are devoted to the discussion of the question, "Is suicide a sin?"

Mr. Chairman, when the great assizes shall be held and the seal taken off the Book of Life, and the pages turned, showing deeds of good and evil, from being numbered with those responsible for the misery, degradation, ruin, suicide, and murder caused by these financial crimes, we may well pray, "Good Lord, deliver us."

Gentlemen, at the time of the repeal of the Sherman bill did we not tell you that the prices of all products would go down just in proportion as the ounce of silver went down? Let some gentleman name one article that has not followed silver.

Mr. BOEN. Gold. [Laughter.]

Mr. SIBLEY. Gold! Gold is not a commodity. It is a god, a foreign god, a yellow god! [Laughter.] The gentleman from Connecticut [Mr. SPERRY] says that labor has not gone down. Mr. Chairman, I grant that wages is always the last article to rise and the last article to fall. A new factor appears in the labor world. This mighty giant has marshaled his forces; he has organized into guilds and unions. He no longer runs at first attack, but stands and fights. Trades unions, brotherhoods, and federations have resisted the natural laws of decline with great effect. But with it all, nothing is more delusive, misleading, and nothing more betokens the superficial student or observer than the statement that wages have not fallen. True, the normal rates per diem are the same, or but a trifle lower, but every morning newspaper tells of cuts in wages, and throughout the land are strikes, lock-outs, and shut downs; factories running three days in the week, and taking the millions of idle or partially employed workmen of the nation, and never has the ounce of silver shown its parity, its dominant force, its controlling influence more closely than with labor unprotected by its unions, and affecting even these in lessened opportunities for employment.

Take the shops of one railway in my own district. The men there are receiving, it is true, the same rate of wages that they formerly did; but under what conditions? They work seven hours in one day, and then the next day they remain idle, and the other half of the men work for seven hours. Last week, according to newspapers, fifty freight crews were laid off on a single division of the Pennsylvania Railroad. And on the other great railway systems, where there have been three or four brakemen to a freight train, they have reduced the number to two. Tell the idle and the unemployed that the rate of wages has not gone down and ask them if they will believe your statement. They will not do it, for they know differently.

Mr. BRYAN. Let me suggest to the gentleman that the American Federation of Labor at Denver the other day declared for free coinage at the ratio of 16 to 1.

Mr. SIBLEY. I think the world will soon be declaring for that. The next great break that I expect to see for free coinage at the ratio of 16 to 1 will be made, not by laboring men, but by the "solid men," so-called, of the East. You will have to come to it, my friends of the East, or you will see such a panic that the "John Law South Sea Bubble" bursting, and all the panics and "Black Fridays" of the past will prove to be as a summer zephyr compared with the shrieking cyclone, or as a prairie breeze to the howling tornado.

I want to give you bankers something to think about. Your turn is coming next. The small grist has been pretty well ground out between the upper and the nether millstone. I want to say to-day that the thinking men, the intelligent men of the world, are bimetallics. Two years ago you could denounce a man as a "crank" who dared to stand for what he believed to be the interests of his country, his duty to humanity, and his duty to his God-Pioneers in the cause of truth and reform must expect misrepresentation and vituperation. As the distinguished author of Tom Brown's School Days has so fittingly said:

If the angel Gabriel were to come down from Heaven and head a successful rise against the most abominable and unrighteous vested interest which this poor old world groans under, he would most certainly lose his character for many years, probably for centuries, not only with the upholders of said vested interests, but with the respectable mass of the people whom he delu-

ered. They would not ask him to dinner, or let their names appear with his in the papers; they would be very careful how they spoke of him in the palace or at the clubs.

But the more this subject is investigated the more clearly does it appear that bimetallicism is what the public good demands.

To-day the professors of Oxford and Cambridge, of Glasgow and of Edinburgh, of Vienna, of American universities, and of the universities of the world, say that bimetallicism must be adopted if this enormous decline in values is to be arrested. In a paper read before the Society of Arts by J. Barr Robertson, and published at page 354 in *Coinage Laws of the United States*, a Government publication, you will find the statement which I am about to read, showing the effect of twenty years of hostile legislation:

While it would take too much space to enter into details regarding the practical effects of this appreciation of gold, it will suffice to give some indication of the enormous injury it has inflicted, if it is stated that the transfer of wealth from the landed and propertied classes and from the mercantile, manufacturing, and producing classes generally in the United Kingdom, to the holders of securities, mortgages, annuities, etc., can not be less than \$22,000,000,000, due solely to the appreciation of gold.

It is already a question how much further the holders of securities are to receive the assistance of a continually contracting currency to enable them to go on absorbing further and further the wealth of the producing classes. If no other relief can be obtained it may be necessary to fix a commodity standard instead of a money standard for long-dated payments, as has been recommended by the principal economists of the last hundred years. Such a colossal unearned increment as has accrued to the holders of securities valued in gold during the last twenty years in Europe and the United States, amounting to not less than \$7,000,000,000 to \$9,000,000,000, is entirely unparalleled in the history of the world, and all other public questions sink into utter insignificance compared with it.

Consider that statement for a moment; consider the enormous shrinkage in value and loss to production. Thirty-five to forty-five billion dollars! Such sums stagger the comprehension, appall the mind, and chill the heart. How utterly insignificant become all other questions until this absorption is arrested. This is humanity's problem for immediate solution.

Now, my friends from the East, you are going to cry for deliverance. The savings banks, the trust companies, and the insurance companies are holding to-day about \$4,500,000,000 of their depositors' money. They have held those sums for thirty years, possibly some less; the periods vary. To make this sum earn them money they have had to invest it in securities of various kinds; and the system of index numbers indicates that the decline of values has amounted to more than 40 per cent in the last twenty years.

Your savings banks, your trust companies, your insurance companies have the money of their depositors and the policy holders. Now, how are you going to pay back that money? Are not your vaults loaded down with Union Pacific stock, bought at 100 and now worth but little more than the paper on which it is printed; with Santa Fe stock at 100, now quoted at 44; with Chicago, Burlington and Quincy, bought at 103; with Rock Island, bought at 145? What is the value of those stocks on the stock market to-day? Have not your insurance companies been foreclosing their mortgages on the farms throughout the nation and realizing only about 80 per cent of the money they had loaned, so that they have been obliged to take the farms in order to get back a portion of their money? They are extending payments and seeking in every way to avoid foreclosure, hoping to work out to a point where the land will sell for enough to pay the sum loaned. Have not all your insurance companies and loan companies come to a point where they will not loan a dollar on farm lands, once the best security on earth?

Now, then, take the decline of 40 per cent in values, and let us see where our great financial institutions are. Five hundred millions of that total sum are protected by the taxing power of the municipality, State and nation, behind it to enforce collection, but the other \$4,000,000,000 are without any such security. Forty per cent of the uncovered \$4,000,000,000 is \$1,600,000,000, which represents the shrinkage in the values of your securities. Gentlemen, do you not see that that wipes out all the capital of your savings banks, all the capital of your insurance and trust companies, and on the present value of the securities held in your vaults what percentage can you pay to your depositors and policy holders? Gentlemen, you are forcing the issue, and you yourselves will be compelled to help to arrest this decline in values or else you will go to the wall. The mill is nearly ready to grind you. It has been grinding the producers of this country remorselessly for twenty years past. Now your turn has come. What are you going to do to save yourselves?

I want to emphasize it, that the little fellow worth from \$50,000 up to a million or so is not meant when we refer to the money power. He is by no means to feel himself included in the ranks of the money trust which has this nation in its grip. He views with too much egotism his importance. He is one of the inconsequential factors in the problem. He is not the miller, but is merely waiting for the smaller grist to go between the upper and nether millstones until his turn shall come to be crushed. It will not be the small fish alone that will be caught in this net, but those who

have joined hands with tyranny and oppression shall not go free from the blighting curse.

Isaiah, the prophet of the Lord, rebuked the unjust rulers of his day in the following words:

Wherefore hear the word of the Lord, ye scornful men, that rule this people which is in Jerusalem.

Because ye have said, We have made a covenant with death, and with hell are we at agreement; when the overflowing scourge shall pass through, it shall not come unto us: for we have made lies our refuge, and under falsehood have we hid ourselves.

Therefore thus saith the Lord God:

Judgment also will I lay to the line, and righteousness to the plummet: and the hail shall sweep away the refuge of lies, and the waters shall overflow the hiding place.

And your covenant with death shall be disannulled, and your agreement with hell shall not stand; when the overflowing scourge shall pass through, then ye shall be trodden down by it.

For the bed is shorter than that a man can stretch himself on it; and the covering narrower than that he can wrap himself in it.

If my memory serves me, this courageous seer was sawn asunder for his rebukes, but his words of prophecy were nevertheless all fulfilled.

But I wish to consider in further detail the financial record of this Administration. We have declared in the legislation of 1890, which created the Sherman Act, and the legislation of 1893, which repealed it, for the maintenance of the parity of every dollar we issued with every other dollar. Here it is on these pages before me, 71 and 77 of the *Coinage Laws*:

That upon demand of the holder of any of the Treasury notes herein provided for the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, as may be provided by law.

And in the "Act to repeal a part of an act approved July 14, 1890," etc., approved November 1, 1893, appears this:

And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government shall be steadily directed to the establishment of such a safe system of bimetallicism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts.

I want to show how far those declarations of parity have been strained. What was intended by the declaration that the Government should maintain every dollar at parity with every other dollar? It was intended that the Government by that declaration should not discriminate at its custom-houses or at its revenue offices against any dollar the United States issued or on which it had placed its stamp. It was never intended to transform the Treasury into a pawnbroker's office, where gamblers in gold could bring their exchanges and take this Government by the throat and demand one certain kind of money that was never specified in the contract. That parity declaration would have been met to the fullest if the Government had never made any discrimination in its receipts at the custom-houses. And yet under that declaration of parity what have you done? The dollar that Thomas Jefferson defined as the unit of value should contain 371½ grains of silver.

That dollar, which was its own ultimate redeemer, has become to-day a mere certificate of indebtedness or a promissory note on the part of the Government that it will pay the holder, whenever it is presented at the Treasury, a gold dollar in exchange. Is not that a violent assumption? Is not that straining the word "parity"? Is not that parity with a vengeance? But, as a matter of fact, under this question of parity that dollar has become a mere promissory note, and under the declaration of parity every dollar of every kind issued by the Government has become simply a promissory note to pay the holder upon demand a dollar in gold. In that way, Mr. Chairman, we have increased our national debt since these declarations have been made and enforced more than \$1,000,000,000, and the people have not known it, except as they have found its results in the decreased value of all the products of human industry. My friends, let me give you a quotation from Junius, because Junius has always been considered a wise man—you will find it in his essays—I had intended to read his two letters to the king. I commend those two letters to the President for perusal. Junius says, "To be acquainted with the merits of a ministry one has but to observe the condition of the people." What is the condition of the people of this country to-day? Ascertain that, and then you know the answer to the question, What are the merits of your Administration?

Every dollar at a parity! Let me give you another illustration. I, as a business man, build an elevator capable of holding 1,000,000 bushels of grain and invite people to deposit with me. They bring 100,000 bushels of wheat, 800,000 bushels of oats, and 900,000 bushels of corn, and my warehouse is full. I issue certificates against the grain—the oats, the wheat, and the corn—and go away

and attend to other business. But my hired men whom I left in charge of the business give their own interpretation of parity to the warehouse receipts, and I learn that they are cashing out in wheat the certificates calling for corn and oats. I go to make inquiry about it and ask, "What do you mean by this business? This contract, these certificates, call for oats and corn, and you are issuing wheat upon them."

They answer: "Well, don't you know you must maintain all grain in this elevator at a parity? The boards of trade, the speculators, the jobbers, and the sharpers, all tell us so."

"Well," I say, "but this contract calls for oats, and I think it is pretty well fulfilled when I give them oats."

"Oh, you don't know your business, sir. The majority of the receipts in this warehouse would be at a discount if you did not cash up in wheat."

"But I have only got 100,000 bushels of wheat in the storehouse."

"Well, can not you understand business? Of course, a farmer can not understand it. It takes an educated man to understand it. Do not you see that the way to make that good is to put a mortgage upon this elevator, and buy more wheat to put into the bin, and then keep cashing out in wheat, and then put on more mortgages and buy more wheat?" [Applause and laughter.]

I tell you, gentlemen, we have been doing that for years, and the business man who found his employees doing such things would give them an immediate ticket-of-leave, and some day I think our Uncle Samuel will rise in righteous indignation and cast his unfaithful servants into outer darkness.

Mr. Chairman, as I recall the record of folly of this so-called Democratic Administration I am reminded of an old stanza which, if not affording a true symbol of life, does give a picturesque view of this Administration:

We have read in the lore of long ago
That a symbol of our life below,
Is a boat with palsied men to row,
And a blind man at the rudder.

Mr. Chairman, to maintain parity and stop the drain of gold from the Treasury let Congress declare that the acts of July 14, 1880, and November 1, 1893, are not to be construed as an obligation to redeem in gold all legal-tender money of the United States at the will of the holder, but that the option of redeeming in either gold or silver shall be vested in the Secretary of the Treasury, and that it is the policy of the United States to maintain all its issues at parity by making no discrimination in favor of any one form of legal-tender money in payment of dues public or private; and the further declaration that contracts calling for gold payment alone are contrary to public policy and may be fairly discharged in any lawful money of the United States. France has a population of 38,000,000 of people, and has the following sums of money:

Gold (more than).....	\$550,000,000
Silver (more than).....	700,000,000
Paper.....	600,000,000
Total money, round numbers.....	2,250,000,000
Population, round numbers.....	38,000,000
Money, per capita.....	\$58.91

The paper in circulation, as given for January 12, 1893, is by Carnot, President, and is found on page 143 of Coinage Laws of United States, and is over \$17 per capita of paper alone.

France maintains the parity of all her money, gold, silver, and paper. She has more than eight hundred and fifty millions of gold, more gold than any other nation on the globe, and keeps it by reserving to herself the right to pay in either metal. Whenever the attempt is made to deplete her gold reserve she tenders silver. France also has more silver than any other nation on the globe, some seven hundred millions, all at a parity, carried at the ratio of 15½ to 1. She has more money, gold, silver, and paper, per capita, than any other nation of the earth, and to-day stands alone as the only nation of Europe that is not in the throes of financial convulsion. Her people are prosperous, contented, and happy. Were we to open our mints to free coinage to-morrow, before we could coin the same per capita circulation of silver that France enjoys would require the uninterrupted efforts of our mints for more than twenty years.

It is a fact within the remembrance of every gentleman that after the Baring failure in 1890, except for the loan of fifteen millions of gold made by the Bank of France, the Bank of England would have been forced to suspend; and it is therefore pertinent to inquire why, when seeking for a European model upon which to found our system of national finances, we should adopt the weaker rather than the stronger? The one system has insured to its people prosperity and happiness; the other idleness and misery.

The Secretary of the Treasury proclaims that he will not and can not pay silver for gold upon demand, because he has not got it to pay. Why, then, should not the great mass of bullion in the Treasury be coined, and when silver certificates are offered

and gold demanded, pay what those certificates call for—silver. By refusal to coin the silver in the Treasury we have deliberately, willfully, and sometimes, it seems, knowingly and intentionally, assisted the gold trust in its efforts to bankrupt the nation and saddle such a load of interest-bearing obligations upon the backs of the people as will reduce them to serfdom and slavery. The gold trust and its agents proclaim that the Government of this nation is bankrupt, and coolly demand that we hold out our hands and permit them to forge other links in the shackles which bind us—aye, to demand that we assist in heating and heading down the rivets that shall fetter our limbs.

Mr. Chairman, when citizens of the United States ally themselves with people of other lands to destroy this Government, to force it into bankruptcy, or to coerce its representatives to the commission of acts which blight the prosperity and happiness of a free people, I know of but one term which defines such action, and that is treason. I know of but one term which stigmatizes the individual conspirators, and that is traitor.

Mr. Chairman, the cause at trial is that of creditor versus debtor; humanity versus selfishness; truth versus error—a free Government such as our fathers designed to found versus the rule of an organized plutocracy. Every great statesman and political economist of the last three hundred years has laid down as a political axiom that the values of property are determined by the volume of money proportionate to the volume of trade transactions. I shall quote in an appendix the declarations of many great thinkers upon this topic from the days of John Locke and Adam Smith down to the present moment, which, briefly condensed, may be summarized as follows:

Double the volume of money, you double the value of products. Divide the volume of money and you divide the value of products.

Divide the volume of money, you double the debt. Double the volume of money and you divide the debt.

Nothing more clearly illustrates the increasing value of money than an example the force of which must be apparent to the duller intellect. If a man had sold his farm for \$30,000 in 1873 and buried his money deep in the earth, or, as men do, placed it at interest at 6 per cent, in addition to his interest, with one-third of his \$30,000 he can to-day repurchase the same farm. If this man has gained \$30,000 and the interest on \$30,000 for twenty years, then certainly the man who purchased the farm has lost \$20,000 of his purchase money and the interest on \$30,000. If a farmer had sold \$10,000 worth of horses in 1874 he could purchase others, their equal, to-day for \$2,000. If he had sold his beef cattle from off his farm for \$6,000, he could buy back to-day an equal or greater weight of beef cattle for \$2,000. Money has been magnified; sources and profits of industry have been minimized. If the man who sold the farm for \$30,000 in 1873 had placed it at interest at 6 per cent it would amount to more than \$100,000 in 1894 with interest annually added to principal. If the one man has gained through appreciation of money and interest more than \$90,000 net, the man who purchased has certainly lost an equal sum. By vicious legislation money has been made a monarch, while industry and production have become beggars on the face of the earth.

Mr. Chairman, the President told us in his message demanding the repeal of the Sherman law that "he gives twice who gives quickly." There is no mistaking the fact that we gave quickly. Democrats and Republicans outvied each other to be first to give the nation the single gold standard. And since that day the cotton planter is sure that he who gives quickly gives three times instead of twice, for he knows now he must give three bales of cotton where he gave but two before the absolute destruction of silver money in the nation, and where before the crime of 1873 he gave less than one bale. The grower of wheat now understands the meaning of the old saw quoted by the President, for he gives now two bushels of wheat where one before sufficed. The laborer upon the railway and in shop and field and mine understands its import now, and realizes that it means that it gives months hunting employment where two days sufficed before.

Men who work upon the farm, in the shop, or in the mine are prone to think that the volume of money in a nation and matters of finance are subjects in which necessarily they can have but passing interest, and relegate the entire subject to the "masters of finance," to those who loan money, deal in stocks, manage banks, and operate trust companies. This indifference to such subjects has led mainly to the condition which confronts the nations of the world to-day. The most careful compilations of the last census indicate that in 1890 three-tenths of 1 per cent of the population of the United States received more than 70 per cent of the total increase of wealth, or that of the increase of national wealth in the last ten years, of every one hundred dollars of increase 1 man out of every 300 men took seventy dollars and the other 299 men had thirty dollars to be divided among them, or about ten cents apiece.

Now let us state the problem fairly and honestly. If in any

given community of 300 citizens one man was taking seventy dollars out of each one hundred dollars that was earned by the united efforts of all that community, how long would it be until you could make the 299 men see that they were called upon to take more than a passing interest in financial questions so far as they concerned that community? You would no longer commit the entire financial management of that community to the one man who was taking seventy dollars for each ten cents allowed to the balance. But, my friends, that is just what you are doing in this nation at this very hour, and the men who get the seventy dollars are telling you that finances is a dry subject, a very deep and abstruse topic, and you should leave it entirely to them. They own or control the columns of nearly every metropolitan journal, and those who dare to tell you the truth are denounced as "cranks," demagogues, and fanatics.

What is the plain duty of the 299 citizens? Clearly not to despoil or rob the man of his possessions, but by united effort to assist one another in the securing of such legislators as will enact laws so beneficent in their operations will make such absorption a future impossibility. Let me show you now how partyism works: This man who gets the seventy dollars springs a great issue through the columns of his newspaper as to whether a man should wear boot heels 3 inches high or no heels on his boots. The strife waxes hotter and hotter, the 300 men divide their forces, 150 for boot heels three inches high, and 149 against any heels, and while the votes are being counted he is secretly laying his plans to steal every pair of boots and shoes in the whole community. The old Roman maxim, "Divide and rule," is employed to-day as much as ever in the palmiest days of Roman power. The 299 men strive with no concert of action, but pull this way and that, and their efforts redound in the end not to the well-being of all, but to the further aggrandizement of the one who upon false issues has divided them.

So in this nation the three-tenths of 1 per cent rule because they are to all intents and purposes a unit, and if they can continue to divide upon minor issues the 99.7 per cent of the people, just so long shall they make your laws and demand even greater subsidies from earth's toiling masses. Read, if you please, the testimony taken by the Senate committee investigating the charges of bribery and corruption in the sugar schedule. Mr. Havemeyer under oath admitted that the sugar trust gave large contributions to both political parties; where he thought the Democrats would win he gave to them, and where he thought the Republicans would win he gave to them. No matter which party was defeated, the sugar trust was triumphant and had their representatives in both parties.

India, with her population of 300,000,000, is controlled by an army of 30,000 English soldiers. Why? Because the people of India have no organization; they are undisciplined and disunited. How? Because the step of each English soldier is the step of the 30,000, each man touching shoulder with his fellow. The purpose and will of one man is the purpose and will of the whole. India groans with the burdens laid upon her by her taskmasters, thousands starve each year, and through creeds and castes dividing the one from the other, they court the yoke of foreign masters and grovel in abjectest misery.

With all these facts and truths appealing to me, I shall never stoop at the beck of powers, nor, on the demand of persons or party, sacrifice my sense of duty to my fellow-man and to my righteous Judge by lending my support to those schemers who would, if they could, corner the cooling zephyrs and the summer shade; who would, were it possible, combine to control God's sunshine and His air; who would form a trust to control the dew and summer showers, and make each dweller upon this footstool pay unholy tribute. My duty is not to those who, if they could get to Heaven, would wish to form a trust to control the waters of the River of Life; who would tear up the golden pavements of the New Jerusalem to coin and hoard in bank coffers to torment the dwellers in Heaven with usurious loans.

Mr. Chairman, the body politic, financial, social, and industrial, is to-day afflicted with a thousand ills, and each ill has developed a horde of specialists who have some specific remedy for each separate malady. Apply the remedy for the one great evil, arrest the pyæmia which, unchecked, must destroy the whole system, and the thousand wrongs and ills, which are but symptoms of the universal disease, need no remedy, for with the purifying of the lifeblood these excrescences and tumors, by the natural process of absorption, will disappear; the receiverships, the bankruptcies, the closed factories, or those operated at a loss, the profitless investments, the mortgaged homes, the paralyzed aspirations, the idle men, the tramps, the strikes, the lockouts, socialism, and anarchy disappear as the summer clouds before the noonday sun.

Arrest the decline of values of all forms of property arising through appreciation of gold, and humanity takes on new hopes and girds herself for conflicts, not among its fellows but for conquests over the material universe. Fix at some point through bimetallic stability of values, where investment shall unerringly

know that through appreciation of gold and debasement in value of all products there shall be no longer from year to year a continuous decline of the latter, and at once you inspire courage and faith in every legitimate enterprise and activity in every field of usefulness. But continue the dwarfing process, the crushing, grinding, resistless, and relentless system of gold monometallism, and with it you discourage enterprise, dampen ardor, dispel hope, and destroy faith; and then the teachings of the Master will be reversed, and the provident and faithful steward will be he who alone has buried his talent in the napkin, while the man who had the five talents and used them in the fields of human activity will be the one who will return to his lord empty handed to merit rebuke for having attempted to use his money for his own and society's betterment.

Men tell me that if we adopt free silver coinage we will lose our gold. But had we not better lose our gold than lose our virtue? Better lose our gold than lose our independence, better lose the small sum of gold in the United States than that all shall lose their homes, their hopes, and their happiness.

Destroy the wheat and corn of the earth, and humanity would despair and die.

Destroy all the money, both gold and silver, and humanity would still survive.

Even the ordinary transactions of commercial life would soon be adjusted upon some other basis of value. Why, then, a whole nation in sackcloth and ashes; aye, even many nations grovelling in woe and wailing through the punishments inflicted by a god of their own creation?

Sir, I have read of the breath of the hot simoom, which, sweeping across the desert sands, destroys all in its path. I have read of the black plague, which, stalking through a nation, claimed thousands for its victims. I have read of the scourges of the yellow fever in our own land, which brought terror to the hearts of millions and death in the homes of thousands. But, sir, I have never been told that these scourges were invited guests. Tyrants and monstrosities of cruelty have in ages past wreaked insatiable violence upon defenseless subjects, but nowhere in the pages of history have I found recorded a people who willingly and cheerfully submitted. Sum up the whole list of human ills, inventory all the plagues and plagues, and their curses are as trifles compared with the curses which follow falling prices.

Men to-day are supporting the proposed measure not because they believe it right, but because they have come almost to despair of securing the right. For half a century upon the slavery question in this land compromise after compromise was effected, and each such bargain made by namby-pamby men, with best of intentions, doubtless, in their hearts, added but so much more to the blood and treasure wasted in the undoing of all compromise or attempts to patch mortal lies to eternal truths. The one great question settled on the field of Mars was that African slavery could not exist upon this continent. We who are bimetallics want no more compromises. We demand that slavery, neither white nor black, shall exist, and that the masters of the world's gold shall not be the masters of our products, our consciences, and our lives. That one family with its connections on the Continent, and with headquarters in London, shall hold in vassalage the seventy millions of this land, is a monstrous proposition! Have Americans lost their honor, their patriotism, their courage? Our fathers at Concord and Lexington, at Eutaw and Cowpens, at Princeton and Monmouth, at Yorktown and at New Orleans, lifted, as we thought, the yoke of Britain's bondage. The stamp tax and the tax on tea created a revolution in that heroic age, but degenerate sons submit to hunger, starvation, and death because some theoretical Dogberrys write long essays on abstract propositions and give sophistry in place of truth. You raise no voice of protest when English gold owns and controls your newspapers, and when English gold bribes your politicians and alleged statesmen.

Mr. Chairman, we are told that if we enact free silver coinage that we will drive out our gold. This does not necessarily follow. Repeal or properly interpret the declarations of parity and adopting the policy of France, letting the Treasury pay in either metal, and the gamblers in gold will as surely fail in their ability to manipulate our finance as they fail in France. But if this yellow god for a time disappears, will the disappearance injuriously affect any industry? True, gold may for a time command a slight premium, but what enterprise but can laugh at Satan's rage? Gold at a premium! Name over all the years of national prosperity and tell me those in which we made the most marvelous leaps and bounds in national development, and they will show that it was in those years when at every moment gold commanded a premium.

With gold at a premium we depend upon our own furnaces and forges, our own looms and spindles, our own, and not foreign, hives of industries for all life's sweets and all life's needs. We decrease the necessity for gold to pay balances due to foreign nations upon imports of luxuries or those other articles that can be

fabricated equally well by American fingers. We shall thrive as we did from 1863 to 1874, because gold at a premium is a surer protection than tariff walls. Restore the condition in which the farmer got \$1.25 for his wheat and the planter 15 cents for his cotton, and behold how like the sweep of the fairy's wand you shall transform a nation from universal gloom into the sunshine of happiness. Every thinker who has studied the problem knows that a premium on gold creates in its operation a bounty to the growers of wheat, cotton, and other products of the farmer, equal to the premium on gold, on every pound or bushel exported. European financiers and economists realize this fact and have written warnings to their own people of the tremendous advantage accruing to the United States if they adopt bimetalism. Permit me to quote one authority, second to none in the world, Prof. Edward Suess, professor of geology, University of Vienna, vice-president of Imperial Academy of Sciences, and member of the Austrian Parliament, and whose views upon other phases of this silver subject I shall more largely quote in the appendix to my remarks. On page 411, Coinage Laws of the United States, he says, speaking of the United States:

But this very high rate of gold becomes a premium on the exportation of wheat.

If the dollar in gold is equal to two dollars and a half in paper money * * * the premium on gold has raised the price of wheat to farmers in that country eightfold.

Listen again to him, where on page 412 he says:

Senator STEWART of Nevada was right, too, when he said that gold is not sufficient for the human race; that legal enactments have their share in the fall of the price of silver, and that the silver standard (referring to India) is an advantage for the wheat culture of India against America.

Again, on page 419, urging the wisdom of Europe adopting a bimetallic system, he says:

But in declining to do so Europe must keep in mind that she places America face to face with a choice which, however it may turn out, must in any case be fateful to Europe.

And so, Mr. Chairman, we could quote without number authorities of the Old World and the New, who viewing this question not as politicians, but as statesmen and philosophers, who indicate the marvelous advantages which must accrue to this nation and the hardships to Europe, if we but have the foresight to take advantage of our opportunities and launch our bark upon the tide of fortune sweeping past our very shores. Give us statesmen who dare unfurl the sail, who dare grasp the rudder, and the ship of state will sail into an open sea of prosperity such as never known before. Four-fifths of the people of the globe are to-day upon a silver basis. They want our products of factories, of furnace, of forge, and loom and spindle. Come once more to the world's money, to the money of our fathers; correct the follies of 1873 and 1893, and the commerce of the world comes to your harbors. The one-fifth of the people who have the single gold standard take from us only the absolute necessities of life; they take the products of our fields, they take them because they must have them to sustain life. They can not take less than they do already, but the products of our mines and looms and workshops they do not want. They with cheap labor can make them at less cost at home. Their trade we have already. Why not strike out then for the world's trade, and become the masters of all maritime marts, and within two years all Europe, losing her outlets for products, will restore bimetalism, and America, through the possession of silver, will be impregnable in her power, and the most grovelling suppliant in the whole list of nations will be the imperious Albion, whose money lords have so long been deaf to the pleas of a plundered people.

Mr. Chairman, there is on the face of the globe less than \$3 per capita of silver. Wherefore, then, all these fears of a silver deluge? Not a nation on the globe to-day that has a silver coin to spare; and if it were possible that every dollar's worth of silver in the world was to be sent to our shores we would then have a less amount of silver per capita than the per capita circulation in paper, silver, and gold now in France. The highest product of the silver mines of the whole world would afford, deducting the amount used in the arts, a yearly per capita increase of less than 5 cents to the people of the globe.

The advocates of the gold standard, with an air of superior wisdom and greatest financial comprehension, assert that this nation must adopt the money of the great commercial nations of the world, and the great masses following the blind leaders into the pitfalls of industrial, agricultural, and commercial ruin forget the fact that 96 per cent of all commercial transactions of the United States are among her own citizens, and only 4 per cent among the citizens of foreign nations. For whom are we legislating, the 4 per cent or the 96 per cent?

Gentlemen have for days stood here and sung the glory, the power, and dominion of commerce. I have no quarrel with commerce. No act of mine has ever helped erect a barrier in the pathways of legitimate enterprise, but when gentlemen exalt commerce as above all law and all government, then must I protest, aye, even rebel against this usurpation.

No florid prose, nor honeyed lines of rhyme,
Can blazon evil deeds, nor consecrate a crime.

Let me quote from a letter written by the president of one of the greatest banks of America, the American Exchange National Bank of New York, to José F. De Navarro, of New York, in commendation of a very able pamphlet upon silver written by Mr. De Navarro from the standpoint of "commercial ratio" for silver. The closing sentences of the letter, dated April 10, 1893, are as follows:

Commerce is larger than governments and will certainly prevail over them all. When once this conviction prevails we shall all be surprised to see how easily natural laws will conquer local prejudice and legislation.

Yours, gratefully,

GEO. S. COE.

Mr. Chairman, on the floor of this House the supremacy of commerce to government, the conquest and overthrow of legislation for all the people, is boldly, eloquently, and proudly proclaimed. Commerce, gentlemen, has ever been regarded by the wise and good as but the handmaiden of agriculture. Commerce in her proper place and sphere is beneficent, but invading the realm of government is as dangerous as a star out of its orbit, crossing the paths of other heavenly bodies flying through infinite space.

I fear my country's glory—fear the reign
Of dull security and the joy of gain,
The thrifty turmoil of successful trade,
The war and barter and the ambuscade
Of conquering commerce and of countingrooms
That build one palace and a hundred tombs.

I fear my country's piety—I fear
The purchased psalm, the salaried prayer and tear,
The cushioned peace and stained-glass reverie
Of meager congregations; while a sea
Of sorrowing men strive not for bread alone,
But chance to earn it, and to have their own.

I fear my country's pride, free competition
And license for the money-monger's mission.
Chains are not stronger than their weakest links;
Nor nations richer than their poor, methinks;
Nor wealth nor glory can more lofty be
Than wealth and glory through equality.

For days we have heard interminable talk about what money commerce must have and what the banks must have; that they will consent to this and will not to that. Mr. Chairman, to me it seems as though the time had come when we are entitled in this body to hear something about what demands the people have to make through those of us who are here as their champions. The discouraged farmers all over our land, who, toiling from the first glow of light in the east until the last gleam fades in the western sky, find that all their fruits have been plucked and their golden grain garnered for the world's gold trust, have an interest in this matter. The millions who dig in the mines and labor in factories and furnaces are parties in interest. More than a million men whose families suffer through enforced idleness are listening to know what word of cheer and comfort you have for them. Investors in securities whose balance is found only on the debit side of the ledger have some rights. Owners of factories, of furnaces, of mills and mines ask us what we propose to do for them. Paralyzed industry, enterprise, and active aspiration, all ask, "Watchman, what of the night?" Let us not think they mean what show have our partisans for place and profit at the public crib; what party advantage may some devious policy produce? No; they want to know when we are going to keep our pledged faith, to punish the wrong, to enthrone the right.

Mr. Chairman, as indicative of the arrogance of those who, because successful in the manipulation of stocks and bonds, or because within their coffers are hoarded the fruits of industries of a nation's producers, and as indicative of the readiness with which men fall down and worship at the shrine of Mammon, let me cite you an instance occurring last summer. When Henry Clews, who sends out each week to the banks of the nation and to the newspaper press his edicts of command and his rebukes to ignorant Congressmen, evolved a plan of maintaining the Treasury gold through the recommendation that 25 per cent of all customs duties should be made payable in coin, forthwith, in the editorial columns of newspapers of both great parties appeared the most commendatory notices and fulsome flatteries of the genius of so great an intellect. There was scarcely one political newspaper of the nation that did not approve this method and think an easy solvent had been found of all difficulties connected with the maintenance of a gold reserve.

Editorial space writers even went so far as to suggest that in the place of ignorant Congressmen, whose knowledge was chiefly confined to the plow, the Government should call to its legislative halls those possessed of such high degree of financial wisdom as that exhibited by this master of finance from his seat of empire in Wall street. And yet up in Pennsylvania they are building a home for the feeble-minded, and a farmer in that section of the State who had a boy 14 years old that had no more financial wisdom than this would commit him to the charge of that institution. Let it be determined, in accordance with this financier's views, that customs duties shall be payable in gold, and that I as an importer have a thousand dollars in duties to pay to the collector of the port of New York. I walk into his office and tender a thousand dollars of lawful money. He takes it and counts it over, and

states: "Sir, I can take \$750 of this, but \$250 of it must be paid in gold, because an eminent financier of this city has caused a law to be enacted requiring payment of 25 per cent of all customs receipts in gold." What do I do? Merely step to the office of the sub-treasurer of the United States, present my \$250 of legal tender and demand the gold. I return to the collector and give it to him, and in this transaction the Government has neither gained nor lost one penny of its gold, but has merely transferred it from one cash drawer into another.

Mr. Chairman, before I conclude my remarks I want to say that I believe I am a Democrat. You may take the Bible, Shakespeare, Montaigne's Essays, and the works of Thomas Jefferson, and you can lose all the other literature of the world and still be rich in treasure. I read these works, and I read the history of Andrew Jackson as Benton gives it to us, and I revere, I follow, I worship at the shrine of Democracy. But if I am going to have my pockets picked, I do not feel any better about it because some man comes to me and says: "Don't make a fuss about it; it is a Democrat who is picking your pockets." I do not care what is the name of the knave, or to what party he may belong. I will take him by the throat and get him out of there if I can.

If I get into a wagon labeled "Democracy," and if I look through the coating of veneer and varnish and find, instead of being made of hickory it is made of basswood, and that a reckless, headstrong driver is rushing with mad haste over an unbeaten path abounding in precipices and yawning chasms, I am going to jump out, and I shall not be particular where I light. [Laughter.]

If I get onto a boat to go up the Great Lakes from Buffalo, and instead of sailing up the lakes they head her downstream, and we go down the Niagara River, it makes no difference to me if a lot of men who have got insurance on the hull of the craft sing out from the shore, "It is all right. Don't worry. Stay aboard." There are lots of good men on board; God knows that. But when I get down to that point in the river where I can see the rush of the rapids and hear the roar of the cataract, you may shout until your throats are sore, if it please you, that the old ark is Democratic, but I am going to take the first craft that has steam up, headed the other way. It makes very little difference what the name of the boat may be, so it heads toward safety. And if no craft is in sight headed that way, for one I propose to drop overboard and strike out for shore on my own hook.

Gentlemen in these debates are prone to refer to the great defeat of Democracy which occurred November 6, 1894. Let me recall to my successful Republican friends the reply of Solon to Croesus. When the latter, in the full splendors of wealth, pomp, and power, sought to secure a compliment for himself from the sage old philosopher, "Let no man account himself the favorite of fortune," said he, "until the hour of his death approaches." When on the funeral pyre and the flames rolled about him which Cyrus had kindled Croesus recalled the wise man's words of warning. It is a little early to tell whether upon the 6th day of November, 1894, you Republicans met with a triumph or found rods in pickle for a thrashing. When the Democratic party elected Grover Cleveland in 1892 they celebrated a victory that, with all the facts considered by some impartial historian of the future, will be termed the hour of supreme Democratic disaster. I have read of fortified cities so impregnable in walls, moats, turrets, and towers, so nobly defended by its heroes that they could laugh defiance in the face of the beleaguers, be they never so numerous and warlike, but in the hour of their most seeming security they woke to hear the war cry of the invader at their very hearthstones and saw their citadel seized. An empire overthrown, a city sacked, not by higher skill, not by superior prowess, not through force of numbers, but because one man in the silent watches of the night, set to guard the main gates, had thrown them open for the admittance of the enemy.

If in place of condoning, excusing, even defending undemocratic policies and methods of this so-called Democratic Administration, we had in this House and on the stump rebuked and repudiated such exposition of Democracy as has been on exhibition for the last two years, think you that the people in the Democratic strongholds would have reclined at ease upon their arms while a conflict was in progress? Ah! they were waiting only to catch one blast of the trumpet tones of that Democracy they have known so well. They heard no bugle blasts for equality, for liberty, for truth. They heard only the jingling of the money changers' coins. They said the hand is Esau's, but the voice is Jacob's voice, and withheld their blessing, and faithful fighters fell because of distrust of the leadership. Sir, for myself, two years' service with this Administration was enough to satisfy my longings, and I declined to be a candidate for reelection.

The Democratic party is not dead; it is diseased, not in all its parts, but in a single member. The hand that has clasped in fellowship hands with Baal, with Moloch, with Mammon, and with Shylock has become leprous by the contact; it is a putrid, gangrenous mass. If it remains attached to the body it will poison the very fountains of existence. "Cut it off and cast it from thee,

for it is better that one of thy members should perish, and not that thy whole body should be cast into hell."

Mr. Chairman, if upon the foundations laid by Thomas Jefferson, James Madison, Andrew Jackson, and all the fathers of the Republic, and upon which Lincoln and the other good, exalted, noble, and true of the world have built—if upon those foundations some one holds aloft the sacred torch of truth—I am willing to follow it. I do not care what be the name of the man who holds it. I am confident that man will be a Democrat. No matter what his party title, I am sure he will be my brother in the flesh and in the spirit.

Mr. Chairman, to-night, about the banquet boards of the East, there will assemble a distinguished company to do honor to the occasion which calls them together. To-night they worship at the shrine of Andrew Jackson, amidst bubbling fountains of the juice of grape, the air redolent with the perfume of flowers, the tables heaped with costly viands, and with silver tongue and honeyed speech they will prate about Andrew Jackson, a man the least of whose merits they never apprehended, the slightest of whose teachings they never followed, the commonest of whose virtues they never practiced.

He denounced their fathers as a band of human vampires, and their fathers exhausted their epithets of derision and ridicule upon him.

I can imagine Andrew Jackson reincarnated, coming there to-night and listening to those speeches, in which they instill doctrines as contrary to those he taught as are the sounds coming up from the gates of Gehenna different from the choral song of the triumphant angels in glory; instilling teachings the fruits of which are as contrary to those of Jackson as are the fruits that grow in Hades from the fruits that grow on the Tree of Life within the New Jerusalem. [Laughter.]

If that man were reincarnated and should appear there, he would be the most unwelcome guest that ever came within that banquet hall. They would imprison him on the slightest pretext; and the next most unwelcome guest would be the man who dared read his doctrines and repeat to those men the principles that he taught.

The old hero would stay there a few moments, and as he listened to the utterances of those pretended disciples I fancy he would tip the table over in righteous indignation and thrust those apostates into the middle of the street. If there ever was a man on earth who would refuse to grovel at the feet of the money power that man was Andrew Jackson. Let me read a few pertinent passages from his works with which the Democratic leaders of to-day seem to be woefully unfamiliar or willfully ignorant. In his message to Congress, December 2, 1834, he said:

The bold effort the present bank has made to control the Government, the distresses it has wantonly produced, the violence of which it has been the occasion in one of our cities famed for its observance of law and order, are but premonitions of the fate which awaits the American people should they be deluded into a perpetuation of this institution, or the establishment of another like it. It is fervently hoped that, thus admonished, those who have heretofore favored the establishment of a substitute for the present bank will be induced to abandon it, as it is evidently better to incur any inconvenience that may be reasonably expected than to concentrate the whole money power of the Republic in any form whatsoever or under any restrictions.

In his veto message President Jackson said:

It is to be regretted that the rich and powerful too often bend the acts of government to their selfish purposes. Distinctions in society will always exist under every just government. Equality of talents, of education, or of wealth can not be produced by human institutions. In the full enjoyment of the gifts of heaven and the fruits of superior industry, economy, and virtue every man is equally entitled to protection by law. But when the laws undertake to add to these natural and just advantages artificial distinctions, to grant titles, gratuities, and exclusive privileges, to make the rich richer and the potent more powerful, the humble members of society, the farmers, mechanics, and laborers, who have neither the time nor the means of securing like favors to themselves, have a right to complain of the injustice of their government. There are no necessary evils in government. Its evils exist only in abuses. If it would confine itself to equal protection, and, as heaven does its rains, shower its favors alike on the high and low, the rich and the poor, it would be an unqualified blessing.

In the light of these utterances, what his views would have been of a measure like the one which the gold trust is now endeavoring to fasten upon this nation is susceptible of neither doubt nor dispute.

Let us go further back, to Thomas Jefferson, the venerable father of American Democracy, and see what wisdom we may gather from his writings to instruct us on this proposed legislation. In a letter to Albert Gallatin, October 15, 1815, he wrote:

We are undone, my dear sir, if this banking mania be not suppressed. The war, had it proceeded, would have upset our Government; and a new one, whenever tried, will do it. And so it must be while our money, the nerve of war, is much or little, real or imaginary, as our bitterest enemies choose to make it. Put down the banks, and if this country could not be carried through the longest war against her most powerful enemy without ever knowing the want of a dollar, without depending upon the traitorous classes of her citizens, without bearing hard on the resources of the people, loading the public with an indefinite burden of debt, I know nothing of my countrymen. Not by any novel project, but by ordinary and well-experienced means: by the total prohibition of all private papers at all times, by reasonable taxes in war, aided by the necessary emission of public paper of circulating size.

In a letter to John W. Eppes, November 6, 1813, Jefferson says:

The subscribers may be one, two, or three, or more individuals (many single individuals being able to pay in five millions) whereupon this bank oligarchy or monarchy enters the field with \$90,000,000 to direct and control the politics of the nation; and of the influence of these institutions on our politics and into what scale it will be thrown we have had abundant experience. Indeed, England herself may be the real, while her friend and trustee here shall be the nominal and sole subscriber.

Further on he wrote:

But the art and mystery of banks is a wonderful improvement on that. It is established on the principle that private debts are a public blessing.

At the time we were funding our national debt we heard much about a "public debt being a public blessing;" that the stock representing it was a creation of active capital for the aliment of commerce, manufactures, and agriculture. * * * If the debt which the banking companies owe be a blessing, it is to themselves alone, who are realizing a solid interest of 8 or 10 per cent on it. As to the public, these companies have banished all our gold and silver medium, which before their institution we had without interest, instead of which they have given us two hundred millions of froth and bubble on which we are to pay them heavy interest.

Ah, sir, when the brave little band of Scots was driven back and surrounded by a multitude of the Saracens, when it seemed the day was lost and the infidel host must triumph, Douglas rose in his stirrups and taking the silver casket which held the heart of Robert Bruce, swinging it by its chain over his head, that the eye of every Scot might see, threw it into the very farthest midst of the Moslem horde, exclaiming, "Pass on as thou wert wont; I follow or die!" Ah, the heart of Bruce! Little recked the Scotsmen then Moslem spear and scimeter. No horde of infidels could stay the onslaught of the devoted band, and in its silver casket in Melrose Abbey the heart of Bruce reposes, that had been won again by Scottish valor. Saracens, Moslems, and infidels encompass the champions of truth in their crusade for humanity; yea, for plain, true Christianity, and whenever we will throw the heart, the life, the teachings, the truths of Jefferson never so far into the thickest ranks of the enemy, millions born and yet to be will follow, will fight the good fight, and will conquer!

Mr. Chairman, were these men of other times who piloted the ship of state during some of her darkest hours of peril—were they, I ask, patriots, statesmen, men of profound wisdom and far-reaching political sagacity, or were they, as some modern would-be leaders of Democracy would have us believe, merely old fogies and fossils, without experience or insight into the needs of the nation and incapable of dealing with the problems of government? Upon our answer to these questions will largely depend our action on the measure which is presently to demand our decision. These are the same issues, the same enemies, differing only in their outward form and not in their essential nature, from those which the heroes of Democracy in bygone days grappled with and overthrew.

Men of Tennessee, that most illustrious citizen whose courage upon the battlefields was only excelled by his courage in the chair of state; whose honesty of purpose and whose devotion to the masses, whose defiant challenges to the haughty money trust halted them in their career of plunder, and whose charge upon their entrenchments seemingly destroyed them forever—your State is the custodian of his ashes, and the whole nation of his fame. Do you honor his memory in re-creating a hydra-headed dragon, the destruction of which has placed his name high in the calendar of Democratic worthies?

Men of Virginia, I am not forgetful of the fact that the soil of your Commonwealth has been made sacred by the ashes of noble dead, from Washington down to the last upon the list of the roll of illustrious citizenship. But within your borders, aye, within the borders of a universe, no emblem of brass nor sculptured stone marks the last resting place of a grander apostle of human liberties than Thomas Jefferson. So long as error combats the rights and privileges of man, so long as humanity has aspirations for higher civil blessings, so long his life's work remains unfinished, and, though dead, he shall be the contemporary of all the wise, the noble, and exalted of earth. What are you asked to do? What will you do? Will you declare his maxims are but fables; that his warnings and his fears were but the phantoms of a feeble intellect? Will you violate the plainest truths of this noble sage? Will you nullify the teachings of this master mind? Will you discredit the deductions of this profound philosopher? Have the leadings of Providence become so wearisome that we long for the fleshpots of Egypt? Has virtue been reduced to a scramble for the leaves and the fishes?

We read in the second Book of Kings what transpired in the land of Israel when the Moabites vexed sorely the children of the living God:

20 And Elisha died, and they buried him. And the bands of the Moabites invaded the land at the coming in of the year:

21 And it came to pass, as they were burying a man, that, behold, they spied a band of men; and they cast the man into the sepulcher of Elisha; and when the man was let down, and touched the bones of Elisha, he revived, and stood up on his feet.

And so, Mr. Chairman, if this party called Democratic, and termed dead by careless observers, which through corruption has become so putrid as to offend the nostrils, could but touch the

dead bones of its prophet Jefferson, there would still be enough virtue in them, enough of vital truth, that this so-called dead being would awaken into a new life. Now, at the coming in of a new year, as then, the bands of devastating Moabites sweep over the land, the children of God, now as then, are in sore straits, and if those having charge of the Democratic interment but let the party come into contact with aught of Thomas Jefferson, it will have a resurrection, and the dead again stand up.

God give us men! A time like this demands
Strong minds, great hearts, true faith and ready hands.
Men whom the lust of office does not kill,
Men whom the spoils of office can not buy;
Men who possess opinion and a will;
Men who have honor—men who will not lie;
Men who can stand before a demagogue
And damn his treacherous flatteries without winking;
Tall men; sun-crowned, who live above the fog
In public duty and in private thinking;
For while the rabble, with their thumb-worn creeds,
Their large professions and their little deeds—
Mingle in selfish strife, lo! Freedom weeps,
Wrong rules the land, and waiting Justice sleeps.

ADDENDA.

I submit as corroborating my statements relative to the effects of a shrinking volume of currency upon the prosperity of the country, the evils of turning over to private individuals the control of national finances, and the appreciation in the value of gold, the following extracts from writings and speeches of dead and living statesmen, political economists, philosophers, and patriots.

Mr. A. J. Balfour, in his speech at Manchester, England, October 27, 1893, said:

And can we claim that great quality for a standard (namely, as a permanent record of the debts and obligations lasting through long periods of time) which, by the admission even of the monometallists themselves, has appreciated in some fifteen years no less than 30 or 35 per cent, and of whose appreciation no living man under the existing system can prophesy the limits.

Uncle Jerry Ruak, on page 8, Agricultural Report of 1890, states, as Secretary of Agriculture, the effect that the enhancement in value of silver bullion following the passage of the Sherman Act had upon the prices of American wheat:

The recent legislation looking to the restoration of the bimetallic standard of our currency, and the consequent enhancement of the value of silver, has unquestionably had much to do with the recent advance in the price of cereals. The same cause has advanced the price of wheat in Russia and India, and in the same degree reduced their power of competition. English gold was formerly exchanged for cheap silver, and wheat purchased with the cheaper metal was sold in Great Britain for gold. Much of this advantage is lost by the appreciation of silver in those countries. It is reasonable, therefore, to expect much higher prices for wheat than have been received in recent years.

Nothing can more clearly show the effects of falling prices than the interest charges upon the indebtedness of the people of the Union, as exemplified by the following article from a weekly newspaper, to which my attention has been called:

Mr. WALKER, a Republican member of Congress from Massachusetts, says the people of the United States owe debts, public and private, to the amount of \$32,000,000,000. Now, we take Mr. WALKER as authority, because he, coming from a New England State and being a Republican, will not be accused of placing the figures too high.

It is claimed by some that the rate of interest on this indebtedness will average 8 per cent per annum. But to be entirely safe and to be conservative, and for the purpose of giving to the public a bird's-eye view of their condition, we will place the rate at 6 per cent. Now, 6 per cent on \$32,000,000,000 amounts to \$1,920,000,000. In 1882 we raised 1,628,464,000 bushels of corn. At 40 cents per bushel we would have \$651,385,600 as its total value.

Our wheat crop the same year was 519,400,000 bushels. At an average of 80 cents per bushel, we realized \$415,520,000.

Our oat crop was 661,067,000 bushels. At 25 cents per bushel we have \$165,266,750.

Our gold mines produced \$33,000,000 and our silver mines \$75,000,000. Now, let us add this together and see what the result will be:

Value of corn crop	\$651,385,600
Value of wheat crop	415,520,000
Value of oat crop	165,266,750
Value of gold crop	33,000,000
Value of silver crop	75,000,000

Total	1,340,236,000
Interest on debt	1,920,000,000

Difference..... 579,763,400

Thus you will see we are still in debt on interest \$579,763,400. With these stubborn facts staring us in the face we are led to exclaim, "How long, oh Lord, how long, will the people sleep!"

I shall insert with my remarks quotations from Prof. J. Shield Nicholson, professor of political economy in the University of Edinburgh, Scotland, in his recently published Treatise on Money, and Essays on Monetary Problems. Professor Nicholson is a man recognized to-day as one of the greatest teachers of political economy of the age, and the opinions he states are the opinions prevailing not alone in Scotland, but in England, France, and in the centers of thought throughout the civilized world, and whoever lays aside prejudice and studies solely the welfare of humanity will coincide with his views:

Page 58: One most important factor in determining the general level of prices in a country is the quantity of money in circulation.

Page 61: The decline of the Roman Empire was largely due to a deficiency of the circulating medium, which was remitted in payment of taxes in large quantities to Rome and the central cities of the Empire. As a consequence, while in the provinces prices ruled low and the miserable taxpayer would give any amount of wealth for coins, in the center of the Empire, where money was abundant, prices were high. * * * We have in the times of the Middle Ages a constant dearth of the precious metals, and consequently a low level of prices. Under the Tudors a great rise occurred, which illustrates in a twofold manner the effects of increasing the quantity of money. In the first place, under Henry VIII and Edward VI the currency was debased and thus artificially increased in amount, and next it was naturally increased by the great discoveries of the precious metals in America, especially the celebrated silver mines of Potosi.

Page 66: Again, looking to the ordinary course of trade, it ought to be clear that if the commerce and population of the world are increased, so that the amount of ready money transactions is doubled, then so far, unless the quantity of money is equally increased, there must be a proportionate fall in prices. This is practically a very important consideration.

There can be no doubt that after the great discoveries of the precious metals in the sixteenth and nineteenth centuries the rise in prices would have been much greater but for the enormous increase in the volume of trade.

It follows, too, from this consideration, that, other causes affecting prices remaining the same, any increase in the volume of trade by the extension of commerce to new countries must, in exact opposition to the popular view, result not in a rise, but in a fall of prices, unless these new countries happen to produce the precious metals in greater abundance than their commerce requires.

Page 88: We see, then, that the value of gold is determined in precisely the same manner as that of any other commodity, according to the equation between demand and supply. Competition will go on between those who hold the metal on the one side, and those who wish to obtain it on the other, until such a general level of prices is reached that the quantity demanded at that level is equal to the quantity offered.

Page 89: The quality of standard money, other things remaining the same, determines the general level of prices, whilst, on the other hand, the quantity of token money is determined by the general level of prices.

Page 166: The key to the present controversy on the connection between the currency and the fall in prices is found in the dependence of prices on the quality of standard metallic money. Those who experience a difficulty in tracing this great and general fall largely to currency causes may find that difficulty much lessened by considering the way in which, at previous times, a rise in prices has undoubtedly been connected with an increase in the supplies from the mine.

Page 168: And, in fact, we can not proceed a single step in any argument on general prices without assuming their dependence on the quantity of money.

Page 187: If, for example, the United States were to repeal the Bland Act and throw her silver on the market, the consequences would be a further fall in gold prices and a further depression in trade, not in that country alone but in every gold-using country.

Pages 187, 188: In the first place, we have seen how the new supplies in the one case of silver, in the other of gold, gave a real and generous stimulus to the industrial activity of the world. The rise in prices which occurred was not, as we are too often told, merely equivalent to a nominal change of values and a benefit to debtors at the expense of creditors; for as soon as prices began to move in response to the new money, enterprise was quickened, employment extended, and production increased. If in the sixteenth century the trading nations had been afraid of the depreciation of the new silver, and had refused to use it as standard money in unlimited payments, the medieval system might have retained its immobility for many generations, whilst the only gain to the world would have been a profusion of cheap silver ornaments; and in the nineteenth century, if the nations had listened to the alarmists who urged them to take time by the very tip of the forelock and demonize their gold before it became worthless through depreciation, Australia and California would have been left to sheep and cattle, the enormous expansion of trade which took place over the whole world would have been impossible, and the only gain would have been an addition to the stock of the gold plate of those who held mortgages in one shape or another over the whole industries of the world.

But if an increase in the supplies of the precious metals, when freely coined, has the effect which history reveals, surely it does not require much reason or much imagination to discover that, with diminishing supplies of gold and refusal to use silver, the contrary effects—in a word, a dragging depression of trade—might be expected.

Page 189: Political economy would be indeed the most dismal of sciences if it taught that, to insure a period of prosperity, we must submit to a period of horror, and that a long continuance of peace is the sure precursor of depression. Political economy, however, teaches no such thing; on the contrary, it shows that in the long run destruction is not good for trade, and that what we call general overproduction is in reality simply bad organization.

Page 198: For with every increase in the volume of trade and the numbers of people, with every expansion of commerce into new regions, with every displacement of old customs by competition and contract, a greater demand is made on gold for currency. But the amount of gold produced is diminishing, and the amount absorbed by manufacturers and by the East is increasing.

Page 201: The general conclusion on this part of the argument, putting aside imaginary cases of ingenious theorists, seems to be that with bimetalism we should at first have a movement of general prices toward the old level, though in all probability not to the high level of 1873-1874, which was under the influence of exceptional causes, and for the future the level of prices would remain much more steady. We should have, as before, credit cycles and periods of comparative inflation and depression, but we should have, on the whole, much greater stability; and it is agreed on all sides that the more stable the general level so much the better for the public good.

Effect on farmers.—Page 204: The fall in Eastern produce may have a depressing effect on other markets and other produce, and the general fall in Western prices is probably due partly to the indirect effects of the depreciation of silver, as well as to the direct effect of the pressure on gold. If, for example, the fall in the price of silver has encouraged the export of wheat from India, and has caused a fall in its price, it is easy to see that a sympathetic fall will take place in other grain and food stuffs; and then if all the gold-using countries try to improve their position by raising sheep and cattle, the increase in quantity will tend to lower the price of beef and mutton, and of wool and hides, and thus the depreciation of silver, though it strikes most severely at the producers of wheat, indirectly affects the whole farming class.

Page 208: But it is contrary to all principles and to all experience to suppose that the laboring classes can derive more than temporary benefit by a disturbance of the currency, even if that disturbance leads to lower prices. The price of labor can not be an exception to the general fall in prices. If profits fall enterprise is contracted, and if enterprise is contracted wages must fall and employment become irregular.

Page 229: Now consider the export trade of India, with wheat for the example. Every fall in silver acts like a bounty on the production of wheat in India,

and the area under cultivation is rapidly extending. But, again, suppose that silver ceases to fall and that silver prices begin to move upward. The Indian producer, in this case, will require more gold than the Western producer; he wants not only the same number of rupees, but more; and then he can only afford to sell for more gold. But if gold prices rise the West of America and the Lothians of Scotland may again find it profitable to grow wheat, and the Indian producer may suffer.

Page 238: Everyone pays sufficient respect to arithmetic to admit that if the prices were fixed and unalterable wages could only arise at the expense of profits. But with falling prices, both wages and profits will fall; and though profits may fall first we may be sure that wages will follow.

Mr. Brooks Adams, of Boston, to whom I am indebted for many facts, in his pamphlet on *The Gold Standard*, says:

Perhaps no single force has wrought so ceaselessly, and yet so subtly on man's destiny as that mysterious influence which causes variations in the value of money with which he buys his daily bread.

In short, between 1873 and the present time these economic phenomena have been subjected to the most patient scrutiny, and have been examined with all the resources of modern science; and if any fact can ever be said to be established by observation, it is that gold has increased very largely in its purchasing power since 1873, while silver remained substantially constant to the end of 1893. In 1893 the repeal of the Sherman Act and the closure of the Indian mints caused a profound disturbance of silver values, which it is still too early to estimate. Nor, for present purposes, is the position of a precious metal, the demand for which has been artificially destroyed, a matter of great moment; the vital fact is the rise of the standard by which property is measured, for this touches the very life of the world.

Within the last fifty years, since the growth of America and Australia has made London more and more the center of exchanges, and, as it were, the heart of the economic system, gold and silver have flowed thither to be sent back again to distant communities which are in the process of development, and the outflow largely takes the form of loans. But these loans have to be repaid, principal and interest, in gold, and as gold daily commands a larger and larger amount of commodities, the produce of the debtors fails to realize the necessary sum and they become bankrupt. * * *

Were the operation of an appreciating currency equal upon all men, little damage might be done, but he perishes first who is weakest, and by his ruin drags down the stronger. The farmer is the weakest of capitalists, and therefore has the least power of resistance, because he can not suspend production. In like manner farm labor is weaker than industrial labor, because it can not combine. Therefore, agricultural prices are the most sensitive, and it is only subsequently that manufacturers suffer through the failure of demand.

Thus, after 1873, the first class to be prostrated in England were the landlords, who were very generally unable to carry their mortgages; but the same fate was certain, sooner or later, to overtake all farmers who were debtors.

The symptoms of this creeping paralysis are but too evident. The Economist of August 26, 1893, says that "the customs and excise returns bear unmistakable evidence of a curtailment of the purchasing power of the community;" and last year, at the lowest prices ever known, Great Britain actually bought 1,000,000 hundredweight less of wheat and wheat flour than the year before, though her population is fast increasing, "and the crops were among the worst grown within the memory of living man." Though the nominal daily wage may be maintained, the surplus of labor causes the individual competitor in the wage market to lose time; or, to put it in another way, the wage fund does not grow in proportion to the increase of those among whom it must be divided. The consequence has been a series of the longest, fiercest, and most disastrous strikes in history, which culminated last summer in the coal-mining troubles in the midland counties, which approached a social convulsion.

On the other hand, the owner of productive property is driven to the wall, for though the price at which he can sell his commodity declines, wages are maintained by the unions; and though the workmen may be starving because of the irregularity of employment, the pay roll stays the same. The mines of the midland really seem to have been showing a loss when the men left the pits, and the best cotton mills of Lancashire have not averaged more than 1 per cent of profit applicable to dividends for several years.

Approached thus, from the historical standpoint, the evidence seems conclusive that the disease which is devouring the world is an appreciating debt, and if this be true it is a disease which does not admit of a local remedy. So long as the obligation of contracts is unimpaired the mere passage of a country from a gold basis to a basis of silver or paper does not appear to afford relief. India, Russia, and Italy are as hard pressed as Australia or the United States. If a single nation is to free itself from the common lot it must be by the repudiation of gold debts.

Every great writer on and every student of political economy who has looked beneath the surface of things is forced sooner or later to the admission that the volume of money is forever the factor determining values. Call them into evidence:

For the value of money in general is the quantity of all the money in the world, in proportion to all the trade.—*Works of John Locke*, volume 5, page 49.

Price, therefore, is the value of any given article, in the currency by reference to which that article is measured; and must, of course, be varied by any variation in the quantity of gold or silver contained in such currency.—*The Question Concerning the Depreciation of Our Currency*, Huskisson, page 4.

The demand for money is regulated entirely by its value, and its value by its quantity.—*Principles of Political Economy*, Ricardo, chapter 13.

A reduction of circulation must tend to lower prices.—*Lord Overston's Tracts*, page 22.

Prices temporarily may rise or fall independently of the quantity of gold in the country; ultimately they must be governed by this quantity. Credit gives a certain latitude without rendering prices ultimately independent of gold.—*Investigations in Currency*, Jevons, page 32.

In this sense, to say that the quantity of money regulates prices is only the same thing as to say of any article that is bought or sold that its quantity is a material factor in determining its value.—*A Chapter in Standard Money*, Giffen.

To show the selfishness, the heartlessness of these gold monometalists and their desire of increasing the value of their gold incomes, I offer the testimony of Mr. Bertram Currie, one of Lombard street's great money magnates, before the royal commission on gold and silver.

Q. But I think you said that a demand for gold increased its value. If there were a fresh demand by America [referring to the American imports] gold must protanto have increased in value.

A. But what evil is done thereby if it has?

Q. Do you think that a fall of prices due to an appreciation of the standard is not evil?

A. I think a fall in prices is no evil.

Q. A fall of prices due to a cheaper production of commodities would be a gain?

A. I ask no question as a consumer. A fall in prices benefits me.

Q. * * * Is it not a fact that owing to the low prices large tracts of country that were formerly profitably cultivated in England have gone out of cultivation and are now producing nothing?

A. If that is so it is because they are unsuited to the production of these commodities.

Q. But I am speaking of land which produced these commodities at a great profit not very long ago.

A. That is the general fate of mankind. Somebody else has found that he can produce them cheaper and better. * * * I know the feeling of the class to which I belong, and I know that any change is diametrically opposed to our feelings, and that whatever change is made, to whatever extent we can, we will be clear of it. If we lend a man £1,000, we will say to him, "Understand we are not to be paid back in this new stuff; we must have gold."

Mr. Montefiore Levi, a distinguished Belgian senator and president of the Brussels International Monetary Conference, in his address to the delegates of that body, said:

The depreciation of silver, so far as it serves as a monetary standard, finds an echo throughout the social organism. But the principal evil of the present situation lies in the instability that results from it. How would it be possible for the merchant or manufacturer to make with safety contracts extending over a long period, as important business transactions generally do, if the shrewdest judgments and the best founded calculations might at any moment be upset by a sudden movement of the money market? There is no need, we believe, to look elsewhere for the cause of the noticeable falling off which has taken place in international transactions. The hesitation which checks all great enterprises and which paralyzes many markets is the direct consequence of the instability in the price of silver as compared with gold.

M. Ernest Seyd, in 1871, wrote the following remarkable prophecy:

It is a great mistake to suppose that the adoption of the gold (standard of value) by other States besides England will be beneficial. It will only lead to destruction of the monetary equilibrium hitherto existing, and cause a fall in the value of silver from which England's trade and the Indian silver valuations will suffer more than all other interests, grievous as the general decline of prosperity all over the world will be.

The strong doctrinarism existing in England as regards the gold valuation is so blind that, when the time of depression sets in, there will be this special feature:

The economical authorities of the country will refuse to listen to the cause here foreshadowed; every possible attempt will be made to prove that the decline of commerce is due to all sorts of causes and irreconcilable matters; the workman and his strikes will be the first convenient target; then "speculating" and "overtrading" will have their turn; many other allegations will be made, totally irrelevant to the real issue, but satisfactory to the moralizing tendency of financial writers.

M. Ernest Seyd, in a letter written in 1872 to Hon. Samuel Hooper, of the American Congress, said:

That the rich do not complain of this state of things is explicable; it does not directly affect them; on the contrary it makes the lower classes more dependent. "Then why do not the poor complain?" may be asked. Is it to be expected that Tom, Dick, and Harry, the workmen, should study social economy, so as to be able to propound the doctrines of truth and the practical value of their applications to a subject so obscure as that of money is to most men? Enough that in vague terms they complain of a scarcity of money, of idleness, and want of work, and that this idleness and want of work are in direct relationship with the available means of exchange for intercourse you may admit if you lend an ear to the arguments of the following passages:

"Money is the absolute necessary element in effecting exchanges in commodities, i. e., for carrying on intercourse, i. e., the consumption as well as the production of commodities; hence the numerical presence of money to a great extent guides the number of transactions in either direction. In this sense a supply of money encourages, a diminution of money lessens, the number of transactions.

"So well is this rule recognized in all schools of national economy that we in England pride ourselves specially upon the freedom which we give to gold for its import, export, and free coinage. We know that by exhibiting a 'demand' for gold, and acting accordingly, we can obtain it, but we take great care not to bar its supply in any way; we do everything in order to encourage it, recognizing that in the theory of supply and demand the former is the really active, positive, and productive agent; whereas the old theory contented itself by adhering to the false doctrine, 'the demand rules the supply.'

"We feel and know that this free supply does not only encourage our international trade, but also (and what is more important) our own inland intercourse between ourselves, as it encourages consumption and production. The universal presence of sovereigns (coins) increases the demand for consumption.

"Thus, while for the reasons given we supply gold coin freely, we in England follow the directly contrary course with regard to the less valuable mediums of exchange. We debase them, limit their tender value, close egress and ingress, and thus confine the whole of this great national intercourse between the majority of our people to within a narrow compass or cage, in which it becomes crippled. Hence, the want of supply limits consumption, the want of consumption limits production; hence, idleness, poverty, demoralization, and crime. Tom, Dick, and Harry, with their wives and families, stand idle and become demoralized; not, forsooth, that there is a want of food in the country, for there is enough to eat, but because there are not mediums of exchange sufficient to set the one going to produce something for the other—some of those many things, beyond meat and drink, which, made from cheap and abundant raw material, assist and comfort in bearing life, keeping the one as well as the other to God-ordained modest labor and morality, and profiting both. And for the prevention and violation of these sacred rights I hold responsible the men or soi-disant economists who have framed our monetary laws, who insist on saving and try to prove by all the sophistry in their power that a despoiled shilling is nevertheless not a despoiled shilling, and that they may rob Peter to pay Paul with impunity.

"Men of that class who have made their fortunes in international trade have no other eye for anything else than custom-house statistics or the rules of competition in our manufacturing districts. They overlook altogether the minor and far more important life of the people themselves, and say to them, 'Here we want gold, you must be content with bad silver, and we can not give you much, because it is inconvenient to us,' and with this ofal, which even in that sense is not supplied freely, and is kept within very narrow and unnatural limits, the people must be satisfied.

"A curious feature in connection with this matter is the oft-repeated saying: 'There is no demand for silver.' Blowing hot and blowing cold. First praising supply of gold, then calling for a demand of silver before it is supplied. I say the demand for silver has been destroyed, the strength to use it is gone, pauperism is too great to make a demand such as would satisfy the authorities. And what kind of form must the 'demand' take in order to force a supply? How far must the agony go in order to burst its bounds? Some time ago a general cry arose throughout the country on account of the scarcity of silver. They were people who ascribed this to Colonel Tomlin's effort to agitate the subject, as if that gentleman had bought up and hidden many millions of silver. But the demand seemed genuine, for it was impossible in some parts of England to find silver. The authorities took care to show that the demand was accidental and promised that as soon as the mint had finished coining gold, in a few months, it would coin silver. Yet during this time the demand had to wait, and many hundred thousands and millions of modest transactions between the poorer and industrial classes, from which they might derive comfort and sustenance, could not take place. This accidental demand for silver was a mighty effort of the crippled intercourse, caused by offers for mutual exchange, which exchange could not take place because the means were absent. The sick man tried to rise and had a craving for nourishment; he fell down again because it could not be given him when he wanted it. * * *

"Lessons like these are lost upon our economists. Who can wonder that they utterly fail to recognize the silent suffering of our poorer classes less versed in social economy than themselves, when they refused even to profit by such manifestations which so completely bear out all that we, the advocates of the double valuation have brought forward? And if you bear in mind the great gulf that exists in Europe between the ruling classes and the people, the deep root of prejudice against their rising, the peculiar kind of charity and charitable social economy whose stock arguments rest on abuse of the lower classes with just so much effort for elevating them as 'caution' may admit, you might come to the conclusion that scarcely anything short of rebellion will be found strong enough to serve the authorities as sufficient manifestations of demand for silver. To this point I am certain we must ultimately come. Grave political questions may occupy the world for some years to come, but this question will be one of the rest. Rebellions for similar objects have happened before in this present age."

I make the following extracts from a paper read by J. Barr Robertson, on The Currency Problem, before the Society of Arts January 19, 1893:

In a period like the present of widespread depression in trade and industry, and amongst the people generally, the question as to whether this can be traced to any special cause or causes is one of the highest importance. Numerous controversies have been, and are being, carried on as to these causes, and out of the conflicting masses of argument and fact, of error and confusion, there is gradually emerging the cardinal idea that the predominant cause is the appreciation that gold has undergone in the last twenty years. In 1885 and 1886 a royal commission sat to inquire into the depression of trade and industry, but it practically failed to find any adequate cause for the troubles to which the inquiry extended. In its third report, however, the question of the altered relations between gold and silver was prominently brought forward; it was accepted as proved that the average prices of commodities in gold-money countries had fallen, and that the gold price of silver had fallen, and it was stated that as this depression extended to other countries, and was therefore not the outcome of merely local causes or conditions, the appreciation of gold would be a cause sufficient to account for most of the phenomena into which they had been inquiring. * * * But it is very important in passing to emphasize the fact that outside of the questions of the precious metals and the currency no adequate cause was found to account for the depression.

So far as the United Kingdom is concerned, the following table will show certain figures of very great importance in this controversy:

Per head of the population—Wheat (United Kingdom).

	Net imports per annum.	Home produce per annum.	Total foreign and home produce per annum.	Gazette price per quarter.*
	Pounds.	Pounds.	Pounds.	s. d.
Average eight years, 1872-1879.	184.68	172.77	357.45	51 2
1884	191.57	144.75	336.32	45 8
1885	237.81	139.33	377.20	32 10
1886	187.79	109.93	297.72	31 0
1887	223.63	131.26	354.89	32 6
1888	123.49	127.30	250.79	31 10
1889	219.03	128.65	347.68	29 9
1890	226.38	127.79	354.17	31 11
1891	224.06	124.58	348.64	37 0
Average eight years, 1884-1891.	219.23	129.30	348.53	32 10
January 1, 1893				25 8

* A fall of 36 per cent.

It will thus be seen that in the eight years, 1872-1879, the total quantity of wheat consumed in this country (United Kingdom) was 357.45 pounds per head of the population, at the average price per quarter of 51s. 2d., whereas in the eight years, 1884-1891, the consumption per head of the population was only 348.53 pounds, and yet the average price was as low as 32s. 10d. This was a fall on the average of 30 per cent. Can it possibly be that with a less consumption—that is with less wheat sold in the markets of the United Kingdom in the latter period than the former—there can be any contention that the smaller supply per head of the population could only bring 32s. 10d., while a larger supply in the earlier period should bring 51s. 2d., if the cause was only one of supply and demand? These figures are conclusive that the fall in price is not really due to excessive supply, because there was no excessive total supply.

Where the English grower has been so grievously injured is that, while the prices of wheat have fallen to such a low point in twenty-five years, his rent, wages, and other expenses have not fallen in a corresponding degree, or, rather, they did not fall as the price of wheat fell. He has been taught by leading authorities on the question that the fall has been due to bad seasons, to excessive competition from abroad, and to other causes; and he has been led to hope that the present state of things will, if let alone, right itself, and another era of prosperity soon spring up. But it is a fact that the yield of wheat per acre in all the wheat-growing countries of the world beyond these shores is

gradually diminishing, and the populations of the world are nearly all increasing, and some of them very rapidly, and thus requiring larger supplies of wheat. When, however, the English grower sees, in the midst of his adversity, and at a time when he regards wheat growing as something almost to be despaired of, that the Indian grower is in the enjoyment of a much higher relative price and a very high degree of property from his wheat fields, the former will perhaps begin to think that it can not be wheat growing that is so unprofitable; that there must be some other cause apart from occasional bad seasons or from the supply and demand of wheat throughout the world with which the English grower has to contend, and from which the Indian grower is free.

The question thus naturally arises as to the cause or causes that have led to this fall. Judging from the operations of the law of supply and demand, one might expect to find that there is less gold in circulation compared with the transactions in which gold, or money on the gold standard, is required than was the case twenty-five years ago. It can be said with positive certainty that if there had been more money in circulation in the gold standard countries during the last twenty-five years prices would have been higher, indeed prices would have been maintained at the level of twenty-five years ago if there had been money enough to effect that object. And therefore, conversely, if average gold prices have fallen it is because the supply of gold in the gold countries has fallen off relatively to the transactions requiring the use of money. This will very probably be disputed, if one may judge from the writings of latter-day commentators on the currency, though hardly any proposition in the whole field of monetary science has had such conclusive practical illustration in all countries and all ages, and been so universally accepted.

So that while at any one time the money of the gold standard, for example, has only one value, or one purchasing power, the commodities in which it is valued, and to which it affixes a value, have as varied a price, or purchasing power, as against money, or against each other, as there are commodities in existence. Thus money is being continually measured against all purchasable articles, and its purchasing power is thus tested and adjusted daily and hourly to thousands of articles. But each of these articles being only one in thousands, it is impossible that each separate commodity should as rapidly and exactly adjust the changes in its price to the changes in demand and supply in regard to all the articles, as is the case with money, which is all the time measuring itself against all commodities, and thus keeping the volume of money in circulation continually and completely adjusted to the transactions to be carried out by money.

It would be strange, indeed, if demand and supply could regulate the prices of thousands of articles, and that yet demand and supply in regard to the single article, money, in which they are all valued, should not have a corresponding influence. The truth is, that from the necessities of the case, demand and supply are more potent and more rapid in their action on the one universal article, money, than they are on the varying prices of numerous commodities. Money is seeking for and measuring commodities, and commodities are seeking for and measuring money, and so there is continual competition between them. They are both subject to the conditions of supply and demand, and to those who doubt this we would take a homely illustration and ask, Which of the two limbs of a pair of scissors does the cutting? There are two limbs essential to one operation, namely, cutting, and there are two conditions, the volume of money and the volume of transactions to be performed, by money, essential to the price of one or of all articles. It is true that one limb of the scissors may be sharper than the other, and may thus contribute more to the cutting; and it is also true that the volume or purchasing power of money is more active in adjusting itself to changes in supply and demand than a vast number of commodities can be with their endless fluctuations, because the purchasing power of money over commodities is the average of all these fluctuations.

The consequence of this is that, other conditions remaining the same, the average prices of commodities will fall in proportion to the contraction of the volume of currency in which they are valued.

To sum up the leading facts in regard to gold, there is the undisputed evidence of statistics to demonstrate that the gold prices of commodities have fallen from 30 to 33 per cent, since the period from 1865 to 1899; that is, gold has increased in purchasing power from 43 to 50 per cent.

While it would take too much space to enter into details regarding the practical effects of this appreciation of gold, it will suffice to give some indication of the enormous injury it has inflicted if it is stated that the transfer of wealth from the landed and propertied classes and from the mercantile, manufacturing, and producing classes in the United Kingdom to the holders of securities, mortgages, annuities, etc., can not be less than £2,000,000,000, due solely to the appreciation of gold. It is already a question how much further the holders of securities are to receive the assistance of a continually contracting currency to enable them to go on absorbing further and further the wealth of the producing classes. If no other relief can be obtained it may be necessary to fix a commodity standard instead of a money standard for long-dated payments, as has been recommended by the principal economists of the last hundred years. Such a colossal unearned increment as has accrued to the holders of securities valued in gold during the last twenty years in Europe and the United States, amounting to not less than £7,000,000,000 to £9,000,000,000, is entirely unparalleled in the history of the world, and all other public questions sink into insignificance compared with it.

If, however, our monetary policy is to be based upon a permanent and automatic principle, bimetalism must be adopted.

Then our own gold and silver commission of 1886 to 1888 found unanimously that bimetalism had, in the two hundred years ended in 1873, preserved the ratio between silver and gold, so that it did not vary more than 3 per cent above or 3 per cent below the fixed ratio of 1 to 15½. The six monometallist commissioners favored bimetalism for every country except our own.

President E. B. Andrews, of Brown University, one of the delegates to the International Monetary Conference at Brussels, and one who perhaps has given more attention to this topic from the educational standpoint than any other living man, in a speech on the silver question, made at Meadville, Pa., December 30, 1894, thus replied to certain interrogatories propounded by monometallists:

ABOUT WHEAT.

With reference to the question of wheat I think the cause of the fall in the price is misconceived. The cause of the fall in wheat is not, in my judgment, to any extent set forth when you talk about the cheapening of cost of production and transportation. The great overplus market where prices are

fixed is Liverpool, or, generally speaking, London. Before the price of silver had fallen a man from America or India or Argentina could trade with one just as well as another. But now silver is demonetized, and instead of the silver in a silver dollar being worth the gold in a gold dollar it is worth in a little while only 90 cents in gold. The old amount of silver will buy just as much wheat in India as before, but the old amount of gold will get a great deal more silver than before. The seller from India is in condition to say to the buyer in London, give me your whole trade and I will do 5 cents better than I did before, more or less. The American farmer has got to raise wheat and he has got to sell it. Therefore he is obliged to follow down the Indian merchant. And when silver goes down to 80 cents the American has got to go down to 80 cents, and to 70 cents and to 60 cents in turn. He has got to do it or starve. And that, ladies and gentlemen, is the philosophy of the low prices of wheat in the United States of America.

If you will take the gold price list of wheat and compare it with the gold price list of silver bullion you will find that the wheat has followed the silver as the shadow follows the man. I know that certain gentlemen have "monkeyed" with that, some by taking very brief periods and particular months when the price of wheat might be for the time for local reasons going up or down a little; but generally, taking considerable periods, two or three or five-year periods, you will find that most remarkable parallel. I consider it nonsense to talk of the cause of the fall in the price of wheat as the cheapening of the cost of production and transportation. The railroads have been compelled to follow the price of wheat just as the farmer has and for the same reason. Rather than give up the traffic in wheat altogether the railroads put a little extra tariff on some things, as the local freight traffic, and put the transportation of wheat down to the very lowest figure, even perhaps a little below cost.

Q. Is it not true that the price of wheat has fallen in Argentina, a silver-using country, just as much as it has in England, a gold-using country?

A. The gold price of wheat has certainly fallen in Argentina as it has fallen all over the world, as I have already pointed out. But the general price has not fallen in India or Argentina or China or anywhere, but on the contrary there has been a slight tendency in India at least, which has been the great competitor of the United States of America, for wheat to go up in terms of silver.

Q. Is it not true that from the beginning of this century down to the time the mints of the leading commercial nations were closed to silver, all attempts to maintain the two metals at parity failed, the price of one or the other rising or falling alternately, and did this result in great confusion, in the repeated disappearance of first one metal then the other, and that the closing of the mints to silver was to avoid this great and long-standing evil, which kept prices constantly fluctuating?

A. No, it is not true at all. The fact is quite the contrary, that from 1803 to 1873, every year but one large sums of gold and silver both were brought to be coined at the French mint at the ratio of 15½ to 1. Therefore that relation was maintained at the French mint absolutely, that mint being ready at any time to take any amount of silver or any amount of gold at that ratio, that ratio being departed from only in localities considerably remote from the mint, and then in only very slight degree to very slight extent, the variation in all those seventy years being less than the variation between certified checks and gold in New York City during 1873. And yet certified checks and gold were supposed to be on a parity one with another.

Some gentlemen, like Mr. Edward Atkinson, have scraped together in different countries these instances of a slight premium of gold over silver, or silver over gold, and they have said that before 1848 gold passed out of circulation and that after 1848 until 1870 silver passed out, etc., but these statements, I assure you from the most careful examination of the figures, are quite untrue. Gold and silver both were constantly brought to the mint in great sums. Let any one explain that in conjunction with the allegation that either metal departed from circulation.

That wonderful fact of the maintenance of gold at a parity with silver and silver at a parity with gold at 15½ to 1 through those seventy years in the face of changes in the relative production of those two metals far greater than any that have taken place since 1873, is another thing that the friends of gold monometallism will never let the public know if they can help it, because it is absolute death to their theory. It can not be explained in any other way than that governments, a sufficient number proceeding with due discretion, can maintain those metals together for a very long time easily, so that a given amount of one will have the value of a given amount of the other.

Another very remarkable fact is that the parity of those metals was kept up during all those years substantially by France alone down to 1865. After 1865 to 1873 France had a little help from Belgium, Switzerland, and Italy. Now, if all of that wonderful parity, under difficulties greater than have existed since 1873 could be kept up by practically one nation alone through seventy years, I ask you who are accustomed to reason whether the Latin League together with the United States of America, Great Britain, the German Empire, Austria, Russia, and Scandinavia together could not so tie these two metals together that they would never become parted?

Q. Is there any evidence that the closing of our mints to free coinage in 1873 was done in pursuance of any conspiracy, or that those who voted for the new coinage act of that year were animated by any corrupt or dishonest motive?

A. To this last part of that question, that those who voted for the new coinage act of that year were animated by any corrupt or dishonest motive, I answer, no. I do not believe that there is any evidence that any of them acted from any corrupt or dishonest motive. The only thing for which I think they can be blamed is allowing that legislation to go through silently without any discussion upon it by themselves or by the country. That was more their ignorance in not knowing that they were taking hold of a tremendous power. They were ignorant, and I think they were to a certain extent to blame for that, but I do not think they were corrupt. With reference to the first part of the question I think a somewhat different answer must be given. I believe there were bankers and gold owners in London and Berlin and New York and perhaps elsewhere who knew perfectly well the result of the demonetization of silver, who knew that it would instantly put a new value into every pound sterling of their gold holdings, and that those men used influences unknown to the men over whom they used it, at least so far as this country is concerned used that influence to bring that legislation to pass.

Q. Is it not true that all or nearly all the poorer nations of the world use the silver standard exclusively? Is not their trade and commerce, taking out India, which is a British province, as nothing compared with the trade and commerce of the gold-standard nations?

A. I think few, very few, silver nations are worse off than poor Portugal. Still, in general, it is true that the poorer nations use the gold standard. As to the trade of the silver nations, for America it is very important. That trade has made England rich. We trade comparatively little with gold nations of Europe except it be in agricultural produce. Now, the manufacturing interests of this country have become so immense either they must have an immensely larger home market or they must have a foreign market. Suppose by free coinage or in any other way we could get hold of the trade of the silver-using countries? The result would be unparalleled prosperity, such a boom in American manufacturing interests as has never taken place since we had national being. China, for instance, is about to open the grand-

est market for cotton goods that ever was. England is there waiting for it. If we had silver back so there could be facile trade and money communication between China and Japan on the one hand and America on the other, we would have a better chance than England. The trade of the silver-using countries is not a bagatelle by any means.

Suppose the manufacturing industries were to boom as I have suggested, what would be the result on farming communities of this country? Why, you would have a home market such as you never could have under any other policy. I think if we could command the markets of the silver-using countries, or a very large part of it, the manufacturing plants in this country would double in from fifteen to twenty-five years.

Q. If the double standard is impossible, if we must choose between the gold or the silver standard, is not gold the better?

A. I think so for the present, but would not undertake to say that would be the best policy always. If we alone had to make an everlasting choice I would say choose silver, for the reason that ultimately the trade of the silver-using world would be more important to us than what trade we could have with England, Germany, France, and other gold-using countries.

Q. Would not free coinage stimulate silver production?

A. From the moment when the world becomes convinced that England and Germany and France and the United States of America are going to say that silver shall be no longer demonetized, all the depreciation in silver will disappear. Some of us can remember how gold in terms of paper little by little disappeared in 1873. Why? Because this great nation said it would redeem its paper in terms of gold. It would be the same, I think, in this case. Further, there are not many silver mines in the world where it is profitable to mine silver at 60 cents per ounce. The great output of silver in the last few years has been due to an accident, namely, the construction of the great Rocky Mountain railways, which construction has never paid for itself and which was undertaken for altogether different reasons. Because you could construct little spurs from these roads up to the mines it became possible to open up new silver mines. But that possibility is to-day at an end. People who talk of a great flood of silver have no idea of what they speak. There is a vast deal of silver in Mexico and South America, but it will not be a factor in our time because it will take an enormous amount of capital to enable those countries to increase their output and there is no capital in those countries.

Q. Since 1873, when the new coinage act was adopted there has been added to the currency in circulation under the operations of the Bland-Allison and Sherman acts \$27,000,000 of silver coin and silver certificates, which now exceed the gold by over \$30,000,000, and raising the amount of money in circulation per capita from \$18.94 to \$23.80. This enormous addition of silver to our circulation, constituting now nearly one-half of the whole, has taken place while the fall of general prices has been going on. Does not your remedy of still more silver, an unlimited quantity of it, in fact, seem a strange one in view of these circumstances?

A. If you reinstate silver with the cooperation of a number of nations you enlarge the basis of fundamental money, and that is what tells on prices. That is a fact that Dr. Griffith, an ardent gold monometallist, has not made clear. He has shown that any amount of change or subsidiary coinage, coinage that had to ride upon the back of some other form of money, will never raise prices. That is true. So prices have not been much affected by the amount of silver we have coined in this country because it has not been free coinage of that silver, and had to ride upon the back of gold. Until within a little over a year the amount of gold available for the purposes of money has been falling off, absolutely a little, and relatively a great deal, to the demand for general money. Therefore, your coinage of silver, large as it has been under the Bland-Allison Act, and under the Sherman Act, has affected the price of commodities perhaps not at all and certainly very little. If the law now before Congress (the Carlsle banking law) to put a great amount of paper money into circulation should go into effect, I think that you would find that except locally prices would be very slightly changed; because all that money, if it had any basis at all, would have a gold basis, and gold, though perhaps increasing a little this year because of the great output of South Africa, is decreasing in proportion to the amount of it needed for money.

Q. If wages, owing to whatever cause, monopoly of trades unionism, if you please, have been increased or even remained stationary, and other prices have fallen, owing to demonetization of silver, isn't the wage earner benefited by this condition, which increases the purchasing power of his wages, whether the rest of us are benefited or not?

A. No; the wage receiver is the most hard beset in the long run of any of us in this matter. If you could have all the work possible for the laboring population under a different system of money, and also have the purchasing power of your dollar paid for wages increased as it has since 1873, then of course the wage receiver would be better off by that system. The rest of us would be worse off. But that is just the state of things you can not have. You can not multiply industry, you can not provide labor for the wage receiver to do, and therefore the highest and most disciplined classes of labor even in the long run must submit to a curtailment of wages, as they have. It is a very great mistake to suppose that the wages of labor as a whole have kept up until 1890. The wages of skilled labor, at least of many kinds, did keep up till about that time. But the wages of wage receivers, classing all together, have been steadily falling since 1873. And that must always take place when prices are falling. In other words, while the mere increase of purchasing power of a dollar in wages is a good thing for labor, yet if you introduce a state of affairs which means paralysis of industry, the cessation of a great deal of industry, a great many failures in industry, it is impossible that the laborer should keep on in his old line of prosperity. Since 1873 you have had more strikes in this country than in all the history of the country before; you have had more in England, more in France. It has been one of the phenomena of the period. Say what you please, it means that the laboring classes, take them as a whole, have not been as well off during these years as they were before.

From the speech of Hon. JAMES B. MCCREARY of Kentucky, delegate to the International Monetary Conference, Brussels, Belgium, delivered December 6, 1892:

In the year 1878 the product of gold in the United States was \$51,000,000; in 1877 it was \$46,000,000, and in 1896 it was \$35,000,000. Last year it was eighteen millions less than in 1878.

The world's production of gold in the year 1890 was \$120,000,000.

If from the world's annual product of gold there is deducted \$60,000,000, which according to Mr. Burchard and Dr. Soebbers represents the annual consumption of gold in arts and manufactures, there remains but \$60,000,000 as annual available product of gold. I presume no candid and well-informed person will claim that this amount is sufficient to meet the increasing demands of the world.

There is in volume nearly an equal amount of gold and silver in the world. When silver is stricken down the amount of coin is reduced, and the result must be a diminished per capita amount of money and constant shrinkage of values.

It is interesting to note in this connection, after all that has been said about the

rapid increase of silver and its fluctuations, that it can be quite clearly shown that the supply of gold has increased proportionately more than silver in the last forty-four years taken together, which embraces the period of marked increase of gold and silver, and that silver has fluctuated less than when gold compared with the prices of commodities.

In monetary questions there are certain axiomatic facts which have been repeatedly asserted, and which are self-evident. Among those one of the most important is that the amount of money circulating in the country fixes the price of all property and labor which are exchanged for money.

Another is that the law of supply and demand applies as well to money as to all other things of value, so that if the amount of money is diminished in a country the reduced amounts will have the same purchasing power and will buy as much land, labor, and the products of labor as the larger amount would have bought before it was reduced.

The owners and holders of money, bonds, and mortgages "are directly interested in reducing the volume of money, because it increases the purchasing power of their money or its equivalent. But the interest of the farmer, the laborer, and the producer demands a constantly increasing volume of money because the rate of such increase regulates the price of property and the wages of labor." The shrinking volume of money and the decreasing prices so much complained of unquestionably have a tendency to concentrate wealth and to enrich the few and impoverish the many. I believe gold monometallism helps the few who are rich, but hurts the masses.

The time has come when the law-making powers of the world, and the money-owning powers too, should awaken to the fact that all people have rights, and that all proper steps should be taken that will benefit the great mass of mankind, and push industrial, commercial, agricultural, and financial interests all forward together.

In conclusion, I desire to say, that I believe the best aim of this monetary conference should be the general remonetization of silver, and unrestricted coinage of both gold and silver into money of full debt-paying power with a permanent international ratio between the two metals of 15 to 1, or 16 to 1, and I prefer the latter. This, in my opinion, is the system which will give monetary unity and stability of the value of money and furnish the best remedy of which I have any knowledge for existing evils with which all civilized nations are now suffering.

Eduard Suess, professor of geology at the University of Vienna, Austrian vice-president of the Imperial Academy of Science, and member of the Austrian Parliament, in his work on *The Future of Silver*, written in 1893, says:

For a number of years, on the basis of geologic experience, the world has been warned that its entire monetary system is drifting toward an abyss. During the past year we have approached close to its edge.

As compared with gold, silver is depreciated to an extent without precedent in modern times.

Now, there are short-sighted persons who regard this circumstance as a permanent success for those governments that are in possession of a gold currency; and the complete defeat of silver, and the impossibility of its ever regaining the full dignity of a medium of commerce, especially in Europe, are looked upon as demonstrated.

But this verdict is based on but a small portion of the multitude of facts bearing on the subject. It overlooks the fact that for millenniums the two metals, gold and silver, owing to certain properties by which one became the complement of the other, shared between them the solution of one of the greatest of economic problems; that in recent decades, with the enhancement of material well-being and commerce, this problem has become enormously extended and absorbed constantly increasing quantities of metal; and that the mistake by which the bond of union between the two metals was arbitrarily severed can not become more ominously manifest, for the world's economy and for peaceful progress, than by the divergence of the values of the two metals.

This divergence, moreover, is the very contrary of the assumptions under which some years ago the introduction of the gold standard was proposed and later on defended.

All commerce proceeded without disturbance as long as gold and silver stood to each other in a relation of value established partly by law and partly by usage. The first impulse toward unsettling this relation was given by the large shipments of gold that came to Europe from California and Australia after the year 1849. The world was startled; gold came in such abundance that it began to fall in value; voices were heard in Paris proposing the complete demonetization of the metal, so unreliable in its production.

The possibility of an international agreement unfortunately recedes more and more in the face of accumulating difficulties. The conditions of production both in agriculture and in industry in regions with falling standard depart more and more from the conditions in regions with rising standard. The steady increase and improvement in all the means of mental and physical intercourse has brought about a solidarity of all advanced nations which comprises not only their modes of thinking, but also a large share of their interests. If in consequence of withdrawal of gold deposits the Bank of England raises its rate of discount, every great market of the earth knows it on the same day. The constant silver purchases of the American Treasury determine the level of hydrostatic equilibrium of the price of silver all over the earth. They influence the price of wheat in India, of silk in China, of the sugar that leaves Hawaii. And, as at times an epidemic sweeps over a continent and attacks all nations without regard to political boundaries, so we have seen economic crises spread with invisible power over whole continents, and a single state stand helpless in the presence of the destroying force.

With the divergence of the values of the two metals the world's commerce approaches a great crisis.

Nature has bounded man's life on earth by certain conditions to which even the richest nation and the most powerful government must conform.

The present development of the conditions of currency in Europe is in contradiction with the geologic conditions under which the metals occur. The warnings remain unheard. Let us now attempt to trace out some features of this unnatural development of things.

Speaking of the period succeeding the American civil war:

In March, 1863, large issues of paper money begin to be made, and the mean rate of gold (100=par) is 146. In July, 1864, it reaches 235; about that time the Government debt has already risen to \$1,740,000,000, aside from all emissions of the South. In April, 1865, at last the decisive victories of the North take place, while the debt has risen to \$2,700,000,000; very slowly the rate of gold sinks, and in 1870 it is still 115.

But this very high rate of gold becomes a premium on the exportation of wheat, which begins already during the war under peculiar circumstances—that is to say, the premium on gold has raised the price of wheat for the farmer of that part of the country eightfold.

But in order to obtain a correct view of the very complicated and instruc-

tive relations which, in the course of that decade, influenced the outflow and inflow of gold, we must, first of all, go back a little and cast a deeper glance into the development of the economic conditions of the country.

At the time of the war, and of the great issues of paper money, high prices for the products of agriculture prevailed; at that time the farmer extended his enterprises and contracted mortgage debts at a rate of interest of 10 per cent and much more. When the value of the dollar rose, the producer's premium disappeared. But at the same time the heavy mortgage debt remained. The great Government debt has dwindled; the mortgage debt has risen by this time to \$3,000,000,000. All these circumstances acted all the more oppressively because India, America's competitor in the market of the world, being a silver country, retained its premium.

Thus, in the same year, 1899, there were also exported considerable amounts of silver; the purchase of the higher amount of 54,000,000 ounces per year, that is to say about \$70,000,000, by the Treasury, had begun only in autumn of 1890, whereas formerly the amount had been only 24,000,000 ounces per year. The drainage of gold, however, increased, and the Director of the Mint, Mr. Leech, has published accurate records concerning the outflow from New York for the period from February 13 to July 24, 1891, during which this outflow amounted to seventy millions.

"An examination of the above table," says Mr. Leech, "discloses the very singular fact that of this large amount all but \$9,300,000 was shipped when the rate of sterling exchange was below the point (about \$4.88) at which gold shipments can be made without loss. This movement, therefore, must have been artificially stimulated by banks and bankers in Europe paying a premium on gold or making discounts to bill drawers for cash remittances. This was the result of a condition of affairs very unusual in the mercantile world."

So long as present conditions continue the difference of the reciprocal value of the two metals will increase from year to year. In other words, nature offers too little gold for present demands, while she offers silver in abundance. Thus the present legislative institutions are at variance with the conditions established by nature. Let us continue the supposition of an unchanged state of legislation. The figures show how quickly, especially since 1885, the value relation has changed and how slight the influence of the American purchases has been. Even now agriculture and in part industry in Europe are sorely at disadvantage against silver countries, such as India and Mexico. The most striking proof of this is the development of the Indian cotton-spinning mills at the expense of Lancashire. The advantage of this situation accrues in England to the holders of interest-bearing notes, the productive value of which increases with the growing scarcity of gold.

Under these circumstances it is not surprising that already, in April, 1890, the parliamentary debates on this subject assumed temporarily the embittered character of a struggle of labor against capital, in which employers and workmen alike demanded the restoration of the value of silver.

The former president of the Chamber of Commerce of Liverpool, S. Smith, submitted 140 petitions, with 60,000 signatures, asking for the reestablishment of the bimetallic system. He described the losses which labor was suffering by the one-sided enhancement of the purchasing power of gold. That, he said, was a tax which the drones of society levied on the working bees. It could not promote the welfare of society if the income of the idle, nonproducing class was raised at the expense of the toiling masses. One-half of this new burden was derived from the demonetization of silver. He called the attempt to depreciate silver a huge fraud on civilization. The contraction of the currency was merely in the interest of the rich, and was opposed to the interest of the whole nation.

Sir Houldsworth, a cotton spinner from Manchester, declared that it was incorrect that the wage worker found indemnification in the fall of the prices of the means of living for the loss in work or wages. That equalization either did not take place at all or at most very late, and for that reason the wage workers were so heartily in favor of this petition, since they regarded these conditions as the root of the long years of losses. Mr. T. H. Sidebottom, a cotton spinner from Cheshire, lamented the pitiable condition of all debtors in the country, who had assumed burdens under entirely different conditions. The producers were at this day the victims of a monetary vivisection. It was said that England is a land of creditors. But who had made her such if not the inventive talent and the industry of her inhabitants?

To this Sir Lyon Playfair replies that the participation in a bimetallic congress means that England, the great creditor of the world, is to invite the debtor nations to deliberate whether the debts contracted in gold since 1816 might hereafter be liquidated in depreciated silver. The new Latin Union would last just so long as England was willing to remain in the union, in order to be shorn like a gentle sheep by the debtor nations.

Speaking of Mexico:

Aided by this premium on exportation, exports are rising from year to year, wealth flows into the country, and the textile industry begins to improve. "Silver, demonetized by Europe," says Struck, "will retaliate in so far as the great industrial countries of Europe, owing to the depreciated value of the white metal, caused by the action of these very countries, will never again supply cotton goods of extensive consumption to the Mexican and probably to other markets."

Still more vividly, however, is the shifting of the situation to the disadvantage of Europe expressed by the circumstance that Mexico has utilized this prosperous time for great and permanent investments, which guarantee its productive power for the future and have assured President Porfirio Diaz an undisputed position in this land, formerly so disturbed. In his address to Congress in April, 1891, he was able to point out that there are now in operation over 10,000 kilometers of railways and 31,700 kilometers of telegraph lines; that since the preceding August (1890) some 606 new mine concessions had been applied for; that the furnaces of Monterey and San Luis de Potosi had been completed and others were in course of construction; that a public-school law was being elaborated. In a second address, September 16, 1891, the President announced the progress of vine culture and silk culture. Since 1889 the number of pieces sent by mail had risen from 5,000,000 to 125,000,000. Six new steamship lines had been conceded. The customs receipts in four years had risen 9,000,000 pesos.

It might be expected that the great exportation of precious metal would check the development of other kinds of exportation, but this is in nowise the case. While the average exportation of other products of the country in the preceding five years was 49,700,000 pesos, it rose in the last two years to 62,500,000 and 63,100,000 pesos.

The loss which Mexico suffers by the payment of interest on gold debt now amounts to about 2,000,000 pesos a year.

In this way Mexico repeats the same phenomena which were exhibited by the other silver land, India, to wit, unchanged purchasing power of silver in the country itself, hence premium to the advantage of the producer against gold lands, general economic advance, permanent opening of the country,

but on the other hand difficulties of the financial administration due to foreign debt in gold.

Let us suppose, therefore, that the United States decide upon the free coinage of silver. Silver rises in value. Perhaps European governments, despite Windom's prediction, may succeed on that occasion to get hold of some fraction of the greatly overestimated gold circulation of America, even though it be at the increased price of silver, and thus to offer some transient relief to the gold market in Europe. The prices of the two metals converge. Silver is relieved of a part of the loss which it thus far suffered through lack of esteem, but it does not rise to 15j. This result is indicated by the ratio of production, the consumption of gold, and the experience of the slight effect of previous silver purchases on the price of the metal. A premium remains for silver countries, all the more because the causes continue which promote the scarcity of gold.

A pan-American standard may be established on the basis of silver alone. Not without reason does the silver party adhere to Mr. Blaine.

But the outcome of such a movement must be the partition of the earth.

In fact a silver land finds it very difficult to buy of a gold land, and will always prefer to seek its necessities in a land having the same standard.

In Bolton, near Manchester, the cotton manufacturers have just decided to work only four days in the week and to lie idle for three days. And while in Europe there is thus taking place a displacement of the conditions of production, for which comfort is vainly sought in the cheapening of a few of the means of living, a cheapening which, for the most part, vanishes in the retail trade, the chamber of commerce of Bengal at the same time passed a resolution which likewise complains bitterly of the present state of things. The confidence in the silver rupee is said to have sunk in business circles. No European capital is said to go any longer to India; the relations between the East and the West are said to be stagnant. The Indian Government would either have to make a move toward international agreement, or, if that be unattainable, it would have to introduce the gold standard into India at once.

Thus the tension is increased, and both parties suffer.

The utterances of the Bengal Chamber of Commerce leads us from the commercial to the financial relations. Indebtedness in gold, especially when it rests on a silver land, manifestly rises from year to year with the divergence of values. While any economic gain due to the premium in the silver land is distributed among thousands of hands, in the figure of the interest which is due in gold, the burden finds concentrated expression, and it increases with every fraction by which the ratio rises. Many a statesman of an honestly toiling, upward-striving land watches with anxiety this figure which withdraws from his country undeservedly and inexorably a part of the fruits of its industry, and conveys to the bondholder unearned and unexpected gain. The crises of recent times have furnished abundant examples in which the paying capacity of a debtor country was exceeded and a good part of the capital was lost along with the interest.

Here I would like to return to a word of Balfour's already cited (page 90). Money is said to be also the measure of value of deferred payments. The longer the period of deferment the graver must be under present circumstances the consequences of the progressive divergence of the values of gold and silver. The silver land is loath to buy in the gold land, but it must be yet far more careful not to incur long-time gold debt. The almost complete cessation of the emission of foreign loans in London in 1891 is a consequence of the experiences in South America, which, however, have become as instructive to all other debtors as they are to the creditors who have to bear the loss. That, and not the success of the gold régime, is at this day the reason of the cheapness of loan money.

Hence any international agreement, though urgently to be recommended will at this day much more than in former years, after the bond, unfortunately, has been prematurely severed, bear the marks of a transition measure. The object of this measure would be to prevent the partition of the earth till the moment, perhaps distant, perhaps near at hand, when Asia shall be more opened up, or when the world shall be ready to dispense entirely with the monetary services of gold.

Europe, I fear, is laboring under a grave delusion. The economy of the world can not be arbitrarily carried on in the mere hope that somewhere a new California and at the same time a new Australia may be found, as in 1849-1852, whose alluvial land may again give relief for a decade. The present small undulations in the figure of production, however, are without any further significance for the grand process.

Under these circumstances it might indeed happen that the results foreseen by Lexis would ensue, to wit, that even with a very high ratio within a bimetallic union a premium on gold would grow up in the course of years, called forth not by the demand for gold for exportation but by the demand for gold within the area of the league itself.

But any condition is better than the present one, in which we are drifting on toward the partition of the earth into two trade areas.

We assume the case that the United States, despite all warnings, establishes the free coinage of silver. At one blow the Pan-American standard is established. All Asia joins in. The gold standard is limited to Europe and the English colonies, but without India. That, we said, is the partition of the earth. This idea of a partition of the earth into a silver sphere and a gold sphere has already come forward repeatedly.

In the gold area, too, there would at first be improvement, but soon there must ensue more and more contraction, fall of prices, injury to labor.

All obstacles now thrown in the way of commerce by tariffs would dwindle into insignificance compared to the barrier that would be erected by the partition of the earth into two solid areas of different money standards.

As the silver area comprises all zones, all natural products, and, in the United States, also all industries, a great independent economic unit would be constituted by the silver area. Exportation from the gold area would be rendered difficult, and yet the gold area would be dependent on the other for many products, as is proved by the balance of goods, already passive in a high degree even to-day, of Great Britain, Germany, and France. Silver capital would grow up in the silver area, and silver lands would borrow only silver capital. At the same time, however, in the whole silver area industry would continue as hitherto, consuming gold. That is the "walling-in" of Europe.

Whether the United States will make this or some other choice is not now known, but in any case some deductions arise from the present situation.

First of all, it is certain that Europe, in case of refusal to enter into an international agreement, leaves America's hand free to enact measures which must exert the most profound influences on all commerce and on the money affairs of Europe herself.

Furthermore, it is certain that gold alone can never become the standard

of the whole earth, but that, on the contrary, a time will come when it will have been entirely absorbed by industry. Let us not forget Soetbeer's results, according to which the entire monetary stock of the earth is smaller by almost one-third than the production of the last forty years.

From this it follows, furthermore, that, assuming that the system of metallic coinage continues to exist (and I see as yet no practicable substitute), silver will become the standard metal of the earth.

When Buckle wrote that famous chapter of his history of civilization in England which treats of the influence exerted by the laws of nature on the institutions of human society, he could not yet have foreseen that it would be possible from the data given by nature to establish a prognosis for perfectly definite economic questions. He took into consideration the distribution of climates and the variety of the external conditions of life. But the comparisons change as soon as man employs a definite substance whose occurrence is subject to definite laws, and as soon as one is able to take into account the limits of occurrence of this substance, the parallax of quantity as it were, albeit within ever so wide confines. Gold is not the rarest metal, but it is too rare for the task which some would like to impose on it.

Delmar, the Chief of the Bureau of Statistics of the United States, put forth the view "that the probable exhaustion of all the great gold-bearing alluviums of the world and the number and the possible wealth of the silver mines, through the effect of quantity and aside from other circumstances, would tend to widen the relation of value between the two metals, and in this way to render gold dearer and dearer, and silver cheaper and cheaper."

The same result was reached at the same time through studies in Europe. Experience since then has confirmed them. The governments to whom belongs the leadership in these things may now ask themselves whether they have the strength and the will to draw the logical conclusions, or whether they will continue to judge a subject which concerns the whole earth merely from the standpoint of the immediate interest of their States; whether, in particular, in England the interest of the Government creditors is to remain the ruling interest.

China was able through thousands of years to draw upon itself for its requirements and to continue in isolation. Europe will not bear isolation from the other continents. The question is no longer whether silver will again become a full-value coinage metal over the whole earth, but what are to be the trials through which Europe is to reach that goal.

Leon Faucett, in 1843, wrote:

If all the nations of Europe adopted the system of Great Britain, the price of gold would be raised beyond measure, and we should see produced in Europe a result lamentable enough.

Before a French monetary convention in 1860, testimony was given by the late M. Wolowski, by Baron Rothschild, and by M. Rouland, governor of the Bank of France. M. Wolowski said:

The sum total of the precious metals is reckoned at 50 milliards, one-half gold and one-half silver. If, by a stroke of the pen, they suppress one of these metals in the monetary service, they double the demand for the other metal, to the ruin of all debtors.

Baron Rothschild said:

The simultaneous employment of the two metals is satisfactory and gives rise to no complaint. Whether gold or silver dominates for the time being, it is always true that the two metals concur together in forming the monetary circulation of the world, and it is the general mass of the two metals combined which serves as the measure of the value of things. The suppression of silver would amount to a veritable destruction of values without any compensation.

Torrens, in his work on political economy, says:

Gold is a commodity governed, as all other commodities are governed, by the laws of supply and demand. If the value of all commodities in relation to gold rises and falls as their quantities diminish or increase, the value of gold in relation to commodities must rise and fall as its quantity is diminished or increased.

Fichte says:

The amount of money current in a State represents everything that is purchasable on the surface of the State. If the quantity of purchasable articles increases, while the quantity of money remains the same, the value of the money increases in the same ratio; if the quantity of money increases while the quantity of purchasable articles remains the same, the value of money decreases in the same ratio.

John Locke, in his "Considerations," etc., published in 1690, said:

Money, while the same quantity of it is passing up and down the Kingdom in trade, is really a standing measure of the falling and rising value of other things in reference to one another, and the alteration in price is truly in them only. But, if you increase or lessen the quantity of money current to traffic in any place, then the alteration of value is in the money.

The following is from an essay on money by David Hume, the great Scotch historian:

It is certain that since the discovery of the mines in America industry has increased in all the nations of Europe. * * * We find that in every kingdom into which money begins to flow in greater abundance than formerly everything takes a new face; labor and industry gain life; the merchant becomes more enterprising, the manufacturer more diligent and skilful, and even the farmer follows his plow with greater alacrity and attention. * * * The good policy of the magistrate consists only in keeping it, if possible, still increasing, because by that means he keeps alive a spirit of industry in the nation and increases the stock of labor, in which consists all real power and riches. A nation whose money decreases is actually at that time weaker and more miserable than another nation which possesses no more money, but is on the increasing hand.

Adam Smith, the father of political economy, says, page 205:

From the high or low money price, either of goods in general or of corn in particular, we can infer only that the mines, which, at that time, happened to supply the commercial world with gold and silver were fertile or barren.

Any rise in the money price of goods which proceeded altogether from the degradation of the value of silver would affect all sorts of goods equally, and raise their price universally a third or a fourth or a fifth part higher, according as silver happened to lose a third or a fourth or a fifth part of its former value.

John Stuart Mill, in Principles of Political Economy, says (page 301):

If the whole money in circulation was doubled, prices would double. If it was only increased one-fourth, prices would rise one-fourth. The very same

effect would be produced on prices if we suppose the goods (the uses for money) diminished instead of the money increased, and the contrary effect if the goods were increased or the money diminished. So that the value of money—all other things remaining the same—varies inversely as its quantity; every increase in quantity lowering its value and every diminution raising it in a ratio exactly equivalent. That an increase of the quantity of money raises prices and a diminution lowers them is the most elementary proposition in the theory of currency, and without it we should have no key to any other.

Ricardo plainly says in regard to this question:

That commodities would rise and fall in price in proportion to the increase or diminution of money I assume as a fact that is incontrovertible. That such would be the case the most celebrated writers on political economy are agreed. * * * The value of money does not depend upon its absolute quantity, but on its quantity relative to the payments it has to accomplish; and the same effect would follow either of two causes—from increasing the uses for money one-tenth, or from diminishing its quantity one-tenth.

The Encyclopedia Britannica, 1859 (article Precious Metals, by J. R. McCulloch), says:

A fall in the value of the precious metals, caused by the greater facility of their production, or by the discovery of new sources of supply, depends in no degree on the theories of philosophers, or the decisions of statesmen or legislators, but is the result of circumstances beyond human control, and although, like a fall of rain after a long course of dry weather, it may be prejudicial to certain classes, it is beneficial to an incomparably greater number, including all who are engaged in industrial pursuits, and is, speaking generally, of great public or national advantage.

William Stanley Jevons, professor of political economy and logic in Owen University, England, says:

I can not but agree with Mr. McCulloch, that, putting out of sight individual cases of hardship, if such exist, a fall in the value of gold (increasing the quantity of money) must have, and as I should say, has already a most powerful beneficial effect. It loosens the country from the old bonds of debt and habit as nothing else could.

Prof. Francis Wayland in his work, Elements of Political Economy, which is taught in our schools and colleges, page 296, says:

If there is more money in a country than is needed for its exchange the price of goods is raised and it is sent abroad for new purchases. If there is a scarcity of money in a country the price of goods declines and money comes from other lands to be exchanged for them.

Prof. Francis Bowen in his work, American Political Economy, page 280, says:

The power of money thus to determine its own amount arises from the reciprocal action of the quantity of money in active circulation and the price of commodities. All exchange, as I have said, is a barter of merchandise for money, and the quantity of money which an article of merchandise will command in the market is termed its price. Increase that quantity, and the price of all articles inevitably rises; diminish it, and the price as certainly falls.

Thomas Tooke, an eminent English economist, says:

Hence new uses will be found for it when it is abundant; new avenues of commerce will be opened, new branches of industries will be essayed, until increased production finds employment.

Prof. Bonamy Price says that the purchasing power of the so-called precious metals has fallen fourteen times since the reign of the Henrys—that is, 7½ cents would then buy as much as 100 will now.

Dr. Soetbeer, the great German authority, says:

The value of money has fallen through the issue of paper money, as well as through the increased productions of gold and silver.

Judge John Barnard Byles, one of England's greatest jurists, in his work, Popular Political Economy, page 154, says:

Men talk glibly of variations in the currency. Few reflect on the awful extent to which such changes affect the prosperity of all ranks. The laborer, the pauper, and the beggar are as much interested in the currency question as the manufacturer, the shopkeeper, or the great proprietor of lands or funds, and even more.

Alexander Hamilton, in his report on the Mint in 1792, said:

To annul the use of either of the two metals as money is to abridge the quantity of circulating medium, and is liable to all the objections which arise from a comparison of the benefits of a full with the evils of a scant circulation.

M. Edward Cazalet, of Milan, a distinguished and very able Italian banker, says:

Since the value of all articles of commerce is represented by the currency, the value of these articles must fall in proportion to the reduction in the volume of the currency; otherwise the moneyed currency could not possibly do the work which the two metals combined had previously performed.

The London Economist, in its review (1869) of the previous financial year, said:

It may be safely affirmed that the present annual supply of thirty millions sterling of gold is no more than sufficient to meet the requirements of the expanding commerce of the world, and prevent that pressure of transactions and commodities on the precious metals, which means in practice, prices, and wages constantly tending toward decline. The real danger is that the present supplies should fall off, and among the greatest and most salutary events that could now occur would be the discovery of rich gold crops in three or four remote and neglected regions of the earth.

William H. Crawford, Secretary of the Treasury, in a report (February 12, 1820) to Congress, says:

All intelligent writers on currency agree that when it is decreasing in amount, poverty and misery must prevail.

Mr. R. M. T. Hunter, in a report (1852) to the United States Senate, says:

Of all the great effects produced upon human society by the discovery of America there was probably none so marked as those brought about by the great influx of precious metals from the New World to the Old. European industry had been declining under the decreasing stock of the precious metals,

and an appreciating standard of values; human ingenuity grew dull under the paralyzing influences of declining profits, and capital absorbed nearly all that should have been divided between it and labor. But an increase in the precious metals, in such quantity as to check this tendency, operated as a new motive power to the machinery of commerce.

Prof. A. L. Perry says:

The fact that such a medium is in universal circulation, and that the holders are ready and willing to exchange it against any sort of service adapted to gratify their desires, exercises a kind of creative power, and brings a thousand productions to market which would otherwise never have come into existence. Money is a form of capital which stimulates and facilitates all the processes of production without exception.

Professor Chevalier, of France, in speaking of the increase of money, says:

Such a change will benefit those who live by current labor and enterprise; it will injure those who live upon the fruits of past labor. In this respect it will work in the same direction with most of the developments which are brought about by that great law of civilization to which we give the noble name of progress. It has been wisely said that there is no machine which economizes labor like money, and its adoption has been likened to the discovery of letters.

Francis A. Walker, of Yale College, professor of political economy and history, says:

The question whether the supply of money shall increase or decrease is, then, the question whether the burden of these more or less permanent charges shall be diminished or enhanced.

Mason and Lailor, *Primer of Political Economy*, page 50:

One thing may rise in value, but in order that it may do so, other things (Prop. 30) must fall. If money rises in value, it will take less of it to buy other commodities. Therefore general prices will fall.

Professor Syme, *Industrial Science*, page 151:

Money in the United States is more plentiful than it is in England (as proved by the higher prices of commodities and wages in the former than in the latter country), and it is more plentiful in Australia than it is in the United States.

Mr. J. R. McCulloch, the English economist, speaking of an increasing volume of money, says:

It promotes industry and diminishes the weight of obligations which press upon producing classes, whether employed or unemployed.

Fawcett, in *Handbook of Finance*, pages 146 to 148, says:

The decline of prices since 1873-75 is explained by the increased value of gold. The first effect was to cause a collapse in "speculative securities," viz, bonds of railroads, etc., which were based on the expectations of a continuance of high prices for commodities or, in other words, a low value for gold.

The following extract from Allison's *History of Europe* shows that this ruinous policy of contraction has obtained in other countries beside our own, and that the effect was then, as now, to fill the coffers of the rich money lenders at the expense of all other classes:

* * * But if an increase in the numbers and industries of men coexists with a diminution in the circulating medium by which their transactions are carried on, the most serious evils await society and the whole relations of its different classes to each other will be speedily changed, and it is in that state of things that the saying proves true, "that the rich are every day growing richer, and the poor poorer."

[John A. Logan.]

The cause of our depression is money famine, and nothing else.

[James A. Garfield.]

Whoever controls the volume of money of any country is absolute master of all industry and commerce.

[Daniel Webster.]

Liberty can not long endure in any country where the tendency is to concentrate wealth in the hands of a few.

[Professor Walker.]

That prices will rise or fall as the volume of money be increased or diminished is a law as unalterable as any law of nature.

[Andrew Jackson.]

If Congress has the right under the Constitution to issue paper money, it was given them to be used by themselves, not to be delegated to individuals or corporations.

[Abraham Lincoln.]

Labor is prior to and independent of capital. Capital is only the fruit of labor, and could never have existed had not labor first existed.

If a government contracted a debt with a certain amount of money of circulation, and then contracted the money volume before the debt was paid, it is the most heinous crime that a government could commit against the people.

[Thomas Jefferson.]

I believe that the banking institutions are more dangerous to our liberties than standing armies. Already they have raised up a money aristocracy that has set the Government at defiance. The issuing power should be taken from the banks and restored to the Government and the people, to whom it belongs. Let the banks exist, but let them bank on Treasury notes.

[Speech by Senator Beck of Kentucky, page 256, CONGRESSIONAL RECORD, January 11, 1878.]

I know that the bondholders and monopolists of this country are seeking to destroy all the industries of this people in their greed to enhance the value of their gold. I know that the act of 1873 did more than all else to accomplish that result, and the demonetization act of the Revised Statutes was an illegal and unconstitutional consummation of the fraud. I want to restore that money to where it was before, and thus aid in preventing the consummation of their designs.

[Speech of Senator Voorhees in CONGRESSIONAL RECORD, January 15, 1878, page 322.]

The silver dollar is peculiarly the laboring man's dollar, as far as he may desire specie. * * * Throughout all the financial panics that have assailed

this country, no man has been bold enough to raise his hand to strike it down; no man has ever dared to whisper of a contemplated assault upon it; and when the 12th day of February, 1873, approached, the day of doom to the American dollar, the dollar of our fathers, how silent was the work of the enemy! Not a sound, not a word, no note of warning to the American people that their favorite coin was about to be destroyed as money; that the greatest financial revolution of modern times was in contemplation and about to be accomplished against their highest and dearest rights! The taxpayers of the United States were no more notified or consulted on this momentous measure than the slaves on a Southern plantation before the war, when their master made up his mind to increase their task or to change them from a corn to a cotton field. Never since the foundation of the Government has a law of such vital and tremendous import, or indeed of any importance at all, crawled into our statute books so furtively and noiselessly as this. Its enactment there was as completely unknown to the people, and indeed to four-fifths of Congress itself, as the presence of a burglar in a house at midnight to its sleeping inmates. This was rendered possible partly because the clandestine movement was so utterly unexpected, and partly from the nature of the bill in which it occurred. The silver dollar of American history was demonetized in an act entitled "An act revising and amending the laws relative to the mints, assay officers, and coinage of the United States."

Horace Greeley saw what but comparatively few saw as clearly as he did, viz, that the establishment of the British system meant slavery not only to the blacks, but to the whites; and these were the words for which the bankers of New York drove him from the office of the Tribune with a broken heart to the grave. He said:

We boast of having liberated 4,000,000 of slaves. True, we have stricken the shackles from the former bondsmen and brought all laborers to a common level, but not so much by elevating the former slaves as by practically reducing the whole working population to a state of serfdom. While boasting of our noble deeds we are careful to conceal the ugly fact that by our iniquitous monetary system we have nationalized a system of oppression more refined, but none the less cruel, than the old system of chattel slavery.

Senator Ingalls said in a speech in this city on February 15, 1878:

No people in a great emergency ever found a faithful ally in gold. It is the most cowardly of all metals. It makes no treaty it does not break. It has no friends it does not sooner or later betray.

Armies and navies are not maintained by gold. In times of panic and calamity, shipwreck, and disaster, it becomes the agent and minister of ruin. No nation ever fought a great war by the aid of gold. On the contrary, in the crisis of the greatest peril, it becomes the greatest enemy, more potent than the foe in the field; but when the battle is won and peace has been secured, gold reappears and claims the fruits of victory. In our own civil war it is doubtful if the gold of New York and London did not work us greater injury than the powder and lead and iron of the rebels.

It was the most invincible enemy of the public credit. Gold paid no soldier or sailor. It refused the national obligations. It was worth most when our fortunes were the lowest. Every defeat gave it increased value. It was in open alliance with our enemies the world over, and all its energies were evoked for our destruction.

But as usual, when danger had been averted and the victory secured, gold swaggers to the front and asserts the supremacy.

WILLIAM P. ST. JOHN.

Statement of William P. St. John, president of the Mercantile National Bank of New York, before the Committee on Banking and Currency:

Mr. Chairman, you will remember that I declined your first invitation to be heard on the topic pending. My apology was, and I repeat as my explanation and excuse for what I shall say, that at this juncture, while our primary money is so undetermined, I deem any new creation of bank notes, State or national, perilous to the prosperity of the United States.

There is a very widespread unrest of opinion on this topic and the allied topic, called the "silver question," even in New York and New England. Public opinion is under a newspaper terrorism in New York. Men who agree with me fully, and I know many of them of considerable wealth, prefer to keep silent for the present. Anybody who will write at length a lot of nothingness adverse to silver money will be accorded certain newspaper's space and be dignified into great authorities. Rejoinder, if complete, and the more complete the more certainly, is denied even a limited space. Again, other men believe that until a change of Administration here approaches it will merely cost them influence to speak their conclusions favorable to silver money. Then, too, certain newspapers shield their readers against intelligence and cow them out of any timid convictions they might indulge.

As an instance, Mr. Horace White's *Evening Post* a few weeks ago quoted at length from the London Economist one Rawlinson's criticism of Manchester's complaint of England's gold monometallism as relating Manchester to India. The complete rejoinder of two weeks later in the Economist, a compilation of facts that refuted Rawlinson totally, has never even been mentioned by the *Evening Post*. The *Evening Post* spreads at length in several columns a reprint of a recent paper of Mr. McLeod, nine-tenths of which neither is as acceptable to myself, as an independent timeteller, as to anybody else. The real truth which is so universally acceptable is a pad of dignity to the conclusions which they do not, in the slightest degree, warrant. And so it goes.

But conditions current here and elsewhere are forcing the truth upon general attention, and a rebellion against this tyranny and concealment of facts will manifest itself ere long in New York as elsewhere. I have recently been urged by commercial bodies of two important Eastern cities to address them at length upon my convictions. I declined on the ground that I have talked so much that I deem it unwise to be heard again on the topic until invited to speak by my immediate associates in the city of New York.

The paper that I now ask the privilege of reading was prepared for a monthly magazine of importance. I asked the space at first, but afterwards withdrew the request. The editor urged my carrying out my first intention. His private secretary heard the matter in the rough and urged me the more to complete it for his magazine. I learn this morning that more acceptable matter will crowd me out, which is only another evidence of what you gentlemen, aiming to serve your country, are entitled to complain of in the Eastern press.

I would like to explain in advance a term I use for the sake of brevity and without intending offense to anyone, namely, "goldites." The "goldites" are that infinitesimally small but prodigiously influential coterie in the United States who believe that no one nation, not only, but not all the commercial nations combined in a concert of laws, could provide unlimited coinage for

gold and silver on one ratio, and attract thereby the gold and silver coins, or certificates for them, into concurrent circulation as money.

Mr. St. John then read the following paper:

GOLD MONOMETALLISM THE PERIL OF THE UNITED STATES—BIMETALLISM ATTEMPTED INDEPENDENTLY, TO ACHIEVE BIMETALLISM IN EUROPE BY THE EQUIVALENT OF A CONCERT OF LAWS.

Under official dictation, tutored by the one most aggressive of all our hand-ful of "goldites" in the United States, Congress fiddles with bank notes while the burning issue is our primary money.

Identically tutored, our Chief Executive has required his Secretary to abandon the option conferred by law upon the United States and grant to holders of the United States notes the right to exact gold always, silver never, as their redeeming coin. Had the option to redeem in silver dollars been exercised boldly at the time when only 3,000,000 silver dollars were owned by the United States, with an ownership of \$116,000,000 gold, any possible alarm could have been laughed to scorn. To attempt to seize upon and exercise the option now, or under immediately prospective conditions of our Treasury, would be to court all the perils of disaster.

Identically tutored, the demand appears, "one step at a time," to substitute bank promises of money for \$907,000,000 of the primary and secondary money which they promise. Were the scheme adopted and successful, the result achieved would be \$907,000,000 of new bank promises, \$907,000,000 of existing bank promises, and \$1,700,000,000 of promises called deposits, an aggregate of \$3,504,000,000 of national-bank liabilities payable on demand, resting or wrangling on our available supplies of gold. The pretense of the tuition is that this is "sound finance."

Redundant bank notes have invariably banished gold and silver. They were never suspected of enticing either into money. And national banks cannot hope for popular consent to their redeeming their circulating notes in officially discarded silver dollars.

LAW THE LIFE PRINCIPLE IN MONEY.

Money is the creature of law. Money is all domestic. Our ten-dollar gold piece is accounted 232 grains of nine-tenths fine gold when beyond the jurisdiction of the United States. Money and yardstick have nothing in common. The yardstick is an exact, unvarying measure of length. Money is an uncertain, variable measure of varying values. The yardstick is not bartered for commodities. Money is the means of acquisition and momentarily the measure of value of the thing acquired. The yardstick is a unit of length. The dollar as a "unit of value" is preposterous. Our Hamilton-Jefferson statute, founding the mint, provided a dollar as our "unit of account." That dollar of 1792 and the dollar of 1894 contain identically 371.25 grains of silver.

AGGREGATE OF MONEY DETERMINES PRICES.

The aggregate of all money afloat and in bank in the United States is our true measure of normal value of commodities here. The aggregate of money of all nations trading internationally is the measure of normal value of all commodities consumed by all. Therefore, to enlarge the aggregate of money in the United States is to raise normal prices for home and internationally consumed commodities here. Per contra, to diminish the aggregate of money in the United States is to lower all normal prices of internationally moving commodities in all of the trading world.

PERFECTION IN MONEY IMPRACTICABLE.

Omniscience and infinite integrity in lawmaking, but nothing short of these, would yield perfection in money. Perfection in money, thus provided, would involve the use of neither gold nor silver, nor any other commodity.

But my caution against any attempt at such perfection in the money of the United States is that imperfect humanity has never been more safe to handle any near approach to such perfection, or with any other than commodity money, than children have been safe to toy with keen-edged tools. The peril of any other than commodity money in the United States is the reasonable certainty of an overissue of it and collapse.

Now, if my caution against it will be quoted along with my description of it, I will describe perfect money, to wit:

Any convenient substance of about the "intrinsic" properties of silk-ribbed paper prepared to defy the counterfeiter, issued by authority of the law of the United States, and promise no redemption whatever, except acceptance for all dues to the United States and also made receivable and payable for all dues and debts, public and private, within the jurisdiction of the United States.

If United States notes of 1862 and Treasury notes of 1890, together \$497,000,000, were retired, they might all be replaced with logically perfect money as described, provided silver dollars and certificates and bank notes were also all retired. The success of the issue would insure overissue, and then collapse.

Bank notes differ only in degree from Treasury notes, for this same peril lurking in them. The wary can escape a degree of peril in the bank note, refusing it as not a legal tender. But the peril is in the bank note, nevertheless, as Jefferson and Andrew Jackson knew. Nature's restrictions upon the world's supplies of gold and silver, and the burden of the art and industrial uses for these commodities, make these safer than irredeemable paper as our tool of trade.

MINT PRICE MAKES MARKET PRICE.

Gold bullion and United States gold coin enter Europe with one and the same right conferred by law, the right of transition into Europe's money. By law gold carries the right of transition into English money at the price of £3 17s. 10d. per Troy ounce, eleven-twelfths and 1 pennyweight fine. By law, France, Germany, and the other important continental States similarly endow gold. And, by virtue of our law, gold carries the right of transition into the money of the United States at the fixed price of 23.22 grains pure, or 25.8 grains nine-tenths fine, for a dollar.

Thus, by law, the market price and mint price of gold are one and the same, so long as there is gold produced each year more than the arts and industries and India absorb. For so long, gold in the lump, its weight and fineness being known, is the equivalent of coin in Europe and the United States, for the reason that the possessors of gold will accept no lower price while the mint price is offered in lawful money at the mint; and artisans will not pay more for gold because it is obtainable at the mint price by melting the coin.

IMAGINE SILVER MONOMETALLISM SUBSTITUTED.

Imagine all these mints of Europe and the United States to deprive gold of all further right of transition into money. Imagine the law of each of all these nations to grant to silver exclusively the right of transition into the money of each, at one price, equivalent to 371.25 grains pure (412.5 grains nine tenths fine) for a dollar. Thenceforth the "price of silver" in Europe

and the United States would be this one mint price. Silver in the lump then, as gold now, its weight and fineness being known, would be the equivalent of coin. Possessors of silver then would not accept less than this one mint price for it, for the reason that lawful money could be had for it, at this price, at the mint; and the artisan would pay no more for silver because he could obtain it at this mint price by melting silver coin.

LAW DICTATES THE PRICE OF GOLD.

But, with the support of mints withdrawn from gold, and provided there is, as some economists aver, a yearly production of gold neighboring \$25,000,000 more than the arts, industries, and India absorb, the market price of gold would fall rapidly until the price attained would permit the lower arts, utensils and the like, to absorb the surplus gold. Exactly this result is evident in the world's withdrawal of mint support from silver, but much less rapidly attained.

BIMETALLISM BY CONCERT OF LAWS EXPLAINED.

Next, imagine all these mints of Europe and the United States to grant alike to gold and silver the right of transition into their money at the will of the possessor, at one price for gold, equivalent to 23.22 grains for a dollar; and at one price for silver, equivalent to 371.25 grains for a dollar, all the coins resulting to be unlimited legal tender within the territory of the nation coining them. If gold is produced each year more than the arts, industries, and India absorb, the one only use for it is employment as money. If there were silver produced each year other than is likewise absorbed, and no one doubts it, the only use for such surplus silver would be employment as money. Hence, for so long as there continued to be any surplus of gold and any surplus of silver over the said absorption of each, and provided the surplus of neither metal were sufficient alone for the world's entire need of money, for so long the mint price and market price would be one for gold, and the mint price and market price would be one for silver. Which would mean that the one mint price for gold and the one mint price for silver would be the universal market price for each; and would mean universal parity of the gold and silver coins at the ratio established by these mints.

This is bimetalism by a concert of laws. It does not seem akin to the attempts which our "goldites" would thrust upon us; as, for instance, the setting up of a universal price for each of all commodities, or for any one of them so abundant everywhere as iron.

RESPECTABLE "SILVER LUNATICS."

Among other "silver lunatics" sanctioning the confidence that bimetalism thus attempted could not fail, are the learned professors of political economy in the colleges of London, Oxford, Cambridge, and Edinburgh, and the late de Laveleye, with others of the profession on the Continent, and a host of men of other callings eminent throughout Europe and in the United States.

STATECRAFT COST THE WORLD BIMETALLISM.

The aforesaid selfsame tutor, to the contrary notwithstanding, the abandonment of silver and substitution of gold alone as the primary money of unlimited coinage is not the "natural selection of commerce," but the ignorant or vicious achievement of statecraft.

The subjects of England were deprived of their right to convert silver into money—temporarily first in 1793, and finally in 1816—under conditions of little public concern, for the reason that irredeemable bank notes were England's full substitute for money. Precisely similarly the people of the United States were deprived of their right to convert silver into money, a right enjoyed for eighty years, while irredeemable paper of sundry kinds and excessive volume supplanted gold and silver money in the United States.

[Extract of note of Sir David Barbour (British finance secretary to India), October 20, 1887.]

In no portion of Lord Liverpool's Treatise on the Coins of the Realm is there any allusion to: (1) The treasury order of the 25th October, 1807, directing that guineas should be taken at 22s. each; (2) the council order of 8th of September, 1808, referring the question of the high rate of the guinea to the council of trade; (3) the report of the council of trade, dated 23d September, 1808; (4) the resolution of the House of Commons on that report; (5) the orders of the treasury to receive the guineas on public account at 21s. 6d. each, "and not otherwise."

With the publication of these documents falls Lord Liverpool's statement that the English people, by general consent and without any interposition of public authority, attached a higher value to the guinea after the great recoinage than the market value of gold would justify; and with the fall of the alleged fact must disappear the conclusion drawn from it, namely, that with the increase of wealth and commerce the English people in 1808 had come to prefer gold to silver. And with the disappearance of this hypothesis there disappears the only evidence brought forward in support of the theory regarding the progress of wealthy countries from silver to gold, which Lord Liverpool invented in order to overthrow Locke's opinion that "gold is not the money of the world or measure of commerce nor fit to be so."

Lord Liverpool's theory may of course be sound, though the facts on which he relied in 1805 were imaginary; on the other hand, it may fairly be said that it was the acceptance of the theory on the authority of Lord Liverpool which brought about in the nineteenth century that state of affairs which is now held to prove the soundness of the theory.

How Lord Liverpool, or those who acted under his orders, came to overlook the existence of the documents which I have quoted, and which at that time would have destroyed the basis of his argument, is unaccountable.

SILVER MONOMETALLISM SAFER THAN GOLD MONOMETALLISM.

But if any attempt to achieve bimetalism independently is to yield silver as our only money, my conviction is the conviction of Robert Morris, namely, that silver is preferable to gold if either is to be the only current money of the United States. The present Secretary of the Treasury of the United States and his associates of the President's Cabinet have lately shared a well-advertised effort to heap posthumous honors on Robert Morris.

THE WORLD'S BLIND EXPERIMENT.

The repeal of our "Sherman Act," November 1, 1893, following the closing of India's mints in June against the further coining of silver on private account, severed the last link that coupled silver to its crippled right of transition into the money of the Western World. Hence, just thirteen months ago, for the first time in history, the commercial world began a free concert of absolutely blind experiment in money.

The latest estimates of Soetbeer, in his almost posthumous publication of 1892, accorded little, if any, new gold from the mines each year to the world's increase of money. Note, then, that while the population of the United States enlarges at a rate equivalent to adding the population of Mexico to ours within seven years, or of adding the population of Canada and all other British possessions in North America within three years, this absolutely blind

experiment which the United States shares demands that whoever would increase the world's aggregate of money by the equivalent of \$1,000 must provide 4.16 pounds troy of gold.

RESULTS AND PERILS OF GOLD MONOMETALLISM.

Within the last half of the brief period succeeding 1873, 10 cents a pound was a sentimental price for cotton and "dollar wheat" was a sentimental term. Recently, 5 cents a pound in towns and 4 cents on the plantation, 50 cents in towns and "hog feed" on the farm, were prices current. The dollar of the United States, half an inch in width and a thirty-second thick, is thus become \$2 with which to buy the sweat and toil and anxieties of a season, at the very head and front of prosperity in the United States. While thus the dollar of the United States is worth 2 bushels of wheat or 20 pounds of cotton, it gauges the prosperity of the United States at 1½ cents a year, if invested for the period of sixty days in strictly prime commercial paper of New York.

The flood of our prosperity can not rise higher than its source. The font is where the nourished earth yields her own increase and for toil returns a hundredfold. It follows that the conditions contemplated must alter presently, or the want of a traveling public and the lack of sufficiently liberal movements of freight, at profitable rates, will shrink the earnings of certain of our main trunk lines of railway into a deficiency of any dividends, and later into default of interest on their bonds. Unless relief of law ensues without delay, choice parcels of real estate in New York City will manifestly decline in prices, exceeding 20 per cent between sales in January, 1893, and December, 1890.

I am well aware that moderate demand upon liberal supplies of commodities produced at low cost and distributed cheaply will yield low prices. On these terms, low prices stimulate moderate demand into a liberal demand upon the same supplies, and so tend to recover prices. On this basis low prices of our staple necessities are desirable. In such variations of demand relative to such supplies, the producer may gather amid the fluctuations of prices his fair share of the advantages conferred on all by his abundance.

EXPERIENCE SAFER THAN EXPERIMENT.

But, for the reason that the producer does not share the general advantages of the abundance of his supplies, the United States at large is sufferer. Relief must be provided, and for that achievement we propose that, at all hazards, the United States shall abandon experiment.

We ask the Congress now sitting to restore our Hamilton-Jefferson coinage system, founded with the mint, maintained for eighty years without complaint, and overthrown unreservedly at a time when neither gold nor silver was our current money.

On December 6 I submitted to the Chamber of Commerce a developed plan to restore, or attempt, bimetalism independently, the plan providing the modern convenience of paper substitutes for coin and providing ample means to stifle any possible money panic arising with the enactment. No moment could be more propitious than the present for any such attempt. Idle accumulations of money in our important money centers, like the present, are rare.

"GOLDITE" OBJECTION COMMENDS INDEPENDENT BIMETALLISM.

Our "goldites" antagonize every such proposal with two objections, to wit:

1. That such legislation is superfluous because "if there is not gold enough for all, there is gold enough for us. * * * We can command gold in competition with all nations. * * * The United States is the largest and best source of supply of the commodities that the world most needs—cotton, wheat, provisions, petroleum, and the like."

(2) That to reopen our mints to silver without limit while offering coinage to gold without limit will merely substitute silver monometallism for gold monometallism in the United States. They mean that the proposed enactment will yield silver dollars and paper redeemable in silver dollars as our only money, and for the reason that it will banish gold from money and expel it from the United States.

We adopt both of their predictions as the assurance of our safety in making the attempt.

Our ability to command gold in competition with nations striving for the meager supply of gold available to money would depend upon the further sacrifice of our producers of petroleum, provisions, wheat, cotton, and the like. Lower and lower prices for these elementary essentials of our prosperity must pursue a foreign market, and every drain of Europe's gold to us as our return for them would further lower Europe's prices for all commodities, including any more of these she buys.

By our proposal, on the contrary, the United States provides itself the convenient ability to part with gold composedly. Instead of our present restriction to gold alone as our tremulous necessity, we propose to be able to loan our gold to Europe for our own sakes, selfishly. If, as our Mint Director estimates, we have \$500,000,000 of gold and \$30,000,000 annually produced in excess of our needs in the arts and industries, to spare a liberal portion to Europe, having a convenient abundance of domestic money at home, is to loan Europe the vehicle with which to carry our prosperity. To increase thereby Europe's aggregate of money is to raise normal prices of all commodities in Europe, including those for which the United States is Europe's "best source of supply." Therefore, diametrically the opposite in achievement to what our "goldites" urge, we would enlarge Europe's demand for our surplus petroleum, provisions, cotton, and wheat, and upon a higher plane of prices for them as she buys.

SILVER BASIS ONLY TEMPORARY.

Imagine, as the immediate achievement of our proposed enactment, silver dollars and paper redeemable in silver dollars to be the only money of the United States. The tendency first evident will be its restriction upon our importations of European products. This is evident under India's silver monometallism in her relation to the outside world. But a home experience may be recalled:

During the period of plethoric State-bank notes in the United States, when a New York merchant had sold to Western and Southern merchants and bills were due, his collector, obtaining local bank notes in a Western city, would invest in grain or flour, in a Southern city would invest in cotton. Shipping the flour and cotton to New York, the sales would realize New York bank notes. The operation was thus equivalent to shipping New York bank notes from the Western or Southern cities to New York. The like operation between the United States and Europe for our international trade settlements would take the place of gold shipments, if gold were hoarded for a high premium, as feared. Each such operation would swell the volume of our exports of commodities and benefit primarily those for whom we must be most concerned.

But the likelihood of any need of such an operation as a part of the contemplation of the New York merchant in selling to the West and South tended to make him indisposed to sell there. To such extent the Southern and Western importations from New York were lessened. To the like ex-

tent our foreign importations will be lessened under our silver-money régime, to the advantage of our home manufacturers as against the foreign manufacturers all the time. But in our experience, when the New York merchant or manufacturer found his home market not broad enough for all his wares, as was frequently the case, his surplus was sold West and South at as low price and sometimes even lower prices than to customers at home. The home price, being for the greater portion of their merchandise, was maintained at a sacrifice of profit on the moderate surplus sold elsewhere. Similarly Manchester, Lyons, and German manufacturers would experience the restriction of our silver money upon them. Our importations of Europe's products are to some extent a surplus which she must sell. To that extent our importations of foreign products will continue to foreign disadvantage and our gain.

But, because we are Europe's "best source of supply" for our great surplus of staple commodities, Europe will buy of us, even though we do not buy of her. As, for instance, we buy from Cuba \$75,000,000 worth of goods a year and sell to Cuba \$12,000,000 to \$25,000,000 only; or as Brazil finds a market here for \$70,000,000 of her commodities and buys \$40,000,000 only of our commodities in return; and finally as England, on the contrary, is debtor to the United States for an excess of \$100,000,000 a year by average in our mutual barter of commodities with her.

OUR SILVER DOLLAR AT A PREMIUM.

Therefore, with our silver-money restriction upon importations setting all our spindles turning, employing operatives at full time and these operatives made thereby to enlarge our aggregate of home consumers of all home products; with our trade settlements in merchandise serving to enlarge the exportations of our spare products; with Europe's prices for our products enhanced by our enlargement of Europe's aggregate of money, our achievement next evident will be a credit balance of trade established in Europe for the merchants of the United States. At that point exchange on London would sell in Wall street at a discount. This means a draft on gold payable seven days from date offered at a discount in standard silver dollars—the despised, stigmatized 50-cent silver piece in Wall street, held at a premium over gold in London. It means our silver dollars and our gold coin at par; bimetalism a reality in the United States. Our prosperity as her example, and to such a degree at her expense, is likely to enforce the influence of Manchester's opinion of English monometallism, the result of which may mean the abandonment of England's vicious monetary system soon.

Europe's only silver is her money. Europe's silver coin is valued from 3.06 cents to over 13.33 cents per dollar more than ours. Her "silver pots and spoons" carry the additional price of labor in them. She will ship us gold, therefore, rather than silver, at a minimum preference of 3 per cent.

GOLD DESPISED IN 1893.

Our "goldites" would dismiss all this on the ground of an overabundance of silver. Had the most influential doctrine in money in Europe been as influential with lawmakers in 1893 as our aforesaid tutor was influential with law dictators in 1893, France would have closed her mints to gold. Silver monometallism would have been the coinage system of the world. Chevalier threatened France with an abundance of gold as cheap and overwhelming as iron. Silver is the overabundant prediction of our doctrinaires. Note, however, that \$5,000,000 worth of silver bullion is at this moment an overestimate for the world's distributing markets' supplies of silver.

INDEPENDENT BIMETALLISM ACHIEVED.

Finally, our "goldites," and in particular our tutor aforesaid, distort history for proof that bimetalism has proved itself a failure, and that independent bimetalism in the United States during eighty years furnished the experience for the certainty of failure if attempted now. The facts, justly handled, refute both assertions flatly.

The world's great mints were never open to gold and silver without limit on a single price among them for each metal. In consequence, every seeming divergence between a market price and a mint price for either metal was invariably a difference between mint prices. Divergence between one mint price and another, or other mint prices, has to answer in history for every annoying flight of gold or of silver internationally. By undervaluing gold relative to silver, compared with the French mint's valuation of gold relative to silver, our coinage act of 1792 caused our merchants to choose gold preferably to silver for their foreign settlements, following 1792. By undervaluing silver relative to gold, compared with the French mint's relative valuation of the two, in our coinage act of 1834, we made our merchants choose silver preferably to gold for foreign settlements thereafter. This divergence between mint prices—not divergence between our mint price and any market price—cost us gold in one period and cost us silver in the other, for the reason only that during most of both periods we were usually the debtors in balancing our foreign trade.

UNITED STATES INDEPENDENT BIMETALLISM EXPERIENCED.

Our "goldite" assertion that our said act of 1792 effectually demonetized gold by expelling it from the country, and that our act of 1834 effectually demonetized silver by expelling it, are alike refuted by indisputable records, not made for argument, but reporting facts. Thus for the twelve years ending 1805 our gold coinage exceeded our silver coinage. In the eighteen years following, our gold coinage was half our silver coinage. In the nine years ending 1833 our gold coinage was one-fourth our silver coinage. And in this same period of "banished gold" (?) our trade movements of both metals were usually in one direction, usually export in excess of import of both until ending 1833. In 1824 the net movement of the two was import in excess of export. Eighteen hundred and twenty-five refutes this gold banishing theory flatly by a net import of gold and a net export of silver. In the five years following, both metals moved together again, import in excess of export. In 1831 our "goldites" are again refuted flatly by the net import of gold with a net export of silver. Thereafter gold and silver both show import in excess of export until 1894.

And in the period following 1894, while "banishing silver" (?) is the assumption of our "goldites," our silver coinage in the first eight years equaled our silver coinage of the eight years prior. Our silver coinage in these first eight years exceeded by \$3,000,000 our coinage of gold. In the second eight years ending 1890 we coined \$18,000,000 of silver, although we were not producing silver, but were producing gold in amounts more vast than the world had known. And in the first four years of this "silver banished" (?) period our imports of silver exceeded our exports of silver by \$6,000,000 more than our imports exceeded our exports of gold. For the three years ending 1842 the net movement of both metals was together, export in excess of import. And nine years after this act of 1834 our net movement was import in excess of export for gold and silver both. Our "goldites" are refuted notably and finally in the fact that prior to our civil war no single important movement of the one metal inward and the other metal outward is the record of a year.

And note also in this connection and at this particular moment, besides the considerable sum in coins of foreign nations, circulating as our legal tender until 1857, and besides the unlimited legal-tender function of half dollars,

quarters, and dimes until 1853, and besides the fact that 80 per cent of all the silver dollars coined were coined after 1834, this fact, namely, that redundant bank notes, which increased by more than \$200,000,000 in a period of ten years, were tending all the time to house both gold and silver in quiet bank reserves.

FRANCE A SAFE CRITERION.

Finally, I regret profoundly that space forbids the mention of independent bimetalism in France and the record of her mint dictation of the world's market price for gold and silver during a period of seventy years. On the closing of her mints against silver in 1874 France had \$900,000,000 of gold and \$700,000,000 of silver circulating side by side as money. Her population barely exceeding 35,000,000. Our present population exceeds 65,000,000, with a promise of exceeding the aggregate population of Great Britain and France within ten years; and our use for gold and silver is for a circulation over a territory seventeen times the area of France.

I will append a portion of her record and a table for the printed report.

[Appended as follows.]

INDEPENDENT BIMETALLISM OF FRANCE.

By act of her Corps Legislatif, March 28, 1803, "5 grams of silver, nine-tenths fine, constitute the money unit, which retains the name of franc."

The articles prescribed the same fineness for gold coin, and direct the coining of 20-franc and 40-franc gold pieces, as well as 5-franc and smaller silver pieces. A thousand grams of gold, nine-tenths fine, are to yield 3,100 francs; and at the rate of 5 grams to the franc, 1,000 grams of silver are to yield 200 francs—the mint price of gold, therefore, being 15.5 times the mint price of silver; the 1-franc silver piece being as absolutely as gold pieces the unlimited legal-tender coin of France, and they continued to be until the founding of the Latin Union in 1865. As already noted, the 5-franc silver piece continues to be unlimited legal tender in France, and, therefore, the full equivalent of gold in France, although no longer coined, and at the relative price for gold of 15.5 times silver in the existing coins.

Appended hereto are tables C D, reporting in dollars the gold and silver coinage of France during the seventy years in which her mints were open to the unlimited coining of both gold and silver, at a moderate charge, into unlimited primary moneys. And there will appear the world's production of gold and silver during this period, showing astounding variations in quantities of each produced, and yet as notable an approach to fixity in the relative market price of gold and silver during the period.

The coinage of either metal being by the voluntary act of its owner all the time, the coinage shows that conversion into French money was as good a use as any other to which the owner could put it, or the charge for coining would not have been paid.

In 1806, with the year's production of silver fifty and one-quarter times the year's production of gold, we see the coinage of nearly \$200,000 worth more of gold than of silver for the year. In 1818, with the year's production of silver forty-six times the production of gold, the coinage of gold is seven times the coinage of silver for the year. In 1852, when the production of silver had fallen to four and one-half times the year's production of gold, the coinage of silver is five times the coinage of gold for the year. And when, in 1866, the gold and silver coinage of France was so nearly equal for the year, with the production of silver fifty and one-quarter times the year's production of gold, we see the average market price of gold at 15.5 times silver, governed, we infer, by this effectual mint price of 15.5. In 1818, with the coinage of gold seven times the coinage of silver, and the production of silver forty-six times

the year's production of gold, the world's market price averages 15.4, as governed by this mint price, 15.5.

And notwithstanding the timid scream of Chevalier and others in 1853 against the further admission of gold into money, gold seeming then to threaten to rival iron in its abundance, the mints of France continued to accept all tenders of gold and silver, and continued to govern the world's market price composedly until 1871, when war with Germany interfered. And the result, which finally appeared after the closing of her mints in 1874, reported to the Paris conference, 1878, was a stock of gold and silver money afloat and in bank in France, exceeding \$700,000,000 worth of silver money and \$900,000,000 worth of gold.

The late De Laveleye, in his "La Monnaie et le Bimétallisme," 1891, makes plain that all the divergence between the French mint price and the London and Hamburg prices for gold or silver, from time to time during the seventy years, was within the aggregate of the costs of a shipment of the momentarily cheaper metal to Paris and the charge for coining there. And, as observed already, the mints of France had little appreciable assistance in their governance of the world's market price for gold or silver during any consecutive important period of years.

Note once more that the population of France did not exceed 35,000,000 and that their employment of money was within an area of 203,000 square miles; and that the present population of the United States approaches 67,000,000, whose demand for money is for a circulation over an area of territory exceeding 3,600,000 square miles. And recollect that her mint price for silver, the value of silver in her existing 5-franc pieces, is at the rate of 3.06 cents on a dollar higher than ours. This means that if the mints of the United States were open to unlimited coinage for our silver dollars, the French would prefer by over 3 per cent to ship their gold rather than their silver money in any bullion settlement with us as our debtor in trade. The same preference to ship gold rather than their silver money to our equally open mints would appear in the case of any of the European nations except England. England's preference to ship us gold in trade settlements due us, rather than her silver money, would exceed 13 cents on the dollar.

And note finally as to France, that while her unrestricted mints accepted and coined gold and silver without limit during periods when the year's production of silver was only four and one-half times the year's production of gold, and when the production of silver was fifty and one-fourth times the production of gold, governing the price of both metals in all markets the while, the year's production of silver was only twenty-three and one-half times the year's production of gold in the world in 1862, and is proportionately less just now—twenty-one and one-fourth times for 1893.

TABLE C D.

The world's production of gold and silver in periods from 1493 to 1890: Soetbeer. The same for the calendar year 1891: United States Director of the Mint.

The proportions of gold and silver relative to the sum of the two, for each period; and these proportions according to value, at the French mint valuation of 1 to 15.50.

The relative weight of the gold and the silver produced in each period; in other words, the "ratio of production," i. e., the "intrinsic value" (?) of either measured by the other, if production determines value.

Average "market price" for each period, i. e., average relative value of gold and silver in the open market—London and Hamburg: Soetbeer, and United States Director of the Mint.

Coinage of France during seventy years to 1873, while her law allowed equally unlimited access for gold and silver to her mints on private account, at a valuation of 1 to 15.50, for emission in unlimited legal-tender coins.

Period.	Pounds avoirdupois.		Proportion of the total.				Relative production gold to silver (weight)-	Relative market value gold to silver.
	Gold.	Silver.	By weight.		At value.			
			Gold.	Silver.	Gold.	Silver.

1876	35,298,632	10,532,263	1 to 12.90	1 to 17.88

¹ In 1871 Franco-Prussian war was waged, followed by French payments of indemnity to Germany.

² In 1873 Germany's sales of silver began, the United States having demonetized silver by act of February 12, 1873.

³ The full legal-tender silver coinage restricted by Latin Union agreement of 1874; stopped finally by agreement of 1878.

LATIN MONETARY UNION.

The Latin Union did not appreciably enlarge the ability of France to maintain the parity of her gold and silver coins; that is, did not add to the ability of France to maintain bimetallicism independently. The coins of all gravitated to France.

France compacted with Belgium, Italy, Switzerland, and later with Greece also, a union whose purpose was "to rid their several people of annoying conditions of intercourse and business transactions resulting from differing valuations of silver in the subsidiary silver moneys of these several States, and with the purpose also to achieve a uniformity of weights, measures, and moneys among them."

This Latin Union was formed December 23, 1865. It provided unlimited coinage and the unlimited legal-tender function for gold and for silver 5-franc pieces, thus exceeding its first aforesaid intent. The union was maintained with this unlimited 5-franc piece included until 1874 (under Germany's sales), and thereafter with a continuance of subsidiary silver coinage under restrictions until 1878. Except that coining silver has ceased, the union remains in force effectually. Each State made the authorized gold and silver coins of all receivable and payable at its public treasury. Each State contracted to redeem its own issues of subsidiary silver in gold or the 5-franc pieces of the State asking the redemption.

The evidence of the independence of France in her bimetallicism, her independence of her associates in her maintenance of the parity of gold and silver money, is easily made manifest. Much of all their gold and silver money gravitated to France, and for the reason that in Switzerland the rate of exchange on Paris was so frequently and so continuously at a premium; for the reason that the same was painfully true of Belgium, as the late De Laveleye records; and for the reason that the like was glaringly true of Italy, whose only currency became irredeemable paper.

The population of France barely reached 36,000,000, and the territory over which her money circulated was less in area than 362,600 square miles, before 1865. The combined territory of Belgium, Italy, Switzerland, and Greece, and their combined population, were, respectively, 166,500 square miles and 37,500,000 people. The aggregate population of all the Latin Union States, therefore, did not exceed 73,000,000, and their combined area was less than 370,000 square miles.

The present population of the United States approaches 67,000,000, and promises to exceed 85,000,000 within ten years, whose employment for circulating money is over an area of 3,600,000 square miles.

AUSTRIA'S MONEY.

As for Austria-Hungary, while at heavy cost incurred in the purchase of \$100,000,000 of gold at a premium, her stock of that metal may have been increased to that extent. Nevertheless, in no right sense of the word can it be justly asserted that the monetary system of that Empire has been established on a gold basis, even approximately. If her mints have been coining gold every week during the last year, so, too, have they been coining silver to a material extent, and thus increasing the volume of its silver currency as well as that of her gold. As recently indeed as the 15th of March, 1894, the monetary situation of the Austro-Hungarian Bank was as follows:

Gold	\$50,293,363, or 39 per cent.
Silver	79,261,480, or 61 per cent.

Making a total of..... 129,554,843, or 100 per cent.

Note circulation, \$194,228,000; that is no less than 61 per cent of the present stock of specie in the Austro-Hungarian Bank as recently as the 15th of March, 1894, was of silver.

Gold commands a premium in Austria thus far still. She does not redeem her paper in gold as yet, and will not if she abandons silver. Her already burdensome debt of nearly \$2,000,000,000 increases almost every year.

Mr. St. John read his proposed bill, as follows:

"A bill to restore the bimetallic coinage system of the United States, and for other purposes.

"Be it enacted, etc., That upon the terms and conditions and charges prescribed by law for the like deposits of gold, owners of silver not too base for

the operations of the mint may deposit the same, in amounts of not less value than \$100, at any mint of the United States and receive therefor silver dollars containing each 412 grains Troy of standard silver.

"SEC. 2. The standard silver dollars of the United States are hereby required to be received for all dues to the United States and are made receivable and payable for all dues and debts, public and private, within the United States.

"SEC. 3. Depositors of gold and depositors of silver as aforesaid, at any mint of the United States, shall receive therefor on their request, instead of the coin to which they shall be entitled, coin certificates of the United States which shall be redeemed on demand in coin. And depositors of gold coin and of silver coin, other than subsidiary coins, at the Treasury or any subtreasury of the United States, in sums of not less than \$30, may receive the herein-provided coin certificates therefor. And no gold certificates and no silver certificates and no Treasury notes authorized by act of July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' shall hereafter be issued.

"SEC. 4. The herein-provided coin certificates shall be redeemed in gold or silver coin, at the convenience of the United States; and the Secretary of the Treasury is hereby authorized, in his discretion, to redeem the same on request in gold or silver standard bars, at the like convenience of the United States.

"SEC. 5. The Secretary of the Treasury is hereby required to reserve on hand, in coin and standard bars, an aggregate sum of gold and silver equal to the aggregate sum of the herein-provided coin certificates outstanding, except as hereinafter provided.

"SEC. 6. The Secretary of the Treasury is hereby authorized, in his discretion and under regulations which he may prescribe, to direct the Treasurer of the United States, from time to time, to receive, at the Treasury or any subtreasury of the United States, interest-bearing bonds of the United States, duly hypothecated to the Treasurer, and issue therefor safe amounts of the herein-provided coin certificates as loans at interest. The rate of interest to be required on such loans of coin certificates shall be in every case the same as the rate of interest payable by the United States on the bonds hypothecated therefor: *Provided always*, That the aggregate sum of coin certificates issued for deposits of interest-bearing bonds of the United States shall not reduce the aggregate sum of coin and standard bars reserved for the redemption of coin certificates below 60 per cent of the aggregate sum of all coin certificates outstanding.

"SEC. 7. The coin certificates provided in this act shall be received for all dues to the United States, and shall be receivable and payable for all dues and debts, public and private, except where otherwise expressly stipulated in the contract.

"SEC. 8. All authority of law for the transportation of standard silver dollars for private account at public expense, in exchange for other lawful money of the United States, and all other acts and parts of acts in conflict with this act, are hereby repealed."

Mr. ST. JOHN. I should like to explain sections 6 and 7 before any question is asked me, while I think of what I want to say.

The suggestion to make these coin certificates a legal tender with the limit proposed, silver dollars being made as unlimited legal tender as gold coin, is in order that the New York Clearing House banks shall accept these coin certificates as it does the Treasury notes of 1890, which are exactly thus limited tender, in settlements of daily balances.

The proposed section 6 is an emergency issue, and would be availed of in real emergencies only, for two reasons:

(1) Because owners of bonds would not accept long-time loans at a cost of all the interest on their investment; and
(2) Borrowers of 4 per cent and 5 per cent United States bonds, hired to hypothecate for such loans, would only appear when a real emergency made high rates for money in the open market.

If a money-market panic threatened the proposed enactment with a sharp contraction of our aggregate of money this provision (section 6) would empower the Secretary of the Treasury to issue over \$200,000,000 of United States coin certificates against silver coin and bullion already in the Treasury and loan them at 4 per cent and 5 per cent per annum against United States interest-bearing bonds.

If lack of engraved coin certificates threaten the Secretary's immediate convenience I suggest that boldness equaling the recent issuing of interest-bearing bonds will momentarily substitute silver certificates, with some distinguishing stamp on them, therefor.

The bill merely proposes in effect: "That the Congress restore immediately the coinage system of the United States founded with the Mint in 1792, maintained for eighty years thereafter, and overthrown, unobservedly, when neither gold nor silver was our current money. Provide the modern convenience of paper substitute for coin, on the choice of the depositors of gold and of silver at the Mint, one and the same coin certificate redeemable on demand in coin, and redeems these coin certificates in gold or silver, at the option and convenience of the United States. It provides an 'emergency issue' of these coin certificates, additionally, with 'elasticity' unquestionable and with redemptions on demand assured, and the means in the Secretary's hands to stifle any panic in Wall street instantaneously."

Mr. BROSIUS. What limitation would you put upon the legal-tender quality of the certificates you have described?

Mr. ST. JOHN. The coin certificates?

Mr. BROSIUS. Yes.

Mr. ST. JOHN. Only the limitation that you and I might be able to contract against receiving them, if we desire, exactly as the Treasury note of 1890 is limited in its legal-tender function, and exactly as the silver dollar is limited. But I propose to remove the limitation from the silver dollar. Let our gold and silver coins stand alike before the law, as in France; and then the United States Supreme Court will not permit the enforcement of contracts in gold coin only. Such discrimination then would be "against good public policy" to enforce.

Mr. BROSIUS. You have spoken of the limited legal-tender quality, but you have not yet stated what the limit was.

Mr. ST. JOHN. The limit only that you would have a right to contract against them, as you have in the Treasury note of 1890.

Mr. ELLIS. I came into the room after you had read part of your bill. I will ask you whether your bill provides for the repeal of the law of 1873, making the gold dollar the unit of value?

Mr. ST. JOHN. You gentlemen are lawyers, and I need not give you the law. But as I understand statute law to-day, each new statute supersedes any prior act that conflicts with it. The provisions of my proposed bill conflict with that law of 1873, and my final clause provides that all acts and parts of acts in conflict herewith are hereby repealed.

Mr. ELLIS. Do you propose to establish the silver dollar as the unit of value—if that is a good term?

Mr. ST. JOHN. I do not think it is a good term. I presume you mean the unit of account.

Mr. ELLIS. The unit of account?

Mr. ST. JOHN. No, sir; my bill recognizes the dollar of the United States as the unit of account; it does not distinguish between the gold dollar and the silver dollar.

Mr. ELLIS. Does it provide any ratio at which the metals shall be coined—that is a good term?

Mr. ST. JOHN. You did not hear the bill read?

Mr. ELLIS. No, sir.

Mr. ST. JOHN. The first portion is explicit on that point. It simply provides that the silver dollar now existing shall be coinable, without limit in amount, on producing the bullion for it, and on the same terms as are now prescribed for gold.

Mr. ELLIS. Would your theory put this country on a silver basis?

Mr. ST. JOHN. Momentarily, it might—I think it would, immediately.

Mr. ELLIS. How long would that condition, in your judgment, prevail?

Mr. ST. JOHN. I read you a paper this morning in which I tried to answer that. I shall have to refer you to that for my complete answer. I would not predict the achievement of actual bimetalism in the United States under the bill earlier than two years; that is, two years at the outside. I should expect it earlier if conditions existing abroad, existing outside of France, prevail; I would expect it to be accomplished within one year. There is no business prosperity anywhere in the world to-day outside of France.

Mr. ELLIS. To what do you attribute the prosperity of France?

Mr. ST. JOHN. To an abundance of good, sound money, that is, primary money that can not be refused, money that the financiers of that country handle on a scientific basis, France being the only nation of financiers.

Mr. ELLIS. I was criticised the other day for asking some witness something about primary money. I was asked what I meant by primary money. Now, I wish you would give a definition of that term.

Mr. ST. JOHN. Primus, I think, means first, or nothing ahead of it. It is absolute money—unconditional, primary money. Secondary money is the greenback, which, although a limited legal tender, is a promise of money. Gold coin does not promise any redemption. It is not the stamp on the coin that makes it money. It is the law behind it. You can not refuse it, and the condition all over the world to-day is, practically, that all you have to do is to present bullion or gold, and lawful money is returned to you for it under the mint laws of all the commercial nations.

Mr. ELLIS. You have examined the Baltimore plan and the plan submitted by the Secretary of the Treasury, I presume?

Mr. ST. JOHN. I have.

Mr. ELLIS. If either one of those plans were adopted, state whether or not, in your opinion, the volume of paper money would be increased or decreased.

Mr. ST. JOHN. I do not look upon a bank note as money, but a promise of money, and therefore I do not quite get your question.

Mr. ELLIS. I will ask it in this form: If either of those plans were adopted would the volume of paper currency be increased or decreased?

Mr. ST. JOHN. You mean now, money and substitutes for money. Will you confine me to one plan, because I would treat these plans on different bases.

Mr. ELLIS. Answer in your own way.

Mr. ST. JOHN. Suppose you confine me to one; otherwise you give me large ground to cover.

Mr. ELLIS. Then I will confine you first to paper currency. Would the volume of paper currency be increased?

Mr. ST. JOHN. To which of the bills shall I confine myself?

Mr. ELLIS. We have the Baltimore plan, already spoken of, and the other plan submitted by the Secretary of the Treasury.

Mr. ST. JOHN. Confining myself for the time to the last named, if the Secretary's bill were enacted as introduced it would fall absolutely flat; not a note would be taken out under it.

Mr. ELLIS. Why?

Mr. ST. JOHN. For the reason that Mr. Williams and several other gentlemen have given you, as I understand their testimony.

Mr. ELLIS. You seem to have overlooked the fact that there is a mandatory provision in one of these plans.

Mr. ST. JOHN. On the contrary, that panic-assuring provision will be resisted and the panic ensue concurrently. All I have to do under the statutes of New York is to make application one day and the next day I can become a State bank. We are not obliged to be a national bank, although we prefer it. We will not continue under national charter and guarantee the liabilities of other banks. We are more experienced than to do that.

Mr. ELLIS. I wish you would follow the bill in detail as far as you like.

Mr. ST. JOHN. I could follow it to criticism.

Mr. ELLIS. I should like you to do it.

The CHAIRMAN. Would the currency issued under that be safe?

Mr. ST. JOHN. There would not be any currency issued under it as it now stands, but there would be the greatest panic that this country has ever seen.

The CHAIRMAN. What would cause the panic if the banks did not issue currency?

Mr. ST. JOHN. The fact that conservative banks would abandon their national charters rather than guarantee the liabilities of others, and such abandonment would throw upon an unresponsive market \$300,000,000 worth of United States bonds, of which \$21,000,000 are 2 per cents, not now salable at par. These withdrawals of bonds by national banks would mean surrenders of the circulation secured by them. That would mean, in the aggregate, a "contraction of the currency" of the United States by \$180,000,000 in the period between the enactment of the law and July, 1895. This burdening of the bond market, under antagonism of the national banks, would make it impossible for the Treasury to sell its next \$50,000,000 of bonds to recoup its gold reserve, and chaos would reign supreme.

In February of 1881, when I had been only one month in the Mercantile National Bank, and without previous bank experience, there came out in the New York papers a mistaken notion that between January and July the national banks must replace all the bonds they possessed by the substitution of new 3 per cents. The President was induced to veto the bill by the panic occasioned by an \$18,000,000 contraction of the currency which ensued. There are only three concerns in New York City buying and selling Government bonds. They make the market, practically, and sometimes are quite arbitrary about it. There is sometimes a difference of 1 per cent between their buying and selling prices for United States bonds, the best of securities in the world. Therefore it was thought by the national banks then that they had better sell promptly. Hence the contraction and the panic. If section 7 of the Secretary's bill is passed we would have to find a market for \$300,000,000 United States bonds between the date of its passage and July next. We would prefer to sell our forthwith.

The national-bank note is guaranteed by the United States, for the reason that the national bank, as a creature of the United States, is an arm of the Government. The national banks, with their note-issue system, were created as a means of providing a ready market for United States bonds by a method yielding acceptable substitutes in moderate amount for money, and for no other reason. That means of providing such market ought to be preserved by the United States. If the United States desired the Mercantile National Bank of New York to take \$900,000 of their 3 per cent bonds at par to-day, or their 5 per cent bonds on a 3 per cent basis, and did not exact gold for it, but would let us pay for the bonds with our notes which the Comptroller would issue on them, we would do so promptly. We did not buy any of the first or second \$50,000,000 of United States bonds lately issued, because I did not believe any existing law provided for the issue. I think necessity rather exceeded the law, as it usually does, and I find no fault. There was nothing else

to do under the circumstances. The circumstances could have been prohibited, however. We made a direct contribution of \$500,000 of gold coin to the Treasury reserve "in exchange for any lawful money;" but the newspapers were not told of it.

A copy of the Secretary's bill has been handed me. Suppose I take it up by paragraphs. I shall not consume much time.

Mr. ELLIS. Consume all the time that is necessary.

Mr. ST. JOHN. In the first place, under this proposed bill of the Secretary's a sum of "greenbacks" or Treasury notes of 1890 are to be impounded. This effects an immediate contraction of the currency. To procure and deposit these notes you contract the currency existing. There is a period of time, involving from fifteen to forty days, before a national bank can get its notes from the Comptroller, under existing law, put them into shape, and get them into circulation. It is not always easy to float national-bank notes. We took out \$300,000 of national-bank notes some three or four years ago and it took us nearly two months to get them out. They were nothing but chips—I do not mean poker chips, but chips of wood—until we could get them into circulation. This element of temporary contraction is an element of danger in the Secretary's bill.

Now we come to the provision that the notes are a first lien upon all the assets of the association issuing the same. That might be open to this question: Whether they are a lien also on the stockholders' additional liability. That liability of shareholders is perhaps not an asset of the bank.

The Secretary's third section provides: "That in lieu of all existing taxes" one-fourth of 1 per cent per annum is payable as a duty for each half year upon the average amount of the bank notes in circulation. That is to pay for the Government's interest in the matter. But there are two quarters to be paid under section 5, as a means of establishing a safety fund. That means one-half of 1 per cent per annum.

The CHAIRMAN. Until the 5 per cent is reached.

Mr. ST. JOHN. That means a period of ten years before the safety fund is established. What would happen to your banks during that ten years preceding the establishment of a safety fund? In the meantime there is only dubious safety. That is logical, if it is not true; and I think it is true.

There is particularly no safety for the good banks that would be liable to demands upon them, during ten years, to pay failed banks' notes and take the chance of any assets of these failed banks to reimburse them. At least the Oswatomie People's National Bank can not have this right to jeopardize the Mercantile National Bank of the city of New York if we surrender our national charter.

"Each association hereafter organized and each association applying for additional circulation shall pay its pro rata share into the said fund before receiving notes."

I suppose that means that if 5 per cent has been contributed by banks already issuing, any new bank must contribute 5 per cent as a starter. That is another deterrent; but it ought to be required if the rest of the bill is enacted, of course.

The underlying proposal pertaining to all these bills, the Secretary's indirectly and all under the recommendations of Mr. Horace White and associates, whom you have heard, is the retirement of the greenbacks and Treasury notes; and Mr. White wants the silver dollars and certificates retired also. The proposal amounts to a demand that the United States abandon a profit to the people at large and confer a profit on the banks instead.

Mr. COBB of Alabama. Will you please explain how it is, if this bill becomes a law, that the United States would guarantee a profit to the national banks?

Mr. ST. JOHN. I do not say that. I have said that the Secretary's bill would fall flat and if section 7 is enacted will create a panic. I say the underlying demand of the gentlemen who have been here to testify in behalf of any of these bills is that the greenbacks shall be retired. That is basal in their demands. Profit to the issuing banks is the first requisite of any creation of bank notes.

Mr. COBB of Alabama. Are you opposed to the retirement of greenbacks? If so, state why; and if you are not, state why not.

Mr. ST. JOHN. I am opposed to asking any sacrifice of the people at large in order to provide profit to banks. I do not dare ask any such thing. I never did and I never will. I would not so sacrifice the popularity that the national banks of the United States have legitimately earned. The great popularity to which they are entitled is being sacrificed by well-meaning doctrinaires, outsiders, who know little about banking. Think of it, the United States issues \$100,000,000 of bonds, on which interest is to be paid for ten years at 5 per cent per annum. At the same time it is proposed that \$245,000,000 greenbacks, a debt which does not bear interest, and therefore is saving (at 5 per cent per annum) \$17,300,000 a year to the people at large, shall be retired. More interest-bearing debt to issue to retire them. And as a feature of the proposal is that bank notes, yielding profit to banks as the first essential of their existence, shall supersede them! It is preposterous!

Mr. JOHNSON of Indiana. What is your opinion of section 10 of the Carlisle bill?

Mr. ST. JOHN. My opinion of that is just what I said when I came here; that it is absolutely impossible for the banks of the United States to redeem a liberal issue of bank notes in gold. The possibility does not exist.

The CHAIRMAN. Section 10 is in regard to State banks.

Mr. JOHNSON of Indiana. Section 10 is the one which provides for the issue by State banks under certain conditions therein imposed.

The CHAIRMAN. Take our printed copy of the bill. That is the only bill to which we refer.

Mr. ST. JOHN. Section 10 provides, I see, that the use of circulating notes issued by a banking corporation duly organized under the laws of any State, and which transacts no other than a banking business, shall be exempt from taxation under the laws of the United States under certain conditions. That section is the State-bank feature. What I would have to say about that is two things: First of all, the Secretary introduces a bill based on his timidity as to a sufficient gold reserve. He says that he is asked to pay gold for greenbacks and Treasury notes, and he wants to put that burden upon the banks. He proposes to allow a State bank to issue notes if the State bank will first lodge with some State officer a certain number of dollars' worth of greenbacks or Treasury notes. He does not provide that the State officer must hold these greenbacks or Treasury notes subject to demand, and is without any right in the Constitution of the United States to compel such State officer to do so. He is simply furnishing a means of issuing State-bank notes and leaving those greenbacks or Treasury notes in circulation also. He is not reducing by a dollar the demand on the Treasury for greenback or Treasury-note redemptions.

Mr. JOHNSON of Indiana. You said there were two reasons; you have given one.

Mr. ST. JOHN. I meant to couple that with the fact that I think that the national-bank-note system ought to be preserved, so far as it is to the public interest to preserve it, and so far as it is to the public interest to create or preserve any banks of issue. The national-bank-note system of note issue ought to be preserved as the means of assuring a market for United States bonds when the Government needs to issue interest-bearing bonds.

Mr. JOHNSON of Indiana. You contemplate, of course, the continued use of paper money?

Mr. ST. JOHN. I propose to create coin certificates of the United States

secured by a reserve of 100 per cent in coin and standard bars in lieu of the Treasury notes of 1890 and other paper, excepting the greenbacks and excepting national-bank notes, as now issued, also. The greenback is a note that did not promise anything but money; it did not say what money, and it did not promise coin until by act of 1874, which said it should be paid in coin. That act says gold or silver, explicitly.

Mr. JOHNSON of Indiana. What is your opinion as to the relative merits of a system of paper money under direct Federal control, as compared with a system of paper money under the control of the various States?

Mr. ST. JOHN. With no Federal control attempted?

Mr. JOHNSON of Indiana. Yes.

Mr. ST. JOHN. Well, we have had a history in this country that was exceedingly expensive; very costly. Uncertainty caused a difference in exchange between cities, which varied from a tenth of 1 per cent to 3 per cent quite commonly, and sometimes exceeded 5 per cent. That difference in exchange was the price of that system to the producing sections, whose products were exchanged by means of State-bank notes for products hailing from the money centers.

Mr. JOHNSON of Indiana. Do you believe that conditions have so changed in the interval that there is now no danger of the evils from which we then suffered under the old State-bank system?

Mr. ST. JOHN. Has anybody furnished any fact to verify that statement? I do not admit it.

Mr. JOHNSON of Indiana. I want to develop your views.

Mr. ST. JOHN. I am willing to be converted by facts, but I have not seen any facts to warrant even a suspicion of such a change.

Mr. JOHNSON of Indiana. If we are to have a system of circulating notes issued by banks, which system do you think is preferable and would best subserve public interest—a system under exclusive Federal control, or a system partially under Federal control and partially under the control of the States?

Mr. ST. JOHN. I do not believe it would be possible to maintain a system under two controls under the Constitution of the United States, as I read it.

Mr. JOHNSON of Indiana. But let us assume the constitutionality.

Mr. ST. JOHN. I can not assume it, because I do not believe it is possible. I think the Constitution would interfere. I think that is an absurdity, and I do not think you want to ask me to assume an absurdity.

Mr. JOHNSON of Indiana. But as there might be a difference of opinion on the legal aspect of the question, assume that it is possible from a legal standpoint; as a practical business man what would you say as to the desirability?

Mr. ST. JOHN. I have had no experience to justify any opinion whatever, and I do not think anybody else has. I do not respect opinions that are based on imagination only. I will not ask you to do so.

Mr. JOHNSON of Indiana. Are the functions of a bank, so far as its discounts and deposits are concerned, so entirely separable from its functions as a bank of issue of circulating notes that, in your opinion as a practical business man, and leaving out of view the constitutional aspect of the question, that the discount and deposit functions could be subjected to one jurisdiction and the note-issuing functions to another jurisdiction?

Mr. ST. JOHN. There is nothing but imagination that could answer that question. I do not know. I have no suspicion that such a disjunctive conjunction could survive the first strain upon the money market.

Mr. JOHNSON of Indiana. The witness who was upon the stand just before you came was asked by the gentleman from Kentucky [Mr. ELLIS] to explain why it was that no money could be borrowed on short time by the merchant in New York on personal security at a low rate of interest, whereas a merchant in a city like Louisville, Ky., who was unquestionably solvent, could not obtain money from the banks there on the same time at so low a rate of interest. Can you give us a solution of that problem?

Mr. ST. JOHN. I can mention one of the causes.

Mr. JOHNSON of Indiana. What is your explanation? Does that condition exist?

Mr. ST. JOHN. It does.

Mr. JOHNSON of Indiana. Why?

Mr. ST. JOHN. I will give you one reason. There are many, doubtless, but one is this: The statutes of the United States establish a requirement of reserves of money in national banks. In the country banks—banks out of the main cities—it is 15 per cent of their deposits; in the larger cities it is 25 per cent of their deposits. Banks of those cities of the 25 per cent class which are not designated "reserve cities" and banks of the cities that are in the 15 per cent class are allowed by law to carry a portion of what is called their "cash reserve" on cash deposit in the city of New York. Thus, in law, a deposit in New York subject to check is a portion of the cash reserve required of the Oswatimie National Bank. The money is in the city of New York and is employed in New York. The banks in New York, competing with each other, invite such deposits, sometimes at a small rate of interest. The result is an accumulation of money in the banks of New York. One of the effects is a competition to employ it safely. There are too many lenders at times and low rates. Great demoralization in the money market in New York ensues. The effect has been evident in the condition for a year past until the last bond issue reduced funds, the prime borrower being able to get money on his own terms.

Mr. JOHNSON of Indiana. There are accumulations of money in New York?

Mr. ST. JOHN. There are, frequently.

Mr. JOHNSON of Indiana. That is your answer boiled down?

Mr. ST. JOHN. Yes; with this addition: The peril of these accumulations is what your section appreciates in your disadvantage in rates, which you ask me to explain. New York banks lend the money on an average calculation of demands upon them. If they lend too much of the money entrusted to them they are in danger. Hence, when their habit of thought is accustomed to the accumulation they dread the first evidence of its diminishing. To forestall this dread they lend to New York merchants of certainty to pay and whose paper will sell everywhere, in preference to lending to Louisville, when just as certain of payment, but not certain that Louisville paper will sell if money is drawn and must be provided.

Mr. JOHNSON of Indiana. Is that sufficient to explain this discrepancy in the rates of interest, in your opinion, between Louisville and New York?

Mr. ST. JOHN. Here is another thing: The Mercantile National Bank of New York has to-day some \$10,000,000 to \$11,000,000 of other people's money on deposit, and some \$5,000,000 of idle money in our vaults, part of which latter ought to be earning interest. But the times are uncertain; there is a threatened alarm on the gold shipment question, and there are other disturbing elements in prospect, so that we do not dare lend as closely as we would like. Under present conditions I would rather buy a prime New York merchant's note for \$100,000 at a discount of 3 per cent per annum than Louisville paper at 6 per cent per annum, four months to run.

Mr. JOHNSON of Indiana. If you will be kind enough to make your answers a little more concise it will perhaps better serve our purpose.

Mr. ST. JOHN. If that is not pertinent it may be stricken out. It is pertinent to remind ourselves that as communities grow in wealth they keep more and more of their money at home. Every government's bonds that sell at par and over are practically all at home.

Mr. JOHNSON of Indiana. You feel certain that the reason why you could make money at a low rate of interest is because of the superior character of the paper?

Mr. ST. JOHN. In times like these there is no security except in the most strictly prime paper, known to be such and available to sell as such.

Mr. JOHNSON of Indiana. I am assuming that the prime security is offered in Louisville.

Mr. ST. JOHN. I know banks in Louisville that are prime, and I know one that can get \$200,000 from me whenever it wants it. They can get money from me at 4 per cent and lend it at 6.

Mr. JOHNSON of Indiana. Do you think that it is the selfishness of the banks that causes this difference in the rate of interest?

Mr. ST. JOHN. No, sir; it is due to timidity, in view of the general lack of prosperity in the producing sections, or belief that producers are suffering generally.

Mr. JOHNSON of Indiana. Does not that timidity obtain in New York as well as in Louisville?

Mr. ST. JOHN. It does indeed.

Mr. JOHNSON of Indiana. Then how would that affect the difference in interest complained of?

Mr. ST. JOHN. It is not quite the same in New York. In New York we have a very large clientele of men who are worth a million dollars or more each and known to be. That condition does not obtain in the smaller cities. I can take paper of Louisville merchants with entire confidence, because I know them. But I can not be certain of getting cash for it if my depositors draw on me heavily.

Mr. JOHNSON of Indiana. Are there not men of unquestioned financial standing in Louisville as well as in New York? How could that create the difference?

Mr. ST. JOHN. I answered before that there are accumulations in New York such as are not in Louisville, those accumulations being partly the result of statute law. I explained our competition in New York as lenders, and our required caution as to amount to lend.

Mr. JOHNSON of Indiana. But I understood that there were other reasons, and it is with respect to the additional reasons that I was inquiring. Something has also been said in the course of the examinations we have had here about the scarcity of money in the agricultural sections of the country at what is known as the crop-moving time, and about the high rate of interest charged for money with which to move the crops. Can you explain the reason for the scarcity of the money and why it is that it costs the people living in those sections so much to get it? Describe the process whereby money is made high to them in order to move their crops.

Mr. ST. JOHN. Primarily and underlying the whole thing is the fact that the aggregate sum of money in the United States is not sufficient. If there were a general business revival in the United States we would have a painfully stringent money market within ninety days. That is one answer to the question.

Mr. JOHNSON of Indiana. Is it not a fact that at the very time that these people in the agricultural sections are complaining about the scarcity of money there are large quantities of money lying idle and congested in the money centers?

Mr. ST. JOHN. Undoubtedly so, as I thought I had explained.

Mr. JOHNSON of Indiana. Then would you say that the reason why this complaint exists is that there is not sufficient money for the purpose of moving the crops?

Mr. ST. JOHN. I would, undoubtedly. When I find an accumulation in every bank of Europe greater this year than for years past, I know there is a reason for it. The increase of the aggregate money of the world is stopped, except as one can provide 4.03 pounds of gold when he wants to add a thousand dollars to it. Distrust is the concomitant and distress the achievement.

Mr. JOHNSON of Indiana. Is the reason why money can not be had in agricultural districts in sufficient quantities to enable the crops to be moved because of the fear among lenders that there is no security for the money?

Mr. ST. JOHN. It is one and a sufficient reason for bank caution. The people who are making these complaints, and justly too, I think, are not prosperous. They are mortgaged to death to their factors and stores and country merchants. What they mortgage their homes and crops for is dollars. If their product will not yield dollars they can not pay their debts. Cheap overcoats do not concern the planter and farmer unless dollars are the outcome of their crops.

I have said that the aggregate of all our money is our measure of all values. It follows that the aggregate of money must increase with the aggregate of the commodity considered if the price of that commodity is to remain unchanged. Large volume of wheat, low prices for it; large volume of dollars, low value of dollars. I do not mean interest value of dollars. I mean relative value of wheat and dollars. High prices for flour and high rates of interest are found together. We see this conjunction in mining districts. To be brief, it is the fact that the world's growing abundance of the necessities and luxuries is surpassing the world's sufficiency of money. The prime sufferer is the producer of the abundance. Reflectively and painfully all elements suffer on account of him.

When crops move from the producing sections they move East and North and out of the country. The Western or Southern draft follows the merchandise to New York, is cashed in New York, and the money for which the merchandise sells is there. Now, to get the actual money to the West or South it has to be shipped there. That process of shipping is expensive in two ways. First, the express charges. Second, the alarm it nearly always causes the money-center banks who are asked to ship; it raises their rates of interest.

Mr. JOHNSON of Indiana. That is what I am trying to get at. The items that go to form the dearth of currency at the time it reaches the crop-moving section is due to what, do you say?

Mr. ST. JOHN. It is because it has to be shipped from the money centers to the crop-producing localities. That is a process demanding money. The insufficiency of our aggregate of money in the United States appears at such times glaringly to the unprejudiced. When crops move from the producer he wants actual money. Checks, drafts, and like credit substitutes for money do not content him. Money is the measure of his sales.

Mr. JOHNSON of Indiana. Let us stick to the question. You have stated one reason why money is so scarce and high, and that is because of the cost of transportation. You stated that there was another reason. What is that?

Mr. ST. JOHN. I thought I said that the cost of transportation was one element. I meant to say that the timidity element mentioned is the chief cause.

Mr. JOHNSON of Indiana. The feeling that the security offered for the money will not be sufficient if the people are not sufficiently prosperous?

Mr. ST. JOHN. Only partly that. More importantly, the money-center banks are timid at once upon every large drain upon their cash resources.

Mr. JOHNSON of Indiana. Are they afraid to realize on idle money with which the money centers are loaded?

Mr. ST. JOHN. I would rather say cautious. If cash reserves run down, we become a little more conservative of what remains.

Mr. JOHNSON of Indiana. Can you think of any other reason?

Mr. ST. JOHN. I do not think of any other reason. I am sorry to be so verbose in these. I was not expecting these inquiries.

Mr. HUGHES. Would not that timidity that you refer to, and the demand for money, exist in New York as well as elsewhere?

Mr. ST. JOHN. It always does. If checks are drawn upon a bank the money must be there to meet them, or must be raised instantly.

Mr. HAUGEN. What rate of interest did you charge during the panic a year ago?

Mr. ST. JOHN. The Mercantile National Bank of New York never exacts more than 6 per cent from its dealers, under the present administration of thirteen years. There was one instance during that panic of 1893 in which we did exact 8 per cent, I think. We had been badly abused, and might have exacted 20 per cent.

Mr. HAUGEN. What was the current rate about?

Mr. ST. JOHN. There was no current rate. Lenders got anything they chose to exact.

Mr. HAUGEN. It was much higher than it is now?

Mr. ST. JOHN. Yes; brokers paid on prime security three-fourths per cent per day and 6 per cent per annum; 276 per cent per annum for some days.

Mr. JOHNSON of Indiana. Can you give us, in a succinct form, your explanation as to how there can be a remedy for the high price of money in the agricultural districts in crop-moving times?

Mr. ST. JOHN. If there were a larger aggregate of money in the United States it could circulate over our vast territory without occasioning alarm. If I knew that the world believed that Louisville is absolutely prosperous, I would like to lend much of my money in Louisville. I would do so with the same certainty that I have mentioned as pertaining to New York. I merely take Louisville as the illustration, because you mention it.

Mr. JOHNSON of Indiana. Take any other prosperous Western city where rates are higher on good security than with you.

Mr. ST. JOHN. I regard Louisville as one of the most prosperous cities of the West and South. I did not mean to reflect on Louisville. But there is no general prosperity in the United States to-day. That is what I meant to say.

Mr. JOHNSON of Indiana. The receipts of interest throughout New England have been a good deal less than in other sections of the country, have they not?

Mr. ST. JOHN. Yes.

Mr. COBB of Alabama. Is it not a fact that it is because of this vast accumulation of money in New York, and a number of other cities, that the country is not generally prosperous?

Mr. ST. JOHN. These accumulations are not the cause; they are one evidence of the lack of prosperity.

Mr. COBB of Alabama. Have you any opinion as to what causes this want of general prosperity, whether it is from natural conditions, or from the result of operations of law, or what is your idea?

Mr. ST. JOHN. My opinion is that the aggregate sum of money in the United States is insufficient to establish confidence in its ability to meet the demands upon it under ordinary prosperity. Also, our money has a scarcity value proportionate to our abundance of the commodities which it values. "Prices," or dollar valuation of commodities, is ruinous to those who provide prosperity when we have any.

Mr. COBB of Alabama. What remedy can you suggest?

Mr. ST. JOHN. Enlarging the primary money of the United States.

Mr. COBB of Alabama. How?

Mr. ST. JOHN. Abandon experiment and go back to eighty years of our own experience and the world's experience in money.

Mr. COBB of Alabama. In your opinion, would that give us a more general dissemination of the volume of money in the country?

Mr. ST. JOHN. It would decidedly. May I read my answer to that inquiry on another occasion? I assume that I may.

"At this present moment a dollar, as the means of acquisition and measure of value, is more efficient than in any other period of recent years, prices of staple commodities being ruinously low. And yet at this same time money seeking wages, entitled interest, seeks employment vainly, or at rates that barely pay. Under these conditions fixed capital suffers in the failure of investments, the banker suffers as a lender, the merchant in the restricted distribution of commodities, the manufacturer and other producer in the current low prices, and labor in want of employment starves. In the mutual relations between these elements of the people, accumulated wealth loses in the reduction of its income, but regains a portion in the increased efficiency of the remainder as related to the commodities which he consumes. No other one of these elements, as such other, has profited at all. Labor has lost everything in losing its employment. The enduring fact, therefore, if these functions in money were the only ones to be preserved, would be 'the rich made richer at the expense of the poor made poorer,' as one achievement of statute law."

Mr. JOHNSON of Ohio. Do you consider that the enactment of Secretary Carlisle's plan into law will produce a great panic?

Mr. ST. JOHN. It will, if the seventh requirement is included, that banks must, in order to stay under national charter, not only guarantee each other's notes, but sell their \$300,000,000 of bonds before July, 1895. It can not help creating panic.

Mr. JOHNSON of Ohio. The forcing of United States bonds on the market is one element?

Mr. ST. JOHN. That is the primal cause; and then if the Government has to issue more bonds to recoup its gold reserve the timidity aroused in Wall street as to prices for Government bonds would manifest itself in the lack of any market for them, and prove perilous.

Mr. JOHNSON of Ohio. You do not believe in bank currency as a substitute for greenbacks and national currency?

Mr. ST. JOHN. What do you mean by "national currency?"

Mr. JOHNSON of Ohio. There are two or three forms. There is the Treasury note, which is really a legal tender, and there are the silver certificates and gold certificates. Those are national currency, and they are proposing now to substitute the national bank note for that. Do you believe in that plan?

Mr. ST. JOHN. I believe that if additional national bank notes, or any other bank notes, were issued in liberal amount while our primary money is chaotic we would go to pieces for a time.

Mr. JOHNSON of Ohio. Are you opposed on principle to this change that so many bankers have favored, of the Government going out of the note-issuing business and the banks going into it?

Mr. ST. JOHN. I am opposed to the substitution.

Mr. JOHNSON of Ohio. You are not as wise as some who are in favor of redeeming and destroying greenbacks. You do not object to that as they do?

Mr. ST. JOHN. The only timidity I have with reference to the greenback—and I have that timidity, I am bound to confess—is that it is so good a money, so nearly perfect money, and yet not money, that you gentlemen will provide more and more to excess of it. The greenback is perilously good money, as suggesting more and more of it until collapse.

Mr. JOHNSON of Ohio. Your practical suggestion is not to take in the notes by the Government?

Mr. ST. JOHN. I would not disturb the greenbacks.

Mr. JOHNSON of Ohio. You propose in your plan, if I understand it, a dollar-for-dollar reserve in coin against these coin certificates. How much do you propose in order to provide for times of stringency?

Mr. ST. JOHN. Forty per cent.

Mr. JOHNSON of Ohio. An increase on the amount of what you have of 60 per cent.

Mr. ST. JOHN. Forty per cent in reserve.

Mr. JOHNSON of Ohio. I beg pardon. You are wrong in the calculation.

Mr. ST. JOHN. I see what you mean. Your statement is correct mathematically, but I do not believe it would be intelligible after my other statement.

Mr. JOHNSON of Ohio. That is, in extraordinary times you propose that the coin certificates out shall not be increased beyond the point of a 40 per cent reserve, which amounts to an increase of 60 per cent?

Mr. ST. JOHN. I mean that until bimetalism is the actual achievement of my bill, if it be enacted, that the usual reserve against the coin certificates shall be 100 per cent. But emergency issues may be made against deposits of United States bonds, but only reducing the reserve to 60 per cent at lowest.

Mr. JOHNSON of Ohio. Does that afford an elastic currency?

Mr. ST. JOHN. It is the only really elastic currency that has been mentioned to your committee.

Mr. JOHNSON of Ohio. I am inclined to agree with you.

Mr. ST. JOHN. There has been no elastic currency mentioned before in the course of these hearings, so far as I have read. This would be an elastic currency, and I have given you the reasons for it.

Mr. JOHNSON of Ohio. You propose to convert the various Government bonds indirectly from bonds into currency?

Mr. ST. JOHN. Stopping the interest that the Government has to pay for the time the owners or borrowers use the money which the Treasury thus provides, and for no longer.

Mr. JOHNSON of Ohio. It is really an interconvertible plan?

Mr. ST. JOHN. It is a temporarily convertible bond of the United States.

Mr. JOHNSON of Ohio. It will contract?

Mr. ST. JOHN. The coin certificates will contract in amount as soon as the unusual demand for money ceases.

Mr. BLACK. Did I understand you to say this morning that, under existing circumstances, you would favor a bond issue?

Mr. ST. JOHN. What I said was this: That the business community of the United States to-day is in great peril; that necessity knows no law but the law of self-preservation. I say that the United States to-day must redeem its notes in gold, even in defiance of law, if necessary, for the sake of your prosperity and mine. But I say also that this ought not to be so.

Mr. BLACK. As I understand, the mistake of the Government has been made, but your idea is that we can not adopt any other plan?

Mr. ST. JOHN. The Government can not adopt any other course until it is strong enough in gold and silver both, to make alarm ridiculous. A giant can do things that a child can not do. The United States was able to redeem greenbacks and Treasury notes in silver and laugh at such consequences as could have ensued. It is not able to do so to-day.

Mr. BLACK. That is what I understand. Then, under existing conditions, you would favor an issue of bonds?

Mr. ST. JOHN. I hope, but my judgment is against the hope, that we need not issue bonds. But until you furnish a statute which will enable the United States to create money in a way to stifle panic, I say yes, issue bonds to maintain a gold reserve, although I say we are at fault officially for this need.

Mr. COX. In regard to the plan suggested by the Secretary, you seem to have a very serious objection to the requirement that the banks shall guarantee the notes of each other. It seems that that is based, to a certain extent, upon the idea that liability would be unknown. Suppose the law were so amended as to provide that the banks should pay up to the extent of 5 per cent of their circulation, and that they should then be released; would not that relieve the difficulty?

Mr. ST. JOHN. That would take away the negotiability of the note. People would be afraid of the notes.

Mr. COX. I do not think you have my idea.

Mr. ST. JOHN. Then I misunderstood you. The people to whom you offer a note would say: "Is that a note of the Chemical Bank? If it is, all right. If it is a note of the Osawatimie Bank, I do not want it."

Mr. COX. The guarantee fund is raised to 5 per cent.

Mr. ST. JOHN. But it is to take ten years to raise it. What may happen meanwhile? Suppose it is exhausted in the first panic. It would take a second ten years to restore this 5 per cent "safety fund."

Mr. SPERRY. The country is now on a gold basis, I take it.

Mr. ST. JOHN. The country is decidedly on a gold basis.

Mr. SPERRY. If I understood you correctly this morning, you said that the proposed scheme would put us immediately upon a silver basis, and that in about two years we should come back again to the gold basis.

Mr. ST. JOHN. No, sir; I allowed the conclusion that we reach a silver basis at once. If we did, then I said we would achieve a bimetallic basis within two years, when both our dollars, gold and silver, would be at par.

Mr. SPERRY. Then what basis would we be on?

Mr. ST. JOHN. A bimetallic basis, with the option to every debtor to pay in either coin, one coin being as good as another in the United States, and practically everywhere else in the world.

Mr. SPERRY. In case we should go on a silver basis, under your proposed scheme, what effect would that have on the prices of labor and commodities?

Mr. ST. JOHN. It would enhance them materially, but not at once. The theory that we would jump into some region of excessively high prices is ridiculous. It is not historical. Everything that is readily negotiable would advance promptly. It would take real estate in New York City two years to begin to show the advance notably. Government bonds would not advance for the reason that they are already high priced for the income they yield.

But securities in general, railroad securities, would advance, because railroads would promise to be prosperous. There would not be any large immediate rise in normal prices of commodities for the reason that there is no great amount of silver bullion available to the United States to convert into money. I said this morning that about \$5,000,000 is a liberal estimate for supplies on hand in distributing markets, and as soon as present owners saw that our mint would fix the price at \$1.20 per ounce, they would not sell at less.

India's supplies would go to her at \$1.20 per ounce, as they now go at 62 cents an ounce.

Mr. SPERRY. Then the immediate effect of reaching a silver basis would reduce the prices of commodities?

Mr. ST. JOHN. I said just the reverse. I said the immediate effect would be to raise the prices of everything, but that the rise would not be so rapid as some people imagine.

Mr. SPERRY. Would there be any immediate effect?

Mr. ST. JOHN. There would be, decidedly.

Mr. SPERRY. Then either I do not understand you or you do not understand me. What would be the immediate effect?

Mr. ST. JOHN. If the Secretary be the bold man I think him to be, and determined to carry out the law in spirit as in letter proposed, he would say, "Gentlemen of the United States, if anybody wants any part of \$200,000,000 at 4 per cent or 5 per cent per annum, let him lodge United States bonds therefor and he can have it." Otherwise, the immediate effect would be a panic. This provision of my bill would stifle any panic that threatened to arise.

Mr. SPERRY. Suppose we leave the bravery of the Secretary of the Treasury out of the account, and I will put it in this way: Under your proposed scheme we should go upon a silver basis?

Mr. ST. JOHN. I say I would not dispute that; I would admit it by way of argument. Practically I think that is not true. The demand for money, and

no silver immediately available for money, would attract gold into use, at interest, just as soon as all alarm was seen to be ridiculous.

Mr. SPERRY. What would be the immediate effect upon prices of labor?

Mr. ST. JOHN. The immediate effect, so far as felt at all, would be to raise the prices of everything, including labor.

Mr. SPERRY. Immediately?

Mr. ST. JOHN. That would be the immediate tendency. "Immediate" is a vague term.

Mr. SPERRY. There would be no effect downward?

Mr. ST. JOHN. No, sir.

Mr. SPERRY. Would there be a panic?

Mr. ST. JOHN. No, sir; panic would be stifled, as I propose.

Mr. SPERRY. I am asking for the immediate effect, not the final effect. I had thought that if we go on the silver basis the effect might be a panic.

Mr. ST. JOHN. If the means were not at hand to allay it there would be a panic. No business man gets panicky if he can see the means to allay it right at hand certain to be used.

Mr. SPERRY. I am speaking of the condition of affairs, which I understand would result from your bill, if we should immediately go upon a silver basis. In that case would not the immediate effect be a panic?

Mr. ST. JOHN. No, sir; the sight of the means at immediate command to allay panic would prevent a panic.

Mr. SPERRY. There would not be a panic if there was not any panic. I understand that.

Mr. ST. JOHN. I mean to answer you with entire frankness, and I do not mean to be captious. As I understand it, a panic could arise only from a shrinkage, or fear of shrinkage, in the volume of money. Now, I propose to meet that with \$300,000,000 of coin certificates of the United States of America—as good a certificate for money as can be made.

Mr. SPERRY. In other words, \$300,000,000 of gold would go out?

Mr. ST. JOHN. I did not say that; I do not admit it. My bank has \$1,400,000 of gold on hand as part of its reserve. Not a dollar of it would be disturbed. It would all lie there as now, in reserve against our \$10,000,000 or \$11,000,000 of deposits.

Mr. SPERRY. Then there would be no immediate panic?

Mr. ST. JOHN. None whatever, if the provision proposed is included in the act. Men are not children. We are not doing business on that basis in New York or elsewhere.

Mr. SPERRY. What are the means you speak of, that you think would allay what is generally considered to be an immediate effect growing out of a gold basis?

Mr. ST. JOHN. I think if anybody has the United States bonds, or if he can hire them, as has frequently been done, he could lodge them in any subtreasury or in the Treasury, and obtain any part of the \$300,000,000 coin certificates. These coin certificates are to be a limited legal tender; as such, unless contracted against, they are money. There will be no objection to them if the money market is stringent. Clearing-house certificates are good enough for money in dread of panics; the United States certificate is their superior.

Mr. SPERRY. Those coin certificates would be redeemable, how?

Mr. ST. JOHN. In coin, at the Treasury's option as to whether gold or silver coin.

Mr. SPERRY. And if the condition of the Treasury were such as to force the Treasury to redeem those coin certificates in silver, then what?

Mr. ST. JOHN. The Treasury would not be asked to redeem any, that is all. It would not now be asked to redeem greenbacks or Treasury notes had the like option been availed of when it ought to have been.

Mr. SPERRY. Then should we not be on a silver basis?

Mr. ST. JOHN. I said so; or on a paper basis, because the Treasury only owes a few million silver dollars at present.

Mr. SPERRY. Then the means you propose to allay the panic would not come into operation, would they?

Mr. ST. JOHN. I do not know why not. I never saw a silver dollar at a discount, and I have bought them at 3 per cent premium. I offered in large type in every New York daily paper, for two days, three-quarters of 1 per cent premium for silver dollars to be paid for in clearing-house checks at the height of the panic of 1893.

Mr. SPERRY. In your judgment, if we go immediately upon a silver basis and the Government bonds are brought in and transferred into coin certificates, possibly in silver, no panic would result?

Mr. ST. JOHN. Not if my proposition of relief is adopted in the shape discussed.

Mr. SPERRY. What would be its effect on foreign exchange?

Mr. ST. JOHN. I told you this morning what the first effect would be if we were on a silver basis; it would depend entirely upon how much silver was offered at our mints. If a stringent demand for money appeared I would not be surprised to see dollars of the United States, of whatever composed, worth a premium as money in New York, over exchange on anywhere, right off. If scarcity of money were caused by the fulfillment of your idea that we would be immediately upon a silver basis, the demand upon gold for use as money would be superior to any promise of a premium on the gold in hoarding. If scarcity of money did not ensue the point of your inquiry is removed.

Mr. SPERRY. If you now draw exchange on London it calls for gold, does it not?

Mr. ST. JOHN. It means gold on the other side, or Bank of England notes.

Mr. SPERRY. Those are the equivalent of gold always.

Mr. ST. JOHN. Not always, but means that now.

Mr. SPERRY. If at the present time you draw exchange from London on New York that means gold?

Mr. ST. JOHN. Nobody ever does that.

Mr. SPERRY. Are not remittances made if there is a balance in our favor?

Mr. ST. JOHN. That is the other way. There are no remittances to us in that shape, in sums worth mentioning. Dealings in money between Europe and the United States are by drafts always on London, or elsewhere over there.

Mr. SPERRY. If I wanted to remit to New York, would I draw a draft?

Mr. ST. JOHN. No, sir; actual money would be shipped, unless you made a deposit in London to the credit of your creditors. If exchange on London were at a discount in New York, they would ship gold this way; it is the only acceptable thing they have to ship.

Mr. SPERRY. Are there times when exchange on London is at a discount in New York?

Mr. ST. JOHN. Many times. As for instance, while the "Sherman Act" repeal bill was pending, and the New York papers had told alarmingly of our exportations of \$71,000,000 between February and June, there came a day in June, 1893, when gold began to return. In the course of the four months ending with September \$55,000,000 of gold returned from Europe to New York. Would you believe that the New York papers forgot to direct public attention to the fact? The "Sherman law" was not repealed until November 1. The reason that gold came back, the continuing "Sherman Act" to the contrary notwithstanding, was because exchange on London was at a discount in New York.

Mr. SPERRY. What would be the rate of exchange between New York and London if we were on a silver basis?

Mr. ST. JOHN. That would be a mere guess at present; there is nothing to base an opinion upon.

Mr. SPERRY. What would it represent?

Mr. ST. JOHN. It would represent the then present value of the money of the United States; which I think will be as good money, and as attractive to other nations, as an example, as any money in the world. It will be the very best if it restores our own and their prosperity.

Mr. SPERRY. That is the bullion value?

Mr. ST. JOHN. No, sir.

Mr. SPERRY. Would it represent the bullion value of gold and silver money?

Mr. ST. JOHN. It would represent what was then the relative bullion values of our gold and silver coins.

Mr. SPERRY. At the present time a merchant buying \$1,000 worth of goods in London pays \$1,000 in New York, within a range of 1 or 2 per cent for exchange, I take it?

Mr. ST. JOHN. I think I understand you, and if I do, that is about correct.

Mr. SPERRY. Suppose we were on a silver basis and that a New York merchant buys \$1,000 worth of goods in London; how much will his draft cost him?

Mr. ST. JOHN. That will be taken into the account in the price of the goods when buying, and he will not remit such money as you imagine. I will explain: The silver dollar of the United States, if it were in London to-day, would sell there at a discount of about five-eighths of 1 per cent. That is par, less freight, insurance, and interest to New York. It would not sell at the value of the bullion composing it, as you are sometimes told here. If the mints of the United States were wide open to silver, as they are to gold, the market price of silver, for a time at least—and this will commend itself to anybody—would be the coining price of silver at our mint.

Mr. SPERRY. What does the Mexican dollar sell for in London?

Mr. ST. JOHN. It sells for its bullion value without regard to the law of Mexico. Let me explain.

Mr. SPERRY. Answer it now.

Mr. ST. JOHN. I will answer it now. I object, first of all, to Mexico as a criterion for the United States. Mexico's population does not exceed the aggregate population of Pennsylvania and New York. Mexico's little internal-trade employment for her money may be imagined from the fact that her entire railroad system embraces about one-third the direct track mileage of the Erie Railway, only one-sixth of the direct and side track mileage of that single one of the railroad systems of the United States; and Mexico imports of commodities which are her mere comforts, together with her luxuries, an aggregate of more than she has anything else but her silver product to give for them. Therefore, as a seller of silver, necessarily at any price obtainable, her silver coin and bullion stand practically alike in the markets of the world.

Mr. SPERRY. What is the relative bullion value of the Mexican dollar and the American dollar?

Mr. ST. JOHN. One is about 420 grains and the other about 412½, nine-tenths fine.

Mr. SPERRY. The bullion value of the Mexican dollar is worth more than the bullion value of the American dollar.

Mr. ST. JOHN. Yes; and our trade dollar's bullion value was the same as that of Mexico when we had trade dollars. When our trade dollars were deprived of their legal-tender function they sold like bullion, at a discount, while our ordinary 412.50-grain silver dollar was at par.

Mr. SPERRY. Have you stated the price of the Mexican dollar in London?

Mr. ST. JOHN. It is whatever the price of silver bullion is, and a little more. They fetch anywhere from one-half of 1 per cent to 1 per cent more than bullion because available for exportation to China as money.

Mr. SPERRY. It sells as bullion?

Mr. ST. JOHN. At a moderate premium over bullion.

Mr. SPERRY. The American dollar does not sell as bullion?

Mr. ST. JOHN. It would sell to-day in London for 100 cents in gold, less about five-eighths of 1 per cent, the cost of transportation to New York.

Mr. SPERRY. Just on a par with the greenback?

Mr. ST. JOHN. Or the gold dollar when exchange on London is at a premium as now.

Mr. SPERRY. These two kinds of dollars, Mexican and American, being of substantially the same bullion value, can you explain why it is that in London the Mexican sells for about 50 cents in gold and the American for about 100 cents in gold?

Mr. ST. JOHN. Because the aggregate of American dollars (gold, silver, and paper) is not greater than our aggregate employment for them all as money. Our gold, silver, and paper dollars, as long as they are equivalent legal-tenders and as long as the aggregate of them does not exceed our use for them as money, will always be at par at home and abroad. Demand for dollars here relative to the supply of dollars here will comprehend this whole question.

Mr. SPERRY. Would it be true to say in answer to the question I put to you that the American dollar sells at par, so to speak, because the American Government maintains a parity between the two metals?

Mr. ST. JOHN. Not a bit of it. The Government does not do it. Neither the Treasurer of the United States nor any assistant treasurer would dare to-day to redeem 10,000,000 of silver dollars in gold. He would have a storm of popular indignation upon him over night.

Mr. SPERRY. Then you think the Government does not maintain a parity?

Mr. ST. JOHN. I know that the Government does not maintain the parity between our silver dollars and our gold coin. The business demand for dollars, whatever composed dollars, maintains this parity in their use as money. The Government does not, and could not just now.

Mr. SPERRY. The parity is maintained, is it?

Mr. ST. JOHN. It is, in spite of the pitiable condition of our Treasury.

Mr. SPERRY. Then I will put the question in that way: Do you think the American silver dollar sells at par in London because the parity of the two metals is maintained in the United States?

Mr. ST. JOHN. Yes, sir; that is it exactly. You mean the coins, of course.

Mr. SPERRY. Of course I meant gold and silver coin. If we go on a silver basis, that ends the maintenance of the parity between the two metals?

Mr. ST. JOHN. I did not admit it for a moment; and I do not believe it, though I assented to it, provided it suited you. I said, to begin with, that there is not \$5,000,000 worth of silver bullion available at once to the United States, if our mints were reopened to silver. Can you imagine the United States unable to add \$5,000,000 to its aggregate of money at par? Until the volume of silver brought to our mints becomes so great that we can not use the money into which we convert it, \$1.20 per ounce pure will be the world's price for silver bullion everywhere.

Mr. SPERRY. Then, in your judgment, if we should go upon the silver basis, the parity being destroyed by whomsoever destroyed, a merchant in New York buying \$1,000 worth of goods in London would merely remit \$1,000 without regard to the difference in value between gold and silver coin?

Mr. ST. JOHN. You surely would not attribute any such impression to an intelligent man. I did not say anything like that.

Mr. SPERRY. I understood you to say so.

Mr. ST. JOHN. No, sir.

Mr. SPERRY. Then what would be the effect, the parity being broken down or lost, if a New York merchant wants to settle a thousand-dollar account in London? How much will it cost him in American money?

Mr. ST. JOHN. That would depend upon relative prices in New York and

London, ascertained daily by cable, for wheat, cotton, petroleum, and the like. The difference and a margin for safety would determine practically the rate of sterling exchange.

Mr. SPERRY. He would speculate in the wheat market? Mr. ST. JOHN. He would decidedly not speculate. Such transactions proceed daily now. The buying here and selling over there are practically done at a single moment. The movement of commodities from the United States determines whether exchange on London is at par or a premium or a discount in New York.

Mr. SPERRY. Suppose he did not want to go into the wheat market? Mr. ST. JOHN. He would not need to go into the wheat market. I told you the way in which the price of exchange is fixed. But if the movement of commodities left us debtors in the balancing of trade, then the rate of exchange on London would be fixed at once and for so long as the difference between London's price for the gold bullion and silver bullion in our dollars.

Mr. SPERRY. Suppose he did not want his banker in London to speculate in the wheat market. Suppose he should go to his New York banker and ask for a London draft to pay \$1,000 in London; how much would he have to pay his New York bank for the London draft after the parity is lost?

Mr. ST. JOHN. The difference in exchange would equal the difference in the parity, as just explained, under the conditions mentioned.

Mr. SPERRY. That is exactly what I am trying to get at. That would be the difference between the bullion value of gold and silver coinage of the United States, would it?

Mr. ST. JOHN. At the time when the transaction is made, our mints being open without limit to both metals, our trade relations with Europe would answer your inquiry. I predicted this morning our relations to become the creditor in trade with Europe.

Mr. SPERRY. Then if the silver dollar were worth 50 cents, and we were on a silver basis so that all the New York checks would be cashed in silver, he would have to draw a draft for how much—\$2,000?

Mr. ST. JOHN. I could not suppose any such thing. That could not exist. The supposition is an impossibility in itself, when the United States stands ready to coin at 1.29 per ounce.

Mr. SPERRY. Now, you are assuming. Mr. ST. JOHN. But you must not put upon me an assumption that I regard ridiculous.

Mr. SPERRY. But you are assuming that the United States comes in to establish the parity, are you not?

Mr. ST. JOHN. I am not; not to establish the parity as you mean; but if the United States proposes to coin into our money without limit all the silver that is offered, and if all that can be offered, for years at least, can not be more than we can use acceptably as money, your assumption is not reasonable.

Mr. SPERRY. Is it an answer to the question to assume that the United States comes to the assistance of the New York merchant and establishes a parity?

Mr. ST. JOHN. That would seem, on its face, to be an offensive way of putting your inquiry.

Mr. SPERRY. I do not wish to be offensive, but if you can answer my question I will put it over again, and give you another opportunity. Whatever you say goes. The question is this: Assume that we have lost the parity. Under your answer I take it I had a right to assume that New York checks are cashed in silver dollars, the bullion value of which is 50 cents of their face, in round numbers. A New York merchant wants to settle a thousand-dollar account in London which calls for gold. He goes to his New York banker and asks for a draft on London. How much will he have to pay for that draft in order to settle that account in London?

Mr. ST. JOHN. Unless the chairman insists upon my answering that question "yes or no," which would be grossly unfair to me, I will restate all there is of a question in what you ask, and answer it. Whatever is the difference in price between 371.25 grains of silver bullion in New York and 23.22 grains of gold bullion in New York, that difference will be the premium on exchange on London in New York, unquestionably.

Mr. SPERRY. That is exactly what I supposed.

Mr. ST. JOHN. I will not assume for a moment that 50 cents will be the price of the silver bullion in our dollar anywhere, when our Mint values it a hundred cents. I would not sanction that statement for a moment, so long as India continues her vast demands upon the world's supplies of silver, and there is not the slightest prospect that it will cease.

Mr. SPERRY. What is the bullion value of a silver dollar to-day?

Mr. ST. JOHN. About forty-nine and odd cents. I have not seen the quotations for two or three days. But our own and every other mint in the world are practically closed against silver, excepting that of India. Indian princes are coining; and the Government is coining rupees on Government account, and will continue to.

Mr. SPERRY. We have to deal in legislation with existing conditions.

Mr. ST. JOHN. Oh, no; not at all. We create conditions by law. We govern sixty-odd millions of people, occupying 3,000,000 square miles of as productive territory as the face of the globe could provide, under one dictation of enlightened law.

The CHAIRMAN. Are there any other questions?

Mr. ST. JOHN. I should like to place myself on record by saying two or three things, if it will not take up too much time.

I object to the conclusions of the Comptroller of the Currency, in his report for the present year. On page 33 of that report, at the bottom of the page, he says:

"Under the existing laws, the Government standing responsible for the redemption of the circulation of failed national banks, up to January 1 last, had there been no bond deposit whatever, the loss to it would have been but \$1,139,253, and of this amount \$959,247 represents the loss by banks whose trusts are still open and will pay further dividends, thus reducing the amount last named."

My comment on this is that no one knows what would have happened "if." We do know that the safety-fund system of the Baltimore plan failed disastrously in New York, that the Suffolk system failed expensively in emergency, and that every other but the one national banking system of note issue has been costly to the people of the United States.

Mr. JOHNSON of Indiana. Pardon me, Mr. Chairman, I believe a meeting for the committee has been appointed for to-night. It will be very inconvenient for members to come up here, and I desire to move that we now go into executive session, with a view of seeing if we can not attend to our business and avoid a night meeting. We are all tired. Mr. St. John has been heard at length, and it seems to me that he might have made these attacks or refutations in the time he has occupied, instead of going so extensively into a discussion of the silver question. I think he should be allowed to put himself on record without testifying.

Mr. ST. JOHN. I only desire to refer to two or three other matters.

The CHAIRMAN. Mr. St. John can state briefly what he desires.

Mr. ST. JOHN. Mr. Horace White, on page 85 of the report of these hearings, said, in commending the safety-fund system of bank notes:

"Both systems [the New York safety-fund and Suffolk systems] aim to secure note holders, and both are adequate to that end."

I beg to offer, in rebuttal, Hon. John J. Knox, in his report as Comptroller for 1876. On page xxiii he reports regarding the New York safety-fund experience that—

"Contributions to the fund were first made in 1831. In 1841 to 1842, 11 of the

safety-fund banks failed, with an aggregate capital of \$3,150,000. The sum which had been paid into the fund by these banks was about \$86,274, while the amount required for the redemption of their circulation was \$1,548,538."

Mr. WALKER. In a subsequent report Mr. Knox changed his opinion.

Mr. ST. JOHN. This is no part of his opinion. I do not offer anyone's opinions. Facts only interest me in this perilous controversy. I will offer in rebuttal again of Mr. Horace White, and these points cover all he offered you as facts to base your opinions on, the following as to the Suffolk system. It went to pieces on more than one occasion, and it did not aim to maintain bank notes at par. It bought bank notes at a discount. The people have learned the value of money at par. They won't approve of any other. Here is the rebuttal of Mr. Horace White:

[The Suffolk Bank, by D. R. Whitney, president of the Suffolk Bank. Riverside Press, Cambridge, Mass., 1873.]

"The business man of to-day knows little by experience of the inconvenience and loss suffered by the merchant of sixty years ago arising from the currency in which debts were then paid (page 1). Suffolk Bank's charter was granted February 10, 1818. There were only six banks in Boston (page 3). If any bank deposits with Suffolk Bank \$5,000 permanently, and more as needed from time to time, such bank shall have the privilege of receiving its own bills at the same discount at which they are purchased (page 7). About this time, May, 1825 (page 16), the Phoenix and Pacific banks of Nantucket failed to redeem their bills. . . . After a delay of two months a settlement was made (page 17). Between 1831 and 1833 a great increase took place in the number of banks in New England. . . . The Suffolk Bank became overloaded with bills (page 23).

"During the winter of 1835-36 thirty-two new banks were chartered. . . . many of these banks with little or no real capital; specie was borrowed one day to be counted by the bank commissioner and replaced next day by the notes of stockholders; the bills of these banks, loaned in violation of the usury law at high rates of interest, were used in the wildest speculations. . . . These bills poured in upon the Suffolk Bank until forty-four banks were overdrawn \$264,000, and Suffolk Bank rebelled (page 25). . . . The threatening storm now broke (May, 1837); Suffolk Bank, in common with other banks, suspended specie payments (page 28). . . . Suffolk Bank's total losses by Eastern banks was very great (page 30). . . . About this time (1844) arrangement was made with bankers and others in New York to receive New England bills at one-tenth of 1 per cent discount (page 38). . . . In December, 1855, the difficulties attending the business had become so great that the propriety of giving it up was discussed. It was decided to continue it (page 32). During the five years preceding 1857 a large increase of banks took place in New England. . . . Speculation was rampant. . . . specie reserve was low. . . . loans had increased, so that banks were in a very poor position to withstand the panic which then took place (page 55). On October 14, in common with other banks and on recommendation of the clearing house, the Suffolk Bank suspended specie payments (page 56)."

Mr. JOHNSON of Indiana. What went to pieces? Mr. ST. JOHN. The Suffolk redemption system, not the Suffolk Bank. That is a prime national bank to-day; and we are one of its correspondents in New York. That note-redemption system was utterly inadequate. It was a disastrous failure at three distinctly separate times. Mr. JOHNSON of Indiana. What broke down? Mr. ST. JOHN. The whole system known as the Suffolk Bank note-redemption system. The whole thing broke down because too much work was put on it. It was not adequate to the occasion. There was not specie available with which to fulfill obligations created and floated. Nothing similar would fare better to-day.

Mr. JOHNSON of Indiana. The distinguishing feature of that system was the redemption of bank notes? Mr. ST. JOHN. Yes; they did not always have the means to redeem the notes.

Mr. JOHNSON of Indiana. I do not want to seem to be discourteous to Mr. St. John, but much he has said, in my opinion, has not been relevant. If he desires to make a direct reference that will occupy but a few moments, I have no objection to his doing so, or to his inserting in the record some quotation that he thinks desirable. But I do not believe that it is necessary for us to hear these matters in extenso.

The CHAIRMAN. How much time do you desire, Mr. St. John? Mr. ST. JOHN. If I can have five minutes I can say all I desire.

The CHAIRMAN. Proceed. Mr. ST. JOHN. With regard to the testimony of Mr. Butler, of New Haven, I will say that he is my personal friend, and knows that I esteem him highly. We differ in our notions as to money. He seems to have said that if free coinage of silver were to be provided he would sell out everything and invest in real estate, "because I could raise my rentals and get a fair return for my money." I would rejoice that if there were no prosperity accompanying free coinage his tenants could not stand a rise in rent, if they could pay any rent at all.

A similar prediction was attributed by the New York papers to my warm personal friend, Mr. George S. Coe, president of the American Exchange National Bank of New York, and chairman of the finance committee of the Chamber of Commerce, in connection with the Bland-Allison Act of 1878, as that enactment might affect specie payments in 1879. Our newspapers attributed to Mr. Coe the assertion that he would give \$50,000 to purchase first place on the line at the subtreasury in New York to demand gold for greenbacks on January 1, 1879, if the Bland-Allison Act was not vetoed by the President. The act became a law over the veto, and against the predictions of the New York papers of a cataclysm if it should. In 1880, while the Bland Act was in execution, and 75,000,000 of silver dollars were already coined, the United States imported \$75,000,000 more than it exported of gold that year; and in 1881, after 105,000,000 of silver dollars had been coined, the United States imported \$97,000,000 more of gold than it exported that year. And remember that \$55,000,000 of gold was imported after \$71,000,000 had been exported, while the Sherman Act repeal was still pending and uncertain in 1893.

I desire to say, also, that I object to the conclusions of Mr. Hepburn, when Comptroller of the Currency, on page 32 of his report for 1892. Mr. Hepburn is now president of the Third National Bank of New York. On that page (32) he said:

"Over 90 per cent of all business transactions are done by means of credit. When the public lose confidence and credit is impaired and refused, over 90 per cent of all business transactions are directly affected. It is easy to realize how impossible it is for the remaining 10 per cent of money to carry on the business of the country without monetary stringency and financial distress."

Ninety per cent of the banking business may be conducted in credit substitutes for money, but the banking business is only a portion of all the business of the United States. The buying of cotton and of grain from first hands, called the "first movement of the crops," is done mostly with actual money. Railroad fares and city travel are paid for in actual money. Much of the retail business of the country of all kinds and pay rolls, etc., employ actual money, as Comptroller Eckels in his recent report shows. The aggregate of all other than the banking business, therefore, is vast, and employs a vast aggregate of money.

I desire further to object to Canada as a criterion for the United States, as advanced by Mr. Horace White and Mr. Cornwell.

Canada will be a criterion of the United States when the eagle takes dictation from the humming bird.

The total population of all the provinces composing Canada is less than 4,500,000; the population of the State of New York alone is 5,900,000; population of the United States, 67,000,000. The circulating notes of all the chartered banks of Canada are less than \$40,000,000; the gold coin in the clearing-house banks of New York City, November 25, 1894, was \$96,000,000. The aggregate resources of all the chartered banks of Canada were less than \$315,000,000; the aggregate resources of the clearing-house banks of New York City alone exceed \$1,434,000,000; the aggregate resources of the State and national banks of the United States exceed \$7,340,000,000.

Canada's bank act was "assented" to May 16, 1890. It had no strain upon it. Thirty-nine banks compose the system which it governs. The United States statutes, on the lines proposed by Secretary Carlisle, would govern 8,000 banks (State and national).

I desire, finally, to submit for the consideration of the committee the following concurrent resolution introduced in the Senate by Senator Matthews December 6, 1877, which passed the Senate January 25, 1878, and passed the House promptly thereafter:

"Therefore, be it resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued or authorized to be issued under the said act of Congress hereinbefore recited are payable, principal and interest, at the option of the Government of the United States, in silver dollars, of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith, nor in derogation of the rights of the public creditor."

Mr. Stanley Matthews died a justice of the Supreme Court of the United States.

Mr. Chairman and gentlemen, I hope you will overlook the defects of my statements. My nervousness is due to my severe cold, which kept me coughing half the night. I apologized for it in advance; and I thank the committee for its kind attention.

Mr. JOHNSON of Ohio. I move that the hearings be now closed.
The motion was agreed to.

Currency Reform.

I have ever been the enemy of banks, not of those discounting for cash, but of those foisting their own paper into circulation and thus banishing our cash. My zeal against those institutions was so warm and open at the establishment of the Bank of the United States that I was derided as a fanatic by the tribe of bank mongers who were seeking to filch from the public their swindling and barren gains.—Thomas Jefferson.

So persecuted they the prophets which were before you.—Matthew, v, 12.

SPEECH

OF

HON. WILLIAM J. BRYAN,
OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 22, 1894.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. BRYAN said:

Mr. CHAIRMAN: I desire, in the first place, to call attention to the extraordinary circumstances which surround the presentation of this measure. This is the closing session of the Fifty-third Congress, and nearly half of the members of the House will retire in about two months. Yet the President of the United States has asked this Congress to pass a bill which changes the entire character of our paper money. If this proposition were to take off the 1 per cent tax from national-bank circulation, or if it were to allow them to increase their circulation to 100 per cent on the bonds, it would not, although objectionable, involve any new principle; but the plan proposed involves an entirely new principle. It revolutionizes our currency system, and this change, which affects every man, woman, and child in the nation, which concerns every inhabitant, is asked of this Congress without the subject ever having been discussed by the American people.

I doubt if you will find a parallel in the last twenty-five years. I doubt if you will find such a repudiation of the theory of democratic government. Why do we have platforms? It is in order that the people who vote, knowing the policies to be pursued, may express themselves on those policies, and select such agents as will carry out their purposes. If that is the purpose of platforms, if we believe that what power we have really comes from the people, and if we believe that they are competent to govern themselves, what excuse can be given for proposing so important a change in the monetary policy of the country, without ever having submitted the question for public consideration?

Has any President ever proposed before to annihilate the greenbacks? Has any party ever declared for it? Have any campaign speakers ever presented that issue to the American people? And yet after an election, one of the most extraordinary elections ever held in the United States, after a political defeat without prece-

dent, the defeated party in control of Congress is asked, before it retires, to please turn over the issue of all paper currency to the banks. More than that, the Banking and Currency Committee at once takes up the question and certain people are invited to come and be heard. And who are invited? The bankers are invited to come and give their opinions as to the proposed plan. Has any one else been heard? Is the banker the only man interested in this question? And yet, after hearing for a week from the bankers, a report is made—one of the most extraordinary reports ever made to Congress. By a bare majority the committee decide to throw the bill into the House, and they say that owing to the exigencies of the Treasury they agree to the report, each one reserving the right to propose amendments and to vote against the bill! [Laughter.]

Mr. PENCE. They begin to see that they are going to do it.

Mr. BRYAN. Another extraordinary feature in connection with this bill. Before this Congress has been in session a month we are brought face to face with this proposed change in our currency, and, without having time to read the testimony of the bankers even, the matter is brought up in this House for discussion. It was at first proposed to have two days of general debate. That was the first proposition; and then unanimous consent was asked to close debate under the general rule this week, when it took three days for the members of the committee to get through, not to speak of the few other members of Congress who may feel that their constituencies are interested.

I say, Mr. Chairman, that when you consider the circumstances surrounding this question I doubt whether you will find a parallel even in the history of the United States. What does it mean? The President has launched upon the country an issue, an issue which must be dominant until either all Government paper is annihilated or until all bank paper is annihilated. That is the issue. And instead of submitting it to the country for calm discussion we are asked now to take snap judgment upon the people and decide the question finally, so that if the people want to change it hereafter they must get a House, Senate, and President to agree to the change.

Mr. Chairman, what excuse has been given for presenting this bill at this time? Well, there was a lame excuse in the beginning. But while there might have been some possible excuse for the original bill, the committee recommends a substitute which takes away the only shadow of an excuse that the committee ever had. What was the excuse given for the bill? Why, it was said that the exigencies of the Treasury required immediate action. And what were those exigencies? They said, "They are presenting greenbacks and Treasury notes and drawing out the gold and will compel another issue of bonds!" And this plan as first proposed was commended to Congress on the ground that it would absorb about half of the Treasury notes and greenbacks, and thereby protect the gold reserve.

It is useless to reply that it will not take up all these paper obligations, and that so long as any are outstanding they can still be used just the same as if they are all outstanding. That is a complete answer to the excuse. But men who desire a thing, and give a pretended excuse for wanting it, will not be deterred when you take away their excuse. The influence back of this bill is the same influence that was back of the repeal of the Sherman law a year ago; and when we fully met and answered the excuse they gave for that bill it did not lessen the power behind the bill. Did they not tell us then that the reason why the Sherman law must be repealed was that they were drawing out gold on the Treasury notes? Do you remember that? And I, among others, tried to call the attention of the House to the fact that as long as we had \$346,000,000 of greenbacks which could be used for the same purpose it was foolish to complain that the gold was being drawn out on the Sherman notes.

I suggested that it was like finding fault because the gate was open when the whole fence was down, and that the gold drain would go on just the same, until the Secretary exercised the option to redeem in silver, as he should do. But we labored in vain. The reason given was not the real reason, and therefore to answer it gained no advantage, and it will not have any effect on those who are urging the passage of this measure now to show them that the bill will not bring a particle of relief to the Treasury. I will call your attention to the testimony of Mr. Butler, of New Haven, one of the bankers, whose testimony is conclusive on this point.

Mr. BLACK of Georgia. Does the gentleman mean to say that the committee invited bankers only to appear before the committee?

Mr. BRYAN. Perhaps I should not make it so broad as that; but they were nearly all bankers.

Mr. WARNER. Oh, no; the gentleman is mistaken in that.

Mr. PENCE. All but Mr. Carlisle and Mr. Warner.

Mr. BRYAN. I think if the members will take the testimony they will find that the great bulk of this testimony was given by bankers.

Mr. WARNER. Horace White is not a banker; Mr. Dodsworth is not a banker; A. J. Warner is not a banker.

Mr. BRYAN. You have named three.

Mr. WARNER. C. C. Jackson is not a banker.

Mr. BRYAN. Well, that is four; but Mr. Jackson is a broker.

Mr. WARNER. If you will give me the list I will show you a number who are not bankers.

Mr. BRYAN. Take another list, please, and I will proceed while you count them.

Mr. WARNER. I know the gentleman wants his statement to be correct. Mr. Carlisle and Mr. Eckels took up a large part of the time of the committee. On going over the record I find that those who are not bankers whose hearings were extended were Mr. White, Mr. Dodsworth, Mr. Gunton, Mr. Rothwell, Mr. A. J. Warner; that those who are either bankers, brokers, or financiers, were Mr. Butler, Mr. Cornwell, Mr. Jackson, Mr. Homer, Mr. Pratt, Mr. Ripley, Mr. Williams, and one other gentleman, Mr. St. John, of New York, who came here repudiating the idea that he represented the bankers and declared himself in favor of free silver. If Mr. St. John be added to those who are not bankers or brokers or in any way allied with them, the time and the space given them is greater than that given to all those who are classed as bankers and brokers—this even though the time and space given to Mr. Carlisle and Mr. Eckels be left entirely out of consideration.

Mr. BRYAN. In numbers, how do they compare?

Mr. WARNER. In numbers, there is one more of those whom the gentleman considers as bankers than of the others, if we omit Mr. Carlisle and Mr. Eckels, upon whom so much time was spent.

Mr. BRYAN. Now, Mr. Butler says:

It seems very much like pouring water into a sieve and catching it in another sieve. One million of legal-tender notes deliberately worked could take one hundred millions of gold out of the Treasury of the United States in any one year. Ten millions of legal-tender notes, worked to the full capacity that they might be worked, could withdraw a thousand millions of gold from the Treasury.

This is Mr. Butler's statement and it is common sense. Leave ten millions of these notes outstanding and they can draw out gold from the Treasury as effectually as if you leave every one of them outstanding. And yet, Mr. Chairman, even in the beginning this bill did not remedy this difficulty, and the amendment proposed, which allows the national banks to go on under their present charters so that they need not reorganize and deposit this money, takes away the excuse upon which the bill was first brought in. At this time there is no excuse for it. There is no excuse for this bill unless it can remedy the Treasury difficulty complained of. But if the real difficulty was what some gentlemen say it is, there has been a remedy proposed in keeping with the gold-standard idea. There is one thing about this debate which has gratified me, that is, that some of the advocates of this plan—perhaps not in detail, but generally—have been frank enough to meet the issue squarely and tell us just what they want.

The great difficulty which we have had to contend with in discussing this money question heretofore is that we have been debating with men who were behind masks, and who were pretending friendship to silver, when they could not be relied upon to vote for silver in any form or at any time. But in this discussion some gentlemen have been frank enough, I say, to tell us what they really think, and they have pointed out what they regard as the only measure of relief, and I want the members of this House to realize just what the gold standard means. The gentleman from Connecticut [Mr. SPERRY] who, from his standpoint, discussed this subject with great intelligence, says that you must fund the greenbacks.

Mr. Chairman, that is all you can do. If you want the greenbacks taken up, so that there will be no more of them and no more Treasury notes with which to draw gold out of the Treasury, there is only one thing that you can do, and that is to fund them in bonds, and you may as well accept that conclusion. But I asked two or three gentlemen this question: "Suppose you do that, what are you going to do then? Does that protect the Treasury?" And they answered, "No; we have \$500,000,000 of silver and silver certificates outstanding, and when the greenbacks and the Treasury notes are out of the way, we must then redeem silver in gold, or the same difficulty will confront us that confronts us now." This question was asked of Mr. Jackson, of Boston, who testified before the committee. This is his testimony:

Mr. JOHNSON of Ohio. You want to retire the greenbacks so that there will be no call loans for gold?

Mr. JACKSON. Exactly.

Mr. JOHNSON of Ohio. And then you want to propose a step further—that is, to make every silver dollar or silver certificate redeemable by the Government in gold.

Mr. JACKSON. Every one of them.

Mr. JOHNSON of Ohio. So you would still have to carry gold.

Mr. JACKSON. Yes, sir.

Mr. JOHNSON of Ohio. After destroying the belief of the people in further silver, as you think ought to be done, you think the next step would be to retire greenbacks and finally to retire all the silver in circulation?

Mr. JACKSON. That is it.

Mr. JOHNSON of Ohio. And that is the feeling among the people of New York City?

Mr. JACKSON. I live in Boston, but I should say it is, decidedly.

The gentleman from Connecticut [Mr. SPERRY] told us, toward the conclusion of his very able speech yesterday or the day before, that in his judgment it was not sufficient to fund the greenbacks and Treasury notes in bonds, but that we must fund also a part of our silver in gold bonds.

Now, Mr. Chairman, the members of this Congress might just as well meet this question. Even if the proposed plan would absorb every greenback and Treasury note outstanding, still it would bring no relief. It would require more than a billion and a half of new bank notes to do that, but if it could be done still we would not be any nearer the end. What is the difficulty? The law says:

Upon demand of the holder of any of the Treasury notes herein provided for the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold and silver coin, at his discretion.

But there is a clause reading as follows:

It being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

Now, the present Secretary, and the one preceding him, have construed that to mean that the option really belongs to the note holder, and the same principle has been applied to the greenbacks. Mr. Chairman, I find the English language hardly adequate to express my feelings on that subject. What does that construction mean? Why, there is not a lawyer who would apply such a construction in anything except finance. You construe laws so that they will stand, not so that they will fall; and yet that construction means this: "The option is with the Secretary, but it is the policy of the Government not to allow him to use it." If you construe the last clause so as to take away the option from the Secretary, from the Government, then you construe a part of the law so as to contradict the other part; and no law ought to be construed in that way if there is any other reasonable construction. Now, that construction is the authority of the Treasury Department for paying in gold when it is demanded, and the Government pays in gold simply because the note holder demands it, and the Government is afraid that if it refuses gold will go to a premium.

But when you have taken the greenbacks and Treasury notes out of the way, and men come and present silver, does not that same clause, "it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law," apply with as much force? And will they not say that the moment the Government refuses to redeem a silver certificate in gold, gold will go to a premium, and that we will be on a silver basis? I call attention to this in order that members of the House may understand that there is no relief for the Treasury provided in this bill, and would not be if the bill allowed twice as many bank notes to be issued as it does permit. Now, what will bring relief? There is only one remedy for this difficulty, and we must make up our minds either to accept that remedy or follow the gold standard to its legitimate conclusion and issue bonds.

Either the Government has the option, and can exercise it, to pay in silver when it wants to, or we must make all paper redeemable in gold only and abandon the bimetallic standard. I am in favor of the former. I believe in bimetallicism. We find that along in 1878 or 1879, I think it was, a gentleman, afterwards on the Supreme Bench, Mr. Matthews, of Ohio, introduced a resolution declaring it the sense of Congress that the Government had the right to redeem its coin obligations in either gold or silver. The resolution passed, and he was not called a lunatic either. That was the public opinion at that time. Mr. SHERMAN admitted in an interview before one of our committees about that time that the fact that the Government had this option and could exercise it helped him in the resumption of specie payments. If we had the right then, we have it now; and if we have it now, why not exercise it, Mr. Chairman, and not turn over our finances to the control of those who conspire to defeat the purposes of the Government?

The word "conspire" is perhaps strong, but I want to call attention to what is, to my mind, conclusive evidence of conspiracy in the sense of collusion. The members of the House will remember that when we were here discussing, a little more than a year ago, the proposed repeal of the Sherman law, we were told that they were presenting Treasury notes and drawing out gold. I have the report of the Treasurer of the United States on that subject. You remember that we assembled in August, and that the bill repealing the purchasing clause of the Sherman law became a law about the 1st of November.

I find that during the three months, August, September, and October, there was presented in greenbacks \$1,595,861 for redemption, and in Treasury notes \$1,788,480. Now, we have outstanding, speaking approximately, about twice as many greenbacks as we have Treasury notes, and if they had been used promiscuously at that time we would have been called upon to redeem about two

dollars in greenbacks for every dollar in Treasury notes. But that was a time when they were trying to show that the Treasury notes were dangerous; and for those months the Government was required to redeem more Treasury notes than greenbacks. Now, there were two months when the discussion was going on in the Senate—September and October—and for those two months the Treasury notes presented amounted to \$620,115, while the greenbacks amounted to only \$436,104, about one dollar and fifty cents in Treasury notes to every dollar in greenbacks, when the ratio would naturally have been two of greenbacks to one of Treasury notes.

Why was that? I believe it was because the people who wanted that law repealed were bringing those notes for redemption in order to present an "object lesson" before the American people. How is it now? On the 13th, I believe it was, of November the President decided to issue some more bonds; and I think it was on the 14th that the advertisement appeared in the papers. From November 14 down to December 19, both days inclusive, there were drawn out of the Treasury \$31,971,533 in gold; and during that time bonds to the amount of \$33,570,000 only had been delivered. You can see how rapidly we are gaining gold. Between the time of advertising the bonds and the delivery of thirty-eight and a half million of the bonds, they had drawn out about \$32,000,000 in gold with which to pay for them. But what was the proportion of greenbacks? Now, you know the cry is "the greenback must go." Do we find that now the Treasury note is being used more than the greenback? No; beginning with November 14 and ending with December 19 we find that \$30,867,233 in greenbacks has been brought in and only \$1,104,300 in Treasury notes—more than twenty-five dollars to one dollar, whereas the natural order would be only about two to one.

Thus we see that the people who are behind these measures were able to force the Government to the repeal of the Sherman law and stop the Treasury notes by showing how dangerous they were; and now they try to present an "object lesson" on the greenbacks, and offer more than twenty-five dollars in the greenbacks to one dollar in Treasury notes for redemption. Do these figures not show design?

The New York banker is the "honest Iago," the trusted friend, who first whispers suspicion, then manufactures evidence to discredit, and then tries to destroy. These men have it in their power to bring this influence to bear against Government paper, and are they not doing it? Yet, in the face of this conspiracy against the people of the United States, some members of this Congress tell us that the only reply Congress can make to this organized band to assume the attitude of the child Samuel, and say, "Speak! for thy servant heareth." Ah, Mr. Chairman, if in the White House we had the Andrew Jackson who was once there, he would say: "By the Eternal! the rights of the people are dearer than the interests of Wall street!" [Applause.] But it seems that the only reply that the Executive is able to give is: "Whatsoever thou shalt ask of me, I will give it thee, unto the half of my kingdom."

Mr. Chairman, I do not speak in the sense of personal criticism. Men in official position are responsible for their conduct; every act and utterance is a proper subject for discussion. And I ask, is the President, in the measures that he is presenting, regarding the interests of our people on this financial question, or is he shaping his policy to suit the interests, the wishes, and the demands of those who conspire against the credit of the Government and against the welfare of the people?

And, Mr. Chairman, this brings me to the first objection I have to make to this bill; and the objection applies to all bank notes, whether they are issued under State or Federal control. Remember it is the bankers who are asking for this measure. The "Baltimore plan" was proposed by a bankers' association. They ask you to allow them to issue the paper money of the country. Do they ask it because they are interested merely in the public good? Have they no desire for profit? Let me call your attention to the language of Mr. Williams, the president of the Chemical National Bank of New York. He was before the committee advocating the funding of the greenbacks into 3 per cent bonds. He said:

United States bonds bearing a rate of interest not over 3 per cent—and my idea would be that a 3 per cent bond would be the most advisable to issue, as it would never go below par—and that these bonds should be received as security for circulating notes of national banks on a basis of par for the bonds, the Government having a first lien also on the assets of the banks as additional security. No further margin need be required, as the security would be ample. These notes should be redeemable in the city of New York, and when issued in sufficient volume and being readily convertible would furnish adequate elasticity to the currency, which is so much desired, but in no event should be made subordinate to that of security.

Now note:

The tax on the circulation of national banks should at once be removed, and it will be readily seen that with a 3 per cent bond at par and no tax to be paid on the circulation there will be some inducement for national banks as a matter of profit to take out circulating notes.

Mr. Chairman, I assert as my honest conviction that the only reason why the national banks desire to issue paper money at all

is because of the profit to be derived from it. No person in committee or elsewhere has suggested that they would ever issue a note unless there was profit in it. So it is a mere proposition presented here, shall we make the issue of notes profitable to the banks, or, in other words, shall we make it profitable for them to issue money at all?

Now, you may call it what you like, Mr. Chairman, but, stripped of all its verbiage, the proposition to allow banks to issue money is equivalent to a proposition that the Government shall loan money to the banks at a low rate of interest, or, as Mr. Williams suggests, at no interest at all, and let them reloan it at whatever rate of interest they can secure. I insist that there is no difference in principle between the national banking system as now existing, between the banking systems as proposed by this bill, between the system proposed by Mr. Williams, between any of these plans, and the subtreasury plan proposed by some of the farmers. The principles are identical. It is only a question of security and to whom we shall loan.

Mr. Chairman, if I had no other reason for opposing this bill I would be opposed to it because it says, in substance, to the farmers and to others, "You can not borrow money from the Government at 1 per cent or at 1½ per cent or at any per cent, but we will loan to the banker in your community at a nominal rate, and he will loan to you at 8 or 10 per cent or at whatever he is able to collect." I say, if there was nothing else objectionable in the bill, that objection alone would, to my mind, be insurmountable and condemn the whole proposition.

Men talk of the preservation of law and order—

Mr. BLACK of Illinois. Will the gentleman yield to me for an inquiry?

Mr. BRYAN. With pleasure.

Mr. BLACK of Illinois. Is it not true that the farmer, by taking position with other farmers or financiers, can, and very frequently does, become a stockholder in national banks?

Mr. BRYAN. Yes, sir.

Mr. BLACK of Illinois. So there is nothing against the farmer having this power—nothing to prevent him having it the same as anyone else?

Mr. BRYAN. Nothing at all if he will go into the banking business.

Mr. PENCE. But not as a farmer, only as a banker.

Mr. BRYAN. I have heard before the argument suggested by the inquiry of the gentleman from Illinois, and it would justify a subsidy to lawyers, on the theory that everybody can become a lawyer if he wants to. It would justify a subsidy to any other class of people on the ground that anybody can go into that business.

Mr. WILLIAMS of Mississippi. May I ask the gentleman a question?

Mr. BRYAN. Certainly.

Mr. WILLIAMS of Mississippi. Will the gentleman from Nebraska please explain clearly to the House how he identifies the exercise of the natural right, inherent in any natural or incorporated person, to issue his promissory note to anybody who chooses to take it, with a loan from the Government of the money provided by the people for the support of the Government?

Mr. BRYAN. I am glad the gentleman has asked the question, because it recalls to my mind a point that I had myself overlooked, and I think I can in a word make it so plain to him that he will not ask the question again. If he wants to borrow money he has a right to issue his note, and he has a right to issue it to any person who will take it and let him have the money. But in practice, when he finds a man who will take the note and let him have the money, he finds a man who will make him pay interest upon it. So that the natural right that men have is a right to issue their notes for money and to pay interest on them. But the right which you ask for the bank, on a proposition similar to this, is a right to issue its notes as money and draw interest on them.

Mr. WILLIAMS of Mississippi. Will the gentleman permit me?

Mr. BRYAN. Certainly.

Mr. WILLIAMS of Mississippi. If the gentleman will allow me to say so, he is but obscuring the issue when he makes it a question of interest. The question I asked was based upon my natural right, whether as an individual or a corporation, to issue my promissory note, with or without interest, to anybody who is willing to take it, not invoking the power of the Government to make him take it by a legal tender enactment, but leaving him free to take it as he chooses. The question of interest or no interest cuts no figure at all in the controversy.

Mr. BRYAN. I think the illustration I have given covers the case absolutely, for the tax is equivalent to interest. The bank does not ask the privilege of circulating its notes as other people circulate theirs. Nor does a bank's issue circulate on the credit of the bank, but on the faith of the Government which authorizes and controls the bank. Bank notes are accepted on the supposition that they are safe because the bank is expected to comply with the law, but an individual's note

can only circulate on his own credit. The bank asks the privilege of circulating its notes as money, a right which no individual has, and a right which you would have to give to every individual who would give like security in order to make the law equal in its operation.

Mr. WILLIAMS of Mississippi. If the gentleman will excuse me, I thought, according to his definition of money at any rate, the legal-tender quality was altogether essential. I thought again and again I had understood him to say that was what made money. Then the gentleman says this man wants to circulate his promissory notes as money without the legal-tender quality which would make it, according to the gentleman's definition, money. Is not that the play of Othello with Othello left out?

Mr. BRYAN. Well, Mr. Chairman, I will not discuss with the gentleman the technical meaning of words. I do believe that there ought to be no money except a legal-tender money, and no money except what the Government issues. That is my opinion; but the bank wants to issue a paper to be used as money, to circulate as money, for the profit there is in it to the bank; and I insist that when the bank asks it, it is asking a right which nobody else has, and it is asking of the Government a favoritism which the Government can not afford to show.

Mr. Chairman, we talk of the necessity of suppressing riot, and of quelling mobs. It is necessary. Law and order must be preserved at any price, because there can be no security to life, liberty, or property without law and order; but, Mr. Chairman, when these gentlemen propose the preservation of law and order, by sowing the seeds of discontent, and then bringing the Army near to the cities to suppress the manifestations of discontent, I want to propose a more patriotic plan. I want to propose the only real remedy, namely, that we take away the causes of dissatisfaction and cease to scatter the seeds of discontent.

Favoritism shown by the Government breeds more discontent to-day than all other things combined. The love of justice is the deepest sentiment in the human heart, and just as long as men see that others are treated as they are, they can bear almost any condition. But, sir, when men see that a few are favored and, by special class legislation, are taken out of general conditions and given unfair advantages; when they see these abuses of government, then they begin to feel dissatisfied and to clamor against certain laws, and some even blindly begin to clamor against government itself, confusing the Government with obnoxious laws.

Mr. Chairman, we read in holy writ that when the father of Joseph gave to him a coat of many colors, his brethren hated him because the father had shown his special affection for him; and favoritism to-day breeds discontent among citizens as effectually as it did four thousand years ago among the brethren who kept their flocks in Dothan.

If you put a splinter into the flesh it will fester; nature will try to expel it. If you take it out the wound will heal; but if you keep that splinter there the corruption will spread over the whole system until sometimes life itself is sacrificed.

Let this little splinter be inserted in our political system and others will demand like favoritism. The corruption will spread throughout our body politic, and on every hand we shall see the effects of the vicious principle which we are asked to declare as a right principle in the case of banks.

Mr. Chairman, I believe that if to-day an appropriation were proposed for the spread of smallpox throughout the United States it would be far less dangerous to the people of the country than legislation like this, which takes up a particular class of our people and applies to them a vicious principle, with all the consequences that must necessarily follow from it; because when the smallpox is raging in the country, it is an open and obvious disease, and people may escape from it, but the influence of this pleasant but poisonous principle is such that other people insist upon having it applied to them because it has been applied to somebody else. And therefore, Mr. Chairman, I do not believe that we can afford to give this valuable privilege—because it will not be used unless it is valuable—to a particular class of our people. If the brethren of Joseph complained because his father gave him the insignia of favoritism without his asking, what will be the feeling when this favor is given, not as a voluntary token of parental affection, but because of the demand made by the banks for it, a demand backed up by all the influence which they can bring to bear.

Mr. WILLIAMS of Mississippi. Is not the gentleman from Nebraska perfectly aware of the fact that to-day a great majority of the national banks and other banks of this country are opposing this very identical bill?

Mr. BRYAN. Yes; a great many of them are.

Mr. WILLIAMS of Mississippi. Then why does the gentleman say—

Mr. BRYAN. I intend to speak of that in a moment, and perhaps I may as well take it up now, as the gentleman has called attention to it. The second objection which I have to this bill is that the moment you vest in a private individual or corporation

a particular or valuable right or privilege you make him or it the enemy of any law that seeks to take away the privilege. Of course the national banks will object to any law which they do not think as good as the one they have; and there is a special reason why they may object at this time to this bill; they may think that by waiting until next year, when the Republicans have a large majority in Congress, they can get a better bill than they can get now. That is one reason why the national banks may object to this particular bill at this time.

Mr. WILLIAMS of Mississippi. Did I understand the gentleman from Nebraska a moment ago to say that we did not give them that as a voluntary act, but on their demand?

Mr. BRYAN. I am not speaking of this particular bill, but of the right to issue paper money. And I want to call attention, Mr. Chairman, to the difference between the principle enunciated by the first Democratic President and the principle enunciated by the last Democratic President. Mr. Jefferson gave this advice in 1819: "Interdict forever to both the State and National Governments the power of establishing any paper banks."

Mr. Jefferson's idea was to annihilate every form of bank paper and to prevent its ever being revived. Mr. Cleveland on the other hand says in his message sent to Congress at the beginning of this session: "The absolute divorcement of the Government from the business of banking is the ideal relationship of the Government to the circulation of the currency of the country." Mr. Cleveland thinks that the issue of paper money is a function of the banks and that the Government ought to go out of the banking business.

Mr. BLACK of Georgia. Will the gentleman permit me?

Mr. BRYAN. In a moment. Mr. Jefferson thought that the issue of paper money was more properly a function of the Government, and that the banks ought to go out of the governing business; and I am not ashamed to say that I would rather stand with Thomas Jefferson and drive the banks out of the governing business than to stand with Grover Cleveland and drive the Government out of the business of issuing paper money. [Applause.]

Now, Mr. Chairman, when I say that banks will attempt to prevent any legislation hostile to them, I do not say that they are worse than others. In all our legislation we must remember that people are human, that men are much alike, and that they are very apt to look after their own interests rather than the interest of somebody else. It is not strange that when you have given to the banks a valuable privilege they will try to prevent that privilege from being taken away from them.

Mr. BLACK of Georgia. Did Mr. Jefferson favor the issue of paper money by the Government—

Mr. BRYAN. Yes, sir.

Mr. BLACK of Georgia. Except on emergency, and its redemption to be provided for by the revenue of a tax.

Mr. BRYAN. I will quote what he says. The Supreme Court, however, has decided since that Government paper can be made a legal tender.

Mr. BLACK of Georgia. We are not talking about the decision of the Supreme Court, but we are talking about Jefferson. Did he hold the same idea that you have advanced?

Mr. BRYAN. Let me read his idea. I have quoted to you what he said about interdicting to both the State and National Governments the power to establish paper banks. He said he was opposed to paper banks; he even said that he believed they were more dangerous than a standing army, and in that I fully agree with him. I do not believe that a standing army can drive the Government to legislation.

Mr. BLACK of Georgia. Does he—

Mr. BRYAN. Wait a minute. If the gentleman will pardon me, I will reach that point directly. I do not believe that a standing army can menace the Government as much as the association of all our great moneyed interests in favor of or against a particular law. Now, I will read what Mr. Jefferson said—

Mr. BLACK of Georgia. I thought you were taking him as your leader?

Mr. BRYAN. I was quoting his words against paper money issued by banks. Now, I will read what he said about Government paper.

In a letter written from Monticello, June 24, 1813, to John W. Epps, Mr. Jefferson said:

This is equivalent to borrowing that sum, and yet the vendor, receiving payment in a medium as effectual as coin for his purchases or payments, has no claim to interest. And so the nation may continue to issue its bills as far as its wants require and the limits of the circulation will admit. But this, the only resource which the Government could command with certainty, the States have unfortunately fooled away, nay, corruptly alienated to swindlers and shavers, under the cover of private banks. The States should be applied to, to transfer the right of issuing circulating paper to Congress exclusively, in perpetuum, if possible, but during the war at least, with a saving of charter rights.

He wanted the States to confer upon the Federal Government the exclusive right to issue paper money.

Mr. WARNER. Was that a legal tender?

Mr. WILLIAMS of Mississippi. To issue what?

Mr. BLACK of Georgia. He said he wanted the people of the States to transfer that right.

Mr. BRYAN. Yes, sir.

Mr. BLACK of Georgia. But he says that the right resides in the States.

Mr. BRYAN. I am not discussing the right. I am discussing the policy of establishing banks of issue, State or national.

Mr. BLACK of Georgia. We are discussing Mr. Jefferson.

Mr. BRYAN. I am discussing the words which I quoted from Mr. Jefferson.

Mr. BLACK of Georgia. But the gentleman is not discussing the other view. I thought the gentleman took him for a leader, but he seems to only follow upon those positions in which he agrees with Jefferson.

Mr. BRYAN. I hope the gentleman will not expect me to quote everything Mr. Jefferson said on all subjects when I quote him in support of one proposition.

Mr. WARNER. Was that legal tender?

Mr. WILLIAMS of Mississippi. Read the language again.

[Mr. BRYAN read again the language of Jefferson, just given.]

Mr. BRYAN. Now, does the gentleman from Mississippi wish to ask a question?

Mr. WILLIAMS of Mississippi. I merely desired to have the language of Mr. Jefferson read again.

Mr. WARNER. What I want to ask the gentleman is whether he for one moment suggests that those remarks of Jefferson applied to paper having any legal-tender quality whatever, or to any such paper as that which the gentleman is now advocating?

Mr. BRYAN. Mr. Chairman, I have not quoted Jefferson as sustaining the idea of legal-tender paper, nor is it necessary, in order to make the argument good, to find that Mr. Jefferson ever did approve any such idea. I do not know whether he ever advocated or opposed legal-tender paper. I have quoted Mr. Jefferson as against State-bank paper and national-bank paper, and I have quoted him as in favor of the Government exclusively issuing paper to circulate as money. Whether that paper is to be a legal tender or not, is another question on which I shall speak later. How much time have I remaining, Mr. Chairman?

The CHAIRMAN. The gentleman has twenty minutes remaining.

Mr. SPRINGER. Mr. Chairman, I ask unanimous consent that, if no other gentleman desires to speak this afternoon, the gentleman from Nebraska be allowed to occupy sufficient time to conclude his remarks.

The CHAIRMAN. There is no other speaker on the list for this afternoon.

There was no objection to the request of Mr. SPRINGER.

Mr. BRYAN. I am grateful to the gentleman from Illinois [Mr. SPRINGER] and to the members of the committee for this courtesy. I had not intended to occupy much time this afternoon, because the House has indulged me very generously on former occasions, and also because my argument made on this floor on the 5th of last June covers much of the ground I am now going over. However, the questions which have been asked have occupied a considerable portion of the time which I should otherwise have devoted to the direct discussion of this bill.

Mr. Chairman, I was quoting what Mr. Jefferson said in regard to the danger of these banks. I believe that it is a question which this Congress ought seriously to consider, whether the establishment of these banks of issue, State or national, tends to build up a class hostile to any change, and makes it difficult for the people to withdraw from the experiment if they become tired of it. That is my second objection to any sort of a bank of issue; for, while other people will look after their rights and their interests—and it is proper for people to look after their own rights and to protect their own interests—while other people, I say, as a rule, will oppose any legislation which interferes with their rights or interests, there is no class on earth of its size that can bring such tremendous influence to bear upon legislation as the bankers. For they not only have the power of concentrated capital but they have the leverage of the obligations which they hold, by which they can, if they will, without acting openly, almost coerce those who borrow of them.

But there is another objection. I am opposed to banks of issue, State or national, because I do not believe we can safely give to private corporations the power to control the volume of the paper currency of the country. This bill has for its purpose nothing less than the surrender to the banks of issue of the control of all the paper money to be used—because our silver certificates and gold certificates are not, in one sense, paper money, they are simply certificates of deposit. Now, can that safely be done?

Mr. Chairman, we who believe in the bimetallic idea, and, in fact, nearly all those who believe in metallic money at all, favor it mainly for the reason that the supply in the world is so large, compared with the annual addition—that annual addition being determined by the supply from the mines—as to prevent any sudden expansion or contraction of the currency. That is the main argu-

ment in favor of a metallic currency. That is the reason which makes me believe in metallic money as a base. I believe that if we leave the metallic idea undisturbed by restrictive legislation the volume of currency will be more uniform, and consequently the value of the dollar more stable, than it will be under any other plan.

There is another way in which you can control the currency, namely, by legislation. There are those who believe in what they call irredeemable paper money, to be regulated in volume by legislation. In legislative control there are two difficulties to be met. First, there may be a lack of knowledge on the part of the legislative body as to how much money is needed, a lack of knowledge of the various factors which enter into the supply of and demand for money. Then there is another difficulty. Even if there is great intelligence, infinite intelligence, there must be associated with it absolute impartiality, or else one class will get an advantage over another; and my fear of a money controlled entirely by legislation is that, as one party or faction or influence becomes dominant, and then another, they may increase or decrease the currency, inflating or contracting it; and by so doing change the value of the dollar, change its purchasing power and therefore change the value of all the property owned by all the people who live within the jurisdiction of the Government.

Now that, to my mind, is the danger. And yet, Mr. Chairman, when I am compelled to choose between the regulation of the volume of currency by legislation and regulation of it by banks or other private corporations, I shall without hesitation risk the dangers attendant upon regulation by the Government. The representative of the people is answerable to them. He must act openly. His conduct is known and he is responsible to his constituents. But when that power is given to private individuals or private corporations they exercise it for their profit and not for the public good. Having no more knowledge than the legislators have, they have an unrestrained desire to act so that they will secure the greatest possible advantage. Banks have combined in the past; we know that. Banks can combine again; we know that. Banks will combine in the future whenever they can secure a profit by it. No one can dispute that who will read the testimony of the bankers themselves, for they tell us that we must make the issue profitable. But if they find that by surrendering their paper issues suddenly they can make more profit, are we not bound to believe they will do it?

This must be so if we believe the testimony of the bankers themselves. And this bill not only gives to the banks the power to control the currency, but it takes away every safeguard that the present law provides to prevent the unfair use of that power. The present law provides that the banks can not surrender in the aggregate more than \$3,000,000 in any single month, and that any bank after surrendering any part of its circulation can not take out more for six months. But this bill wipes out those restrictions. More than that. For fear the banks may not be able to act suddenly, this bill provides that the Secretary of the Treasury must keep on hand blank notes, ready to be issued on demand. This bill not only surrenders to the banks the entire control over the currency, but it wipes out every restriction upon the exercise of the power. By this bill we simply say to the banks, "Now you have absolute control of the volume of currency; please be merciful unto us."

Mr. Chairman, I, for one, am not willing to surrender this attribute of sovereignty to national banks nor to State banks nor to any private individuals whatever. I am no more willing to give them the right to contract and expand the currency at will than I am to farm out the right to collect our taxes or to enact penal statutes.

Mr. SPRINGER. Will the gentleman allow me a question?

Mr. BRYAN. With pleasure.

Mr. SPRINGER. The gentleman states that this bill gives to the banks the power to enlarge or contract the currency at their will. Will he tell us how the banks can enlarge the volume of currency unless there are some persons who want to borrow the money—persons who come to the bank and take it out? And how can the banks contract the currency unless some persons come to the banks and pay their debts? How can the currency be expanded unless people who want the money and can use it come to the banks and take it out?

Mr. BRYAN. The gentleman's question is partly pertinent. Under natural conditions what he says is true—that expansion or contraction would depend upon the demand. But, Mr. Chairman, whenever the banks found that they could secure a greater profit by suddenly drawing in the money they had out and presenting it for cancellation I have no doubt they would do it.

Mr. SPRINGER. Under this bill the banks would have no more use for money if the people did not want it than they would for "the fifth wheel to a wagon." You might give the banks a thousand millions of currency, and it would simply lie in their vaults unless persons wanted to use that money and went to the banks and drew it out.

Mr. BRYAN. You can stimulate the use of money by lowering the rate of interest.

Mr. SPRINGER. You want it lowered, do you not?

Mr. BRYAN. I do; but I do not want the banks to hold a string to it. I do not want them to lower the rate of interest at one time and raise it at another, just as they may choose. I do not think you can trust this power to expand and contract the currency to private individuals without danger of abuse—too great a danger for Congress to overlook.

Mr. SPRINGER. The friends of this bill regard the power to expand or contract the currency as one solely with the people, who may or may not need money in the transaction of their business. The banks themselves can not expand or contract. Only the people who need it, and therefore obtain it from the banks, can expand the currency. When the people do not need money the currency will be contracted by the return of the money to the banks.

Mr. BRYAN. That is doubtless the judgment of those who favor the bill. They believe it will always be profitable for the banks to issue money when it is needed and to take it in when it is not needed; but I am not willing to trust the banks to act upon that theory always. If at any time they find that by going contrary to the theory they can make more money they will do so.

Mr. WILLIAMS of Mississippi. Will the gentleman permit one further interruption, and then I will not trouble him again?

Mr. BRYAN. Certainly.

Mr. WILLIAMS of Mississippi. I suppose the gentleman and I agree about one thing, namely, that the banks and the bankers are controlled entirely by the dictates of self-interest, that there is no philanthropy of any sort in regard to their business management, and that they would not cut off their noses merely to spite their faces. Neither animosity nor philanthropy is paramount in the control of the banking business. We agree on that, I presume?

Mr. BRYAN. Yes.

Mr. WILLIAMS of Mississippi. Then we agree about another thing also, and that is that the market value of money to be loaned, at what we call interest, depends on the law of supply and demand. Now, in view of that, would it not follow that the desire of the bank to utter its notes, based on its self-interest, would in turn be necessarily based on the condition of the loan market as to the demand for loans and the supply of loanable funds? In other words, would not the self-interest of the banker in trying to get the best interest and the highest profit from the conduct of his business make him utter notes when there was a demand for notes, and therefore a higher rate of interest; and is not the converse of that also true, that he would retire the notes when there was a small demand for them and a low rate of interest, and would not that work exactly and automatically in accordance with the demands of business and the interests of the people in connection with it?

Mr. BRYAN. The statement of the gentleman from Mississippi in regard to the law of supply and demand must be taken with a considerable grain of allowance. Where there is a possibility of combination the bankers can, to some extent, avoid the natural law of supply and demand; and, without even conceding the gentleman's premises, whenever the banks find that they can make a greater profit by combining to contract or expand the volume of currency they will unquestionably do it. And, Mr. Chairman, what I fear is these times, when they find it more profitable to hurt the people than at ordinary times—

Mr. WILLIAMS of Mississippi. But would the individual banker so find?

Mr. BRYAN. Well, the banks can act in concert, and they do.

Mr. WILLIAMS of Mississippi. I do not know of a single historical instance of a great number of banks acting in concert in regard to the loaning of money.

Mr. BRYAN. If you will go into any town in this country you will find that the banks agree upon a rate of interest and the hours of opening and closing, possibly the rate of discount, and other things of the same kind in which they act in concert.

Mr. WILLIAMS of Mississippi. I do not mean that the banks in a little village, like the cotton buyers in a little village and the merchants, may not make some combinations for a short time and make a temporary profit thereby, but you assume as the basis of your argument that the entire so-called "money power" of the country, through the banks, may combine to shut off competition. I deny it as a possibility.

Mr. BRYAN. If the gentleman will only go so far as he seems willing to go, and give all the banks of the country power, by increasing or decreasing, in concert, the amount of money that we are to have in circulation in this country, then I think he will find that he has established a very dangerous system.

Mr. WILLIAMS of Mississippi. Not if the actual volume of money is increased.

Mr. BRYAN. But the power to increase would be accompanied by the power to diminish.

Mr. WARNER. If the gentleman will permit me, I understand him to concede, and we all agree, that the extent to which a bank can expand its circulation depends on the extent to which people wish to borrow money at the interest it sees fit to charge. That is correct, is it not?

Mr. BRYAN. With that latter qualification as to the interest they see fit to charge, I should say it was.

Mr. WARNER. And the only way the bank can withdraw the circulation is by raising the interest to such a rate as shall compel people or induce them to bring the money back to the bank instead of keeping it out. Is not that correct?

Mr. BRYAN. Generally speaking, I would say yes.

Mr. WARNER. Then, as I understand it, the only way that a bank can expand or contract its circulation is practically by lowering or raising the interest charged?

Mr. BRYAN. That is the way it is done generally. That is one way. It might draw in its loans and refuse to loan money.

Mr. WARNER. Could it do that without raising the interest charged?

Mr. BRYAN. Yes; it can refuse to loan the money at all.

Mr. WARNER. You mean it can hold the money while it earns nothing?

Mr. BRYAN. Yes.

Mr. WARNER. Then, do you propose by law to prevent a bank, or an individual, or any other owner of money, from loaning it at a low rate of interest if he wants to get the money out, or from refusing to loan it in case he does not consider the security safe, or his interest makes it more profitable to hold the money? Do I understand the gentleman to propose to regulate that by law?

Mr. BRYAN. Mr. Chairman, I am just now proposing to prevent, if I can, a law that gives to the banks more power than they already have. When we propose a law which attempts to regulate them in the manner the gentleman suggests it will be time enough to discuss that question; but I am opposing now a law which would give them any more power over the fortunes of the citizens than they now possess as banks of loan and discount.

Mr. WARNER. Conceding, as I think we all do, and as the gentleman does also, that the only means by which a bank can extend or contract its circulation is by either lowering the rate of interest so as to induce people to take the money, or by raising the rate of interest so as to induce or compel people to bring in the money—my understanding is that under those conditions the gentleman's suggestion is either immaterial or else it must involve an interference by law with the power of banks or individuals either to loan money at a low interest or to refuse to loan money if they do not deem the security sufficient or their interest subserved by doing so.

Mr. BRYAN. Mr. Chairman, I do not think the gentleman's argument is at all pertinent to the subject which I am discussing. I am simply contending against a law which gives to them an additional power which may be exercised with danger to the community.

Mr. WARNER. Does this law give anyone—individual or corporation—more power to raise or to lower interest or to refuse loans than they at present have?

Mr. BRYAN. Not as to the real money they have on hand.

Mr. WARNER. Or to raise or to lower interest so as to make room for or to call back their credit paper?

Mr. BRYAN. It does not limit any powers which they now have.

Mr. WARNER. Does it in any way add to the powers which they now have over the very means which we all agree—yourself among us—are the only ones by which they can expand or contract the currency?

Mr. BRYAN. It does not add to their powers, perhaps, but it gives them greater opportunities for exercising their powers by allowing them to expand or contract the volume of paper money.

Mr. WARNER. Does it give them greater opportunities for exercising their powers except by raising or lowering their interest rate?

Mr. BRYAN. I think the gentleman and I have discussed that question sufficiently. I have already stated that I am not attempting to interfere with the exercise by the banks of their power to loan the real money which they have, but I am opposed to giving them additional power.

Mr. WARNER. Do I understand the gentleman objects to discounts?

Mr. BRYAN. I am not objecting to any bank of loan and discount. I trust I have made myself clear to the gentleman when I say that I am opposed to giving them the extra power of issuing money, or what is called money, of their own, with the power to let it out or to take it in at will.

Mr. WARNER. Are you opposed to letting them charge more or less interest, or to letting them use their own notes as a facility for loaning money to the people?

Mr. BRYAN. Mr. Chairman, I hardly think the gentleman can misunderstand me. I have used as clear language as I can,

and I think we understand each other, even though we do not agree.

Mr. BELL of Texas. If the gentleman from Nebraska will allow me, the gentleman from Mississippi [Mr. WILLIAMS] asked the gentleman from Nebraska if he could call to mind any occasion when there has been a general combination of bankers for the purpose of effecting a decrease of the money in circulation. If the gentleman will allow me, I will call attention to an occasion in 1881 when the funding act was pending, and the bill, as I understand, passed this House fixing the rate of interest on the new bonds at 3 per cent. The bankers went to work and withdrew \$18,000,000 of their circulation, and the threat of what they would do, together with what they had already done, terrified this Congress and the country generally to such an extent that the House surrendered and put the rate of interest at 4 per cent, as was demanded by the banks of the country, and it was predicted that if they did not do so general financial disaster would ensue.

Mr. BLAND. If the gentleman will allow me, I will correct him. The House and Senate had passed the bill, and in the meantime the banks had surrendered some \$18,000,000 or \$20,000,000, and terrified the President into vetoing it.

Mr. BELL of Texas. The gentleman is correct about that. I recollect now that that was the fact.

Mr. WILLIAMS of Mississippi. It is well enough for the gentleman from Nebraska and the gentleman from Texas to go on record historically correct. Mr. Carlisle in his statement before the committee explains that. He says:

I think that provision was inserted in the act of 1882 on account of particular transactions that occurred in 1881 at a time when the refunding bill was pending before Congress, and when a certain section was put into the bill which required national banks thereafter taking out circulation to deposit 3 per cent United States bonds (not disturbing any bonds then on deposit). I think there was an impression throughout the country that the effect of the fifth section of that bill would be to compel national banks to take out of the hands of the United States Treasurer the bonds which they already had there, and to substitute for them 3 per cent bonds; and the consequence was that within thirteen days the banks withdrew \$18,000,000. It was feared that there would be a serious crisis; but the President, Mr. Hayes, vetoed the bill, and the House failed to pass it over the veto. That was, I think, the cause of the insertion of that provision. It was an extraordinary case. It was the case of a clear misapprehension on the part of the banks.

I deny that it was by any combination or any conspiracy any more than when we hear there is going to be a ten-billion-bale cotton crop, on an estimate of that sort we fly to the market as soon as we can to get rid of our cotton while it is up.

Mr. BLAND. If the gentleman will allow me to answer.

Mr. BRYAN. Certainly.

Mr. BLAND. I know Mr. Carlisle makes that statement. The fact is that the bill was pending here for several weeks, and that the banks could not be under any misapprehension about it. They knew all about it, for it was pending here some time, passed the House and Senate, and in order to get a veto they surrendered their circulation.

Mr. WILLIAMS of Mississippi. I will ask the gentleman to allow me to read this language.

Mr. BRYAN. I will ask you to have it written out and I will insert it in my remarks.

Mr. Chairman, I have been interested in this discussion. [Laughter.] It is my opinion that in the summer of 1893 the banks did act in concert to bring influence to bear on Congress. I have in my possession a letter written by a prominent New York banker to one of the banks in my district urging the importance of using influence in favor of unconditional repeal, and I received, just after the passage of the bill, a copy of a letter sent out by a number of financiers in Chicago, headed by a leading banker, to the business men throughout Illinois, asking them on a certain day, the day of the vote, to send telegrams to their Members and Senators "in substance but not exactly as follows." They did not want them to be exactly alike, because there would be so much sameness, but "substantially as follows." And I know that on the day the vote was taken quite a number of the members of this House, as the result of that notice so sent out, did receive telegrams "in substance as follows;" and I remember, and perhaps the House will remember, how yellow the desks looked that day because of the telegrams that were lying on them.

A MEMBER. Like autumn leaves.

Mr. BRYAN. I remember one desk, not very far from me, which was literally covered with these telegrams. [Laughter.] I simply suggest this for the edification of those who may possibly deny that influence was brought to bear.

Mr. WILLIAMS of Mississippi. What was the purport of those telegrams?

Mr. BRYAN. They urged members to vote for the repeal of the Sherman law.

Mr. WILLIAMS of Mississippi. The gentleman will not do me the injustice to imply that I have said the national banks never combined for the purpose of urging a public measure or preventing the passage of a measure. What I said was that there never had been an instance of a successful combination for the purpose of contracting or inflating the currency. That is all.

Mr. BRYAN. Mr. Chairman, I am not able to answer from my own observation, but I point out that these banks can combine, and they can be trusted to do it where they think it is to their interest.

But now, if I may be permitted, I will resume my argument.

Mr. BLAND. I would like to have the gentleman read the speeches of Thomas Benton, where he showed that the power of the United States Bank was used in loaning and refusing loans for the purpose of electing one President over another.

Mr. BRYAN. I think that is a matter of history; and I may say to the gentleman in connection with that, that a banker in my State told me that he thought it was legitimate for a bank to use its loaning power to aid those who were in favor of legislation it favored and against those who were against legislation that it wanted.

The next objection to these banks of issue—

Mr. BELL of Texas. Will you allow me to read this authority now?

Mr. BRYAN. If it is brief.

Mr. BELL of Texas. Mr. Chairman, I want to read this, which is a pretty good authority, in view of the authorities just presented. I now read from a speech made by Mr. Carlisle eleven, twelve, or thirteen years ago. Here is what he said about it:

The two Houses of Congress, representing the aggregate interest of 50,000,000 of people, have, after due deliberation, passed a bill which the banks have chosen to consider obnoxious to them and forthwith—within thirteen days—they have contracted the currency \$18,722,340—

Mr. PENCE. What Carlisle?

Mr. BELL of Texas. John G. Carlisle. [Laughter.] (Continuing reading)—

and precipitated a crisis which would have been disastrous to the country had it not been met by measures which they had no power to prevent. The prompt action of the Secretary of the Treasury in purchasing a large amount of bonds at the city of New York and the course of the Canadian banks in throwing \$7,000,000 or \$8,000,000 of their loanable capital on the market, alone prevented a catastrophe from the effects of which we might not have entirely recovered for many years.

The gentleman says he presented a competent authority awhile ago. He will find from the same authority that they contracted the currency \$18,000,000 in thirteen days. In his statement in this report Mr. Carlisle does not deny that they contracted the currency.

Mr. WILLIAMS of Mississippi. Nor do I deny it; but what Mr. Carlisle says is that the manner in which they came to contract it was, as he thinks, through a misapprehension of the law, they became frightened lest they should not be able to buy the bonds the act required.

Mr. BLAND. Does the gentleman insist that these banks misapprehended the law?

Mr. BRYAN. If the members of the House are willing that this discussion shall proceed I do not object.

Mr. WILLIAMS of Mississippi. Will the gentleman allow me to insert this statement? I will not read it, but will just say what he said was "I do not deny that a contraction took place." Nor do I. Just the same as when the cotton planters will put an immense crop upon the market if they become afraid that the price will go down. The bankers became frightened lest they would not be able to comply with the law, and they surrendered their circulation and retired from business down to the level where they might be able to comply with the law. Now, that is Mr. Carlisle's statement. I do not want Mr. Carlisle to be put in the attitude of saying that they did contract the currency and then having him put in the attitude at another time of saying that they did not contract it.

Mr. BELL of Texas. He gives one reason in this statement, and, according to your statement, in this report gives another.

Mr. BRYAN. Mr. Chairman, I submit here, in conclusion on this branch of the subject, what Mr. Carlisle said in 1878:

According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation or otherwise from one-third to one-half of the metallic money of the world is the most gigantic crime of this or any other age.

I only read that to show that, in the opinion of Mr. Carlisle, a conspiracy was once formed in this country and in Europe together to destroy one-half of the metallic money of the world; and if the financiers of the whole world can get together, how much easier it is going to be for the financiers of a community or a locality or of a State, or even of the United States.

But now let me take up another point. These notes are objectionable because they are not legal-tender notes. There is no sort of pretense that any legal-tender quality can be given to the notes to be issued under this law, whether they be issued by national banks or by State banks. Mr. Chairman, I, for one, am opposed to any money being in circulation which is not a legal tender for debts. You can not make these bank notes a legal tender—at least it has never been attempted—even though they are the notes of national banks; nor can State-bank notes be made a legal tender.

The result will be that when you have driven out the greenbacks and the Treasury notes and substituted these bank notes

for them the people will be using a money which will pay debts only by "unanimous consent." It will be the opportunity of the shaver. The extremity of the individual will become the opportunity of the man who desires to profit by his misfortunes. Gentlemen refer to the Bank of England notes; they are a legal tender. Gentlemen refer to the notes of the Bank of France; they are a legal tender. So far as I know, there is no money in circulation in France that is not a legal tender. So far as I know, there is no money in circulation in England (except, of course, the subsidiary coins), which is not a legal tender.

Mr. WILLIAMS of Mississippi. The notes of the joint-stock banks of England and the notes of the Scottish banks circulate freely in Great Britain, yet they are not legal tender.

Mr. WARNER. And the notes of the Irish banks also.

Mr. BRYAN. I had reference to the notes of the banks in England, but if necessary I will modify my statement to conform to the suggestions made.

Mr. KILGORE. Is it not a fact that our national-bank-note currency, which passes just as current as the greenback, is not a legal tender?

Mr. BRYAN. Yes, sir.

Mr. KILGORE. Is it not a fact that the greenback currency at one time in its history depreciated 200 or 300 per cent, while at the same time it was a legal tender, was nontaxable, and was fundable in a bond bearing a high rate of interest?

Mr. BRYAN. Yes, sir; it was a partial legal tender.

Mr. KILGORE. Then the legal-tender quality does not keep up a currency?

Mr. BRYAN. I was not discussing that question.

Mr. KILGORE. Well, the legal-tender quality is not essential to the circulation of a currency?

Mr. BRYAN. On that subject, Mr. Chairman, I would like to say that, in my judgment, the reason why the greenback fell below par was that it contained an exception clause and because the Government itself refused to take it. By compelling the payment of Government dues in coin a demand for coin was created and that demand raised the coin to a premium. The greenback, however, was always as good as the national-bank notes. The national-bank note that we now have, while it is not a legal tender, is only a small part of our currency. The bank notes now outstanding amount to only two hundred millions, while we have about five hundred millions of legal-tender paper, and now it is proposed to take away all our legal-tender paper and give us paper money that is not a legal tender. More than that, the bank notes that we now have are guaranteed by the Government, and ordinarily a bank will give you money upon them, because there can not be any possibility of loss. But the bank notes provided for in this bill are not the same kind of bank notes as those we now have. If these notes are good, why not compel the banks themselves to redeem the notes of other banks? You are trying to foist upon the public, notes which the banks themselves discredit by refusing to redeem them, and yet you tell the people that they are good notes and that they ought to accept them.

Mr. WARNER. I desire to ask the gentleman whether he is under the impression that the pending bill repeals that clause of the existing law which makes the notes of national banks acceptable by all other national banks in payment of debts due them?

Mr. BRYAN. I think it does not.

Mr. WARNER. I am sorry that it does not, but in fact it does not.

Mr. BRYAN. What I say is this, that now, because the national-bank notes are necessarily good, being backed by a Government bond, a bank will always give you coin or anything else you want for them. It is not compelled to do so by law. It is compelled to redeem its own notes, but not the notes of other banks. Ordinarily, however, a bank will give you coin for notes of another national bank. But when you change the character of the note and make a note which the banks may not be willing to redeem, you do not know whether you are going to have any inconvenience or not. Gentlemen will remember that during the panic a year ago the banks refused to take drafts drawn on each other, except for collection. And, as to this Canadian currency which we have heard so much about, I find in a pamphlet issued by the Reform Club—which, having reformed the tariff, is now about to reform the currency (laughter)—

Mr. BOEN. Where is that Reform Club located?

Mr. BRYAN. In New York.

Mr. LACEY. Is it going to make as good a job of the currency as it did of the tariff? [Laughter.]

Mr. BRYAN. Well, I was partially satisfied with its work on the tariff, more so than I am with its proposed work on the currency. But I desire to read an extract from the pamphlet on this point:

Therefore the notes of each bank had been accepted without hesitation by all other banks, but the universal laws of exchange prescribed that in certain cases such notes should be only accepted at a discount. For example, the movement of funds being in general from the Maritime Provinces toward Ontario and Quebec, the notes of the Nova Scotia and New Brunswick banks

generally were at a slight discount in Toronto and Montreal, as drafts upon those banks would naturally be. Likewise the notes of Toronto and Montreal banks were usually subject to some discount in the Northwest Provinces.

Now, the Government came in and established central redemption agencies; the banks did not establish them. The Government by law compelled the establishment of these agencies.

Now this bill, as first introduced, provided that the banks should establish agencies where they desired. In its amended form the bill is improved, because it requires the designation of those agencies by the Government. When the bill was first reported the committee had confidence that the banks would, of their own accord, establish a sufficient number of agencies. Yet in Canada, where the banks had the same power, their notes were at a discount at distant points. But if you establish the agencies you can not have them in every town. For instance, if there is an agency at Omaha or Lincoln a man two or three hundred miles distant who holds a note has no assurance that he may not have to pay a discount on that note in order to get it cashed. So that, Mr. Speaker, you simply leave the note holder at the mercy of the man who is furnishing the money which he must have.

Mr. WARNER. As I understand the gentleman, he is fully aware, as I was afraid he was not, that the bill now pending provides additional facilities for redemption, to be prescribed by the Comptroller of the Currency. Now, do I understand him for one moment to suggest that with a law in force, which it is not proposed to change, compelling every national bank throughout the length and breadth of this country to receive this currency as legal tender in payment of any obligation to it either from another bank or from an individual, one dollar of this currency can for a moment go below par, unless the whole system should go to smash?

Mr. BRYAN. Mr. Chairman, I take it for granted that a bank will comply with the law, and I take it for granted that it will do no more than comply with the law unless it wants to do so. And we can not take our experience under the present law and judge from it what will be the experience under the new law. While under a continuation of the law now existing a bank will be compelled to receive this note for debts due it from individuals or banks, yet if a man wants to get money on the note he can not take it to another bank and obtain the money; the bank may simply take it for collection and charge him a discount.

Mr. WARNER. Does the gentleman mean that, with the great volume of our currency continually passing through the banks in payment of loans that they have made, a note receivable by any bank in the United States in payment of any obligation due it, can remain for one moment in any other part of the United States at a discount?

Mr. BRYAN. Yes, sir.

Mr. WARNER. Well, the gentleman is welcome to his opinion.

Mr. BRYAN. In my judgment that is possible, and not only possible but probable, and I think it constitutes one of the dangers of this kind of currency. When you have withdrawn the greenbacks and Treasury notes you have not a dollar that you can pay a debt with. Paper money is all that circulates. People do not want gold and silver to carry around in their pockets. They want the paper representatives of gold and silver. And yet you want to flood the country with a paper currency that you can not pay a debt with and can not draw money on unless you present the paper at the bank which issued it or at a redemption agency.

Now, let me call your attention, Mr. Chairman, to the testimony of Mr. Butler, and I was interested in it because it perhaps gives the origin of one of the popular songs of the present day.

One of the great arguments in favor of a bank currency is that it is an elastic currency; and they tell us it can only be elastic by being a nonlegal-tender currency and not redeemable at all the banks, so that it will always return to the bank issuing it when there is a surplus. That is the argument in favor of an elastic currency—that it is not a legal-tender currency; that when there is no use for it it will always tend to come back to the bank of issue. And in the old wild-cat currency days the banks used to send their currency off as far as they could, so that it would be as long as possible in getting back. Mr. Butler says:

Under every effort we made to keep it out it remained about \$125,000; and even then we used to send it to Ohio and Illinois and Indiana.

But no matter how far it was sent away, or how often, this wild-cat currency would always come back at last, and I think that may be the origin of the song, "And the cat came back." [Laughter.]

Now, that is the idea of some of our financiers as to this money. I do not believe we can afford to substitute for legal-tender money a money which is not legal tender. There is nobody demanding it. The people who use the money are not demanding it. No party is demanding it. No association is demanding it, except the people who want to issue the money. They are the only ones.

Mr. BLACK of Georgia. Let me ask the gentleman if there was not something of a pledge or a demand for it in the Democratic platform on which the gentleman was nominated?

Mr. BRYAN. There was not. There was a demand in the na-

tional platform that we take off the tax on State-bank circulation.

Mr. BLACK of Georgia. Will the gentleman question the fact that the purpose was to allow the State banks to be restored to the rights they enjoyed before that tax was imposed?

Mr. BRYAN. That was the intention, I think, of those who secured the adoption of that plank; but I heard some very eloquent men on this floor say that the reason was because it was an unconstitutional tax.

Mr. BLACK of Georgia. Of course unconstitutional. But the gentleman started out in his address that has been so entertaining and instructive to us, and I quite agree with very much that he has said, with the opening declaration of the obligation of platforms. Now, I wanted to know what he was going to do about that demand of the Democratic party in its platform.

Mr. BRYAN. I think the gentleman is rather straining my language. I said the object of platforms was to put questions before the people so they could choose their servants on them, and I made the point that this currency scheme had never been under public discussion. The platform did not demand the retirement of greenbacks and Treasury notes.

Mr. WILLIAMS of Mississippi. So you do not stand on the Democratic platform?

Mr. BRYAN. So far as that plank is concerned, many men, elected as Democrats, repudiated that plank entirely. I was one of those who voted against taking off the tax before and after the election, and I expect to continue to occupy that position.

Mr. BLACK of Georgia. Then the gentleman is bound by the platform when he chooses to be bound by it, but not otherwise?

Mr. BRYAN. I can not see how the gentleman can put that construction upon what I have said. I think when a man repudiates a plank in advance of election he is not bound by it. That is often done. So far as I am concerned, however, I denounced that plank during the campaign, and, besides, I was nominated before the platform was adopted and on a platform which differed in some respects from the national platform. I consider myself bound by the platform on which I was nominated and elected rather than by the national platform.

But I must not dwell on that. I do not believe, Mr. Chairman, that the notes will be safe under this proposed plan. I do not want to present too long a list of objections to the notes, but I do not believe that they are safe, and let me give you one of the strongest evidences that they are not safe. You know why the substitute took away the danger of assessment? It was because the banks were afraid of the liability under it. Now, if the notes are good without that, the banks were in no danger. If the banks were in danger because of that, then the notes are not good without it. And if the danger of being called upon to make good the losses was so great that banks would refuse to go into the business because of it, I want to ask if the danger is not great enough to make the holders of the notes fearful if the assessment is done away with?

There is no absolute security for paper money unless the Government is back of it. If we are going to have paper money I believe the first essential is that it shall be absolutely good. If we are going to have bank money I believe the best bank money we ever had is the present national-bank money, because it is always good in the hands of the note holders. But the national bank has objectionable features—all the objectionable features, in fact, that banks of issue have on principle. Still it furnishes security for its notes, and this bill now pending does not give security to the notes. You may say that generally they will be good. That is true. Ordinarily they will be good, but you can not make them good enough to meet emergencies.

Let me call your attention to the experience had in Newfoundland quite recently. They had two large banks of issue there which had \$1,200,000 of currency outstanding. These banks recently suspended payment. They were good banks. Things went on smoothly in prosperous times. One declared a 12 per cent dividend last year and the other a 15 per cent dividend. In time of prosperity they prospered; but what was the result when adversity came? Why, the banks suspended payment, the notes became mere merchandise, and I have just noticed in the press dispatches that a government leader has offered a bill providing that the Government shall investigate the matter, find out how much the banks will pay, and then guarantee the notes to that extent so that they will again pass as money, the concluding words of the paragraph being that some are advocating a plan which provides for issuing treasury notes.

Ah, Mr. Chairman, when we come to the time of need private banks of issue are a failure, and the people, after all, must fall back upon the Government. If the Government is good enough to give relief in time of distress, why is it not good enough to furnish in times of prosperity the notes required to meet the needs of business? Why is the greenback, which is so good whenever there is an extremity, so repugnant to every idea of "good bank-

ing" when the time comes that the banker can take something else and make more money out of it?

The State-bank circulation contemplated is not as safe even as the national-bank notes proposed. The bill allows the revival of State banks of issue under certain conditions, but it does not provide for any safety fund. It provides the guaranty fund, but not the safety fund. You have simply the assets of the bank. You say, "If men do not want to take the money they need not do so." That, Mr. Chairman, is not a sufficient answer. We have a law that requires the inspection of banks by Government agents. Why do you not say that if men do not want to deposit in banks they need not do it. We know, Mr. Chairman, that we must inspect and regulate them, because otherwise the people will be imposed upon and advantage be taken of their necessities. And the same argument that justifies a law regulating the rate of interest, the same argument that is behind a law inspecting banks and inspecting scales, etc., is the argument that will compel you to make paper money good before you allow it to circulate. You do not do it with state banks.

I appreciate the contention of these gentlemen who say that the States ought to be allowed to regulate that themselves. But, Mr. Chairman, this money is a matter which affects the whole country. It is a matter which affects one State as much as another. The law now virtually prohibits, not in terms, but in effect, State banks from issuing circulation; and I prefer to let it stay as it is, rather than repeal the law and risk the reestablishment of wild-cat banks.

It is not that every bank would be a wild-cat bank. It may be the majority of them would be good, but Mr. Chairman, the fact that some of them are bad will throw discredit upon all the rest of them, and people will be first negotiating the price of a horse, and then the price of the money that pays for the horse.

But I must not dwell upon that. I believe that this bill lessens the security to depositors. Gentlemen talk about the banks keeping a reserve without any compulsion. They probably would. Good banks would, and you say bad banks will evade it anyhow. Well, men try to evade all good laws; but, Mr. Chairman, I do not think this provision which repeals the necessity for a reserve fund is in the interest of the depositors, or in the interest of the public. Just as soon as there is a threatened panic, the fact that there is no legal reserve required will make people suspicious, and will hasten the run upon that bank.

Mr. PENCE. Will the gentleman permit me?

Mr. BRYAN. Yes, sir.

Mr. PENCE. Is it your understanding that this bill repeals the provision of the national banking act requiring a reserve?

Mr. BRYAN. Yes; this bill does it in so many words.

Mr. PENCE. You are speaking of the substitute?

Mr. BRYAN. Both of them do.

Mr. WARNER. What protection is a reserve to depositors in case of a run, or in case of close times?

Mr. BRYAN. It is just this protection. People differ in timidity. The very timid will go first. If they get their money, that tends to allay the panic, and if there is no legal reserve there they are more apt to start a run in the first place, and if, when they get there they find the money gone, then the bank has to suspend.

Mr. WARNER. I understand that the gentleman admits that in times when money was not tight there was no trouble. Now what I am getting at is, how does the proviso for a reserve afford any additional security whatever for depositors in the time of a run? Is not the reserve comparatively small and paid out to those who first get there?

Mr. BRYAN. Certainly.

Mr. WARNER. Then, how is it any protection to a depositor in the case of a run?

Mr. BRYAN. It is a great protection to have some money there to be paid to the first who come, and stop the panic, rather than to have none there when they come for it. It gives a feeling of confidence which is very important.

Mr. WARNER. Does it give a feeling of confidence to have it understood that the bank is encroaching upon its legal reserve?

Mr. BRYAN. It can only encroach upon its reserve to pay its depositors, but without a law on the subject it can encroach upon its reserve to make loans, and if the desire to loan money and get interest for it is greater than the caution of the officers of the bank the depositors suffer.

Mr. WARNER. Do I understand, then, that a bank can stop a run, or can do anything else than cause a run, by refusing to extend its loans, and thereby compelling the people to get the currency? I appreciate the gentleman's argument as to general times, but I ask him in all candor whether every argument for a reserve in ordinary times does not fail in times of panic, and whether the fact of a reserve is any protection or anything else than a prohibition to the bank from extending loans so as to prevent financial stress and runs upon the bank?

Mr. BRYAN. Well, Mr. Chairman, I have no idea that I will ever be able to entirely agree with the gentleman in opinion; but

my point is this, that if a bank is permitted to loan all its capital and not required to keep any reserve, then as soon as a panic is started the bank will have to draw in its loans and embarrass its borrowers or find its vaults empty.

Mr. WARNER. Will it not have to withdraw those loans if it is not allowed to discount while its reserve is not kept up?

Mr. BRYAN. No, sir. It will have to refuse loans.

Mr. WARNER. If there should be a run on the bank, and it should withdraw its loans, will it not make a greater rush for the currency?

Mr. BRYAN. No, sir. The run would not be as great as it would be without a reserve.

Mr. WARNER. That is the way it looks in our part of the country.

Mr. BRYAN. If its legal reserve is safe it can renew its loans and the gentleman can see how much more danger there is of the panic being extended if the bank must draw in its loans and create a reserve after the panic begins.

Mr. WARNER. But if you refuse to extend loans, does not that cause a greater demand for currency?

Mr. BRYAN. If you have to refuse extension in order to create a reserve you will cause embarrassment, but if you have the legal reserve on hand you can extend loans.

Mr. WARNER. The gentleman's understanding of the law is entirely different from that which we have in our part of the country. The understanding we have of the present law is that it forbids the extension of loans and discounts which might keep money easy and save the cash reserve from being drawn out by depositors in a run.

Mr. BRYAN. Why, certainly, if the reserve falls below the limit.

Mr. WARNER. In other words, whenever there comes a time when the demand for money is such as to bring it down to the reserve line, the proviso for a reserve prevents the bank from extending loans and thereby protecting itself from the run upon its currency.

Mr. BRYAN. I have tried to state my position clearly and have given the reasons which lead me to believe that without a legal reserve depositors are less secure and panics more probable.

And now, let me add, that the security of the depositors is still further lessened by this bill, because the payment of the circulating notes is made a first lien upon all the assets of the bank. Under the present law the bonds are always more than sufficient to redeem the bank notes outstanding, but under the new law, if an officer of the bank runs away with the funds on hand, an amount of notes equal to more than one-half of the capital must be redeemed out of the assets which ought to secure the depositors. The danger to depositors occasioned by this new liability will intensify financial disturbances and invite general panic.

But why particularize further? There is hardly a dangerous financial idea now extant which has not found a place in the bill, and there are several days left in which to supply newly discovered ones by amendment. The presentation of the bill at this time is not only inopportune, but is absolutely without excuse. The measure is half national bank and half State bank, the deformed offspring of two false systems, and has all the faults, weaknesses and frailties that might be expected in the child of such a union.

I said that it was without excuse. I will modify the statement. It is without an excuse which can be boldly declared. There is an excuse for it, but the excuse does not appear in the argument of those who advocate the bill. There is a purpose behind it, but it is not the purpose blazoned upon the banners. The real purpose of the bill is to take another and a long step in the direction of gold monometallism.

When we were considering the repeal of the Sherman law some of the members who voted for that bill did not like it, but they made themselves believe that it would help silver; that it would "clear away the rubbish," as some said, and that we would "get down to the foundation," and on that we would build up bimetalism. There were men in this House who voted for the repeal of the Sherman law under the belief that there would be subsequent affirmative legislation in favor of silver. Some of us tried to convince those members that the influences behind that bill were hostile to the reestablishment of silver. There was never anything in the President's attitude to encourage any man to believe that he intended to do anything toward the rehabilitation of silver, but there were some people who voted for that bill in the vague hope that in some way it would turn out to the advantage of silver; and to-day there are men who are going to vote for this bill who are trying to justify their action on the ground that in some way this bill will redound to the benefit of silver.

I desire to call the attention of any such to a statement made in the New York Evening Post of December 19, this week:

Whatever may be the fate of the Carlisle bill, the movement for currency reform through better banking methods will go on, and it will draw more and more of Mr. Bland's cohorts. Already the newspapers of the mining States have taken the alarm. Some of them say that either the Carlisle bill

or the Baltimore plan, if adopted, will be the "death knell of silver." Yes, gentlemen, the death knell of silver, in the sense that you mean, is already sounded. It was sounded when the attention of the public was drawn to a cheaper and speedier way of supplying the public with the instruments of exchange needed to transact their daily business.

Mr. Chairman, it is my humble judgment that the influences behind this bill are bent on nothing less than the total annihilation of silver as standard money. Notwithstanding the distress and misery already brought upon our people by the appreciation of money; notwithstanding the declaration of all national platforms in favor of bimetalism; notwithstanding the known sentiment of the people in favor of the use of both gold and silver as standard money; notwithstanding the constant contest waged by the agricultural communities in favor of the rehabilitation of the white metal; notwithstanding the recent resolutions of the Federation of Labor in favor of the immediate restoration of the free and unlimited coinage of gold and silver at the present ratio of 16 to 1 without waiting for the aid or consent of any other nation on earth—notwithstanding all these influences, I say, in favor of bimetalism, the money centers present this insolent demand for further legislation in favor of an universal gold standard. I, for one, will not yield to the demand. I will not help to crucify mankind upon a cross of gold. I will not aid them to press down upon the bleeding brow of labor this crown of thorns.

The member who votes for this bill may justify his vote in his own mind and indulge the hope that in some way it will turn out for the benefit of silver, but I warn him that when this bill is disposed of the forces which are pushing it through Congress will never allow any legislation favorable to bimetalism if they can prevent it. It is a part of the gold conspiracy, and like every other act in the conspiracy comes to us in disguise. The demonetization of silver in 1873 was not secured after open discussion. The law was not enacted after the people had passed upon the question. Demonetization was secured then without popular consent, and was hidden in a bill to codify the mint laws. Again, what about the bill of last summer? Had the people gone into the campaign and demanded the unconditional repeal of the Sherman law? No, sir. The same plank of the platform which declared for the repeal of that law declared for the coinage of gold and silver on equal terms without charge for mintage, and you Southern members, most of you at least, took that plank in the platform before your constituents and told them that it meant the restoration of silver. And yet, after a national victory had been won on that platform which declared for the equal treatment of both metals, we assembled here and were told that we must first repeal the Sherman law and that then we could carry out the other part afterwards.

One-half of the work was done, but where is the other half? I insisted at the time that it was not the purpose of those who were behind that repeal bill to restore silver. I, for one, have not been deceived by the events which have followed. But those members of this Congress who voted for the repeal of the Sherman law in the belief that it was going to bring the restoration of silver, what have they seen to justify their hopes? The gentleman from New York [Mr. HENDRIX] stood on this floor and told us that if Congress would pass that repeal bill "within three months" England would be here asking for an international agreement. The bill was passed. Three months passed, and England did not come. Three more months passed, and England did not come. Nine months—more than a year has passed away, and yet England has not asked us for an international agreement.

A year has passed away, and yet the President of the United States has not proposed a single plan for the rehabilitation of silver. A year has passed away, and the President has never intimated a desire or a purpose to help in the restoration of the gold and silver coinage of the Constitution. You can be deceived, gentlemen, if you want to be, but if you are deceived you will deceive yourselves. You can not deceive the people. The evidences of intent are too plain. The great New York daily from which I read tells you that the death knell of silver has already been sounded because there are cheaper substitutes for silver; and yet you expect to join with these gentlemen in getting the substitutes and then hope to fool them about the effect on silver! Do not expect to fool the people who manufacture our financial legislation! They may not know what the public needs, but they know what their own interests demand and what will best suit their purposes, when they propose laws. They may fail in prophesy, they may make excuses which are not good, but they drive straight to their purpose, and that purpose is the annihilation of silver as a standard money of this country.

This bill proposes to create substitutes for money, but what we need is not more substitutes for money but more real money. These physicians are treating symptoms when they ought to be eradicating disease; they are trying to cure a boil when they ought to be purifying the blood. The money question can not be settled by turning over our paper currency to the banks. We might afford temporary relief to the Treasury by coining the seigniorage, redeeming coin obligations in silver when that is more convenient,

and by making it a criminal offense to present greenbacks and Treasury notes for redemption when they are presented for the purpose of forcing an issue of bonds. The first would supply more than \$50,000,000 to meet the deficit, the second would enable the Treasurer to protect the Government from the raids made on the gold reserve by the banks, while the last would apply the same punishment to those who plunder the people in large amounts that we now apply to petty criminals.

It is true that it might be difficult to prove the criminal purpose of those presenting the notes for redemption, but it would be some restraint upon wrongdoers to have the Government declare that those who conspire to lay burdens upon the people for the payment of interest on bonds needed only for investment stand in the same attitude as men who conspire to rob individuals directly. But even these measures, while giving in reality the relief which this bill falsely pretends to give, and far more, would only be a partial remedy. Let us go further and strike at the root of the difficulty by restoring silver to its ancient place, or, if you will not come with us, then have the courage to carry out your idea to its legitimate conclusion. Do not longer deceive the people with shams and makeshifts.

If you favor the continuance of the gold standard, stand up like the gentleman from New York [Mr. WARNER] and the gentleman from Connecticut [Mr. SPERRY] and advocate the funding of all greenbacks and Treasury notes with gold bonds and the redemption of all silver and silver certificates in gold. That is the only alternative. It is either a gold standard, with more bonds and all money convertible into gold on demand, or it is the restoration of the gold and silver coinage of the Constitution. If gold is your god, follow it; but if you shrink from the incalculable evils of an universal gold standard come with us and help in the reestablishment of bimetallicism. To those who are really in favor of the use of both gold and silver, and in favor of other needed reforms, I commend the platform adopted by the Nebraska Democrats in their last State convention, held on September 26, 1894. I quote it in full, for it covers the most important of the pending issues:

We, the rank and file of the Democracy of Nebraska, at last in convention assembled, send greeting to the common people, who constitute the strength of the Democracy of the nation.

We renew our allegiance to the principles taught by Thomas Jefferson and courageously defended by Andrew Jackson, and we demand that the great political problems of the day be solved by the application of these principles to present conditions.

Believing that a public official is a public servant and deserving of praise or censure according to his acts, we commend President Cleveland for his honest and economical administration of the Government and dissent from such of his financial views as are repugnant to the teachings of the fathers and opposed to the welfare of the people.

Believing that "all men are created equal," and that all are alike entitled to the consideration of government, we denounce as unjust and unjustifiable the protective tariff system which, through the instrumentality of class legislation, robs the many for the benefit of the few. We demand a tariff for revenue only, and point to the Wilson bill as it passed the House of Representatives as a reasonable fulfillment of the promises made by the Democratic party in the campaign of 1892. While we do not condone the acts of those Democratic Senators who modified the Wilson bill in the Senate, we accept the bill as it finally passed as the best measure attainable under the circumstances, and as a great improvement over the McKinley law.

We especially approve of the income tax, and favor its retention as a permanent part of our revenue system.

We indorse the language used by Hon. John G. Carlisle in 1873, when he denounced the "conspiracy" to destroy silver money as "the most gigantic crime of this or any other age," and we agree with him that "the consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world." We are not willing to be parties to such a crime, and in order to undo the wrong already done, and to prevent the further appreciation of money, we favor the immediate restoration of the free and unlimited coinage of gold and silver at the present ratio of 16 to 1, without waiting for the aid or consent of any other nation on earth.

We regard the right to issue money as an attribute of sovereignty and believe that all money needed to supplement the gold and silver coinage of the Constitution, and to make the dollar so stable in its purchasing power that it will defraud neither debtor nor creditor, should be issued by the General Government, as the greenbacks were issued; that such money should be redeemable in coin, the Government to exercise the option by redeeming in gold or silver, whichever is most convenient for the Government. We believe that all money issued by the Government, whether gold, silver, or paper, should be made a full legal tender for all debts, public and private, and that no citizen should be permitted to demonetize by contract that which the Government makes money by law.

We are in favor of the election of United States Senators by direct vote of the people, and in case the Senate refuses to allow an amendment which will secure the direct election of Senators we are in favor of calling a convention of States to submit such an amendment for ratification by the States.

We are in favor of a constitutional amendment making the President ineligible for reelection.

We are in favor the operation of the telegraph in connection with the postal system.

We are in favor of a liberal pension policy.

We are in favor of the arbitration of differences between corporate employers and their numerous employees.

We are in favor of the foreclosure, as soon as due, of the liens of the Government against the Union Pacific and other Pacific railroads.

Believing that the duty of the representative is to represent the will and interests of his constituents, we condemn as undemocratic any attempt by caucus dictation to prevent the representative from voicing the sentiments of his people on public questions.

We believe in the right of every individual to worship God according to the dictates of his own conscience, and we condemn as un-American and contrary to the spirit of our institutions any attempt to apply a religious test to the citizen or to the official. We appeal to all Democrats who have been led

into political hostility to the members of any church to remember the principles of religious liberty promulgated by Thomas Jefferson and defended by the party which he organized.

We approve of the maximum-rate bill passed by the last legislature and favor its reenactment if it is declared void by the court on account of irregularities which can be remedied.

The coinage plank announces the position which we must take if we expect to restore silver. We do not ask for the inauguration of any new system, but we ask for the restoration of a coinage system which existed from the beginning of the Government until 1873. We ask that the restoration shall be immediate, because we can not afford to delay for a single day the amelioration of present conditions. We ask that the coinage shall be free and unlimited, because the coinage of gold is free and unlimited and because the bimetallic principle can not be reestablished in any other way. We ask for coinage at the present ratio, because we believe that friendly legislation will restore silver to its former place without changing the ratio and because a change in the ratio, made by increasing the size of the silver dollar, would lessen the number of dollars, appreciate the value of each dollar, add to the burden of all debt, and further depress prices. We ask for independent action by this country, because we can not submit the rights of our people to the action of other nations and because we have vainly waited for twenty years for other nations to help us to help ourselves.

The currency plank presents an idea directly opposed to the idea embodied in the pending measure. This bill looks to the permanent retirement of all Government paper which is payable in coin and the substitution thereof of bank issues. This is the challenge which the President throws down. We meet his demand with a counter demand that all bank notes shall be retired and that all paper money shall be supplied by the Government. I indorse the position taken in the platform of our State convention, and believe it more in harmony with Democratic principles and with the teachings of Jefferson and Jackson than is the new-fangled doctrine which has been borrowed from the Republican party and incorporated in the bill now before us.

The amendment which will be proposed by the gentleman from Missouri [Mr. BLAND] embodies our plan in substance, and I shall gladly support it. It provides for the immediate restoration of the free and unlimited coinage of gold and silver at the ratio of 16 to 1. It provides that the paper money to be issued shall be redeemable in coin and that the Government, not the note holder, shall have the option as to the kind of coin and may pay in whichever is most convenient. The amendment also provides that the money issued shall be a full legal tender. The Supreme Court of the United States has decided that the Government's notes may be made a legal tender, and I believe that legal-tender money is better than any other kind of money. Not only am I in favor of the Government supplying all the paper money needed, but I believe that it can and ought to prevent any private citizen or corporation from setting aside the legal-tender laws by private contract. Why should a citizen be allowed to suspend the operation of a legal-tender law any more than he should a criminal statute or other legislative enactment?

We are sometimes asked why we are not willing to compromise. Our answer is that principles can not be compromised. No compromise has been offered which does not require the abandonment of a principle. Gentlemen plead for harmony, but there can be no harmony between those who adhere to the financial views of Mr. Cleveland and those who adhere to the financial views of Thomas Jefferson. Shall we go with our opponents farther away from bimetallicism because they will not join us in going toward it? Shall we join our opponents in destroying what Government paper we have because they will not join us in securing more Government paper? Shall we join our opponents in establishing new banks of issue because they will not join us in abolishing the ones we now have? Gentlemen say that something must be done. Is it better to do the wrong thing than to do nothing?

If the President is determined to make our financial bondage still more oppressive than it now is, let him carry out his purpose with the aid of a Republican Congress. If we can not relieve the people, we can at least refuse to be responsible for further wrong doing.

We are told that the President will not approve any bill which carries out the pledge of the last national platform in favor of the coinage of gold and silver without discrimination against either metal or charge for mintage, but is that any reason why we should join him in making the restoration of silver more difficult for the Administration which shall succeed him? It is useless to shut our eyes to the division in the Democratic party. We who favor the restoration of silver deplore the division as much as our opponents; but who is to blame? Did not the President ignore the silver Democrats in making up his Cabinet? Has he not ignored them in the distribution of patronage? Has he not refused to counsel with or consider those Democrats who stand by the traditions of the party? Did he not press through Congress with all the power at his command the unconditional repeal of the Sher-

man law, in spite of the earnest protest of nearly half the Democratic members of the two Houses? And did he not join with the Republicans to defeat the seigniorage bill, which was supported by more than two-thirds of the Democratic party?

Did he not oppose the income tax, which a large majority of the Democratic party favored? Has he not in fact joined with the Democrats of the Northeast time and again to defeat the wishes of the Democrats of the South and West? We desire harmony, but we can not purchase it at a sacrifice of principle. We desire to live on friendly terms with Mr. Cleveland and our Eastern brethren, but we can not betray our people or trample upon their welfare in order to do so. If the party is rent in twain let the responsibility rest upon the President and his followers, for no other Democratic President ever tried to fasten a gold standard upon the country or to surrender to the banks the control of our paper currency. Let the fight go on. If this bill is defeated the people will profit by the discussion it has aroused. I have confidence in the honesty, intelligence, and patriotism of the American people, and I have no doubt that their ultimate decision will be right. [Loud applause.]

The Currency.

SPEECH

OF

HON. NICHOLAS NICHOLS COX,
OF TENNESSEE.

Friday, January 8, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8518) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1896, and for other purposes—

Mr. COX said:

Mr. CHAIRMAN: In a discussion of so important a matter I do not think that any character of remarks at all personal or partisan should be indulged in. I do not think that any light will be thrown on the pending bill by charges and countercharges as to the causes of our troubles made by either of the great political parties. We are not now called upon to discuss our errors, only so far as they may disclose a way for substantial and speedy relief. What good can be accomplished by abuse and unfriendly criticisms I am unable to see.

If the honorable gentleman from Pennsylvania [Mr. SIBLEY], who has just spoken, has information, as he says he has, by the confessions of a member of this body that he sold his vote to secure an appointment from the President, and the President bestowed an appointment for a vote, then that member should be exposed and the gentleman have him expelled. I have too much confidence in every member of this body to entertain for a moment such a thought, and too much esteem for any President, without regard to party, to believe that that high officer would be so influenced.

When the gentleman further says that members have had golden locks put on their mouths, ought he not to name them? Is such an insinuation or charge just or proper, when he can name no one, nor prove the guilt of a single man? I speak for myself, that since I have been a member of this House I have never seen or heard anything that cast a suspicion on a single man in this body. Gold will lock the gentleman's mouth, I have no doubt, as soon as it will his equals here and everywhere.

I have my convictions as to the causes of our troubles. They have been stated on this floor in my feeble way. But shall we, as representatives of our people, engage in disputes with each other and refuse to attempt to relieve our constituents. I leave all this behind, and will labor all I can to restore to our country that prosperity it ought to enjoy. I quarrel with no one, and will abuse none.

Our financial officer stands as high in statesmanship as any man. His high reputation will not suffer from a few blasts of words, delivered in spite; and that he is laboring with fidelity to duty in this matter no one doubts, and he is worthy of the highest praise; that he is working for our people, believing his views will help them, no one that knows his efforts questions. He comes to us, he asks us to help him and hold up his hands with the great power confided to us, so that he may, if possible, relieve the people of their distress, and turn in again sunlight on them. Will we do it, or will we leave him unaided and alone?

I speak for myself, and every effort I can make, feeble as it will

be, shall be done to give relief to our business, independence to our Treasury, and prosperity to our people.

The proposed bill is not perfect, and I do not believe any great financial measure can at once be formed. It must be built up with experience and careful thought, and there can be no doubt that apparently just criticism can be made on any plan proposed; but is it not better to try and cure instead of sitting down complaining and doing nothing?

THIS BILL IN CONNECTION WITH THE TREASURY.

We all understand the sad condition our financial system is in as it affects the Government. Our receipts of money are below our expenses, and each day adds to our indebtedness. Now, we believe that this will not last long, but the great cause of this deficiency is not our taxing laws, but the prostration of business. If we can let loose business and permit our people to proceed unrestrained by vicious legislation, it will be but a short time until the receipts of the Government will pay its expenses and more than pay them, and again make the Government absolutely independent of all other financial powers. The banking features of this bill operate more directly on this part of the subject.

The Secretary of the Treasury in his report calls direct and emphatic attention to another great evil that is continually forcing his finance in a most unsatisfactory condition. About five hundred millions of the notes of the Government are out. They are promises to pay money. They are due and owing, and no one contests their validity. The people expect them to be paid whenever presented. They are, so to speak, checks on the Treasury of the United States, and the Secretary is charged by law with their payments. In order to be ready so to do he is charged by law to hold one hundred millions of gold as a pledged fund for the payment of these notes or checks. He is not only charged with the duty of paying them, but when he pays them he must again put out these promises and again pay them when presented; an endless claim and a process of obtaining money from the Treasury regardless of its condition and regardless of the condition of the people, who must in the end furnish the Treasurer with the money to keep up this process.

These notes are remarkable in another respect. They are promises to pay money and are themselves lawful money. Three hundred and forty-six millions of these notes are legal tenders and are as effectual in the discharge of obligations as gold; the remainder of the sum, in effect, occupies exactly the same position. You may in the contract stipulate against receiving them in payment, yet the holder can convert them into gold at his own option.

So you have a legal-tender, lawful money, a debt-paying money, continually draining another legal-tender, debt-paying money from the vaults of the Government at the will of the holder of these notes.

Mr. Chairman, let me call the attention of the House to another important fact connected with these notes. They are the most desirable money we have. They can pay a debt, and can at any time be converted into gold. As a matter of convenience they are more desirable to hold than gold. There is less risk in holding them than gold and they are the great power that at any moment can bring the Treasury to borrowing and begging to obtain gold. They are the great instrument through which speculators in gold, either foreign or home gold gamblers, can empty our vaults regardless of the welfare of every citizen of the United States. These notes were at one time great favorites with our people. But now they are gone from common circulation. You hardly ever see one. They are hoarded and held, always ready to obey the gold gambler and gold speculator.

Look what a ridiculous figure we displayed in borrowing gold. These notes were taken out of their hiding places, presented to the Treasury for gold, and then syndicates and speculators traded with the people as to how much they must have for their gold that had just been drawn from their Treasury. The terms being agreed on, again these notes assume the same functions they had before, and await another opportunity to make another raid.

This proposed legislation is to make these notes the basis of a banking system in place of United States bonds. Each bank operating under this bill is to deposit with the Treasurer 30 per cent of its circulation in these securities, and if necessary use the same for redemption of the notes of the bank if it becomes insolvent. If the plan of the Secretary succeeds it would in a few years dispose of so many of these notes that the remainder could not threaten the Treasury or stand as a menace to its successful operations. I know this is not an extinguishment of the paper, but holds it in check and converts it into a use bonds are now performing, these bonds in no way interrupting the business of the Treasury. Is this not wise in view of what we see every day? No man can manage successfully our financial system so long as five hundred millions of our obligations have a mortgage on every dollar of gold that reaches our vaults, and an interminable mortgage that is never satisfied.

We all recognize something must be done. This great country

can not and ought not to be disturbed in its financial operations by every order for gold that may be sent from other nations, and it is more humiliating that it should be disturbed by money traders and shylocks of our own country.

IS IT PRACTICABLE?

Mr. Chairman, we must not forget that we have to do one of two things. We must get these notes under our control, either by paying them at once, or place them where we can control them without prejudice or wrong to the holders until our condition is such that we can pay and discharge them and then destroy them. No one is so blind as not to recognize the disturbed conditions of our finance and our business. Our revenues will certainly increase if our business is made prosperous. So we are dealing with a state of facts that exist now. Our banking system must be changed in a few years, or abolished, and any delay is dangerous. Now, if we can make this a success, does not the highest sense of duty demand immediate action?

If we decide to raise money and pay the notes, and cancel them when paid, we must first get the money to do so; and this money must be gold, as the construction of law is now. We can get it but one way, and that is to borrow it at the lowest rate of interest possible. We issue our bonds, say, to run for twenty years at even 3 per cent. That increases our bonded indebtedness to the extent of the notes. Assume that they do not exceed four hundred and fifty millions and that the interest is paid quarterly, or even semiannually, you have paid at the end of the twenty years two hundred and seventy millions in interest; more than half the existing notes. You have at the same time reduced your volume of circulation four hundred and fifty millions.

Every year your money becomes less, your debt running, drawing interest on that which at present draws no interest, becoming larger. It does not seem to me you are strengthening your financial standing by going in debt. I am sure it has an opposite effect with an individual. You pay seven hundred and twenty millions for a debt of four hundred and fifty. You must under this plan provide a fund each year to be ready to pay the bonds, thus drawing from the money of the country each year that which the people so much need in their own business; and as you do this you increase the difficulties in obtaining the money to meet these obligations. To my mind there could be but one excuse for such a course as this, and that excuse only should be self-preservation. We are in no such trouble as that.

An objection has been urged that these notes would go to a premium, and could not be procured for banking purposes. While I do not have the least fear of such a result, yet a slight amendment in the bill authorizing the Secretary to accept other lawful money, at his discretion, to bank on, places this point beyond debate.

This system places back into circulation every dollar that is taken out. True, it is not exactly the same character of paper, but it is a paper dollar redeemable in lawful money at the option of the holder—not by the Government, but by the bank that gets the benefits of putting it in circulation. This in no way ever touches the Government so long as redemption by the bank is maintained. There are no bonds bearing interest issued; indeed, the obligations of the Government are lessened when compared with the present system of banking.

But it is argued that the plan is impracticable, for the reason that no one will bank under it. Of course if the scheme can not be put into operation we are where we commenced. It will be a dead statute and no relief obtained. This objection addresses itself to the citizens who wish to bank, and the first question will be as to the profits of the business. If the proposed legislation offers equal opportunities for profits as compared with the present system, and imposes no more obligations or labor, then there will hardly be any objections to entering on the new plan. So far as that branch of the business which relates to depositors, evidently the advantage, if any, is with the new system. I believe however, this will in practice amount substantially to the same, but we can make that safe by amendment.

Now, so far as obtaining and issuing notes as a means of making profits, I think I can clearly show the proposed system is superior, and superior not only to the bank but to the patrons of the bank. If the notes of the bank are regarded as useful in making profits, then the more the bank can get (always assuming they are good) on the amount of money invested, certainly the facilities for profits are greater. The plain reason why banks now do not want to issue their notes is from the fact that it costs the bank too much to get them. Now, this proposed system affords the opportunity to take out circulation that can be used with profit.

This is a mere matter of calculation, and it places in the hands of the bank a fund which can be issued or not as the bank may decide, and relieves it to a great extent from the uncertainties which attach to deposits. The bank is in a certain sense its own depositor. Having this increase of circulation, it can lower its rate of interest. Upon this point I have no fears as to the course of

banks that need more circulation. Just in this connection let me say that this opportunity to banks to obtain circulation, in my judgment, gives birth to a large amount of opposition from the great money centers that have an overabundance of money, as it creates an opposition to them and destroys greatly their monopoly in the use of the circulating medium.

Just here, Mr. Chairman, may I not connect another idea that has been advanced to show how contradictory are the positions of our opponents. This idea is that such an opportunity is given the banks to take out circulation that a ruinous inflation will occur, while the others contend that none will be taken out, as the banks will not accept what is offered. Now, below these conflicting theories lies the truth. No bank that is bound by personal oaths, and with its entire assets and personal liability pledged and bound to redeem its notes at its own counter, will put them in circulation for mere experiment. It will be the demand of its customers that controls this, and when the demand is such that a fair compensation can be realized by the bank in issuing its notes they will go, and when they cease to be remunerative the whole interest of the bank is centered in having them in its vaults.

In this line lies the whole idea of elasticity. The expansion is created by the demands of business, the contraction is from the same identical cause. No combination to make currency scarce or plentiful will ever be made between the banks unless banks are so foolish as to surrender the rights they have to make reasonable profits. That is not likely to occur. Banks are not so sentimental. Each bank looks to its own interest and uses its own opportunities, not for oppression of its customers but for reasonable profits.

As to the expenses in the way of taxation under the proposed system, including the amount to be paid for the safety fund, they are reduced exactly one-half. So again the practicability is demonstrated and currency provided for the great business of a great country.

Mr. Chairman, if I have been able to demonstrate the great advantages and good that will result to the Government, then that good is for the whole people and all alike receive the benefits. If I have been able to show that a legitimate banking business can and will be conducted under the proposed legislation, not only conferring great benefits to all the people, but benefits in localities where most needed, then my support of the measure is free and cordial.

There remains, however, another recommendation that is to me of great value, not only as it affects the Government in its finance, but as it affects the people in their business—that every bank shall redeem its own notes in lawful money, without the intervention of the Government. The notes of a corporation should not be more sacred than those of an individual. This certainly is true when the corporation has the valuable franchise of using its notes as money. It thus far alienates the Government from banking, and draws it that much nearer to its proper functions. It forces each bank to preserve its own financial character, and at the same time gives to it the power to enlarge its issue as needed, or contract when not needed, being responsible directly and immediately to its own customers in its own locality. The Secretary with great force emphasized this very important departure from the present system.

SOME OBJECTIONS ANSWERED.

I am met by the proposition that this proposed measure is not democratic and is a perpetuation of the national-bank system. I do not hesitate to say that if this was a system being proposed for the first time I should not support it. But that is not the question before us. We have a system that in vital points has proved defective. Banking has become so interwoven in our business that you can as easily dispense with railroads as banks, and certainly it is more important to cure defects within our reach than to complain about matters we can not remedy.

What are you going to do? You can not destroy the system. You can not satisfy our people by sitting quietly down and doing nothing. Our promises are made, our duty is plain, and I appeal to my party friends to redeem their promises, exert their talents, and be a living, moving power, capable to legislate and brave enough to execute. [Applause.]

And another objection is that the depositor is deprived of certain securities which he now has under existing law. I admit there is force on this point; but that can easily be remedied by an amendment that does not in the least destroy the symmetry of the bill, and I see no reason why we should not go forward and perfect the bill, instead of trying to destroy it, and in our vote say we will not even consider this most important and vital subject. If we shall decide that we will have nothing to do with it, may not our constituents very well decide that they will have nothing to do with us? Is nonaction to be our course, and allow the opportunity presented to us to pass? Is our party so utterly unconscious of our obligations as to become dead to the demands of our constituents? I hope not.

This brings me to the other subject embraced in this bill, and to my mind one of the most important features connected with it.

STATE BANKS.

At the last session of Congress this subject went under thorough discussion, and the House indulged me then in a discussion of the proposition to such an extent that I do not now wish to take but a short time in reference to this matter. The proposition now by this bill is materially changed from what it was. This bill recognizes the authority of the Government to exercise its taxing power on State-bank circulation, and limits such taxing power to the exercise of the same on certain conditions. It will be conceded readily that if the power exists, then the same may be exercised or not upon the compliance or noncompliance with certain limitations and restrictions named in the law. These limitations can certainly be prescribed, if it is conceded the general power exists. The greater includes the smaller. These limitations have but one object in view and that is to make certain the redemption of the notes issued by State organizations. Their solvency is assured by the restrictions interposed and their final redemption in lawful money rendered certain.

Thirty per cent of their circulation must be deposited in legal-tender notes, just as is provided for national banks. A first lien is also given on the assets of the bank, to make sure their notes, and then the liability of stockholders equivalent to their stock is also secured. These conditions precede the issuance of any notes, and must affirmatively appear before the tax can be released.

Not a single gentleman who was examined before the committee but admitted that no danger could arise as to the ultimate or speedy redemption of such notes, some of these gentlemen stating that more security for the redemption of the notes was required than necessary.

It will be seen that these limitations and restrictions are prescribed before the bank can issue a note. And the Secretary of the Treasury and Comptroller of the Currency ascertain and officially announce that the bank has placed itself in a position to be excused and liberated from the tax on its circulating notes.

After the bank has issued its notes the restrictions of the Government are not removed, but are held to force the bank to keep good its notes. If it should fraudulently attempt to put in circulation more notes than it had authority to issue, the tax attaches to the whole, and would in its enforcement close the bank. If it should permit its capital stock to become impaired it must make it good in thirty days or its doors are closed by collecting the tax. While there is no examiner of these banks appointed by the Government to inspect them, yet there is an inspection, and a most effective one, in the United States officer engaged in collecting the taxes. The same power is at work that seizes the unlawful distillery, that watches and collects the income tax and the various taxes due to the Government. No man or set of men with any business sense would ever undertake to violate the law and their oaths, with a certainty of detection, for an experiment that could not possibly be of any benefit to them.

But anyone who speaks against these banks brings up the state of things that existed before the war, and it seems to frighten men, and they charge we are trying to rush in on a currency system that would be utterly unreliable. They seem to think that whatever progress we have made in other matters, we have been at a standstill in regard to finance and banking. They couple this with the statement that forty-four States could have a circulation based on different securities and the holder of the notes subject to all kinds of troubles and loss in regard to the same.

There is no such scheme proposed. All these banks are under the same restrictions. All must provide the same securities for its notes. All are subject to same inspection and are at all times under the eye of taxing power of the Government. But outside of these safety guards there are others more effectual and can not be evaded. Last May I had the honor to address the House directly on this question, and I here repeat what I said then on this point:

"There has never existed in the United States a state of facts and circumstances like the present when State-bank paper was in circulation. It is well remembered that before the war there was no paper circulation but State bank paper, and its redemption was based on gold and silver. At present if loose legislation or bad management in the bank was undertaken—and it may be—the notes of such institutions would never pass over its own counters. They must be regarded as good and stable as national-bank notes or Treasury notes. They will have to circulate side by side with them, and the moment they are treated as of less value they can never leave the vaults of the bank, or if by chance they have left the home bank and gone into circulation, and they go below the national currency, immediately they will be returned for redemption.

"This plain truth will be known to every business man that attempts to put into circulation State-bank notes. Here recognizes at the very outset that these notes are worthless to the bank unless good and solvent and as good as the notes they have to come into

competition with. He further knows that unless their character is fully maintained equivalent to the national currency his bank will have to redeem them in money which is as good. No legislative restrictions could possibly be so effective, and the bank issuing notes must occupy the position of utter indifference as to the use of the State circulation or national circulation, and accept one as readily as the other. So whatever may be the legislation of the States, here is found a law absolutely certain in its results and restraints.

"But let me extend this idea further, and we can see at once the effective and certain check on the circulation of bad paper.

"There are in the United States 3,781 national banks, including all the State banking institutions of different characters, of which there are 5,685, a total of 9,466 banks, one bank to every 7,000 inhabitants. I do not suppose there is one of these banks, at least very few, that is not on some line of transportation, either rail or water. I do not suppose that there is a single one that does not have telegraph communications. Compare this for a moment with the conditions that existed in 1840 to 1856, when unsound and worthless banks existed. It was in this period the greatest disaster resulted from bad bank circulation. If any State institution was to become a bank of issue, each one would at this time operate as a check on the other; if ever the circulation of a bank was refused at one of these institutions it would drive that circulation home for redemption.

"Nearly 4,000 national banks doing business with these institutions, with a circulation beyond dispute, would never permit unsafe currency to float for a day. It is well understood the immensity of business done by checks and drafts. Would any bank, State or national, ever receive a dollar of doubtful currency and give to the owner a credit upon which he could demand legal-tender money?

"Would any solvent bank to-day become a debtor by accepting a check of another unless the bank knew the check to be absolutely good? Certainly not. Now, these notes issued are but the checks of the banks on themselves, and we all remember what great relief was obtained in our financial troubles by the use of certified checks issued by banks, drawn on their own institutions.

"But I have no reason to assume that any State legislature will license institutions to cheat and steal. It would be just as reasonable to presume Congress would do such a thing. The welfare of every State is substantially in the hands of its legislature, and if one legislature should by careless laws permit bad banking, if such could be done, in issuing bad paper, then that State would be the sufferer, and certainly Congress is not the guardian of State legislatures. But, Mr. Chairman, this idea of States permitting the issuing of bad currency is based on the idea of ignorance in the legislators and the people. It assumes that experience in finance, experience in banking, the facilities of communications, and all these combined have taught us nothing."

In the financial troubles we are in, and have been for some time, the per cent of failures between the two systems shows the State banks in advance in solvency.

Mr. Chairman, there is in the opposition to this system, when carefully scrutinized, somewhat of a selfish motive. No State can force its notes on anyone. No one need take them that does not want them, and everybody can thoroughly protect himself. Then where is the legal authority or the justice that confers on representatives of one State the power to manage the local concerns of another State? If Texas is willing to permit her people in an organization created by her law to use their credit with the other citizen, then why should Maine say no, although it may not even affect a single citizen of Maine? Surely it can not unless such a citizen permits it at his own choice.

That the national system has not been adequate and sufficient is demonstrated by the large number of these State institutions. And they have in a great degree located themselves in the rural districts and smaller towns, rendering excellent service. If they have been of universal benefit, how much more would their usefulness be increased if their opportunities were enlarged?

The great cities and great manufacturing centers need large banks and large capital. The necessity does not arise for such large institutions in the agricultural districts or smaller towns, but their needs, so far as they extend, are to them as imperative as the greater industries. It is the car load of wheat, hogs, corn, etc., that make up the great distributing centers. Will you permit them to utilize what they have in legitimate and honorable business, or circumscribe their advantages, and year after year drive them to the great money centers to obtain money at fearful and ruinous rates of interest?

Your system has them by the throat, and you refuse to release them or permit them to escape from a system that is a disgrace to justice.

Turn our intelligence loose, unfetter it, and let our energy, perseverance, and sound judgment be our guides and the days of idleness will soon disappear. [Applause.]

Pacific Railroads.

SPEECH
OF

HON. HORACE L. MOORE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 31, 1895.

On the bill (H. R. 7798) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862; also to amend an act approved July 2, 1864, and also an act approved May 7, 1878, both in amendment of said first-mentioned act; and to provide for the settlement of claims growing out of the issue of bonds to aid in the construction of certain railroads, and to secure to the United States payment of all indebtedness of certain companies therein mentioned.

Mr. MOORE said:

Mr. SPEAKER: We all know by heart the story of the building of the Pacific railroads. The extravagant bounty of the Government in bonds and land and the enormous greed of the railroad companies are as familiar as a twice-told tale. The aid rendered these roads amounts to almost half a billion of dollars. The exact amount is \$447,729,470.54. This includes the bonds, land grants, and 6 per cent interest on the interest that has been paid on the subsidy bonds by the Government. In the act of July 1, 1862, Congress expressed a purpose "to promote the public interest" by opening the Treasury and granting the public domain to secure the building of a transcontinental railroad, and the companies were trustees created for the purpose of executing this trust. The public interest has been sacrificed at every step, whether we consider the interest of the Government whose bounty built the roads or the public whose patronage has enriched the stockholders.

Thirty years after the inception of this purpose on the part of Congress "to promote the public interest," and after the public had paid the roads \$611,479,448 gross earnings in twenty-three years, we find the immense sums advanced by the Government have all been lost or stolen, the roads bankrupt, and in the hands of receivers. I submit that these trustees have not commended themselves to our favorable consideration.

They had received, up to 1887, from the Government and the patrons of the road, over a billion dollars, and practically all of this has been dissipated with the exception of three hundred and thirty-three and one-half millions paid out for operating the road, as the incumbrances on the roads, exclusive of the lien held by the Government, amount to more than the original cost of the property. Such an administration of a trust has no parallel in the history of the country.

From the very beginning it has been apparent that the enterprise was being conducted solely with a view to defraud the Government and rob the patrons of the road. It should be borne in mind that the patrons of this road were not old and established communities with their streams bridged and roads opened, with their school and court houses built; but they were struggling pioneers, following up the Kansas River and the Platte, driving back the savage, breaking the prairie, and building sod houses as they went, and further on they cleared out the valleys and opened the mines of the mountains. These are the men and women who have been subjected to the merciless pillage of these trustees who have built and operated the Pacific railroads.

The original cost of the roads was \$95,555,347, and the capitalization amounts to \$268,302,462. The stock was watered to the extent of \$172,347,115, and on this the people of Kansas and Nebraska, Colorado, and the other States on the line of the roads to the Pacific Coast have been paying dividends. The shippers along the line of this road have been taxed more than two hundred and forty-eight millions over and above what was required to operate the roads and pay a dividend of 6 per cent per annum on the actual cost of the roads in excess of the amount advanced by the Government.

The method pursued by the trustees of this trust fund is expressed in the following language by Governor Pattison in the minority report of the Pacific Railway Commission, page 19:

Mr. Huntington testified before the Commission that "competition is killing," and that there ought to be only one railroad for the whole country. The aided companies combined with others to tax the communities which they served, and they forced the consuming classes in all sections of the country to contribute to the payment of interest and dividend upon the fictitious capital which they had created. They increased the cost of living. They laid proprietary claim to the traffic of large sections of the country. They squandered millions of their money to "protect" their territorial claims, while expending other millions in encroachments upon the territory claimed by other companies.

They constituted themselves the arbiters of trade. They attempted to dictate the channels that trade should follow and fixed rates of transportation that were extortionate. They charged all that the traffic would bear, and ap-

propriated a share of the profits of every industry by charging the greater part of the difference between the actual cost of production and the price of the article in the market. They discriminated between individuals, between localities, and between articles. They favored particular individuals and companies. They destroyed possible competitors, and they built up particular localities to the injury of other localities, until matters had reached such a pass that no man dared engage in any business in which transportation largely entered without first soliciting and obtaining the permission of a railroad manager. They departed from their legitimate sphere as common carriers and engaged in mining articles for transportation over their own lines. They exerted a terrorism over merchants and over communities, thus interfering with the lawful pursuits of the people. They participated in election contests. By secret cuts and violent and rapid fluctuations in rates they menaced business, paralyzed capital, and retarded investment and development.

It is said that the "unspeakable Turk" has no organized government, but that he has an organized system of brigandage. What but a system of organized brigandage has been the rule of the Pacific Railroad corporations?

The problem asking for solution is this: The advances made by the Government to aid in building the Pacific roads are lost, irretrievably so, and no power on earth can recover any part of that money unless the thieves can be pursued and the property recovered, as it is proposed to do in California. I certainly hope this plan is practicable, and that it will be prosecuted even though the Stanford University is left without one stone upon another.

June 8 Senator HOAR introduced the following resolution:

Resolved, That the Committee on the Judiciary be directed to inquire into the justice and equity of the claim of the United States against the estate of the late Leland Stanford and to report, as soon as may be, whether it be expedient that such claim should be forthwith relinquished and put at rest.

He said:

I maintain that the Government of the United States ought as soon as the proper legislation can be devised and enacted (and I believe in that I shall have the sympathy of both sides of this Chamber), to put this question at rest and to say that, without affecting in the least our claim against others, the devotion of this great sum to the education of the poor of the Pacific Coast, and through that largely of the whole country, shall take immediate effect.

I am reminded that—

"In the corrupted currents of this world,
Offense's gilded hand may shove by justice;
And oft 'tis seen, the wicked prize itself
Buys out the law."

The indications are that it will be so in this case. What an object lesson the Stanford University would be to the enterprising youth of California, what an inspiring theme for the valedictorian. He would give the history of the Central and Western Pacific, the watered stock, the extortionate rates, the pools and deals with the Pacific Mail, and close with an account of the Southern Pacific. And as he swept the massive pile of buildings with an inspiring gesture, he certainly would have an opportunity to use the name of Leland Stanford "to point a moral or to adorn a tale."

I do not believe the people of the great State of California are anxious to have their children educated in a university endowed with a clouded bequest, notwithstanding the solicitude of gentlemen at the other end of the Capitol. As I said, the money is gone, and if it is recovered it must be through the courts and from the guilty parties.

Now, what does this bill propose? Simply this, it proposes to give a new lease of life to these Pacific railway companies. They are to be sent out with a license to plunder the people of the West for fifty years longer, to see if it is possible for them to wring from the sweat and toil of these pioneers a sufficient sum to pay the one hundred millions of prior liens on the roads, and to reimburse the Government for its losses through the peculation of the trustees. In other words, the Government proposes to issue letters of marque and reprisal authorizing this band of brigands to prey upon the commerce of the West for fifty years longer as they have been doing for the thirty years last past. And why? To reimburse the Government for a sum of money of which it has been defrauded by a few men who are known and can be named; who can be sued or arrested any day that the Government sees fit to move in the matter.

In a letter addressed to Mr. REILLY, chairman of the Committee on Pacific Railroads, dated January 28, 1895, Mr. C. P. Huntington says:

Then, again, the money has to come mostly from the people who live along the line—that is, from the local business—as the interstate-commerce law has enabled the Canadian Pacific Railway Company to take most of the through or overland business.

Is this fair? Is it justice? Is it common honesty? This is a vicarious atonement that the West is opposed to. I quote from Governor Pattison, page 17:

The present capitalization and indebtedness of the Union Pacific Railway represents triple the cost of its reproduction. To extend the debt is to place a mortgage upon the earnings and upon the products of the people of Kansas, Nebraska, and Colorado, not only of this but of succeeding generations. Why should the iniquitous results of the Credit Mobilier be made a burdensome exaction upon the generations that come after it? To extend the debt is to perpetuate the extortionate rates of transportation which are now charged by the Union Pacific for the maintenance of its present inflated capitalization. Why should the communities of the great West be forced to pay rates that will perpetuate this enormous burden of fictitious and fraudulent indebtedness?

To continue the Union Pacific in its present condition is to force the territory which is tributary to that line to pay fixed charges of \$5,000,000 per annum exclusive of dividends to stockholders. If that line were capitalized on

a proper basis, the sum of \$4,000,000 would pay interest. To extend the debt, therefore, is to tax the Western people, through high rates, not only to pay interest for fifty years on the Government debt at the rate of at least \$2,000,000 a year, but to pay interest also on the other fictitious capital that is represented in the stocks and bonds of the Union Pacific, at the rate of \$2,000,000 a year additional, or a total of \$4,000,000 a year for fifty years.

Would it not be an abuse of its power for Congress to give more consideration to stockholders who are legatees of a gigantic fraud rather than to the people who are forced to ship over the road, and who have been taxed for eighteen years to sustain that corporation? The whole question resolves itself into a choice of protecting the so-called innocent stockholders, as against the consumers who pay \$20,000,000 a year to the Union Pacific for transportation service.

The people of the West should be freed from the incubus of this enormous load. Eventually the consuming classes and not the stockholders must pay this bill if extension of time be granted, and it will be ruinous to the communities which are dependent on the Union Pacific if they are forced to bear their share of this great burden, while communities on other roads bear only the burdens of moderate capitalization. So long as the Union Pacific Railway Company is forced to carry this debt, enterprise and development along its line will be measurably repressed.

I shall welcome the opportunity to support any legislation looking to the recovery of this money from the guilty, but I protest against a scheme devised to punish the innocent and let the guilty go free. The bill under consideration condones every offense, compounds every felony, and does for all the conspirators what the Senate resolution is intended to accomplish for but one.

What should the Government do? In my opinion, it should foreclose the mortgages and take possession of those roads. I concur in the opinion of Mr. HARRIS, that the Government should take the road, but whether the Government operates it or sells it or leases it, in no case should these companies be given another lease of life to operate the roads capitalized at three times what it would cost to reproduce them. The bill under consideration concludes nothing, it only puts off the day of settlement, and is in my opinion the worst possible course that can be pursued.

The Hawaii Islands.

SPEECH

OF

HON. RICHARD F. PETTIGREW,

OF SOUTH DAKOTA,

IN THE SENATE OF THE UNITED STATES,

Monday, July 2, 1894.

The Senate having under consideration the bill (H. R. 4984) to reduce taxation, to provide revenue for the Government, and for other purposes—

Mr. PETTIGREW said:

Mr. PRESIDENT: I shall detain the Senate but a very few minutes.

It seems to me absurd for the Senator from California and the other advocates of the annexation of the Hawaiian Islands to assert upon this floor that the prevailing opinion concerning the character of the people who inhabit those islands is founded on ignorance. The allegation of a lack of information is generally made by impudence in its effort "to make the worse appear the better reason." Probably the Americans and other white people who have emigrated to the islands are very good people; they are certainly smart and shifty, aggressive, bright, and prosperous. They went there to convert the savages to Christianity.

The first of them was the distinguished Captain Cook. Cook seems to have belonged to the church militant. He had quarreled with everybody in England whom he had anything to do with and went to sea because he could not live any longer on land. He cruised around a good deal, converting people more or less to his way of thinking, and when he struck the Sandwich Islands immediately put in operation his reformatory methods. One of his yawls drifted away from the ship in the night and one of the barbarians picked it up. Captain Cook immediately concluded that the island was inhabited only by thieves, and in order to cure that propensity he immediately stole the king, thus establishing a distinguished precedent for the method adopted by our late minister resident, John L. Stevens. Cook led a body of marines ashore, seized the person of His Majesty, dragged him to the wharf, and there, just before the great revolution was effected, was himself killed by a mob of these inconsiderate savages who preferred their own form of government.

This effort to establish Cook's variety of a republic took place during the American Revolution, and since that unfortunate attempt the work has been steadily going on. A good many other Captain Cooks have landed there, sometimes in the guise of speculators, sometimes under the cloak of missionaries. They have carried thither not only theories of the universe which were novel to the islanders, but cannon, powder, rum, tobacco, opium, and a

series of complicated and odious diseases of which they had never dreamed. The net result of this determined effort of the white man to reform and improve the condition of the natives is that the population has been reduced about three-quarters.

Mr. Charles Nordhoff, who wrote up the Sandwich Islands with a very friendly pen for the New York Herald, says:

In 1832 the islands had a population of 130,315 souls; in 1836 there were but 108,579; in 1840, only 84,165, of whom 1,942 were foreigners; in 1850, 69,800, of whom 3,216 were foreigners; and in 1860, 62,950, of whom 4,194 were foreigners. The native population has decreased over 60 per cent in forty years.

Since 1860 they have still further diminished, and the present population is 90,000, of whom 40,500 are natives and 49,500 are foreigners. It will be noticed that the natives have decreased as the foreigners have increased. The representatives of Christian nations who entered the Sandwich Islands with Captain Cook and his followers have taught some of the natives to read, write, and cipher, and to wear a good deal of unnecessary clothing, which has diminished their power of resistance to disease by relaxing their systems, and have introduced there special and insidious diseases, corrupting the blood and transmitting corruption to the progeny. The touch of the white man since Cook has had the same blighting effect in Honolulu that the touch of the white man since Pizarro has had in Peru.

And now it is seriously proposed to annex this impoverished, degraded people—for they are as impoverished as they are degraded. The missionaries have not only looked out for their morals, but for their property. They long ago succeeded in gaining title to nearly all the land, and now they have captured the Government and set up a Government of their own which has no resemblance whatever to what we call a republic. Under Queen Liliuokalani they had a Limited Monarchy; under Dole they have a Limited Republic—limited to about four men. A republic is adapted only to a people who live between the latitudes of 30° and 55°, where competition is sharp; where work is indispensable to life; where the incessant struggle for existence goes on; where the necessity of defending the home fireside from the depredations of winter makes existence difficult. The Hawaiian Islands lie outside of that shining belt of the earth where the constant fight with nature brings out all that is masterful in man, and where, therefore, he finds himself capable of self-government.

All that a man in the Hawaiian Islands is obliged to do to gain a living is to plant a banana tree and steal a fish line. A republic implies intelligence, education, mutual forbearance, tireless energy, enterprise, tremendous industry, the flowering of the domestic virtues. We must not forget that. A monarchy is the best possible form of government for a people who are not fit for anything better. The natives of the Hawaiian Islands to-day dress in calico nightgowns, and, as when Captain Cook's shadow first cursed that summer land, they sleep in grass huts and lazily live on fish and poi.

In the Hawaiian Islands are found the most contradictory conditions. In a small belt along the coast and in the few low-lying valleys the conditions of life are easy, for the heated air makes clothing unnecessary, and the fertile soil enables all tropical fruits and vegetables to grow almost without the planting; but in all the rest of the islands exists the temperature of our Northern winter. Having an area about as large as Massachusetts, and a population about a quarter as large as that of the city of Washington, these islands are mostly composed of volcanic scoria, about as unadapted to vegetation as so much cast iron. It is the crater of the vastest volcano in the world, desolated with ice and fire, generally either too hot or too cold for human endurance. Nothing which the face of the planet presents to man is more bleak, barren, inhospitable, menacing, and terrible than the tremendous area which constitutes the peak of this mountain of flame. So, while the maintenance of life in the valleys and along the hot coast seems easy, Hawaii presents no more temptation to the enterprising emigrant than Ecuador or the equatorial regions of South America, where the mango matures with ease and man with difficulty.

All who consent to work in the Hawaiian Archipelago are virtually slaves, for they work under the laws of contract labor and can not leave their employer until the contract has expired. The laborer of Honolulu gets 30 cents a day and boards himself out of it. Besides the 40,000 natives there are 50,000 more of the most undesirable people in the world and about the most discouraging material to make a republic of—Chinese, Japanese, Portuguese, Polynesians, and unclassified hordes from the great Micronesian Ocean to the west, unable to read or write, and with little regard either for their own liberty or the liberty of others.

The commissioner of the United States sent out to investigate the causes of the so-called revolution says:

The Portuguese who inhabit the islands amount to 8,602. They have been brought here from time to time from the Madeira and Cape Verde Islands by the Hawaiian Government as laborers on plantations, just as has been done in relation to Chinese, Japanese, Polynesians, etc. They are the most ignorant of all imported laborers, and reported to be very thievish. They are not pure Europeans, but a commingling of many races, especially the negro. They intermarry with the natives and belong to the laboring classes. Very

few of them can read and write. Their children are being taught in the public schools, as all races are. It is wrong to class them as Europeans.

The character of the people of these islands is and must be overwhelmingly Asiatic. Let it not be imagined that the Chinese, Japanese, and Portuguese disappear at the end of their contract term. From the report of the inspector in chief of Japanese immigrants on March 31, 1892, it appears that twenty "lots" of Japanese immigrants have been brought here by the Hawaiian Government, numbering 21,110. Of these 2,517 have returned to Japan; 8,562 having worked out their contract term, remain, and 9,636 are still working out their contract term. More than 75 per cent may be said to locate here permanently.

There are 13,067 Chinamen engaged in various occupations, to wit: 8,763 laborers, 1,479 farmers, 133 fishermen, 74 drivers and teamsters, 564 mechanics, 42 planters and ranchers, 776 merchants and traders, 164 clerks and salesmen, 12 professional men and teachers, and 1,056 in various other occupations.

The number of merchants and traders in the entire country is 1,238. Of this number 776 are Chinamen and 81 are Americans. The largest part of the retail trade seems to be conducted by Chinamen.

The Portuguese population in 1894 amounted to 9,377 and in 1890 to 8,602—a loss of 775. These have been leaving in considerable numbers for the past eighteen months, making their way generally to the United States. In 1890 the males were classified as to occupation thus: Laborers, 2,653; farmers, 136; fishermen, 3; mariners, 10; drivers and teamsters, 63; mechanics, 167; planters and ranchers, 17; merchants and traders, 56; clerks and salesmen, 13; professional men and teachers, 11; other occupations, 123; total, 3,396. On the cane plantations there are of male Portuguese, 277 under contract and 1,651 day laborers.

Of the population in 1892, 20,536 were laborers on sugar-cane plantations, 16,723 being Portuguese, Japanese, and Chinese. Of the whole number 10,991 are contract laborers. The remainder are designated as day laborers. The total number of laborers in the islands by the census of 1890 was 25,466.

In 1890 there were 23,863 male laborers. Of this number 18,728 were Chinese and Japanese. At this period there were 41,073 persons of all occupations. Of this number 24,432 were Chinese and Japanese.

Of the total number of persons in the various avocations of European and American origin, it appears that 1,106 were Americans, 819 British, 618 Germans, 45 French, and 300 Norwegians, making a total of 2,688 persons.

The natives furnished 8,871 persons and the half castes 884. The Hawaiians therefore may be said to have furnished 9,755.

There are 196 persons designated as planters and ranchers. Of this number 18 are Americans, 30 are British, and 6 are Germans. The remainder are principally Japanese, Portuguese, Chinese, and Hawaiians.

There are 5,181 persons designated as farmers. Of these, 3,392 are natives and half-castes and 1,500 are Chinese. These two furnish 4,770, leaving a residue of 402 taken from all other nationalities. Of these, 26 are Americans.

It will be interesting, if not pleasing, to examine the number of the various sexes by nationalities.

The grand total of the population is 89,900. The male population is 58,714; the females are 31,276.

The natives and half-castes furnish 21,449 males and 19,174 females.

The Chinese furnish 14,522 males and 779 females.

The Japanese furnish 10,079 males and 2,281 females.

The Portuguese furnish 4,770 males and 3,832 females.

The American males are 1,238, females 630.

The British males are 882, females 382.

The German males are 729, females 305.

This disparity of the sexes applies to all nationalities, save the native race. The most striking feature is that the Chinese men outnumber the women by more than 18 to 1.

The Japanese men outnumber their women by nearly 5 to 1. In all foreign nationalities the males largely exceed the females in numbers.

The natives and half-castes furnish nearly two-thirds of the women.

There is a very compact statement of the condition of affairs on these islands. It shows that the home, the heart of American institutions, is almost unknown to the people.

But let us see how our self-denying missionary brethren have fared, who have now captured the islands and set up what they call a republic. The commissioner says:

The minister of finance informs me that the taxes paid by Americans and Europeans amount to \$274,516.74; those by the natives, \$71,366.82; half-castes, \$20,868.08; Chinese, \$87,266.10; Japanese, \$67,366.07; other nationalities, \$729.82.

That is, the natives pay only about one-seventh of the taxes, indicating a very small ownership of property. The Commissioner adds:

He also informs me that the acreage on which taxes are paid by various nationalities is: Europeans and Americans, 1,052,492 acres; natives, 257,457 acres; half-castes, 531,545 acres; Chinese, 12,324 acres; Japanese, 200 acres; other nationalities, none.

The surveyor-general reports the crown lands for 1893 as containing 915,288 acres. Of these he reports 94,116 acres available for lease. Of this latter number only 47,000 acres are reported to be good, arable land. He likewise reports the Government land as containing 828,370 acres. He reports these, estimated in 1890, to be worth \$2,128,850. The annual income from them is \$67,636. Of this income \$19,500 is from wharfage and \$7,800 from rent of land with buildings thereon.

The cane and arable land is estimated at 35,150 acres.

It is important here to recall his statement made to the legislature in 1891 in the following language: "Most Government lands at the present time consist of mere remnants left here and there and of the worthless and unsalable portions remaining after the rest had been sold."

So the Europeans and Americans who went to that paradise of indolence for the purpose of converting its people to Christianity have secured a solid title to 1,052,000 acres, while the poor, miserable natives have the remnant, 257,000 acres. Let us hope that the dominant invaders have attended to the souls of the Kanakas, which was the main business of the crusade, for they have certainly paid strict attention to the incidental business by getting possession of three-quarters of the fertile land. And now that they have seized the Government, they ask that the people of the United States shall be taxed \$4,000,000 a year, and the money sent to them to support it—for that is exactly what this bill does.

For some years ago we made a treaty with the people of these islands by which we agreed to admit their products free of duty for an indefinite number of years, but the treaty could be annulled by us on giving one year's notice. My motion is to strike out the provision of this bill which continues this treaty indefinitely and insert a provision giving the one year's notice and annul this treaty. But Senators now say we are morally bound to continue forever to remit duties to the amount of four or five millions a year if we retain Pearl Harbor, although they say they did not so interpret the treaty when it was ratified; but that they understand Secretary Bayard said to the representative of that Government that he so understood the treaty.

Let us see what this treaty has cost us up to the present time.

a The collector of customs at San Francisco, under date of February 26, 1886, forwards the statement of his appraiser that the polariscopic test of the Hawaiian sugar brought into that port during the fiscal years 1884 and 1885 would average a little above 93°. The estimated duty remitted has therefore been, since 1885, computed, on sugar not above No. 13, at 1.12 cents per pound, which is the equivalent of the polariscopic test above indicated.

Statement showing the quantities and values of molasses and brown sugar imported from the Hawaiian Islands and entered for consumption in the United States; also the estimated amounts of duty remitted.

[Free of duty under reciprocity treaty, act of Congress approved August 15, 1876, which went into effect September 9, 1876.]

a The collector of customs at San Francisco, under date of February 26, 1886, forwards a statement of his appraiser that the polariscopic test of the Hawaiian sugar brought into that port during the fiscal years 1884 and 1885 would average a little above 93°. The estimated duty remitted has therefore since 1883 been computed on sugar not above No. 13, at 2.12 cents per pound, which is the equivalent of the polariscopic test above indicated.

b Duty remitted calculated only to April 1, 1891, when sugar imported from all countries was made free.

These tables shows that we have already remitted more than \$55,000,000 in duties to the Hawaiian people. And gentlemen exhibit their lacerated consciences when besought to do the straight, honest thing by our own people. When the American Government makes a solemn pledge to a farmer of Nebraska, and that farmer, relying upon the sacredness of that pledge, erects his factory upon the prairie, expecting to receive a bounty of 2 cents a pound for fifteen years, these same Senators vote to violate that contract, erase that pledge, without the least shock to their moral sense; but when a few brigands capture the crater of a volcano in the middle of the Pacific, with a worthless population clinging to its sides, and establish thereon a Government without form and void, representing only hypocrisy and rapacity, they stand up on this floor and appeal to "the conscience of the American people!"

Mr. President, I warn these gentlemen that by and by the conscience of the American people will respond. It is possible that some time or other even the sluggish worm of servility will turn. Hot suns foster rebellions even against legitimate governments, and it seems to me tolerably certain that the degraded and pusillanimous Kanaka will ultimately rise in revolution against the handful of insolent usurpers who now domineer over him. When that time comes he will either win for himself a bloody freedom or bind more closely upon his neck the yoke which the missionaries and speculators have combined to fashion, and if we were to annex the islands to the United States at the behest of these rapacious gentlemen who have established their transient tyranny we should inherit the bitterness and have to maintain our dominion by armed force.

Let us see what these people who have control of the archipelago and who have subverted its government think of the people they are undertaking to govern. I hold in my hand a copy of the constitution which these gentlemen got together and adopted. They call it a "Republic." Let us see what kind of a republic it is they have inaugurated. Senators, they have inaugurated the only kind of a republic that can live in such a climate. They have set up the only sort of republic that ever did live in equatorial regions—an aristocratic oligarchy of the most exclusive sort. They have shut out from voting, I think, every single native—in fact, everybody except the foreigners who have gone there and seized the land.

In the first place, Article 23 with regard to the President, says:— is hereby declared to be the President of the Republic of Hawaii, to hold office until and including the 31st day of December, A. D. 1900, and thereafter, until a successor shall have been duly elected and qualified.

I understand they have since filled the blank with the name of the present President, so as to be sure to consolidate their cause, so as to be sure, before they let go the reins of government, to place it beyond possibility that anybody opposed to them shall have property enough to be a voter. Now what do they provide? After 1900 how will they fill the office of President of this so-called Republic?

For the purposes of such election—

For the purpose of electing a President—the Senate and House of Representatives shall sit together.

Now comes the most remarkable and ingenious provision in any written constitution of a Republic under the sun:

The election shall be by ballot, and the person receiving a majority vote of all the elective members to which the Legislature is entitled, which majority

shall include a majority of all the senators, shall be President for the succeeding term; or for the unexpired portion of such term in case no person shall have been elected prior to the first day of such term.

Then the constitution provides that the House shall be composed of 15 members and the Senate of 15 members. Then it confers upon the lower House, to be elected by a sort of popular suffrage the right to sit with the Senate and elect a President. Then it provides, no matter how many votes a candidate may have in the House, that he must have, in order to be elected, a majority of the Senate! Whom were they trying to fool by inviting the House into such a conference? Let us look further. Each of the 15 Senators is required to have this qualification before he can become a member of the Senate. He must—

be the owner, in his own right, of property in the Republic of the value of not less than \$5,000 over and above all incumbrances; or have been in the receipt of a money income of not less than \$1,800 during the year immediately preceding the date of the election, for the proof of which he may be required to produce original accounts of the receipt of such income.

Under this provision no man can be a member of the senate unless he is the possessor of \$5,000 worth of unincumbered property. I understand that since this print was made they have reduced the amount of property he shall own to \$3,000. But I care not whether they have reduced it or not; they would not have done it had they not already filled the blank with the name of the present President and continued his power unquestioned till 1900. They trust to be able by that time to make it safe to let a man in who has \$3,000 worth of property. It is barely possible that one native may be eligible to the senate now, under the provision as they have since changed it. But what further? Who can vote for senators?

In order to be eligible to vote for senators, a person must possess all the qualifications and be subject to all the conditions required by this constitution of voters for representatives, and, in addition thereto, he shall own and be possessed in his own right of property in the Republic of the value of not less than \$3,000 over and above all incumbrances; or shall have actually received a money income of not less than \$900 during the year next preceding the last day of April next preceding the date of each registration; for the proof of which he may be required to produce original accounts of the receipt of such income.

Under such a provision 12,000,000 out of the 13,000,000 voters of this country would be disfranchised from voting for members of this body! Is any further comment necessary in regard to the character of the people of those islands or the character of these usurpers than the constitution? First, the Senate elects the President; second, the inhabitants are excluded from the right to vote for members of the Senate. What is more, the constitution provides for an advisory council—a legislative body outside of the Legislature. It provides that there shall be a council composed of fifteen members, five to be chosen by the Senate, five by the house, and five to be appointed by the President of this so-called Republic. This body composed, then, really at the will of the Senate and the President, has power when the Legislature is not in session to pass any kind of law they choose, to declare war, to appropriate money, and to do anything else that a legislative body can do. The laws thus made continue in force until the last day of the next session of the Legislature, unless repealed by the Legislature; and then, when the Legislature adjourns, this body again convenes and can reenact those laws. This is the Republic that these people flaunt in our face and those are the people whom Senators say are fit to be members of our Federal system!

The judges of the courts, both circuit and supreme, are appointed by the President. Was there ever a more complete oligarchy of

wealth in the world? Can you devise a more complete plutocracy? The \$4,200,000 that you remit in duties to those people is nearly equal to the value of our total exports to those islands. For the purpose of getting them to buy \$4,200,000 worth of goods from us we are going to send the money to them to do it, and then claim we are gainers by the transaction. What humbug and what nonsense!

But, Mr. President, I believe that under the provisions of this treaty, which we can abrogate by giving twelve months' notice, we are still the owners of Pearl Harbor. For my part, I should give back this piece of doubtful property to the Hawaiian people. I do not believe we want it. It seems to me it is an element of perpetual weakness, and I do not see how it can be otherwise regarded. It is 2,000 miles from our coast. It is in the very center of the Pacific Ocean. It does not intercept any line of commerce between the United States and any portion of the globe. For us it does not command a rod of land on earth. The straightest and shortest line from San Francisco to Japan and China runs 2,000 miles north of the Hawaiian Islands.

The shortest line from San Francisco to New Zealand runs 1,000 miles south of them, and even the shortest line to Australia runs 500 miles south. The ship that goes from San Francisco to Honolulu goes for the purpose of visiting that point, and not for the purpose of pausing incidentally on a voyage to any other portion of the planet. There is no coal on the Hawaiian Islands; so, in order to coal there, we first have to transport the fuel from our own shores. After getting it there, it is in one of the most out-of-the-way places on earth. It would be vastly more expedient and profitable to establish a coaling station on one of our own Aleutian Islands south of Bering Sea, for they are within 100 miles of the shortest lines that can be drawn on the surface of the sea between the United States and Hongkong. Not only would the western extremity of our own Republic be the best possible place to establish a coaling station, if we had to carry the coal from Portland and pile it up there, but coal has already been found upon those islands and it could be mined and kept ready very near where it is most needed.

I hold in my hand a map which shows the facts in this case. It is constructed on the lines of Mercator's projection, but the distances are shown as they actually exist upon the surface of the sphere. It shows that our Aleutian Islands are just half way on our road to Japan and China; that they are very near the shortest route that vessels can take, and that they would constitute the best possible stopping place for all commercial purposes whatever. The map further shows (and I shall print an outline of it with my speech in the RECORD) that the Hawaiian Islands are entirely aside and out of the way of the path of our vessels bound for any other land. Not only are the Aleutian Islands nearer to the United States than the Hawaiian Islands are, but they are seven or eight hundred miles nearer to Japan and China. Indeed, if we were to transport our coal to the farthest westward of our Aleutian peninsula we should be within 500 miles of the coast of Asia and 1,500 miles nearer to Yokohama than Honolulu is.

Our steam vessels of every sort now crossing the Pacific do not go to Honolulu, for if they did they would go hundreds or thousands of miles out of their way. This coal is carried to Honolulu from British America, but bituminous coal, probably superior to it, is now being mined in Washington and will probably soon supersede it. But why should we have a coaling station at all at Honolulu? There is already an excellent coaling station at Unalaska, on one of our Aleutian Islands, over 1,000 miles nearer the coast of Asia than Honolulu, and that station is approached through one of the most spacious and finest harbors in the world. Already coal is being mined at various points in Alaska—at Unga Island, at Cape Sabine, at Cape Lisburne, at Herondine Bay, and other places—but that mighty chain of islands extends through 40 degrees of longitude—as far as from New York to San Francisco—and the exploration of their wealth has only just begun.

A reference to the map will show that this purpose will make Unalaska the legitimate and foreordained coaling station for our Navy in the Pacific.

As to our own western coast, what protection would a coaling station at Pearl Harbor offer us? If England should ever attack our Pacific States she will attack them from Vancouver's Island and from her harbors in British America. Could we resist these attacks from Pearl Harbor, 2,000 miles away in the center of the Pacific Ocean? Who would go to the Hawaiian Islands for the purpose of engaging us there? No, Mr. President, in case of war with any naval power on earth Pearl Harbor would immediately become an element of weakness, and the adoption of a strong defensive policy would compel us to abandon it at once, bring our munitions of war and vessels home, and make a defense from our own coast. In case of war, from what point could we attack British commerce in the Pacific? The Canadian Pacific is its natural outlet, and we should attack it from Puget Sound. What

element of strength, then, would this paltry island in the Pacific give us? It would be absolutely worthless, and worse than worthless, from every point of view.

I believe the people of this country will resist with all their power this scheme of territorial aggrandizement, which aims to amalgamate with our hardy, thrifty, active, overcoming race this mass of indolent, filthy, leprous, nerveless savages of the southern seas. Our area is great enough, our climate is varied enough, our population is heterogeneous enough, our vegetation has range enough to give us without inviting new perils a task sufficiently difficult within our own borders in the education and elevation of our own people and in the maintenance of the Republic as it was transmitted to us.

Mr. President, I shall always consider it my duty to enter my protest against the acquisition of territory in the tropics, against adding to our population people who live in a climate which is so warm that civilization and self-government are impossible, believing, as I do, that the decay of the Republic of the past has resulted from the desire for glory and conquest. I am bound by my oath of office, by my duty to the people I represent, to resist this desire to add to our area. Our duty is to enact laws that will increase the happiness of our own people, to enact laws to give every man an equal chance, to control trusts and corporations that they may not control us, to increase the distribution of wealth and intelligence, and thus grow grand as we grow great as a people.

Currency and Cloture.

REMARKS

OF

HON. JOHN S. LITTLE,

OF ARKANSAS.

Wednesday, January 9, 1894.

On the bill (H. R. 8142) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes.

Mr. LITTLE said:

Mr. SPEAKER: As Democrats and friends of free coinage, I think we are entitled at least to have an assurance that we will be entitled to offer a substitute on the lines of bimetallism, and in accordance with the pledges of our party, before we are expected to vote for the proposed cloture. I believe in fair treatment among Democrats. There should be no deception, no attempt to preclude us from voting for such measures as may be proposed to the pending bill, either as substitute or amendment, and while I am unalterably opposed to the pending bill, with the assurance that this privilege will be awarded, I stand ready to vote for the rule. Otherwise, I will not.

I believe it is wise for Democrats who differ to consult and reach an agreement, when it can be done without sacrifice of principle.

The call for the caucus, from which this rule emanated, stated that no one would be bound by its action, and it was so openly and expressly stated in the caucus; and when we vote against the rule because it cuts us off from what we believe to be our rights we only exercise the right enjoyed by every Democrat on this floor.

We are anxious that a vote should be taken on the bill, if the same right is allowed to us who desire to vote for the substitute offered by the gentleman from Missouri [Mr. BLAND], House bill 8292.

Mr. Speaker, I desire to state that, as for myself, if I can not secure the legislation I so much desire—the free coinage of silver—I stand ready to aid in any conservative legislation, on Democratic lines, that will in any measure relieve the distresses of the people, or relieve the Treasury of its present embarrassments. But, Mr. Chairman, I am not ready to surrender either my own principles, the principles of the Democratic party, or the principles of the honest, intelligent Democratic people whom I have the honor to represent on this floor.

If the friends of our own party who press this measure will meet us on conservative Democratic grounds, upon which we can all stand without sacrifice of principle, we will meet you; but if you arrogantly demand our surrender we say: Let the tocsin of conflict be sounded and we will appeal from this House to the great masses of our party at home, whose devotion to country, to their party, and to the Constitution will vindicate us in our course and drive from power those who ignore party pledges and the demands of the people.

Pacific Railroads.

SPEECH

OF

HON. JOSEPH C. SIBLEY,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 2, 1895.

On the bill (H. R. 7798) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862; also to amend an act approved July 2, 1864, and also an act approved May 7, 1878, both in amendment of said first-mentioned act; and to provide for the settlement of claims growing out of the issue of bonds to aid in the construction of certain railroads, and to secure to the United States payment of all indebtedness of certain companies therein mentioned.

Mr. SIBLEY said:

Mr. SPEAKER: In the limited time allotted to me for discussion of the measure under consideration, it will be impossible to enter as I would like into the details, which, taken together, convince me that I shall best serve the interests of the people in support of the bill reported by the committee or substantially the same. I could not if I would discuss this measure in its legal aspects, and desire to approach it only as a business proposition; not as it may affect any corporation, but simply as it affects the people of the nation. Divested of verbiage, the proposition appears to be this: The Government has a second mortgage amounting in round numbers to about \$180,000,000; individual holders have a prior lien upon these properties amounting in round numbers to something more than \$40,000,000, and the proposition made in the bill under discussion is that the company shall pay the first-mortgage bonds, leaving the obligations of the Government as a first lien on the entire property.

The second mortgage held by the Government covers only the main lines of the properties from Omaha to Sacramento, and from Kansas City to a point on the prairies, 370 miles west of Kansas City, not including branches or terminals, which are essentially valuable and necessary in the operation of these lines. The committee demand in this measure that not only the main lines, which are now under the Government second mortgage, shall be covered, but that the first mortgage to be given shall cover all the property and the terminals, as stated in the bill. It is a fact patent to those who have investigated the subject that all the valuable terminals upon the Pacific Slope are controlled by the Southern Pacific, and not by the Central Pacific, though both lines are operated by the single system; and the demands of the Government under this bill are that there shall be nearly double the value of property given as security to the Government, and in lieu of a second mortgage on a portion of the property it shall hold a first mortgage upon the entire property.

I am not here to deny, or even attempt to palliate, any of the offenses which have been charged against those building and formerly operating these systems; but if we can force those people by assessments upon their own stockholders to raise sufficient money to pay off their first-mortgage indebtedness, leaving the Government in possession of a first mortgage, with largely added security which shall insure final payment, this seems to me the part of wisdom, for already foreclosure proceedings have been commenced against these properties by holders of first-mortgage bonds amounting to some \$60,000,000; and if the Government fails to make this settlement it must either lose its entire investment in these lines, amounting to about \$180,000,000, or advance and pay all the first-mortgage bondholders their claims, amounting, in round numbers, to something more than \$60,000,000.

Deducting the sum held in the sinking fund, in round numbers \$15,000,000, it shows that for the Government to become the possessor of the lines, without branches or feeders and without terminals, it must have an investment of at least \$170,000,000 in property, which I firmly believe can be paralleled and duplicated for less than one-half the sum. The Government claim alone upon these roads amounts to about \$32,000 per mile, and with the present value of material used in constructing our railways I am firm in the conviction, from a somewhat intimate knowledge of the property, that the line can be shortened between Omaha and San Francisco by at least 150 miles, probably 200, and constructed for \$25,000 per mile, or less, affording better grades across the Sierras and avoiding the great snows of the northern route. One of the greatest railway managers this nation has produced, Mr. James J. Hill, I am informed, built his line to the Pacific at a cost of \$25,000 per mile. This line, the Great Northern, was completed a year or two ago, and certainly both labor and material are very much cheaper now than then.

The equipment of these lines, rolling stock, etc., is held by car-trust companies, and we are asked to invest \$170,000,000 in two

streaks of rails extending from Omaha to Sacramento, devoid at either end of terminal facilities. My judgment is that before we had completed the proper equipment of the line this Government would find itself involved in the expenditure of a sum not less than \$225,000,000. On the other side of the question, it seems to me that for the first time the Government is in the position to receive every dollar with interest that it has ever advanced to these Pacific lines. The first-mortgage bonds given by these companies, bearing interest at 3 per cent and covering all these properties, can probably be sold to-day at par, leaving the Government entirely free from any connection with the operation of these railroads and with every dollar of advanced money returned to the Treasury.

Mr. Speaker, I am not unwilling that the experiment of Government operation of railroads shall be tried, although the figures given from the reports of American and European railway lines, with the cost to the traveler and the shipper, is far less upon American than upon European lines under governmental control. This may arise from higher skill and greater energy of American operators. But if the experiment of Government ownership is to be made, let us make it justly and give the experiment a fair opportunity for success. Let the line be built, with present cost of labor and material, and show what earnings it can give upon the sum invested, or rather what reduction in rates can be afforded to transportation. Let us not make the experiment through acquisition of properties at least double, if not three times, in excess of the sum necessary to completely parallel every mile of track and terminal advantage possessed by those which we must take to-day.

I firmly believe that these properties can be duplicated for a sum not in excess of the present first-mortgage bonds, which the Government must pay before it can realize anything upon the sums it has invested; and if the stockholders and owners of these lines accept the proposition made by the committee of this House, it will be because the value of this property to them as holders of the branch lines, feeders of the main lines, are so intimately connected the one with the other as to force this concession from them in favor of the Government for the proper protection of their branches and tributary lines.

I have thus attempted to state my position and indicate as hastily as possible the reasons that impel me to vote as I do on the pending proposition. I can not in a dogmatic manner assert that my views are the only correct ones or believe that those entertaining other views are reprehensible for theirs. I only seek conscientiously to perform my duty in this matter to the people as given me to see my duty, and entertaining at the same time the most profound respect for the opinions of those who view this question from a different standpoint, seeking as patriotically as I do to protect the interests of all the people.

Pacific Railroads.

SPEECH

OF

HON. JOHN C. BELL,

OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 2, 1895.

On the bill (H. R. 7798) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862; also to amend an act approved July 2, 1864, and also an act approved May 7, 1878, both in amendment of said first-mentioned act; and to provide for the settlement of claims growing out of the issue of bonds to aid in the construction of certain railroads, and to secure to the United States payment of all indebtedness of certain companies therein mentioned.

Mr. BELL of Colorado said:

Mr. SPEAKER: It is with great regret that the short time circumscribed for this debate forbids any opportunity for general debate. I will therefore take advantage of this opportunity to spread upon the record as a part, or more properly speaking the whole, of my remarks on this subject the joint resolution of the Colorado legislature. This comes from a legislature the members of which are composed of all three parties, and, as I understand, without division, and cheerfully signed by a Republican governor and supported by the undivided press of the State. If anything in the way of an enlightened public sentiment will move members, then this should have great influence, as these representatives and this governor are personally cognizant of the abuses of trust and of the people through the great Government privilege enjoyed by

these great railroad companies. The said resolutions are as follows:

HOUSE CONCURRENT RESOLUTION NO. 2.

Whereas the Government of the United States, for the purpose of binding the territory along the Pacific Coast to the Eastern States of the Union and developing the vast intermediate country, furnished the Union Pacific, and Central Pacific, of California, railroad companies the moneys and credits of the Government to build a railroad connecting the Missouri River with the Pacific Coast; and

Whereas the Government accepted a second mortgage to secure its advances and authorized the corporations to issue and sell a like amount of bonds secured by a first mortgage, and also donated to these corporations the alternate sections in a strip of lands 40 miles wide for the full length of said railroads, together making a gratuity worth twice over the original cost of the roads; the most munificent ever granted a corporation; and

Whereas it was the intention of the Government that these corporations should pay, as it matured, the interest upon the Government bonds so advanced, which interest has nevertheless not been paid by them, but they have in the meantime, while withholding such interest, paid dividends on their capital stock out of proceeds from sales of said lands and profits of the operation of said railroads, until the total principal and interest now owing the Government from them exceeds \$97,000,000; and

Whereas the persons in control of said corporations have organized and operated town companies, coal companies, and car trusts for their private gain, and have built and bought branch and other railroads, which they have sold to the Pacific companies at great profit to themselves, in which operations the interests of the Government and of the West were sacrificed; and

Whereas the same parties and their successors are applying to Congress for the further use of the Government's authority and credit, asking a perpetuation of their right to operate the roads and discriminate against and oppress the country for fifty or one hundred years to come; and

Whereas such munificent contributions have made millionaires out of many of the parties in control of these railroads, while the properties have been wrecked, and the country oppressed by discriminations and high tariffs; and

Whereas the interest of the people of the Western States and the interest of the Government in these railroads demands that such operations should not be permitted; and

Whereas the present management of the Union Pacific Railroad by five receivers designated by the corporation is a continuation in authority of the same management which wrecked it, and is not in the general interest: Therefore be it

Resolved, by the house of representatives of the State of Colorado (the senate concurring), That our Senators be instructed and our Representatives in Congress be requested to resist every effort which may be made in Congress to reorganize the Pacific railroad companies so as to reinstate or perpetuate their managements or to extend to them the Government credit, and that they be further instructed and requested to urge upon Congress such action as will direct the proper authorities to secure the appointment, without delay, of a competent and impartial sole receiver, to take possession of and manage the Union Pacific and Central Pacific railroads in the interest of the Government and all parties concerned, until it can be determined what foreclosure or final adjustment shall be made.

ARTHUR L. HUMPHREY,
Speaker of the House.
J. L. BRUSH,
President of the Senate.

This resolution originated in the house of representatives January 9, 1895, and was adopted the same day by the house.

JNO. R. WALLINGFORD,
Chief Clerk.

Received in the senate January 9, and concurred in by the senate January 10, 1895.

A. B. GRAY, *Secretary of Senate.*

ALBERT W. MCINTIRE,
Governor of the State of Colorado.

UNITED STATES OF AMERICA, STATE OF COLORADO, (35)
Office of the Secretary of State, Denver, Colo.

I, A. B. McGaffey, secretary of state of the State of Colorado, do hereby certify that the annexed is a full, true, and complete transcript of house concurrent resolution No. 2 of the tenth general assembly of the State of Colorado, which was filed in this office the 14th day of January, A. D. 1895, at 12.30 o'clock p. m., and admitted to record.

In testimony whereof I have hereunto set my hand and affixed the great seal of the State of Colorado, at the city of Denver, this 14th day of January, A. D. 1895.

[RECAL.]

A. B. MCGAFFEY, *Secretary of State.*

Land Grants for School Purposes.

SPEECH

OF

HON. WILLIAM MORGAN BECKNER,
OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 4, 1895,

On the bill (H. R. 8697) to equalize the several States of the Union in the grant of lands for school purposes.

Mr. BECKNER said:

Mr. SPEAKER: I have introduced a bill of no little consequence to thirty of the States of this Union. I realize how difficult it is to secure consideration by this Congress, which is now so near its close, but I desire to place the bill and a brief argument in its favor in the RECORD for use hereafter. I refer to H. R. 8697, and with the permission of the House will make it a part of these remarks. It relates to a matter of tremendous import to the people of the States affected by its provisions:

The bill is as follows:

A bill to equalize the several States of the Union in the grant of lands for school purposes.

Whereas the United States have granted to Ohio, Indiana, Illinois, Missouri, Alabama, Mississippi, Louisiana, Michigan, Arkansas, Florida, Iowa, and Wisconsin the sixteenth section out of each township within said States for public-school purposes, and to California and all States since admitted into the Union sections 16 and 36 in each township therein for the same purpose; and

Whereas Texas, when coming into the Union, reserved her lands and has dedicated a great portion thereof to school purposes; and

Whereas the States hereinafter named have had either no portion of the public domain or not their equal portion thereof granted to them or either of them for the purpose named above; and

Whereas the public domain is a common possession and should be equally distributed so that the people of all the States may enjoy the use thereof alike: Now, therefore,

Be it enacted, etc., That there be, and is hereby, granted to the several States hereinafter named scrip for the amount of public land set opposite the names of each of said States, to be sold as herein provided and the proceeds to be used in maintaining the free public-school system in said States, respectively. The number of acres herein granted and to be represented by said scrip is as follows, to wit: New Hampshire, 329,955 acres; Massachusetts, 277,339 acres; Rhode Island, 46,435 acres; Connecticut, 168,589 acres; New York, 1,671,111 acres; New Jersey, 235,822 acres; Pennsylvania, 1,635,555 acres; Delaware, 74,832 acres; Maryland, 305,530 acres; Virginia, 1,363,454 acres; North Carolina, 1,832,901 acres; South Carolina, 1,238,889 acres; Georgia, 2,042,222 acres; Kentucky, 1,339,733 acres; Vermont, 363,063 acres; Tennessee, 1,022,333 acres; Maine, 1,344,444 acres; West Virginia, 817,777 acres; Ohio, 710,471 acres; Louisiana, 733,923 acres; Indiana, 601,045 acres; Mississippi, 638,323 acres; Illinois, 955,141 acres; Alabama, 901,725 acres; Missouri, 1,162,136 acres; Arkansas, 928,057 acres; Michigan, 1,003,573 acres; Florida, 1,053,553 acres; Iowa, 975,900 acres; Wisconsin, 958,648 acres: *Provided,* That no mineral lands shall be selected or pass under this act.

SEC. 2. That the scrip granted herein shall represent the number of acres of public land mentioned therein, and the assignees thereof shall have the right to locate same upon any of the unappropriated lands of the United States subject to sale at private entry at \$1.25 or less per acre. No State shall locate any of said lands in its own name.

SEC. 3. That all the expense of locating said lands, selling same, and collecting the proceeds, and all expenses incident to the management of same, shall be borne by the several States out of their respective treasuries; so that the proceeds of the sale of said scrip shall in its entirety become a part of the public-school fund of said States, not to be in any way diminished or reduced.

SEC. 4. That all moneys derived from the sale of said scrip shall be invested in bonds of the United States, or of the State, or some other safe stocks or bonds that will yield not less than 5 per cent per annum on par value, and to be purchased and controlled by a board to be composed of the governor, the State treasurer, and the State superintendent of schools. Only the income of said fund shall be expended from year to year, and the State accepting the provisions of this act shall in so doing guarantee the inviolability of said fund and make good any loss or impairment thereof in any event. No part of said fund or the income therefrom shall be used in building, repairing, leasing, or furnishing houses or structures of any kind.

SEC. 5. That said scrip shall be transferable by order of said board or a majority thereof under an order made at a regular meeting thereof to be called by the governor, or the control and disposition thereof may be turned over to the legislature of the State by said board at such a meeting so called, and the action of the legislature with reference thereto shall then alone be binding.

SEC. 6. That the Secretary of the Interior is authorized to issue the scrip aforesaid to each State entitled to same in such quantities as may be applied for by the governor thereof, but not until said governor shall have filed with him a written acceptance on behalf of said State of the provisions of this act.

SEC. 7. That the scrip provided for herein shall be located as in case of land warrants and be subject to all the laws and regulations relating to same.

SEC. 8. That any of the States receiving scrip hereunder may elect to have same issued for lands subject to sale at private entry at a higher price than \$1.25 per acre, but in such event the lands so chosen shall be computed at such higher price and the quantity reduced in proportion.

SEC. 9. That the Secretary of the Interior is authorized to adopt and prescribe such rules and regulations as he may deem proper and necessary in order to secure an equitable and just execution of the provisions of this act.

The education of the children is the highest question with which human government can have to deal.

Henceforth—

Says Victor Hugo, one of the great prophets of the people—

all human advancement will be accomplished by swelling the legions of those who read. The diameter of the moral and ideal good corresponds always to the caliber of men's minds. In proportion to the worth of the brain is the worth of the heart. The book is the tool of this transformation. What humanity requires is to be fed with light; such nourishment is found in reading. Hence, the importance of the school, everywhere adequate to civilization.

The Continental Congress recognized this momentous truth when in the third article of the ordinance of 1787 it declared:

Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged.

The first amendment to the Federal Constitution has happily separated church and state in this land of liberty, but the years have brought an ever-increasing interest in popular education. It is conceded to be a matter of exclusive State jurisdiction, but the General Government has done much for its encouragement. As early as May 20, 1785, the Congress of the Colonies in an ordinance "for ascertaining the mode of disposing of lands in the Western territory" provided:

There shall be reserved the lot No. 16 of every township for the maintenance of public schools within said township.

This action, however, still left open the question as to the ownership and control of the land thus dedicated to education, which was not settled until after the new Government had been established. In 1803 the act admitting Ohio into the Union provided that the sections thus reserved were—

vested in the legislature of that State in trust for the use aforesaid and for no other use, intent, or purpose whatever.

From this time until 1859 each State admitted got the benefit of the same reservation. In the act organizing the Territory of Oregon, dated August 14, 1848, Stephen A. Douglas inserted an additional grant for school purposes of the thirty-sixth section, making a reservation for the benefit of popular education of two sections, or 1,280 acres in each township of 6 miles square, which has been the policy with reference to all the States since admitted to the Union.

The wisdom of our fathers in making such provision has never been questioned, and no right-thinking man will for a moment begrudge the beneficiaries of this munificence their good fortune. The injustice done to the States left out in so disposing of a common domain is another question. The lands thus given by the General Government for common-school purposes to the States and Territories in which these reservations have been made amount to 67,893,919 acres, without including Alaska, which has as yet received no consideration in this matter.

Nor is this all by any means. The same States and Territories have received an aggregate of 1,165,530 acres for university purposes under a policy which began with the admission of Ohio in 1803. It may be said to have had its initiative in an act of the Continental Congress relating to the Northwest Territory, dated July 23, 1787. The agricultural and mechanical college act of July 2, 1862, gave to the same States a decided advantage. While its aim was to make equal distribution to all the members of the Union, yet only those in which there were public lands could have their grants in kind, or "in place," as it is called in the law. The others got scrip, which they had to sell before locating and without positive knowledge of its value.

The quantity of land that passed under this act was 9,600,000 acres. There were a number of minor donations to institutions of learning, but nearly all of these were secured by one or another of the same favored States. Nor did the inequality stop here. Beginning with Louisiana, Congress began the granting of swamp and overflowed lands to aid in constructing levees and for other purposes, which was extended in 1850 until it embraced "each of the other States of the Union in which such swamp and overflowed lands" were situated. No State outside of those in which lands for school purposes had been reserved got the benefit of these donations, which have aggregated in quantity 80,456,153 acres, according to the last report of the Secretary of the Interior.

A portion of the same States got 559,965 acres under what was known as the Saline Land Grants. Indiana, Ohio, Illinois, Wisconsin, and Michigan received the benefit of 4,424,073 acres to aid in building canals within their borders. Wisconsin, Michigan, and Oregon were given the advantage of 1,301,040 acres, used in constructing military wagon roads. Ohio and Indiana had several small grants for a like purpose. The Federal Government has also aided railroads within the States and Territories whose schools it has liberally endowed by granting lands to the extent of 196,569,872 acres, of which as much as 43,350,175 had been patented up to June 30, 1894; 29,453,347 forfeited, and 20,317,517 restored, as shown by the last report of the Commissioner of Railroads.

Leaving out what the agricultural and mechanical colleges got, and also some minor grants not worth enumerating, it will be seen that the favored States have been beneficiaries of grants from the common possessions of the whole country to the extent of over 350,000,000 acres, which is more than half as much as what remains of the public domain. To be sure much of the land granted to the railroads has not yet been earned and a large portion of it may never be, but Congress has done all it could to show how liberal has been its disposition toward the later offspring of the Union.

But are the original colonies and the States in which there was no public domain at the time of their admission without rights as to the lands bought with their treasure or acquired through the courage of their citizens? There would have been no common territory and, in fact, there could have been no Government to own and distribute it, without the sacrifice of blood and treasure made by the very Commonwealths that have been thus pretermitted in the beneficence that has given away, so far as Congress could act, more of God's footstool than is embraced in England, Ireland, Scotland, Wales, and France combined. It may be said that they are estopped from complaining now because they have been parties to the policy which has resulted in this gigantic inequality. But this plea would not be allowed in any court of equity unless the party making it could show that he had been put in a position of disadvantage by the action on which it may be based.

In this case, the new States are beneficiaries only, and so many of their citizens being of the same blood, and, in fact, of kin to those who live in the States to whom justice has not been done, I feel assured that they will not be so selfish or unjust as to object to an effort even at this late day to restore the equality which ought from the beginning to have been provided for. I have introduced a bill into the House of Representatives which has for its purpose a grant of land scrip representing two sections out of the

quantity that would have made a township in each State that has had no reservation or grant for common-school purposes, and an additional section to each State that received a section under the system as first undertaken. That is to say, New York is allowed under my bill scrip representing in acres what is equivalent to two thirty-sixths of the area of that State, while Ohio will get what is equivalent to one thirty-sixth. You may ask, why this distinction?

Because New York belongs to the class that has never received anything, while Ohio is one of the States that has had and enjoyed the advantages of the one section referred to in the act of the Continental Congress quoted from above. The States that have received nothing are New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Kentucky, Vermont, Tennessee, Maine, and West Virginia. Maine and West Virginia have been admitted into the Union since the policy of granting lands for school purposes was inaugurated, but as there was no part of the public domain within their limits they have been treated as were the Commonwealths from whose territory they were carved.

The States that received one section and now ought to have an equivalent for another out of each township are Ohio, Louisiana, Indiana, Mississippi, Illinois, Alabama, Missouri, Arkansas, Michigan, Florida, Iowa, and Wisconsin. It may be asked how much will it take to carry out the provisions of my bill. I answer 27,589,996 acres, calculated on the figures as to area that I got from the Public Domain, a volume prepared pursuant to an act of Congress under the auspices of the Land Commission and revised in 1881. Its figures do not altogether agree with those in the American Almanac, a publication compiled by Mr. Spofford, but I have taken those used by me because they come from what is at least semi-official. Someone may say that this is an enormous quantity of land to be given away, but it is not half as much as has already been granted for the same purpose without objection or complaint from any source.

The report of the Secretary of the Interior for 1894 shows that the Government still owns 606,040,313 acres, which does not include Alaska, the Indian or military reservations, "or railroad or other selections yet unadjudicated, parts of which may in the future by sale or restoration be added to the public domain." There is, therefore, an abundance of land left out of which to secure the scant justice which I am now advocating. Of course, the best lands have been sold or given away, and the scrip that the States may obtain under this act will have to be located in regions not so desirable as those from which the favored States have had their reservations. This can not now be cured, but there is much valuable territory from which choice may yet be made, and whatever it is, it will be of help to the school systems, which in many to the States are so inadequate because of the lack of sufficient funds. This element does not enter into the argument at all.

I have provided for a distribution in scrip because it would be a delicate and perhaps quite an objectionable matter to allow one State to own land and exercise its sovereignty within the confines of another State. I have simply followed the precedent established in the act making the agricultural and mechanical college grants. Those buying the scrip can better manage its location than could the State itself.

Is the proposition in itself right and proper? If this be settled in the affirmative, details can be worked out in the committee to which the bill has been referred. I do not hope for the passage of my bill during the brief fragment of the Fifty-third Congress yet left, but I desire to secure for it the attention of thoughtful men everywhere, trusting that it may find favor with statesmen who will have the power to obtain for it consideration in the next Congress and its early enactment into a law. There can be no doubt as to its constitutionality. The objections to the Blair bill in no wise apply to the measure which I have introduced. They were:

1. That there was no express grant of power in the Federal Constitution to provide for education;
2. That the Blair bill undertook to make a gift or grant of money to the several States, which would have to be raised by taxation not authorized by the Constitution;
3. That the provisions of the bill would subject the State systems of education to Federal supervision; and
4. That the appropriations made by the bill would serve as an excuse for maintaining the high rates of import duties then in force, and would thus serve to thwart the desire of the Democratic party to reform the tariff.

The great argument on this measure will be found in volume 66 of the CONGRESSIONAL RECORD, and I venture to say that it is as able on both sides as has been heard in Congress during the past quarter of a century.

The opposition was led by COKE of Texas, Beck of Kentucky, Pendleton of Ohio, Vest of Missouri, and other leaders of the straitest sect of latter-day strict constructionists. Nearly all of

these great men and intense states-rights leaders conceded that the Government has full power to grant lands from the public domain to the States for educational purposes. Senator COKE stated the distinction as clearly and vigorously as anyone has ever done, perhaps, when he said:

I stated that Congress had the power to make donations of land in aid of education in the States, and I stated it upon the authority of section 8 of Article IV of the Constitution, which reads:

"The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States."

Now there is no limitation upon the power of Congress in dealing with public land. The power of Congress over that subject is absolute. Congress can do what Congress pleases with the public lands. Congress can give them away. It gives them to railroads; it gives them to individuals for homesteads; it gives them to soldiers and sailors for bounties; it gives them to States for educational purposes. Congress can make any disposition in the world it pleases of the public lands. Therefore, I say now and I did say before, that I would vote for a bill granting public lands in aid of education in the States, but that Congress has not the unlimited power under the Constitution to tax the people of the United States and give the money away to anybody.

Mr. Pendleton cited the ordinance of 1787, which was adopted by the Continental Congress, while the convention that adopted the Federal Constitution was in session as the genesis of the provision that gave Congress what he conceded was absolute power over the public domain. Mr. VEST did not controvert this position of COKE and Pendleton, and pointed out that no conditions were attached to the grant of lands that would authorize the Government at Washington to supervise or interfere with the question of education within the States accepting these donations. In 1880 the Senate passed what was known as the Morrill bill, a measure having for its object the distribution among the States of a portion of the proceeds of public lands for purposes of popular education. This was earnestly advocated by COKE, Maxey, Beck, Pendleton, Hill of Georgia, Lamar, MORGAN, Vance, PUGH, CALL, RANSOM, McPHERSON, Bailey, and others who were as staunch State-rights Democrats as the country contained. Mr. Maxey of Texas said:

I shall vote for the bill cheerfully. A States-rights man to the very core, I shall vote for it because there is not in the bill anywhere a violation of any State right.

The bill was championed by the venerable Senator from Vermont who has done so much to advance the cause of education, and in addition to those referred to above was voted for by Blaine, CULLOM, CAMERON, Edmunds, HOAR, Logan, PLATT, TELLER, Windom, and other leaders of public sentiment then in the Senate. The power of Congress to dispose of the public lands has, however, been fixed by its practice since the foundation of the Government. In a speech in the House of Representatives on February 4, 1817, John C. Calhoun, in attempting to establish a power for which he was then contending, said:

In reply to this uniform course of legislation, I expect it will be said that our Constitution is founded on positive and written principles, and not on precedents. I do not deny the position, but I have introduced these instances to prove the uniform sense of Congress and the country (for they have not been objected to) as to our powers, and surely they furnish better evidence of the true interpretation of the Constitution than the most refined and subtle arguments.

The Supreme Court of the United States has settled the powers for which I contend in *Cooper vs. Roberts* in 18 Howard, and other cases since, and, in fact, I do not remember any authority to the contrary that is worthy of consideration. I do not think it possible to assail with success the constitutionality of this measure. It is entitled "An act to equalize the several States of the Union in the grant of lands for school purposes," and contains no conditions that can in any way be objectionable to any true friend of education or offensive to the most sensitive stickler for State rights. Its adoption would materially assist in bringing about an era in America like unto that in Rome of which Macaulay wrote:

Then none was for a party;
Then all were for the state;
Then the great man helped the poor,
And the poor man loved the great;
Then lands were fairly portioned,
Then spoils were fairly sold;
The Romans were like brothers
In the brave days of old.

I have argued so far only the constitutional power of Congress to distribute the public domain among the States as proposed in my bill. I now insist that it is its duty so to do. Senator COKE, in the quotation made above from his speech, cites a portion of the third section of Article IV of the Constitution, but does not give the concluding clause, which declares that—

Nothing in this Constitution shall be so construed as to prejudice any claims of the United States or of any particular State.

This is significant with reference to the contention I am making in view of the fact that it is a part of the section which gives control over the disposition of the territory of the National Government. It has increased force when the action of several of the colonies with reference to this matter is called to mind. Maryland in 1776 expressed its decided opinion that—

If the dominion over these lands should be established by the blood and treasure of the United States such lands ought to be considered as a common stock.

The same State declined to join the Confederation until 1781 because not satisfied with the position of Virginia with reference

to this matter. By the treaty of peace in 1783 Great Britain relinquished—

to the United States all claim to the Government property and territorial rights of the same and every part thereof.

Connecticut, Georgia, Virginia, and other States gave up their claims, and the vacant lands became indisputably the possessions of the Federal Government. Virginia, which released a claim to a greater area than all the other States combined, provided in her act of cession that all the lands not included in other special conditions—

shall be considered as a common fund for the use and benefit of such of the United States as have become or shall become members of the confederation or Federal alliance of the several States, Virginia inclusive, according to their usual respective proportions in the general charge and expenditure, and shall be faithfully and bona fide disposed of for that purpose and for no other use or purpose whatsoever.

The Government accepted title to the Northwest Territory on these terms, but has failed to keep the obligation it thus assumed in that only certain States have had the use and benefit of what was accepted for all. In 1831 the legislature of Maryland adopted resolutions affirming that—

The States in whose favor Congress has not made appropriations for the purposes of education are entitled to such appropriations as will correspond in a just proportion with those heretofore made in favor of the other States.

Virginia and Connecticut approved this action of Maryland, but the question, so far as I can learn, has never been considered by Congress. It is no argument that it now comes late, because as between partners there should be no statute of limitations in a forum where justice and equity ought to have chief consideration.

I will attempt no argument in favor of the cause intended to be strengthened by the passage of this bill. None of the States have such a school fund that they do not need more, and in many of those that will be beneficiaries under this act the provision now made for the education of the masses is totally inadequate. They have a right to what they would get by this measure and could with incalculable advantage use the increase so obtained for the uplifting and enlightenment of their people.

In view of the foregoing facts, and in the name of the children whose career may be so seriously affected by its adoption or rejection, I earnestly commend my bill to the favorable consideration of Congress. In the apt and statesmanlike words of Senator MORRILL when his bill was before the Senate in 1880:

The measure before us stands on a noble principle, wholly impregnable, if human self-government rests on popular intelligence—a principle which neither the Republican nor the Democratic party will be willing to repudiate so long as each claims to be the champion of self-government and of the common people; and, if the measure is worthy of adoption, it is worthy to be adopted with the least possible delay.

The Currency.

ADDITIONAL REMARKS

OF

HON. WILLIAM A. STONE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 8, 1895,

On the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. WILLIAM A. STONE said:

Mr. CHAIRMAN: I desire to append to my remarks of January 8 the following statement:

At the annual meeting of the Pittsburgh Clearing-House Association, held January 17, 1895, the "currency question" was discussed, and it was decided to adjourn to meet on the 24th instant, at 10.30 a. m., to continue the discussion upon the following propositions:

I. Permit national banks to issue notes to an amount not exceeding their paid-up capital stock, but require each bank before receiving notes to deposit with the United States Treasurer United States bonds of any issue, upon which they may receive notes up to the par value of said bonds.

II. Impose a tax of one-fourth of 1 per cent per annum, payable semi-annually, upon the average amount of notes in circulation, to defray the expenses of printing notes, official supervision, and other expenses of the Comptroller's Office.

III. Repeal the provisions of the reorganization and extension act of July 12, 1882, imposing limitations upon the reduction and increase of national bank circulation.

IV. Authorize the Secretary of the Treasury to offer for sale from time to time at not less than par, 2½ per cent 5-20-year bonds (i. e., redeemable after five years and payable after twenty years) in denominations from \$50 to \$10,000, to be paid for in gold, legal tenders, or United States Treasury notes to an amount, which, with the gold in the Treasury, will be sufficient to retire all outstanding legal-tender and Treasury notes, such notes to be canceled as fast as new circulation is issued to the banks.

V. Permit national banks to count national-bank notes as a part of their legal reserve.

The other provisions of the present national-bank act to remain unchanged.

Resolved, That the Pittsburgh Clearing House Association unanimously approve of the proposed amendment to the national-bank act presented at the meeting on the 17th instant, and the chairman is instructed to appoint a committee of three to prepare a declaration, and submit the same, with a copy of amendments, to Congress at the hands of our Senators and Representatives.

REMARKS OF J. H. WELLOCK, ESQ., THE MEMBER PRESENTING THE RESOLUTIONS TO THE CLEARING HOUSE ASSOCIATION.

Mr. Chairman, a more serious question is now urgently demanding solution than any that has confronted the country since the days of reconstruction. What are the best steps to be taken for such reforms of our currency system as will relieve the country from the pressure under which it is now suffering. The ills we have are bad enough, but they are less serious than those threatened by various ill-advised schemes suggested for their removal.

The amount of good done by the American Bankers' Association in inaugurating the discussion of financial questions is hardly to be overestimated. The value of the educational discussion started by the presentation of the Baltimore clearing house plan is vast. But the extent of the good to which it has given rise can hardly be better gauged than by realizing the fact that the meeting in Chicago of the executive council of the American Bankers' Association in December, when eleven cities were represented, not one of the gentlemen present was found willing to support the plan which secured the somewhat hasty indorsement of the association at Baltimore in October.

In the meantime there had been such a great amount of educational discussion, so many widely varying schemes of reformation had been propounded, that those present were strongly disinclined to reiterate the verdict rendered by their own association two months before. Bankers, no less than other folk, are susceptible to the influences of information, and in those two months the amount of information forthcoming on matters of currency and finance was positively bewildering. Plans had become as plentiful as blackberries in season; plans of folly and plans of wisdom, and plans comprising both characteristics. But bewildering though this multiplicity has been, and the prolific production is still in progress, those who have time and inclination will find it worth while to glean in the fields of fatuous suggestions for the few ears of grain which are obtainable.

While the discussion is still in progress several points of no slight import have practically been settled. Among these are the following:

Reform is necessary.

Reform must be conservative.

Its main object should be the simplification of our currency by the retirement of legal tenders and treasury notes and substitution therefor of some form of circulation which shall have all the strength of those retired without their complicated weaknesses.

It has been developed further that the question under discussion is essentially of national issue and in no sense one in which partisan or sectional considerations should be allowed to hold sway. This feature of the situation has already been recognized by some of the larger minds of the present minority party, like Senators SHERMAN, ALLISON, and QUAY, who have manifested a statesmanlike willingness to sink partisan considerations for the relief of the nation as a whole, and the more so since it becomes increasingly probable that if the present Congress fails to find a solution of the problem the President will call an early special session of its successor, more largely composed of his political opponents, to settle the question.

In fine, it has become manifest that the most strenuous calls of civic patriotism demand the attention of all Americans to this question. And since the demand is the more urgent in proportion to the ability of the citizens to serve, bankers, than whom none should have a clearer grasp of the subject, are especially called in this hour of real necessity. No one plan in itself has yet been laid before the public which has met with anything approaching universal indorsement. The unprejudiced observer has been able by an eclectic process to gradually modify his opinion until he has reached a position at no small distance from that whence he set out.

The most important of the many plans promulgated thus far, by reason of its intrinsic merits and its source, but most of all from the discussion to which it has given rise, is the Baltimore plan. That the scheme was formulated by the clearing house of a city which has been free from banking failures for sixty years is a recommendation which demands consideration. That the plan was indorsed, even though upon too little discussion, by the American Bankers' Association is something still further in its favor. Yet its originators, suffering the natural fate of all pioneers, have found that those following them, for whom they opened the path, have already learned to improve on the road cleared for them and demand something better. Briefly summarized, the Baltimore plan proposed, in order to procure a "safe and elastic currency": Repeal the provision requiring the deposit of bonds to secure circulation; allow the issue of circulation to 50 per cent of paid-up unimpaired capital, subject to a tax of one-half of 1 per cent per annum upon the average outstanding circulation; allow emergency circulation of 25 per cent paid-up and unimpaired capital subject to one-half of 1 per cent tax and additional heavy tax on average of this circulation outstanding, the one-half of 1 per cent tax to pay expenses of Comptroller's office, etc., redemption equal to 5 per cent of their average outstanding

circulation to be maintained by banks of issue in the hands of the Secretary of the Treasury; redemption of all notes to be made as under existing law; create a guaranty fund by deposit by each bank of 2 per cent of circulation received the first year, by annual tax of 1 per cent on average outstanding circulation until fund equals 5 per cent of entire circulation outstanding, and by the heavy tax on emergency circulation already referred to.

The guaranty fund is for the redemption of the notes of insolvent banks, or the reimbursement of the Treasury for such redemption. The Government shall have a prior lien on assets of each failed bank and liability of shareholders for restoring to the guaranty fund not more than the failed bank's outstanding circulation, after deducting amount credited to it in the redemption fund. Then follow provisions of less import for the retirement of circulation and the winding up of the bank's affairs.

It is only fair to its authors to note that the Baltimore plan is not offered as a completed amendment to the present law, but simply as the outline of desirable legislation.

In one fundamental respect, at least, they were right in the statement that "Our currency must be supplied by the banks, not by the Government. The latter notes only the condition of trade by the rise or fall of its revenue receipts. The banks are the arteries of commerce, feeling instantly the changes of commercial activity and intimately acquainted with its volume and requirements."

But the intrinsic weakness of this plan is found in its very first provision that the requirement of bond deposits to secure circulation be abrogated. And this is the more remarkable since the designers of the plan profess to desire a continuation of the national banking system, while at the very outset demolishing the foundation of its structure, the deposit of bonds to secure circulation. At this one stroke is destroyed the most essential feature of a banking system which has stood the searching tests of thirty-two years' experience and shown no shortcomings not amenable to the remedial influence of moderate and conservative reform.

What safety would the public see in this safety fund?

Ultimate safety it might provide, though even that is open to grave doubt. But to be of any use as a circulating medium of exchange in the highways and byways of commerce and industry, a currency must have an immediate intrinsic or representative value, since no more ultimate and remote value depending on tortuous routes and cumbersome proceedings will so satisfy the public as to give that currency the one essential qualification of immediate and unquestionable acceptance and transferability.

What advantage does this substitution of a safety fund for the deposit of bonds offer?

It provides no improvement in soundness or security; on the contrary, as has already been indicated. Promises to pay secured by the capital and assets of banks, even when indorsed by the Government, which is the people, do not give the people that faith in currency without which nothing prosperous is possible to the same extent as do the bonds which they, the people or Government, have promised to redeem and for the payment of interest upon which their honor is pledged.

Does this Baltimore proposition add in any way to the elasticity of the currency?

What is meant by that phrase anyway? It has been so misused and abused that an attempt to arrive at its definition is in order before going further. One has said, "Any language indicating or synonymous with elasticity is peculiarly fascinating to an American. Indeed, we are an elastic people, and certainly our whole banking system for the last ten years has been elastic enough, practically speaking. It was not want of elasticity, but rather that the elasticity had been extended until there was no more expansion to it, that troubled us in 1893. Perhaps the trouble was not directly with the currency, but with the credit portion of our system. What reason can exist in the mind of any man at the present time for supposing that the right of banks to issue bills or paper money, whether it be safe or whether it be not, would afford elasticity to the currency in future time of need is beyond my comprehension or imagination. I believe that it would not prove true; in other words, if the right to issue bills were given to the banks up to a certain percentage of their capital, they would use it immediately. What reason is there to suppose that they would withhold the exercising of this prerogative and wait until times were hard and money close, and then make judicious use of the privilege? Why would they do that any more than they would fail to hold a proper reserve of their deposits to meet the same conditions?"

"The same element in human nature would be appealed to in each case, to wit, love of gain.

"Taxation would not prove effective as a regulator, for, if made uniform, as it necessarily must be, it would be sufficient in one portion of the country to cause total prohibition of all proposed note issues and would be totally inadequate in other parts to retard it in the slightest degree.

"This is a self-evident proposition when we consider that the

earning powers of money vary from 2 per cent in New York to 12 per cent in Montana."

Then the originators of the Baltimore plan refer us to Canada as an example of the admirability of their scheme of currency. Our plan, they say, is more conservative than the Canadian law, though the latter has been found highly satisfactory to the Dominion.

The first answer to this is that conditions of banking, trade, and finance in Canada and the United States are as far as the poles asunder, geographical neighbors though the two countries be.

Canada is impregnated with British phlegm. The United States is characterized by American impulsiveness and enterprise. The rapid movement which is an everyday occurrence here would send Canada into convulsions at short notice. And investigation develops no great advantages of the Canadian system even for Canada. Our national bank notes circulate in every nook and corner of our land, throughout Canada and in Europe at par. Canadian bank issues, on the other hand, fail to circulate at par in this country, and even in their own they are more or less discounted according to their greater or less distance from the bank of issue and the amount of confidence felt therein. Moreover, in our country we have nearly 3,800 national banks, while in Canada the banks of issue are less than 40, all other banks being mere branches.

Those who venture to argue that the Baltimore plan is good, because the present system of national banking has proved so under the stress of thirty years' experience, are even further astray. In so much as the Baltimore plan would change the whole basis of our national banking system they might as well argue that because a man has for thirty years been walking one path with safety and comfort in possession of all his faculties he could do the same thing after suffering a stroke of paralysis. All plans for issue based upon a so-called safety fund are alike in essentials, differing only in degree. Under the Baltimore plan, for instance, a few men could start a bank with \$100,000 capital. This would entitle them to \$75,000 circulation, less 7 per cent paid in for redemption and safety fund, amounting to \$5,250, leaving \$69,750. The organizers might then borrow all their bank's money, suspend, and their liabilities of \$69,750 would be so much in pocket for them and have to be met by assessments on solvent banks. In this one particular the Carlisle plan is an improvement by demanding the further security of 80 per cent legal-tender deposits.

Next to the Baltimore plan in importance is that which Secretary Carlisle attempted to foist on an unwilling nation on the installment plan. Added to the essential weakness already pointed out as inherent to the Baltimore plan, the substitution of safety, guaranty, or redemption funds for United States bonds as a basis of currency issue, this compromising scheme trying to partially satisfy all separate interests and giving full satisfaction to none would return us to all the horrors and inconvenience of State-bank issues. Try to regulate issues under the diverse State governments as they might the task would be found impossible of achievement. We should have forty-five differing issues, all lacking the golden imprint of the nation's indorsement. "Where are we at?" or more elegant words to the same effect would become the daily plaint of bankers and their clients, as it was in the days of wild-cat, yellow-dog, shinplaster, and the like heterogeneous assortment of currencies. Another weakness in Carlisle's plan is the removal of the necessity for the maintenance of reserves for the protection of depositors, though experience has demonstrated that the reserve now required is none too large. These things so vitiate the Secretary's scheme that when they have been pointed out further consideration of his proposals is hardly called for.

So eminent authority as Senator Vest offers a bill which provides that all Treasury notes and gold and silver certificates shall be destroyed and an equal amount of notes payable in standard gold and silver coin shall be issued and paid out instead of the notes, making it unlawful for any national bank to issue bank notes or currency, and all acts authorizing such issue are to be repealed. It is made the duty of the Secretary of the Treasury within twelve months to sell the United States bonds deposited in the Treasury by national banks to secure circulation, and, after redeeming with coin notes authorized by his bill, the surplus, if any, is to be paid in coin notes to the bank owning the bonds. President William H. Rhawn, of Philadelphia, recommends that we legalize the issue of clearing-house certificates, but while clearing-house certificates have an honorable place in our recollections I doubt if that suggestion will be enacted into law. And so on, various plans are multiplied beyond our time or consideration.

This association has done well to take a reasonable time to consider. It demands more than a merely superficial examination, because while we discuss it the financial, industrial, and commercial interests await the action of Congress, and prompt legislation is imperatively demanded.

An Irishman once said, after falling from a four-story house,

that it was not the fall that hurt him, but the sudden stop. We have been falling for a long time without any pain, but now that we are being brought to a sudden halt we are threatened with serious injury.

Let us review the situation. Well nigh every condition except the financial one, is full of promise for the future. Stocks on hand are low, wages are fair, prices are near bed rock, the people are reasonably well employed, general expenses in railroads, mills, and counting houses have been reduced to a minimum, and after years of depression the people now have a right to be encouraged while they await the solution of this all-important problem.

There is an underlying faith that as in many other instances in our history a satisfactory outcome will be discovered. But how and by whom? Why should not the bankers of Pittsburg respond to the occasion with a declaration of their firm belief that the Government should be rescued from its present dangerous predicament by funding its demand obligations, going out of the banking business and confining itself to its proper functions of collecting sufficient revenue to meet the expenses of the Government, and disbursing the same. Why should you not further declare our firm adherence to the present excellent national-banking act properly amended to give the people a safe, simple, uniform, redeemable and elastic currency as good as gold and fit to pass anywhere at par.

This clearing house represents a capital, surplus, and deposits of \$115,000,000. Your clearances last year aggregated nearly \$800,000,000. Your reputation for conservatism, safety, and success is proverbial, and I can not but believe that your recommendation would be welcomed by our Representatives in the National Legislature, and command the respect and serious attention of all.

You are the bankers for what should be the fifth city in the Union. This is far more than the clearing house of Pittsburg, more than the clearing-house of Allegheny County; it is the clearing house of western Pennsylvania.

Remember that a Pittsburg banker and one other enjoyed the credit of having given such information as to contribute largely toward making the national-bank currency a success instead of the failure it threatened to be at the outset.

We read in our public journals this week articles like this:

Financial rather than commercial or industrial events occupied attention the past week. By far the most important was the export of \$5,000,000 gold, which exceeded all expectation. The entire amount was withdrawn from the United States Treasury and the Government's net gold was reduced to less than \$70,000,000. Secretary Carlisle realized \$35,700,000 gold as the proceeds of his last bond sale, and in less than two months has lost \$40,000,000. There is no reason to believe that there will be any decrease in the demand for gold so long as the legal tenders and Treasury notes are in existence. This fact shows the futility of bond sales to maintain the gold reserve, so long as our present currency laws remain in force. It also emphasizes the urgent necessity of a broad, comprehensive scheme for the reform of the currency. It is, therefore, not strange that business projects extending far into the future and involving large outlays of capital are still held in abeyance. All of these statistics bearing upon the subject fail to show cause for the outward movement of specie.

The foreign trade statement of the United States for the calendar year 1894 shows an excess of exports over imports of \$152,200,000 merchandise, \$21,200,000 gold, and \$36,500,000 silver. Here is an apparent balance in favor of the United States of \$270,000,000. Making a liberal allowance for our interest obligations abroad, for the expenses of American tourists, etc., and there remains fully \$100,000,000 to be accounted for. The only reasonable theory is that that sum represents the withdrawal of foreign capital invested in this country. Inasmuch as the rates of discount and the returns on investments abroad are lower than in this country, it must be that distrust as to the safety of the principal is the underlying cause of the shifting of capital. The London press fosters this distrust and Congress does nothing to allay it. The effect is seen in the market quotations. Two per cent British consols sold yesterday at the unprecedentedly high price of 104½, 3 per cent French rentes at 102 francs 30 centimes, and 5 per cent United States coin bonds were quoted at 110½.

It is probable that if the Government were not a prey to the holders of its outstanding demand notes its credit would be improved.

It has been suggested by high authority that a commission be appointed to take testimony and draft a bill, but the emergency will not permit. Let this question be settled now and the country will move onward and upward through years of substantial prosperity. Congress should settle this question before it leaves Washington.

The tendency seems to be in the right direction. Senator SHERMAN, than whom there is no higher financial authority, the very day that the proposition which is now before us was submitted, presented to Congress a few suggestions, which are in entire harmony with this plan, and on Monday of this week Representative WARNER of New York submitted a bill along the same line.

If United States bonds are worth anything, they are worth their face value; therefore, let national banks be authorized to issue currency to the par value of bonds deposited. In return for their privileges let banks pay an annual tax of one-fourth of 1 per cent on the average of their notes outstanding for the payment of expenses incidental to their supervision by the Government, the printing of the notes, and the like. In order to get contraction or expansion of currency as quickly responsive to the conditions of trade as possible, repeal provisions of the act of July 12, 1882, imposing limitations on the reduction and increase of national-bank circulation. To remove the source of the evils under which we now

suffer, let 2½ per cent twenty-year bonds be sold from time to time at no less than par, in denominations of \$50 to \$10,000, for gold, legal tenders, or United States Treasury notes to an amount sufficient, with the gold in the Treasury, to retire all outstanding legal tenders and Treasury notes by cancellation of the same as new circulation is issued to the banks. And, to show a logical regard for the value of national-bank notes and avoid invidious distinctions, allow national banks to count such notes as a part of their legal reserve.

Let us divest this question of all side issues, and preserve the bank act which has given us the best currency the country has ever experienced; amend it if we must, but not mutilate it. Do not sacrifice any principle in it which we believe right, or compromise with the advocates of fiat money of any kind.

In conclusion, Mr. Chairman, permit me to add that an intimate acquaintance with the methods and members of this clearing house born of many years of association convinces me that we shall do our whole duty in the matter; and I am sure that any plan indorsed by you will be entirely proper, patriotic, and practicable.

Indian Appropriation Bill.

SPEECH

OF

HON. THOMAS A. E. WEADOCK,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 16, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8479) making appropriations for current and contingent expenses of the Indian Department and fulfilling treaty stipulations with various Indian tribes for the fiscal year ending June 30, 1896, and for other purposes—

Mr. WEADOCK said:

Mr. CHAIRMAN: It is not my intention to discuss more than one feature of this bill, and that is the one which proposes to deal with contract schools, which term includes those not owned or controlled by the Government, but by private parties and generally by some religious denomination. My position, which I desire to have well understood at the outset, is that I have no objection to the Government providing its own schools for the Indians, and if that policy is to be the settled policy of the Government provision should be made to relieve the charitable people of this country in the investment they have made at the invitation of Congress. Whatever education I have acquired in any school was obtained in the public schools of my country, and neither as to the Government Indian schools nor any other real public schools, at any time or place, have I found any fault or made objection, by vote or otherwise, against their proper maintenance. But the bill as submitted seems to regard as "nonsectarian" the schools managed by our Episcopalians, Baptists, Quakers, or other denomination, while the term "sectarian" applies only to the schools owned and taught by Catholics. The St. James version, old or new, is "nonsectarian." The Latin Vulgate is "sectarian."

Later on I shall invite the attention of the committee and the country to a comparison between the methods adopted with the mission Indians in California and those sought to be introduced now.

A good many years ago, in 1869, in the Administration of President Grant, the different Christian denominations were invited to enter the field of Indian education. And one denomination, the Roman Catholics, has gone perhaps farther than any other in establishing training, industrial, and other schools, and otherwise putting themselves in readiness to comply with that invitation and to conduct Indian schools. They have conducted a larger number and with better success than any other people who have made the attempt. That is the uniform testimony of teachers of Indian schools and Indian inspectors and officers of the Army and everyone who has been brought in contact with these schools in such a manner as to give them sufficient knowledge to speak upon the subject. The last Indian appropriation bill, public act 197, 1894, made appropriations for these schools, by name, as follows:

For support and education of 100 Indian pupils at St. Boniface's Industrial School at Banning, Cal., \$12,500.

For the education and support of 100 Indian children at the Holy Family Indian School at Blackfeet Agency, Mont., \$12,500.

For education and support of 100 Chippewa boys and girls at St. John's University and at St. Benedict's Academy, in Stearns County, State of Minnesota, at \$150 each per annum, and for the education and support of 100 Indian pupils at St. Paul's Industrial School at Clontarf, in the State of Minnesota, \$30,000.

For support and education of 300 Indian pupils at the St. Ignatius Mission School, on the Jocko Reservation, in Montana, at \$150 per annum each, \$45,000.

For support and education of 60 Indian pupils at St. Joseph's Normal School at Rensselaer, Ind., \$8,300.

For support and education of 60 Indian pupils at the Kata Drexel Industrial School, on the Umatilla Indian Reservation, in Oregon, \$6,000.

In addition to these contracts were made by the Indian Bureau with other schools, as appears by the following table, to be found on pages 16 and 17 of the Report of the Commissioner of Indian Affairs for 1894:

Schools for Indians conducted under contract, with number of pupils contracted for, rate per capita per annum, and total amounts required for fiscal years ending June 30, 1894, and June 30, 1895.

The denominational schools not Catholic specially named in the act were as follows:

For support and education of 150 Indian pupils at the school at Hampton, Va., \$30,000.

For support and education of 200 Indian pupils at Lincoln Institution, Philadelphia, at \$167 per annum each, \$33,400.

For support and education of 60 Indian pupils at White's Manual Labor Institute, of Wabash, Ind., \$10,080.

In the Lincoln Institution, Philadelphia (page 54, Indian bill), there are many Catholic children in school. Archbishop Ryan and Miss Drexel together requested that they should be allowed to attend Catholic services. The lady superintendent flatly refused, saying that the Episcopal religion was good enough for them.

It is proposed to specially appropriate for these "contract schools" in the present bill.

A new sectarian school is established by the bill at Grace Mission, S. Dak., which is subject to a point of order, being new legislation, and I shall make the point at the proper time.

The following paragraph was inserted in that act:

That the expenditure of the money appropriated for school purposes in this act shall be at all times under the supervision and direction of the Commissioner of Indian Affairs, and in all respects in conformity with such conditions, rules, and regulations as to the conduct and methods of instruction and expenditure of money as may from time to time be prescribed by him, subject to the approval of the Secretary of the Interior: *Provided*, That the Secretary of the Interior is hereby directed to inquire into and investigate the propriety of discontinuing contract schools, and whether, in his judgment, the same can be done without detriment to the education of the Indian children; and that he submit to Congress at the next session the result of such investigation, including an estimate of the additional cost, if any, of substituting Government schools for contract schools, together with such recommendations as he may deem proper.

That work seems to have been done by the Commissioner of Indian Affairs, and his conclusions have been reported to the Secretary of the Interior, who seems to have adopted them verbatim; and the recommendation made by the Commissioner to the Secretary is in turn made by him to the Committee on Indian Affairs, and the idea is incorporated in this bill.

The Secretary says:

Contract schools.—The contract schools are now the subject of general discussion. I agree fully with those who oppose the use of public money for the support of sectarian schools. But this question should be considered practically. The schools have grown up. Money has been invested in their construction at a time when they were recognized as wise instrumentalities for the accomplishment of good. I do not think it proper to allow the intense feeling of opposition to sectarian education, which is showing itself all over the land, to induce the Department to disregard existing conditions. We need the schools now, or else we need a large appropriation to build schools to take their place.

It would scarcely be just to abolish them entirely, to abandon instantly a policy so long recognized. My own suggestion is that they should be decreased at the rate of not less than 20 per cent a year. Thus in a few years more they would cease to exist, and during this time the Bureau would gradually be prepared to do without them, while they might gather strength to continue without Government aid. This is the policy which is now controlling the Department, and unless it is changed by legislation it will be continued. The decrease in the appropriation for the present fiscal year is 20 per cent.

Now, remember that no successful contention can be made, and in my judgment no contention ought to be made, against the Government providing its own schools for Indians, just as States provide their own schools for the citizens of the different States, but they should deal with the condition that actually exists; and I am credibly informed that a million and a half dollars have been furnished by charitable people of the United States who have taken an interest in Indian education for the purpose of buying farms, tools, implements, etc., for the training and industrial schools and constructing the schoolhouses in which these schools are kept and carried on to-day. The Secretary of the Interior estimates that it will cost the sum of \$1,203,060 to construct the necessary schools for carrying out the recommendations which have heretofore been made, namely, to provide buildings for the Government for the education of the Indian children, and this sum apparently does not provide for farms, tools, stock, etc.

At the proper time I shall offer an amendment that instead of the sum of \$40,000, the amount named in the bill, being appropriated for the purpose of construction and repair of buildings, a

sum equal to one-fifth of the amount which the Secretary says will be necessary to construct the buildings shall be appropriated this year for that purpose, and that he shall be authorized to purchase school buildings already constructed.

Mr. PICKLER. Will the gentleman allow me?

Mr. WEADOCK. Certainly.

Mr. PICKLER. What is the proposition?

Mr. WEADOCK. The proposition is that, as the Commissioner of Indian Affairs and the Secretary of the Interior advise that within five years the contract schools shall be done away with, a 20 per cent reduction being made this year and 20 per cent in each succeeding year, and that we should appropriate 20 per cent of the amount which he estimates is necessary for the purpose of building schoolhouses each year, so that if we reduce contract schools 20 per cent this year, he will have an appropriation of 20 per cent added to the estimates for building schools for that purpose.

Mr. PICKLER. Does that appear in this bill?

Mr. WEADOCK. No, it does not appear in this bill; but that is limited with a specific appropriation which the bill makes of only \$40,000.

There is another place in the bill where, for the use of the Sioux, they appropriate \$70,000, but that, the gentleman will understand, is for a specific purpose, and not for this general purpose at all. Nor can I agree with the idea that the Commissioner and the Secretary have decided upon the best way of disposing of the contract schools. Now, the effect of it means, when you take a school and cut off 20 per cent or one-fifth of the children attending that school (and the appropriations have hitherto been made for a certain number of children at a specific amount each), without making any adequate provision for them, it seems to me that that is a course of procedure which the judgment of this House would not approve.

Mr. HOLMAN. But that is not contemplated by this measure.

Mr. WEADOCK. That may not be contemplated; but that is possible by this measure; and this measure should be so safely guarded that it can not be done.

Mr. DUNN. Is it not the natural result of it?

Mr. HOLMAN. It is barely the possible result.

Mr. WEADOCK. Let me call the attention of the gentleman from Indiana to an instance in my own district. There is a very excellent school at Harbor Springs, where there is a large number of Indians, and a large number of Indian children, and a large school for their accommodation.

That school to-day is clothing, educating, feeding, and training in industrial arts 200 Indian children. There is an appropriation made for only 95 children at that school. Now, under this bill that number, 95, may be reduced by 20, and the school will then be feeding, clothing, taking care of, and educating all these children with a less appropriation than it had before.

Mr. HOLMAN. How is the balance of the money that is required for the support of the school provided?

Mr. WEADOCK. The balance of the money is provided by charity, by people all over the country who contribute for that purpose, by collections taken up from time to time for the support of the Indian missions schools.

Mr. HOLMAN. And the school educates 200?

Mr. WEADOCK. The school takes care of and educates 200 Indian children.

Mr. DUNN. In order to enable the United States Government to carry out its treaty stipulations with these tribes?

Mr. HOLMAN. Oh, no. That school is not supported under any treaty provision.

Mr. WEADOCK. Not at all; but it is one of the schools with which a contract has been made for the maintenance and education of 95 Indian children.

Mr. HOLMAN. As to our treaty stipulations, the Government carries them all out in good faith.

Mr. WEADOCK. This school, as I have stated, takes care of and educates 200 Indian children, and I will read a letter from the superintendent of the school, a letter from the postmaster of the town where the school is located, and a letter from the postmaster of the adjoining town, who was formerly speaker of the legislature of Michigan, recapitulating these facts and showing what excellent work this school is doing. Much attention is paid to industrial training, and, in my opinion, it would be better if in all the Indian schools, as well as in other schools throughout the United States, more attention was paid to manual training and less to the dead languages.

LETTER FROM EX-SPEAKER WACHTEL, NOW POSTMASTER AT PETOSKEY.

PETOSKEY, MICH., November 23, 1894.

Sir: In order that you may have an expression from a disinterested source concerning the Indian school at Harbor Springs, Emmet County, Mich., I beg to state that I have resided here seventeen years, and am familiar with affairs in this section, as well as with the standing and progress of the school referred to. The Indians of this section are poor, and their offspring have limited opportunities for receiving a livelihood or an education—certainly no impetus is received from the parental source. The school at Harbor Springs

is doing a humane and Christian service in that direction by providing both. They have adequate buildings and sufficiently capable teachers. They enroll about 200 Indian pupils, and I believe the average number for the past year has been about 190.

The institution is also provided with printing office and bookbindery, tailor, carpenter, shoe, and bake shops, and in season the boys are also taught farming and gardening. The girls are taught everything that goes to fit them for future life, and both sexes are taught, in addition to the common branches, music, singing, drawing, etc. I have had observation as a legislator of the State Industrial (Reform) School, which is maintained by the State, where they enroll about 500 boys. It is regarded as a magnificent, well-managed institution, and while the Harbor Springs plant is smaller, the general plan and work compare favorably. The children are sent out well equipped for life's work.

If this statement will assist in encouraging you to provide necessary means for the maintenance of the institution for the present and for the future it will be assistance worthily granted.

PHILIP B. WACHTEL, *Postmaster.*

To the honorable ASSISTANT INDIAN COMMISSIONER,
Washington, D. C.

LETTER OF A. J. SOUTHARD, POSTMASTER OF HARBOR SPRINGS.

HARBOR SPRINGS, MICH., November 26, 1894.

DEAR SIR: I wish to call your attention to the Indian industrial school of this place, which I consider a model for the purposes for which it is intended. I am informed that they only receive an allowance for 95 scholars while they are feeding, clothing, and educating nearly 200.

I wish to urge upon you the importance of strengthening this school if the Government proposes to do anything for the Indian's education. The school is giving them practical training in the different trades and occupations besides a good literary course. They have a printing office, tailor shop, shoe shop, carpenter shop, laundry, and other practical and instructive departments besides the school proper, and are training the young Indians up to be sober, industrious, and useful citizens instead of worthless savages.

I have been a member of the school board in this village for years, and I wish to say that our common schools are of no practical benefit to the Indians, and we are unable to secure their attendance, and if we did our course of instruction is not adapted to their needs. I know of no other possible way of doing so much for the rising generation of Indians as through the school established here or of spending the same amount of money for them that would accomplish nearly as much good.

I would be thankful for anything you could do for the school.

Yours, respectfully,

A. J. SOUTHARD.

Hon. T. A. E. WEADOCK.

HARBOR SPRINGS, MICH., November 30, 1894.

DEAR SIR: It gives me great pleasure to commend to you the good work being done here in the Indian industrial school, under the auspices of the Franciscan Fathers and the Sisters of Notre Dame. I have lived here for the past fourteen years and my business has brought me in contact with the Indians almost constantly, being in the law and real-estate business.

I know how they live and how they bring up their children, and it is a perfect godsend for their children to be placed in some school where they can be taught to be virtuous, kept clean, well fed, kept away from bad influences, acquire some book knowledge, and be taught some useful occupation.

The school I have referred to is doing this kind of work and making good citizens out of what would otherwise be the vicious and depraved element in society. At the present time the school has an enrollment of 190, while the Government only helps support about 95. Unless increased help is given, the school will be seriously crippled in its usefulness and a good many of the pupils will have to go back to the bad influences of their home life. I prepared myself for the life of a teacher and taught seven years and can appreciate the good being done in the school, especially in the line of manual instruction, thus preparing its pupils for the useful occupations of life. I trust you can aid the school by getting increased appropriations for it.

Yours, very truly,

A. L. DEUEL,

Ex-County Commissioner of Schools.

Honorable COMMISSIONER OF INDIAN AFFAIRS,
Washington, D. C.

To the Honorable COMMISSIONER OF INDIAN AFFAIRS,
Washington, D. C.:

We, the undersigned citizens of Harbor Springs, Mich., recognizing the good that is being done in the Indian industrial school of this place under the auspices of the Franciscan Fathers and the Sisters of Notre Dame, would respectfully request you to recommend that an increased appropriation be made to aid said school in carrying on its good work. We believe an allowance is now made for taking care of and educating 95 out of 190 pupils, and unless the school gets some additional help a great many of the children will have to be sent back to the poverty and destitution of their homes. The school is doing a noble work, not only giving the pupils a good book knowledge, but giving them good manual instructions, thus fitting them for useful occupations in life. Bookbinding, carpentering, shoemaking, tailoring, and typesetting, and breadmaking are taught.

Hoping that the way is clear for you to aid the school in extending its usefulness, we are,

Very truly, yours,

A. L. DEUEL,

Ex-County Commissioner of Schools.

W. F. CLARKE, *"The Clothier."*

FRANK F. FOSTER,
President of Harbor Springs.

Mr. DUNN. With the permission of the gentleman from Michigan, I will ask the gentleman from Indiana this question: Is it not a fact that those Indians are the wards of the United States Government by former treaties?

Mr. HOLMAN. There is no treaty that makes them our wards. We treat them as wards of a nation by providing for them, but there is no treaty which makes them wards of the nation, except to the extent that we agree to furnish money for feeding, educating, and clothing them.

Mr. DUNN. Are we not morally bound to provide for those people?

Mr. HOLMAN. Well, upon the whole, everything considered, I think we are.

Mr. DUNN. Now, if you take away one-fifth of the appropriation, then there is one-fifth of our moral obligation that we do not perform, but leave charity to perform it for us.

Mr. HOLMAN. We do not take away one cent of what is required by the moral obligation. The appropriations in this bill cover everything that has been deemed necessary except those provisions that operate in favor of white people.

Mr. WEADOCK. Let me say to the gentleman from Indiana that it seems to me that, instead of providing for only 95 Indian children in this case, the appropriation ought to be increased. When the Government of the United States has not seen fit to erect a school of its own at that place, where there are so many Indians, and when, although the place is within the pale of civilization, the Government has made no provision for educating these Indian children in the public schools, it seems to me that instead of making a reduction of 5 per cent the appropriation ought to be increased to include all of those Indian children, and I think that should be the rule, so that in every place where there are Indian children, either in the Government school to be established and maintained at the expense of the General Government or in a private school already established, every Indian child desiring or requiring an education of the one kind or the other, industrial or literary, should have an opportunity to obtain it.

Mr. DUNN. And without the aid of charity.

Mr. HOLMAN. I would remark to my friend from Michigan that the presence of large numbers of Indian children at these schools is very common everywhere. Charitable people feel interested in the Indians and contribute money for their support and education at other schools, as in this case; so that this is not an exceptional instance.

Mr. PICKLER. Will the gentleman from Michigan allow me a word?

Mr. WEADOCK. Certainly.

Mr. PICKLER. The gentleman from Indiana [Mr. HOLMAN] believes that all these Indian children should be educated on the reservations, and therefore he is opposed to appropriations for such schools as that which the gentleman from Michigan has been speaking of. As far as I am concerned, I am glad that the people of the East are interested in these Indian schools, and while I do not want to increase the number of Government schools in the East, I am in favor of protecting and maintaining those that are in operation and doing the work.

Mr. WEADOCK. What the gentleman has said would be an excellent answer if there was a school on this reservation or at this place, but there is not, and unless these Indian children go to the school of which I have spoken, or go to the public schools, which they will not do, they can not go to school at all.

Mr. HOLMAN. I wish to say, in connection with the remark of the gentleman from South Dakota, that I do not believe you will ever succeed in educating these Indian children until you educate them all, and to do that you must have the schools in their midst so that the fathers and mothers will be influenced in a general way by the education which you impart to the children.

Mr. WEADOCK. And you do not improve them by taking them thousands of miles away from home and placing them among strangers. They ought to be educated at home.

Mr. HOLMAN. You do not improve them at all by taking them away.

Mr. WEADOCK. Now, Mr. Chairman, instead of this method of doing away with the contract-school system by attrition, would it not be ever so much better to fix a certain time in the future at which the Government shall take care of and educate all these Indian children in its own schools? Do not provide that a certain number of children, a certain arithmetical per cent, shall be deducted from this or that school year by year, but provide that at a certain time the Secretary of the Interior shall have procured or established Government schools, which thenceforth shall take the place of the contract schools. Would not that be infinitely better than dribbling at the question in this fashion?

In this manner you would have a definite plan to operate upon. It certainly can not be claimed by anyone familiar with the principles either of law or equity and desiring to see them enforced by this legislation that charitable men and women should be encouraged for twenty-five years to give their money for the purpose of establishing these schools, until the investment has reached a million and a half of dollars, and then that an arrangement should be adopted by which all this property is to be rendered entirely useless. That is the contemplation of this bill—

Mr. HOLMAN. Oh, no; the bill contemplates—

Mr. WEADOCK. Wait a moment. I say that is the effect of the bill, because in no part of it is there any provision to enable the Secretary of the Interior to purchase the buildings already erected. Now I yield to the gentleman from Indiana [Mr. HOLMAN].

Mr. HOLMAN. I admit that the clause appropriating the \$40,000 does not now contain the word "purchase," but it can be placed there.

Mr. WEADOCK. I am not referring to that. I am bearing in mind the statement which the gentleman from Indiana [Mr. HOLMAN], the chairman of this committee, made yesterday, that the omission of the word "purchase" was a clerical error. But he will remember that the amount is only \$40,000 for construction and repair of all the Indian schools throughout the United States. Why, sir, we raise three or four times that amount in some of the small towns of this country for the purpose of construction and repair of school houses.

Mr. HOLMAN. Let me say to the gentleman that we appropriate in a single paragraph of this bill \$1,124,350 for general educational purposes; and I see no reason why a provision for purchase should not be included, so as to give greater latitude to the Secretary of the Interior and the Commissioner of Indian Affairs, and to allow them to expend in the purchase of these various institutions which have been established over the country such portions of that large sum as may seem proper.

Mr. WEADOCK. That is why I said that I thought the chairman of that committee would probably agree to my amendment, which provides that of this sum of \$1,203,060 which the Secretary of the Interior estimates it will cost to construct schoolhouses, one-fifth be appropriated this year to take the place of the one-fifth that you have cut off from these other schools. I can see no objection which the chairman of the committee can urge to this proposition.

My objection to the bill is that it leaves this matter entirely too much to the discretion of the Secretary of the Interior, who in turn will leave matters largely to the discretion of the Commissioner of Indian Affairs. The House in framing a bill of this kind should fix it so that there shall not be too much latitude for construction, and so as to insure that the legislative intent shall be properly carried out.

Mr. SMITH of Arizona. While my views are largely in harmony with the suggestion of the gentleman from Michigan, I wish to ask whether, if we do not place a pretty liberal discretion in the hands of the Secretary of the Interior or some executive officer, the result might not be, under the gentleman's amendment, that a school which the Government should never purchase on account of its surroundings, being confessedly at the wrong place, may be forced upon the Government?

Mr. WEADOCK. No, no. I do not wish an amendment in that shape. I wish the Secretary of the Interior to have abundant discretion in every case as to whether he shall purchase or build. I do not want him to be put into such a position that he shall be obliged to buy any building, whether he desires to do so or not. I wish him to have the discretion so that he may buy or not, as he sees fit. I have confidence in the fairness and integrity and good judgment of the Secretary of the Interior. I assume that if he can buy a building already erected—perhaps which has existed for more than a quarter of a century under this policy—if he can buy such a building in the right place for the education of the children, and at a fair price, he will purchase it instead of constructing a new one.

Mr. SMITH of Arizona. He should do so.

Mr. WEADOCK. Certainly.

Now, I want to go further and address myself to another feature of the bill, to which I shall offer an amendment. The bill proposes to appropriate this year 80 per cent of the amount appropriated last year for the purpose of carrying on Indian education and contract schools; but that matter is left entirely to the discretion of the Secretary of the Interior. He need not make a single contract unless he sees fit to do so. It rests with one officer to say, as soon as this bill becomes a law, that he will not renew any of those contracts. This, it seems to me, would not be fair or proper. Hence I shall offer an amendment similar to—nay, in the very words of one which was offered and adopted to the Indian appropriation bill in the Fifty-first Congress (and that will commend it to the gentleman from South Dakota), an amendment providing that a certain proportion of this 80 per cent shall be spent upon this class of schools—not naming them necessarily—upon schools with which the Indian Bureau now has contracts.

The gentleman from Indiana says that that is the fair purport of the bill. It may be so; that may be the opinion of the gentleman from Indiana; it may be the opinion of the Indian Committee and the members of this House. Yet unless some such amendment be adopted it will rest with the Secretary of the Interior or the Commissioner of Indian Affairs (who seems to be somewhat susceptible to pressure in these matters) to say whether or not he will carry out this legislative intention. The amendment I have referred to was incorporated in the Indian bill passed during the second session of the Fifty-first Congress:

Provided, That at least \$535,000 of the money appropriated for the support of schools under this act shall be used exclusively for the support and education of Indian pupils in industrial and day schools in operation under contracts with the Indian Bureau.

The bill in its present shape is wrong, because in effect it discriminates against a large number of the best, most successful, and hitherto flourishing educational institutions in the Indian service on strictly religious grounds. In so doing it closes the door of education to an army of Indian children for whom there is no other present provision and leaves them to become victims of the obnoxious policy of farming them out to settlers, among whom they are not always, nor perhaps in a majority of cases, gently treated nor improved morally or mentally. The Catholic Indian schools have capacity for the accommodation of Indian pupils considerably beyond the number the Government now allows them. Would it not be a disgrace to the country that these children should be left without the means of improvement merely to satisfy a fanatical, intolerant, un-American outcry against the schools of one Christian denomination?

Since the advent of Commissioner Morgan, the Administrations of Mr. Harrison and the second of Mr. Cleveland have appeared to ignore all rights and equities presumed to be possessed by the persons and religious bodies who, years ago, responded to the invitation of the Government, extended through General Grant and his successors, to assist in civilizing the Indians.

They have seemed to forget that in General Grant's time the United States had come to regard its former Indian policy of brute force and cruel repression as a mistaken and immoral one and a political failure, and had become urgent that the Christian administrations of the country generally should try what denominational missionary work might accomplish. Thus the missionary policy was established, and its splendid results in the elevation of the Indian and the growing peace of the frontier elicited the gratification and praise of all the Presidents, Secretaries, and Indian Commissioners down to Harrison and Morgan. Praise was lavished on the public-spirited citizens who had furnished money for the erection and equipment of these mission schools. Their philanthropy was extolled, and gracious promises of countenance, moral support, unlimited contracts, and national protection were held out to all who would emulate their noble example.

In these days of peace and good will no one could have believed that any administration of whatever party would undertake to break the plighted faith of the nation to the people who had undertaken the missionary and educational work itself had urged them to. Down to the Morgan era no one could have supposed that any sectarian question could be successfully injected into a policy which was utterly devoid of sectarianism, because it gave to every Christian denomination the common right to enter the field and to do as much as it pleased, or was able, for the material, mental, and spiritual welfare of the Indians.

The spirit of fanaticism and bigotry introduced into the problem by Morgan, aided by obnoxious outside influences, has seemed potent enough to obscure all memory of the faith and pledges of the nation; of the rights and equities of those who have reared the fabric of Indian education, now marked for demolition; or of the great and lasting good accomplished by these mission schools.

Intolerance devotes them to destruction in the name of non-sectarian education, indifferent to right, justice, equity, history, or achievement; indifferent to universal testimony of Indian inspectors to the effect that the Catholic Indian schools are all good, give full satisfaction, and are and always have been a credit to themselves and the service.

It seems to me that there can be no valid objection to incorporating it into law, to make that definite and certain which is now indefinite and uncertain, and insuring in this way as far as we can that the legislative intent in making the appropriation shall be carried out.

Mr. BROSIUS. If the gentleman will pardon me, I want to understand his point. I do not think I apprehend correctly his position. Do I understand that you propose to restrict the Secretary of the Interior in making his contracts for the coming year to those institutions with which contracts have been made in the past for this purpose?

Mr. WEADOCK. The bill practically does that now.

Mr. BROSIUS. What portion of the bill does the gentleman refer to?

Mr. WEADOCK. I refer to page 50. But I make it certain and definite by the amendment I offer. The bill provides:

For support of Indian day and industrial schools, and for other educational purposes not hereinafter provided for, including pay of draftsmen at \$1,200 per annum, to be employed in the office of the Commissioner of Indian Affairs, \$1,124,350.

Mr. BROSIUS. Where are you reading from?

Mr. WEADOCK. I was reading from page 50 of the bill, and had read down to the twelfth line.

Provided, That the Secretary of the Interior may make contracts for the education of Indian pupils during the fiscal year ending June 30, 1896, to an extent not exceeding 80 per cent of the amount so used for the fiscal year 1895, and each succeeding year he shall proportionately so reduce the amount thus used that at the end of five years from the date on which this act goes into effect all contracts for such education shall cease.

Now, it is stated by the gentleman from Indiana as his understanding of the bill that the Secretary of the Interior may renew or make the same contracts to that amount—that is to say, to 80 per cent of the amount used for the fiscal year 1895.

Mr. BROSIUS. I do not understand the gentleman from Indiana to make any such proposition or suggestion. Certainly there is no warrant for it in the language of the bill. It would be a restriction, I think, that no representative body like this would like to impose on the Secretary of the Interior. For example: Suppose an institution—one of these institutions with which contracts have been made—should turn out to be wholly inefficient, or should break up, and it would become necessary to make a contract with some other institution; under that interpretation, as I understand you, this power would not be lodged in the Secretary of the Interior, and he could not make a new contract.

Mr. WEADOCK. The suggestion of the gentleman answers itself. If you employ a man to work for you, and he dies, you employ another.

Mr. BROSIUS. But you say that there is a restriction in the bill which would prevent the Secretary of the Interior from making a new contract with any other institution.

Mr. WEADOCK. The gentleman from Pennsylvania misunderstood my statement.

Mr. BROSIUS. Well, I am very glad to know that I have misunderstood the gentleman, because I could not help thinking it a singular and unwarranted position.

Mr. WEADOCK. The bill itself provides by name certain institutions as, for instance, the Haskell Institution in Kansas, the Carlisle School in Pennsylvania, the Hampton School and other institutions for which it makes specific appropriations. The bill also allows the Secretary of the Interior to make contracts with whom he sees fit to the extent of 80 per cent of the appropriations for that purpose used in the preceding year.

Mr. PICKLER. And that is all the restriction there is in the law?

Mr. WEADOCK. Certainly. But the gentleman from Indiana says it is the legislative intent in passing the bill that he will make the contracts with the same schools. Now, it is not contemplated, of course, that new schools will be started with which contracts may be made. There are only certain people now engaged in this business with whom contracts could be made—

Mr. BROSIUS. If the gentleman will pardon me, the very point I made inquiry about was whether, in the opinion of the gentleman, the Secretary of the Interior was restricted in his contract to the institutions with which the contracts had been made in the past. The answer of my friend, as I understood him, was that the bill substantially so provided. Now, if I was misled in my understanding of the gentleman's response I was misled by the gentleman himself.

Mr. WEADOCK. The gentleman from Pennsylvania will bear in mind that my answer to his inquiry included both the construction of the bill by the gentleman from Indiana and the bill itself. I think the bill is open to objection that it is leaving altogether too much to the discretion of the Secretary of the Interior in regard to a matter of this character.

Mr. BROSIUS. My understanding of the bill, as it is drawn, is that it restricts him in the expenditure of the appropriation specified to contracts already existing—

Mr. WEADOCK. Or to the renewal of them. That is right.

Mr. BROSIUS (continuing). But that he is at liberty to make new contracts with other institutions, if it shall become necessary.

Mr. WEADOCK. Certainly. But my amendment is that he shall be restricted in this way to schools already in existence, and with which contracts have been heretofore made.

Mr. PICKLER. That would compel him to engage those schools up to the extent of 80 per cent of the appropriation for the preceding year.

Mr. WEADOCK. Exactly.

Mr. PICKLER. Suppose that it was not desirable to do so, or that the schools had not been satisfactory, or for other reasons such contracts should not be made?

Mr. WEADOCK. I will state to the gentleman that the amendment I propose to offer is exactly similar to an amendment which was passed at the second session of the Fifty-first Congress.

Mr. BROSIUS. That is the very point I raised. Suppose one of these institutions becomes inefficient and fails?

Mr. WEADOCK. That answers itself. Of course, in the discharge of any duty any officer has a discretion to do that duty properly.

Mr. BROSIUS. Not if he is prevented from doing so by express stipulations in the law.

Mr. WEADOCK. Well, that presupposes that a contracting party is in a condition to contract and in a condition to fulfill his contract.

Mr. BROSIUS. Where the law contains express provisions it

presupposes nothing but what it expresses, and if there is a mandatory limitation in the law it is idle to say that the Secretary may violate those limitations when the necessity exists for doing so.

Mr. WEADOCK. I do not agree with the gentleman. Suppose we should provide in the District of Columbia bill that a hundred poor people shall be maintained at a certain hospital in this city. Will the gentleman contend for a moment that if that hospital should burn down, or they could not take care of people there, it would still be binding on the Secretary to have the people cared for there instead of somewhere else?

Mr. BROSIUS. I do not know that it would.

Mr. WEADOCK. Certainly not.

Mr. BROSIUS. But that is not a similar case at all.

Mr. WEADOCK. And if they do not properly take care of these children—

Mr. BROSIUS. The illustration illustrates nothing, because the conditions are totally dissimilar. Let me try to make it plain to my friend, if I do not trouble him too much.

Mr. WEADOCK. Not at all, sir.

Mr. BROSIUS. If this limitation means anything it means that the Secretary is compelled in making his contracts to contract with the institutions already sustaining contractual relations with the Government.

Mr. WEADOCK. It means just that.

Mr. BROSIUS. Very well now. Your suggestion, as I understand it, is that in making the contracts he shall be limited to the same institutions. Now, my objection to that is that one or more of those institutions may fail to serve its purpose. In that event ought not the Secretary to have the discretion to make a contract with some other institution and let the old one fall?

Mr. WEADOCK. He would have that discretion under this amendment.

Mr. BRICKNER. That was done under the provision adopted in the Fifty-first and in the Fifty-second Congresses.

Mr. WEADOCK. Now, I desire to read this amendment which I have referred to:

Provided, That at least \$228,200 of the money appropriated for the support of schools in this act shall be used exclusively for the support and education of Indian pupils in the industrial and day schools in operation under contracts with the Indian Bureau.

That amount would be 80 per cent of the amount appropriated in the last bill.

I simply want to pin it, so that what is apparently proposed to be done in this bill shall be done. Of course, if a school does not fulfill its purpose, if it is not a proper school, if it is not properly located, if it does not carry out its contract and educate these children as they should be educated, according to the judgment of the officers whose business it is to supervise that work, then I want no contracts made with them, and under this amendment, according to my understanding of the law governing this subject, there would be no contracts with them.

Mr. BROSIUS. Would it be too much trouble to read that amendment again?

Mr. WEADOCK. I will hand it to the gentleman.

Now, if it is the intention of this bill to appropriate this sum for the purpose of maintaining these children in these schools, certainly there can be no objection to making that specific and definite in the law. If any gentleman thinks that any additional safeguard is needed, either for the protection of the Government or for the securing of education for Indian children, that may be offered by way of amendment to this amendment or to other portions of the bill.

But to recapitulate and conclude, let me state that all these people desire who have been interested in this charitable way in this question of Indian education, all that fair-minded people and fair-minded legislators should desire, is that when investments have been encouraged by a policy of the Government so long established as this, when these investments have been made in good faith, when this education furnished at these schools has been good and for the benefit of the Indians, as testified by all who are acquainted with them, then we should not either indirectly or directly ruin the value of this property and injure the Indians in the manner in which I think they will be injured if the particular idea is carried out in the manner suggested.

Let the Government provide suitable education for all the Indian children in these Government schools at Government expense, but in doing that let it not do rank injustice to charitable people or investments already made on the encouragement, approval, and good faith of the Government, and if that is done no person certainly will have the right to complain.

At this point I desire to call the attention of the committee and the country to the deliberate and willful misstatements that have been disseminated by malicious fanatics in reference to the Indian appropriation bill of last year. That bill, H. R. 6913 of 1894, making appropriations for current and contingent expenses of the Indian Department and fulfilling treaty stipulations with various

Indian tribes for the fiscal year ending June 30, 1895, was introduced by the Committee on Indian Affairs, Judge HOLMAN of Indiana being chairman, on May 1, 1894. (RECORD, page 5143.)

The bill was debated briefly by Mr. LYNCH, of the Indian Committee, and others.

The first vote on the contract schools came on the motion of Mr. HULL of Iowa to strike out the school named "St. Boniface's Industrial," at Banning, Cal., which would have had the effect of defeating any appropriation for that school.

On Friday, June 15, a special rule was adopted providing for a vote at 3.30 p. m. that day, which time was extended to the next day at the same hour. The rule was adopted by 176 to 76.

The Hull amendment was defeated, 20 to 57. (RECORD, page 7587.) On June 17, Mr. GEAR of Iowa, after the bill had been reported by the Committee of the Whole House, moved to recommit the same with the following instructions:

Resolved, That the bill (H. R. 6913) "making appropriations for current and contingent expenses of the Indian Department and fulfilling treaty stipulations with various Indian tribes for the fiscal year ending June 30, 1895, and for other purposes," be recommitted to the Committee on Indian Affairs, with instructions to report the same back to the House forthwith, amended as follows:

Striking out all of the bill relating to the Indian school, beginning with line 8, on page 50, and all of pages 51, 52, 53, 54, 55, 56, 57, and 58, and inserting in lieu thereof the following:

"For support of Government Indian day and industrial schools, and the erection and repair of Government school buildings on Indian reservations and at places where the Government has established and is now maintaining Government Indian schools, and for each and every purpose necessary in the judgment of the Secretary of the Interior for the establishment and proper conduct of such schools, \$2,225,000: *Provided*, That pending the establishment of such schools on Indian reservations, the Secretary of the Interior may, in his discretion, during the fiscal year 1895, authorize contracts to be made with established schools not conducted by the Government, for the education and support of Indian pupils, and to pay therefor from this appropriation; and the Secretary of the Interior shall report to the first regular session of the Fifty-fourth Congress, in detail, all expenditures made and authorized by him under this appropriation: *Provided further*, That nothing herein shall be construed to prevent the sending of Indian children, at no expense to the United States, to schools not conducted by the Government."

Mr. O'NEIL of Massachusetts made a point of order against the instructions. Mr. O'NEIL of Massachusetts. I make the point that it is new legislation and not in order; that it changes existing law and does not retrench expenditures.

The SPEAKER. It seems to the Chair that this is new legislation on the subject of Indian schools. Does the gentleman know of any provision by which such legislation may go on an appropriation bill except when it reduces expenditures?

Mr. CANNON of Illinois. Wherein does it legislate?

The SPEAKER. It provides—

Mr. CANNON of Illinois. It appropriates.

The SPEAKER (continuing):

"For the support of Government Indian day and industrial schools and the erection and repair of Government school buildings on Indian reservations and at places where the Government has established and is now maintaining Government Indian schools, and for each and every purpose necessary, in the judgment of the Secretary of the Interior, for the establishment and proper conduct of such schools, \$2,250,000."

And then it says:

"That pending the establishment of such schools on Indian reservations the Secretary of the Interior may, in his discretion, during the fiscal year 1895, authorize contract to be made with established schools."

That authorizes him to make temporary contracts for the establishment of schools.

Mr. CANNON of Illinois. Yes, sir. May I call the attention of the Chair to one thing, because I think the Chair has not examined it or the bill itself. This resolution provides for all the Government schools that the bill provides for and for a part of the contract schools temporarily that the bill provides for, the Chair will find; and if there is legislation in one there is legislation in the other. And the Chair will find, further, that there is only appropriation in either.

Mr. BURROWS. These contract schools are already provided for by law.

The SPEAKER. These are contract schools; but this proposes to give permission to make contracts with other schools.

Mr. CANNON of Illinois. Ah, but this provides for contract schools in any degree if no Government school be near.

The SPEAKER. Then you propose legislation to go beyond this appropriation?

Mr. CANNON of Illinois. Oh, no.

The SPEAKER. It must be one or the other.

Mr. CANNON of Illinois. We do not legislate at all in that resolution within the meaning of Rule XXI. We only provide in that instruction for the expenditure of the money appropriated here for the coming fiscal year, nothing more or less, and no broader in that respect than the bill itself.

The SPEAKER. As the Chair understands it, under the present law, under provisions contained in appropriation bills, the Government is engaged in supporting the education of Indians by contracts with existing schools.

Mr. CANNON of Illinois. And by Government schools and contract boarding schools.

Many millions of people entertain the ideas which I have so imperfectly expressed upon this subject.

I appeal to the American Congress for fair treatment to the worthy men and women who, amid privations in the wilderness, are giving their lives to civilize and educate the Indian children, and I appeal especially to the majority in this House, representing that great party that has always opposed that bigoted, ignorant, un-American clamor which now assails the most useful Indian schools we have ever had, to still oppose such attacks against any portion of that great body of citizens which constitutes the free Republic of the United States.

The Currency.

SPEECH

OF

HON. W. BOURKE COCKRAN,

OF NEW YORK,

THE HOUSE OF REPRESENTATIVES,

Saturday, January 5, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. COCKRAN said:

Mr. CHAIRMAN: The disposition which has been developed during the progress of this debate, to treat the regulation of our currency as a party question is likely to wreck a measure of great importance to the American people on the rocks of political expediency. For my part, I confess at the outset that the vote of confidence which the people gave my party in 1892 has been reversed by the later vote of 1894, and I do not think the constitutional provision which preserves this House alive until the 4th day of March contains any moral warrant for legislation of a partisan character. Under our system of Government the existence of each Congress is prolonged long after its successor has been chosen because it is essential to the security of our institutions that the electoral vote be counted by a recognized authority in full operation. I do not believe the precautions which have been adopted to secure the public tranquility justify an attempt at party legislation by a majority which has been condemned at the polls and which has been allowed to survive solely through a constitutional necessity. I asserted this principle after the election of 1890; I confess it now after the election of 1894.

If this question is to be treated as a party question through the belligerency of either side of this Chamber, I believe it would be better to drop it now, rather than disturb the recuperative tranquility of our sorely tried industrial system by an agitation without prospect and a debate without result. I have taken the floor to ask the impartial attention of the House to the nature of money and currency, in the hope that I may persuade both sides of the Chamber that this question cannot be treated according to political exigencies, but must be dealt with according to those immutable laws which govern the productive capacity of all mankind. If this House shall succeed in establishing our monetary system upon some plan consistent with human experience and human reason, its remaining days will not be without profit and its end will not be without honor.

Ever since man has accumulated property he has established government for its security, but the manner in which the functions of government are to be exercised, the distribution of its powers, who shall make the laws, by whom they shall be executed, to whom the sword shall be trusted, in whose hands the scales of justice shall be held, the precise limits inside which government is protection, beyond which it is tyranny—all these are questions on which the opinions of men have divided ever since the birth of civilization. They are the proper subjects of political contention because they are matters entirely within the control of men. In adding to the sum of human knowledge by experiments in the adjustment of these powers parties are the most effective agencies. But surely an attempt to divide the opinion of the American people on the prospects of the crops, on the character of the weather, on their preference for a dry or for a rainy season, or upon any of those subjects which are above and beyond the control of man, would be considered the vaporings of a lunatic rather than the suggestions of a statesman. [Applause.]

Now, the economic laws which govern industrial production are just as immutable as the laws which govern the course of the seasons or the state of the weather. No law which we may enact can either control or affect them. To defy them is to invite ruin; to obey them is to enjoy a proportion of these blessings by which the God of mercies fructifies human labor.

I appeal, then, to gentlemen on both sides of this Chamber to consider this matter strictly in its economic aspects. Political disputes among those charged with the treatment of a dangerous financial condition would be as wicked and as indefensible as political disputes among firemen before the blazing walls of a crowded building or between physicians at the bedside of suffering and sinking humanity.

The tendency of political parties to frame their platforms on the assumption that Government can control the operation of economic laws is an extraordinary feature of popular government. I can account for it only on the theory that for the last generation the people have been confused and misled by high-sounding and

sonorous but empty and meaningless phrases. For fifteen years, aye for twenty years, we have been regaled with disquisitions and elaborate discourses upon "the stealthy crime of 1873," upon the rights and the wrongs of silver, upon the "duty of Government to supply an elastic currency sufficient in volume for the growing needs of our rapidly increasing population," on the "duty of Government to fix a ratio between silver and gold, either by international agreement or by domestic legislation," and a host of other vague, pretentious, incomprehensible expressions from which the human mind has shrunk in doubt, if not in terror. [Laughter.]

Mankind has always loved mystery. During recent years economic science has been so beclouded by turgid rhetoric that whoever professed to hold the key to its mysteries was accepted as a statesman by a weary and mystified people. As the magicians of the middle ages plied their craft by outward signs and formulas which terrified the multitude and through their terrors fascinated them, so these magicians of political economy have puzzled the people by vaporous platitudes, and by confusing the popular intelligence they have succeeded in perverting the popular judgment. The necromancer of old, stern visaged and solemn, wrapped in a mantle, lined with cabalistic figures, was no more extraordinary a personage than the necromancer of modern politics, loquacious and illogical, holding in his hands reams of paper covered with unintelligible and nonsensical phrases. The alkahest was no more absurd a conception than the "double standard of value." The astrologer's jargon of transposed syllables and bogus Latin was no more ridiculous than some of the orations with which the latter-day political astrologist has amused himself and confounded his auditors. [Laughter.]

In this age of scientific achievements we are apt to look back with pity on the generations which accorded occult powers to Nostradamus, and were awed by the quackeries of Cagliostro, which allowed their daily affairs to be controlled by the prognostications of impostors and believed incantations to be more effective than labor, yet our contempt should be modified, our charity broadened, and our sympathy quickened when we survey the condition of this country to-day. We behold our finances disordered, our production restricted, our prosperity blighted, our industry paralyzed because this highly intelligent nation has surrendered the control of its legislation to a miscellaneous crowd of charlatans, some of whom declared that the condition of the laborer was improved when his wages were paid in a bad dollar instead of a good dollar; while others insisted that taxation was the hand-maiden of prosperity, and that commerce flourished in proportion to the burdens which were imposed upon it.

Mr. Chairman, it is undoubtedly disheartening and unpleasant to put aside the mantle of greatness—to descend from the sonorous heights of incomprehensible platitudes to the plain level of everyday speech. Yet as my friend from Missouri [Mr. BLAND], who in his castigation of the gentleman from Louisiana proved himself to be as stern in discipline as he is robust in faith, and my friend from Nebraska [Mr. BRYAN], who insists that the silver cure is the one sovereign specific for the ills of commerce, will, like myself, within a very short time abandon the outer and stormier corridors of statesmanship for the inner and quieter temple of jurisprudence, surely all three of us might consent to doff the mystic garb of occult science with which we have been wont to awe our fellows into silence, if not into respect, and in the plain language of plain citizenship discuss a palpably pregnant evil and endeavor to agree on some means to avert it. [Laughter.]

Mr. BLAND. Will the gentleman allow an interruption just there?

Mr. COCKRAN. Not now.

Mr. BLAND. I understood that we were to have prosperity when we repealed the Sherman law last summer?

Mr. COCKRAN. Mr. Chairman, I did not intend to yield, but the gentleman from Missouri, always illumines every question that he examines, even when he does not intend to unveil the full light of his intellect. [Laughter.] I thank him for his interruption. I challenge the gentleman from Missouri to point out a word of mine which prophesied that the repeal of the Sherman law would bring prosperity to this country. It is the province of the quack and the charlatan to pretend that prosperity can be created by legislation; that any party, faction, or leader possesses a secret by which wealth can be produced through any other force than the industry of man.

I do not propose to begin this discussion by assuming to be better or wiser than my fellows, but to set out with the declaration that there is nothing new nor mysterious nor difficult in political economy.

There is nothing in the laws governing the trade of a country different from the laws which govern the trade of an individual, for the commerce of a country is but the commerce of the individuals that compose it. I do not claim to have discovered any new principle. When the merciful God told the first man that in the sweat of his brow he must eat his bread he revealed to him and to

all his posterity the whole economic law governing production—the one infallible rule by which industrial prosperity can be achieved. [Applause.]

All wealth must be created by human toil. Government can never be a producer. It consumes, but it can not create. What it gives it must take. Government can not therefore be generous and just at the same time, for to be generous to one it must be oppressive to another. The government that does equal and exact justice to all, that conserves to every man the bread which in the sweat of his brow he has kneaded, is a government based upon the word of God and the law of nature; its foundations are indestructible, its limitations are salutary, its operations are always beneficent. [Applause.]

A measure has been reported to this House providing for a new system, or at least purporting to provide for a new system, of circulating notes, and at the threshold of the discussion we hear so much that is childish, so much that is puerile, so much that is incomprehensible about banks and currency, that I must ask the attention of the committee to the fundamental principles governing the functions of money.

The operation of every dollar can be illustrated by the operation of one dollar as it moves and circulates in the course of a single day—if the House will allow me to repeat here an illustration which I used in discussing the repeal of the Sherman law.

Let us assume that a man leaving his house in the morning takes from his pocket a dollar, and with that dollar purchases a beefsteak. The butcher with that same dollar purchases a knife at the cutlery store. The cutler goes to the dry-goods store and purchases a dollar's worth of dry goods; the dry-goods merchant goes to the stationery store and purchases a dollar's worth of stationery; the stationer goes to lunch and pays a dollar for a meal; the hotel or restaurant keeper goes to a bookstore and buys a book for a dollar; the bookseller goes to a haberdasher and buys a dollar's worth of neckties; the haberdasher goes to the baker and buys a dollar's worth of bread; the baker goes to the grocer and buys a dollar's worth of tea; and the grocer goes to the wine merchant and buys a dollar's worth of wine, each of these persons in turn making use of the same dollar. Here we have ten separate operations performed by that one dollar, and it must be perfectly plain to everybody that at the conclusion of the day ten persons have exchanged commodities equal to the value of ten dollars through the medium of a single dollar.

The exchange of these commodities among these ten persons would not have been promoted, stimulated, or increased in any way if there had been three, four, five, or six dollars performing the functions which that one dollar performed. And as ten dollars' worth of commodities were circulated by that one dollar, so fifty dollars' worth of commodities could have been circulated by it, if its activity were multiplied five times.

Mr. Chairman, the dollar whose movements I have described simply facilitated the exchange of commodities among persons who were strangers to each other. Although the butcher delivered his beefsteak to me he actually exchanged it against the knife of the cutler, by means of my dollar. The cutler did not happen to need a beefsteak. He needed some other commodity. I needed the beefsteak, and through my dollar the beefsteak of the butcher and the knife of the cutler were exchanged. At the end of the transactions I had the beefsteak, the cutler had another commodity, and the butcher had a knife. Now, if there never had been a dollar in existence, some of those commodities would have been exchanged, but the exchanges would not have been so rapid or so numerous. The butcher would have waited until the cutler needed a steak. In the fullness of time the cutler would be compelled to purchase meat. He would then bring his cutlery to the butcher's store, and if the butcher at that time happened to need a knife an exchange of their wares could have been effected.

If all commerce were suspended until each person who produced a commodity should meet a person who needed that precise commodity, and at the same time had a commodity of his own which the first producer needed, trade would be reduced to a very narrow compass, intercourse between men would be greatly restricted, and this would be an age of poverty, of ignorance and decay, instead of—

Mr. HUTCHESON. Will the gentleman yield to a question here?

Mr. COCKRAN. Yes, sir.

Mr. HUTCHESON. The gentleman's argument is perfectly unanswerable if he will simply allow me to introduce an element for him. If a butcher had the dollar with which he paid the haberdasher his argument is unanswerable; but if the butcher had contracted a dollar's worth of debt for the article he was to sell for that dollar, and had to pay it, would he have a dollar to exchange for the next thing he wanted and at the same time satisfy his debt?

Mr. COCKRAN. The gentleman, as I understand him, asks me how one dollar can discharge and perform the functions of two dollars at the same time. The question answers itself, it seems to

me. To do all that the gentleman suggests the butcher would need to sell two beefsteaks for two dollars instead of one beefsteak for one dollar. [Laughter.]

Mr. HUTCHESON. He would have to get more dollars to do it.
